In the NT, God alone decides when the time has reached its fullness or is ripe (e.g., Acts 1:7; Eph. 1:10; Col. 1:26; 2 Tim. 1:9; Rom. 3:25–26; 9:11; John 2:4; 7:30; 12:27; 13:1; 17:1; this same idea is also found among the Dead Sea Scrolls). Divine necessity is connected with the destiny of the Son of man figure in the Gospels (Mark 8:31; 9:31; 10:33–34 and parallels; cf. also Luke 24:25–27, 44–46). God has appointed a day of his choosing for fulfillment of his plan (e.g., Heb. 4:7; Acts 17:26–31; 2 Tim. 4:8; 1 Thess. 4:13–5:11; 2 Pet. 3:8–10), which he determined before the foundation of the world (Eph. 1:4; 1 Cor. 2:7; 1 Pet. 1:20). God decides what is to be granted (e.g., Mark 10:40 and parallels; Eph. 1:6; Rom. 9:11) in accord with his purposes in Christ (1 Pet. 1:2; Eph. 1:9; 3:11; Acts 10:42; 2 Thess. 2:13). His gifts and call are irrevocable (e.g., Rom. 11:29); his counsels are beyond human scrutiny (e.g., 1 Cor. 2:6–13; Rom. 11:33–36); and his will is that all should choose life (e.g., 1 Tim. 2:4; 2 Pet. 3:9). God is all-powerful to carry out his will and promises (e.g., Luke 1–2).

For many people today, the notion of the sovereignty of God is difficult to accept. It is questionable, however, that the notion has been easy to accept for people of any age. Empirical realities seem to throw the idea of God's sovereign predestination into doubt. The problem of ubiquitous evil appears to be its greatest rival. The Bible does not pretend that the concept of predestination resolves all paradoxes or detoxifies the bitterness of disappointments, contradictions, and injustices in life. The affirmations of predestination belong to those ultimate dimensions of life on the extreme outer limits of what humans can perceive and talk about. Humans enter these outer limits by permission, as it were, where faith is mingled with mystery. Knowledge and assurance of predestination are vague at best; to lay claim to either is to venture the risk of faith and to invite contradiction. Yet, predestination remains in the biblical understanding of reality and human destiny.

The Bible's Focus: The Bible does not develop abstract theories of predestination applied speculatively and generally to all phenomena. Rather, it concentrates on God's predetermined plan to redeem and to rescue his creatures from destruction. Human beings are on a destructive course, but God has determined to alter this course "from of old" and to see the alteration through to its redemptive conclusion (an important theological consideration in a nuclear age). In contrast to ancient mythology, which speculated on the cosmic struggles of various divine and suprahuman powers as the background to all that happens on earth, the Bible concentrates on the history-shaping, personal decisions of the one God. In the OT, God maintains fidelity to his people chosen in covenant. To understand and appropriate this opened up a future of confidence and trust (Pss. 33:11; 115:3; Prov. 21:1). Even suffering could thus be regarded as part of the divine plan to save, although mere mortals were unable to understand such matters (e.g., Job 11:7; Ps. 92:6–8).

In keeping with this OT emphasis on God's unfolding, predestined plan to rescue and to deliver, the NT concentrates on Christ as the means to this end. His suffering unto death was determined within God's plan of salvation. His death was determined by divine counsel to be the foundational necessity (Mark 8:31); indeed, Christ was the "lamb" sacrificed before the foundation of the world (Rev. 13:8). The NT does not ask why his death should have been divinely necessary; to speculate would be impious. Nevertheless, in his suffering unto death, Christ saves people who believe and who were themselves "chosen before the foundation of the world" (Eph. 1:4; Matt. 25:34).

Free Will and Faith: This sense of predestination in the NT is not exclusive, at least as far as humans can speak about its relationship to them. God chooses faith and those who believe; he does not predestine that some may not believe (known as "double predestination" in the handbooks of dogmatic theology). That God's choice of Christ's suffering unto death and faith becomes for some a

stumbling block and folly (1 Cor. 1:18–25) is a reality but not subject to human scrutiny and reflection on the basis of a view of predestination. The choice to become a participant in God's predestined plan to deliver humankind from sin is generally the free-will option of all human beings. Special cases such as those people who lived before Christ or those not having the option for whatever reason do not point to automatic exclusion from God's grace and love (e.g., Rom. 3:25–26). God does not withhold his care from anyone. Wherever the NT speaks of predestination, it does so with the intent of underscoring God's will to embrace all his creation in the saving help predestined for it. And this does not limit human free will and initiative (e.g., Phil. 2:12).

Not special cases but disbelief became the major problem for biblical writers when wrestling with the affirmations of predestination. That people refuse their appointed predestiny was a perplexing dilemma and a disturbing reality for these writers. When contemplating the end-time consequences of this reality, they saw an awful conclusion to time and history that included "weeping and gnashing of teeth" (Matt. 8:12; 13:41–42). It is a frightful moment for any human reflection upon the outer limits of ultimate possibilities; certainly, no human can talk of this judgment easily and casually.

God's Covenant Promise: Among the NT writers, the apostle Paul takes an unparalleled step of boldness when pondering the promise connected with God's predestined plan for salvation. In the face of unbelief among his contemporaries in Israel, he maintains (Rom. 9–11) that God will not allow his plan to be thwarted by such unbelief. Paul does not come to this conclusion by reasoned deduction, as though he were privy to special disclosures from on high; he does not figure out, as it were, what God is up to through generations. Rather, he links predestination to God's covenant promise to Israel and affirms that God does not break his promises. He wills and is able to keep his promises of old. This is a crucial moment in Paul's thought, because for him the gospel is also by nature promise. If God changes his mind and goes back on former promises, what guarantee is there that he will not also do so as regards the gospel promise? Of course, Paul does not "know" that he will not, but his fundamental theological understanding is that God maintains fidelity as Promiser. And what Paul claims for God's promise to Israel he claims for the whole human race, because this covenant promise was to be a blessing for all the families of earth.

At the key junctures of Paul's development of this line of thinking, he chooses forms of expression that are doxological/prophetic declarations rather than rational deductions unveiling some detailed road map of history (e.g., Rom. 8:31–39; 11:33–36). These declarations do not convince in the style of debate, but rest on the common experience of God's grace for all who call upon him. God's predestined final hour in time and space is not equated with Paul's own personal history or with the experience of some other individual, but it is not independent of them either. No other NT writer goes so far in the deep struggle to understand the far-reaching implications of predestination for human freedom and unbelief. ***See also*** Covenant; Election; God; Grace; Promise; Providence; Salvation. J.E.A.

pre-exilic period, a general historical term usually referring to the period of time prior to the Babylonian exile (586 B.C.). It is usually limited to the time of the United Monarchy and the Divided Kingdom (ca. 1000–586 B.C.), although some might also include the period of the judges (thus extending the period back to ca. 1175 B.C.). Scholars assume narrative, historical, prophetic, legal, and gnomic literature was produced during this period of over five hundred years. ***See also*** Divided Kingdom, Divided Monarchy; Exile; United Monarchy.

premonarchical period, in the ancient history of Israel the period of the judges, the thirteenth and twelfth centuries B.C. It represented a time of transitions: the Israelites moved from a seminomadic population to a farming nation, from a highly diverse people to one with common purposes, and from a confederacy to a monarchy. While the book of Judges illustrates the problems in these transitions, it also demonstrates the birthing of a determined and resilient people. ***See also*** Judges, The Book of.

presbyter, presbytery (Gk. *presbyteros,* "elder"; *presbyterion,* "council" or "assembly of elders"), a group of (usually older) men appointed to oversee the life of a congregation. The early Christian office of elder doubtless originated from OT and Jewish models (see, e.g., Num. 11:16–17, 24–25). In NT times, each Jewish community had its council of elders (note the Sanhedrin in Jerusalem and "the elders" at Qumran). Paul and Barnabas appointed elders "in every church" (Acts 14:23; cf. 20:17–38; 1 Pet. 5:1–4; James 5:14; Rev. 4:4). In some instances, elder and "bishop" were apparently equated (Titus 1:5–9). For reference to a council of elders (presbytery), see 1 Tim. 4:14. ***See also*** Bishop.

press, a device for crushing olives or grapes. ***See also*** Olive; Vine.

priesthood. ***See*** Priests.

Priestly writer(s), the name given to the author(s) of one of the sources found in the books of Genesis through Numbers. The siglum given the source is "P," because the authors appear to have come from priestly circles during the sixth century B.C. Some scholars do not think of the P source as an independent narrative like the Yah-

wist source. The focus of the Priestly materials is upon God's regulations, with little colorful reflection on the human wrestling with those words. The style with few exceptions (such as Gen. 1:1–2:4a) tends to be ponderous, pedantic, and prolix. Many cultic practices are rationalized (Gen. 2:1–3; 17:1–27; Lev. 17:10–14). The major purpose of P is the revitalization of the Sinai covenant and related institutions for Israel in a time of anticipated restoration. The final shape of Genesis through Numbers can be attributed to the Priestly writers. ***See also*** Levites; Priests; Sinai; Sources of the Pentateuch. K.H.R.

priests, the specially designated officials who served in the Temple performing ritual functions and conducting the sacrificial services. The Hebrew word *kohen,* also attested in Phoenician, Punic, Ugaritic, Arabic, and Aramaic, designates not only Jewish priests but also those who served in temples dedicated to other gods. Melchizedek, the king of Salem, was also a Canaanite priest (Gen. 14:18); Asenath, the wife of Joseph, was the daughter of an Egyptian priest (Gen. 41:45); Jehu assembled the priests of Baal (2 Kings 10:19–20), and the like. A term that appears only three times in the Bible, *kemarim,* always designates idolatrous priests such as those who worshiped the gods of the Canaanites, Ammonites, and Assyrians (Zeph. 1:4). There is no feminine form of *kohen. Bat kohen* (daughter of a priest) refers to a woman of a priestly family.

Identity: The priesthood was limited by Pentateuchal law to the Levites, that is, members of the family of Levi, the son of Jacob. According to Deuteronomy, all the levitical families had a right to the priesthood since they did not receive an inheritance of land like the other tribes (Deut. 10:8–9). Aaron and his sons exclusively received the anointing oil and were attired in special clothing of the priesthood (Exod. 28–29). The families of Eli at the temple of Shiloh (1 Sam. 14:3), Zadok in Jerusalem (Ezek. 40:46), and Amaziah at Bethel (Amos 7:10–17) were not specified as Aaronides but were of levitical descent.

Hittite priestesses holding ritual vessels; relief from Carchemish (ca. 1400–1200 B.C.).

History: In the patriarchal period (ca. 2000–1700 B.C.) there was no official priesthood. The head of the family performed sacrifices in various holy places (Gen. 31:54). The only priests mentioned at this time are of nations that were not nomadic and had fixed sanctuaries (e.g., Gen. 41:50; Exod. 3:1). As the Israelites developed a more structured society, a special class came to preside over the more and more complex rituals that their religion entailed.

After the conquest of Canaan (probably late thirteenth to early twelfth centuries), ordinary Israelites often sacrificed at altars (Judg. 13:19–20) or high places (Heb. *bamot;* 1 Kings 3:3–4), but in the temples, the "houses of God," only priests of levitical lineage were allowed to perform the rites. These temples were constructed from Dan to Beersheba. The Ark of the desert period (ca. 1300–1250 B.C.), under the care of the family of Aaron, came to rest at Shiloh, and the Aaronides then became the officiators at this temple. In the time of Josiah (ca. 639–609 B.C.; 2 Kings 23:8), all the priests were brought to serve in the Jerusalem Temple, and the outlying temples and cult sites were abolished. This centralization gave control of the entire cult to the priests serving in the Jerusalem Temple.

Ezekiel typifies the desire of the Israelites in the Babylonian exile (after 586 B.C.) to reconstitute the priesthood in all its glory. The building of the Second Temple (begun late sixth century B.C.) allowed the priests to return to duty. The actual cultic functions were discharged by the descendants of Aaron, while the other Levites held subsidiary roles. The Second Temple did not, however, match the glory of its predecessor. One of the most significant things missing was the Ark itself; the anointing oil was no longer in use, and other customs of the First Temple were not practiced. At this time, the ranks of the priesthood swelled, and the Temple dues were not sufficient to support them. Many priests, therefore, turned to agriculture. Nehemiah often chastises the people for not bringing their obligations (Neh. 12:44–47), and the priests for deserting the house of God (13:10–11). According to many scholars, it was decided at this time that the priests would be called upon to officiate for only a short period of time each. The various duties were divided to give all the households an opportunity to serve while none were completely dependent on Temple duties for their livelihoods. The first-century historian Josephus knew of these priestly divisions in his day (see also Luke 1:8–9).

During the Hellenistic period (ca. 333 B.C.–A.D. 70), the priesthood dominated the nation. The priests were many in number and had a great deal of prestige. The head of the Temple, the high priest, was *de facto* the head of government of Judea. He represented Judea in dealing with the ruling powers, collected taxes, and was responsible for the spiritual welfare of the people. A large number of aristocrats were of priestly lineage. Many priests were scattered throughout the country and came to Jerusalem only to officiate during their terms of Temple service. Until the time of Antiochus Epiphanes (175–163 B.C.), the high priest held his position for life.

The priestly households attained their greatest power during the Hasmonean period (ca. 165–63 B.C.), although there was often conflict between them regarding the extent to which they would become hellenized. The priests were leaders of the Sadducees and the Sanhedrin. At this time, the Pharisees began to loosen the hold of the priests on the spiritual leadership of the people. When Herod became king (37 B.C.), the rule of the nation shifted from the priests to the secular monarchy. He appointed a high priest, not necessarily from any particular family, reduced him to a ceremonial role, and deprived the office of its political powers.

In other sects, such as the one at Qumran near the Dead Sea, the Zadokite priests were accorded an extra measure of respect, such as being the first to bless the food and receive a portion. It was anticipated that a priestly messiah would take an exalted role in the reestablished independent state, alongside the Davidic messiah.

Christians transferred the role of the priest as mediator between God and humans onto Jesus whom they saw as both God and man. He became eternal High Priest by God's appointment (Heb. 5:1–6) and supplanted the ancient sacrificial system by his own sacrifice (Heb. 7:27–28; 9:23–26).

The Roman procurators (A.D. 6–41, 44–66) appointed the high priests, many of whom bought the office through their great wealth. These wealthy families created an oligarchy of power and prestige and were regarded by the Pharisees as tyrannical to the peasants and sympathizers with the Romans. This aristocracy came to an end with the destruction of the Temple and the ascendancy of the Pharisees.

After the destruction of the Temple in A.D. 70, the priestly descendants of Aaron continued to maintain certain privileges, such as the recitation of the priestly benediction. Certain restrictions remained in force, such as the prohibitions of contact with the dead and marriage with a divorced or widowed woman.

Functions: The concept of the service of the priest in the ancient Near East was that he ministered to the god by fulfilling all his needs and worshiping in the house wherein his presence dwelt. In Israelite religion, these images eventually became relegated to technical or literary language. Thus, in Ezekiel, the service of God is expressed in terms of taking care of his needs, feeding him from the sacrifices upon his altar (table). The tribe of Levi is enjoined to "come near to me to minister to me; and they shall attend on me to offer me the fat and the blood, says the Lord God; they shall enter my sanctuary and they shall approach my table, to minister to me . . . " (Ezek. 44:15–16).

Chief among the duties of the priests was the performance of sacrifices. Only they were allowed to approach the altar, and then only within the context of a complex series of rituals and while wearing specific vestments that symbolized their holiness. The blood of an animal was often sprinkled, and certain portions of meat were burnt, depending upon the type of sacrifice. While ordinary priests performed these daily functions, the high priest was entrusted with the sin offerings, especially that of the Day of Atonement. Priests also pronounced the priestly blessing (Num. 6:22–26) over the people, blew trumpets on festive occasions such as holidays and new moons, and blew the shophar (trumpet made from a ram's horn) on the Day of Atonement to announce the Sabbatical Year (Lev. 25:9). The Levites who worked in the Temple alongside the Aaronide priests were the musicians, gatekeepers, singers, and the like.

In addition to preparing the sacrifices, the priests also were in charge of the maintenance of the Temple. They conducted routine inspections of the Temple grounds, noting what had to be repaired, and they solicited funds to carry out the work. In connection with donations to the Temple, they were often called upon to evaluate property and fix the type of sacrifice permitted to those of limited means by evaluating the ability of a worshiper to pay for a sacrifice (Lev. 12:6–8; cf. Luke 2:22–24). The collection of tithes and other obligatory Temple donations was administered by the priests, who were expected to eat their emoluments in a state of ritual purity.

Stone table found in a priest's home in Jerusalem in the Upper City, facing the Temple Mount; ca. A.D. 70.

When a person suffered a disease or physical sign of impurity, the purification rites were performed by a priest. The methods of purification included things like waiting a specific amount of time, bathing, washing one's clothes, being sprinkled with water by the priest, and bringing a sacrifice the blood of which would be sprinkled on one's behalf by the priest. The priests were charged with diagnosing the disease *tsaraat* (usually translated "leprosy," it was used to designate a number of disorders of the skin; cf. Lev. 13–14) as well as purifying the persons or objects affected by it (Lev. 14; see Mark 1:44). Contact with the dead (Num. 19:11–19), emissions (Lev. 15), the carcass of an unclean animal (Lev. 11:24–40), even contact with the red heifer, the means by which impurity of the dead was removed (Num. 19:1–10), required these rites of purification.

In First Temple times (ca. 950–586 B.C.) the high priest had the Urim and Thummim attached to his breastplate which he consulted for a divine reply to an inquiry (Num. 27:21). Lots were often cast, as was the case in the division of the land among the tribes (Num. 26:55–56) and the choosing of Saul as king (1 Sam. 10:20–21).

Among the functions of the priests was that of judging (Deut. 17:9; 12; Ezek. 15:1, 24). The priests administered the ordeal of the suspected adulteress (Num. 5:11–31). In the blessing of Moses before his death, Levi is charged with teaching the law to the people of Israel as well as offering incense and sacrifices upon the altar (Deut. 33:10).

As a prestigious, elite class the priests were also expected to preserve the holiness of the sanctuary and the uniqueness of the people of Israel. Therefore, they were subject to added restrictions not incumbent upon the average Israelite. A priest was forbidden to officiate if he had a physical defect (Lev. 21:17–24), was ritually impure, was under the influence of alcohol, or had married a woman forbidden to a priest. A priest was allowed to marry only a virgin of Israel, not a divorcee, prostitute, convert, or, in the case of the high priest, a widow (Lev. 21:14). Ezekiel makes an exception of the widow of a priest (Ezek. 44:22).

A priest could not defile himself by attending the cemetery except for the burial of a close relative (parent, sibling, child, or wife; Lev. 21:1–3). The high priest could not have contact with the dead even if they were his parents (Lev. 21:11). Upon the death of Aaron's sons, Moses forbade Aaron and his remaining sons to manifest the signs of mourning during the week of their consecration (Lev. 10:6). Although Israel is said to be "a kingdom of priests and a holy nation" (Exod. 19:6), it was the priesthood that embodied the highest levels of sanctity in ancient Israel. ***See also*** Josiah; Purity; Temple, The; Tithe; Worship.

prince, a person of high rank. The Hebrew terms for "prince" are multiple, but they invariably refer to a person of extraordinary power and authority. The word may emphasize an individual's prowess in battle, or it may suggest an office one has attained, whether chief of a tribe, head of a family, satrap, or king. The heir to the throne is also called a prince, as are the chief rulers of a kingdom who answer only to the king (so the seven princes of Persia and Media whose names are given in Esther 1:14). In messianic expectation there was room for a prince of peace (Isa. 9:6). At the opposite end of the spectrum, the devil received the title "prince of this world" (John 12:31). This chief official is thought to have ruled over lesser beings who endeavored to lead good people astray (cf. Mark 3:22). J.L.C.

Prisca, Priscilla (pris'kuh, pri-sil'uh), a prominent woman in the early Christian church, always mentioned in connection with Aquila, her husband. Paul calls her Prisca (a common Latin name), but Acts prefers Priscilla. Prisca's husband was a leatherworker and normally would not be expected to travel extensively with his wife and to purchase property, as is suggested in the NT references (Acts 18:2–28; cf. Rom. 16:3; 1 Cor. 16:19). The fact that Prisca is mentioned before Aquila (unusual for the ancients) both by Paul and by the writer of Acts may indicate that Prisca had a higher social status (perhaps through inherited wealth) than her husband and that this was the source of their means. Driven from Rome by Claudius's edict (A.D. 49/50) that expelled Jews from that city, they moved to Corinth, where they came into contact with Paul; then, leaving Corinth with Paul, they settled in Ephesus. Paul greets them in Rom. 16:3 and 1 Cor. 16:19 (cf. also 2 Tim. 4:19). ***See also*** Aquila; Claudius; Decrees; Paul; Women. A.J.M.

Priscilla. ***See*** Aquila; Prisca, Priscilla.

prison, a building or other facility used for holding individuals in judicial confinement.

Types of Imprisonment: Various types of imprisonment were known in biblical times. Accused persons were often imprisoned either while their cases were being investigated or to assure their appearance for trial. The OT contains several examples: Gen. 39:19–41:14; 1 Kings 22:26–27; Num. 15:34 (see also Lev. 24:12, "until the will of the Lord should be declared"). In NT times Roman magistrates had the right either to remand accused persons to civil or military prisons or to release them on bail or on personal recognizance. Provincial magistrates

often chose to imprison accused persons, and defendants of lower social status were everywhere particularly vulnerable. The NT offers many examples of pretrial imprisonment: Acts 4:3; 12:3–4; 16:23–24; 23:35; Phil. 1:7–26. The binding or chaining of Jesus before bringing him to Pilate may reflect some sort of formal arrest procedures (Matt. 27:2; Mark 15:1).

Some accused, particularly those of higher status, were held under more relaxed custody, sometimes without being chained. They could receive visitors and transact business (e.g., Paul at Rome [Acts 28:16–31]). Another type of imprisonment was for those condemned to death, a penalty common in antiquity. Debtors unable to pay their creditors were also imprisoned, sometimes in special debtors' prisons, until their debts were paid. Luke 12:58 makes precise reference to the "officers" who in Roman times had charge of such prisons (see also Matt. 5:25; 18:30). The asylum granted under Israel's law to those who had accidentally killed someone in fact constituted a form of imprisonment since the individual who left the city of refuge could be slain by the victim's next of kin (Num. 35:9–34; see also Deut. 4:41–43; 19:1–10; Josh. 20:1–9). Solomon's confinement of Shimei ben Gera to Jerusalem can be compared to this practice (1 Kings 2:8, 36–46).

Although the use of imprisonment as a legal penalty remained uncommon, such practice was known in Greece, in Rome, and also in Israel. While some of the prophet Jeremiah's various imprisonments (sixth century B.C.) resulted from lawless violence (Jer. 37:15–16; 38:5–7), his retention in "the court of the guard" may reflect somewhat more orderly judicial processes (Jer. 32:2–3; 37:21; 38:13). Ezra 7:26 lists imprisonment as one of several recognized forms of legal punishment. The NT offers no clear examples of imprisonment used in this fashion. Paul's imprisoning of Christians (Acts 8:3) probably refers to his handing them over to the custody of synagogue authorities who would then administer the penalty provided for in Israel's law, a flogging of up to forty lashes (Deut. 25:1–3; 2 Cor. 11:24; Acts 22:19). However, the pretrial retention of an individual could easily be abused and become in fact a means of punishment (e.g., John the Baptist [Mark 6:17–20]).

Prison Conditions: Despite various efforts to promote reforms, conditions in ancient prisons were often harsh. Most prisoners wore chains; their feet might be shackled, their hands manacled or even attached to their neck by another chain, and their movements further restricted by a chain fastened to a post. The existence of laws prohibiting chains that were too short or too restrictive indicates that jailers sometimes employed such practices. The very word "chains" became a synonym for imprisonment. Some prisoners were also kept in wooden stocks, devices to restrain the feet, hands, or even the neck of an individual (see Acts 16:24). Prisons often were very dark (see Isa. 42:7); the inner area of the prison mentioned in Acts 16:24 was probably without windows. Although solitary confinement was known, prisoners generally were kept grouped together, accused and condemned, men and women alike. Overcrowding was not infrequent (Isa. 24:22). Prisons often had poor air circulation, a lack of hygienic facilities, rats and vermin, and food of poor quality. Unscrupulous guards might at times use the withholding of food or even outright torture to extort money from prisoners or their relatives. Although various rulers, especially in Roman Imperial times, struggled to prevent such abuses, the quality of prison life largely remained the responsibility of local officials, and conditions undoubtedly varied considerably from place to place.

Numerous early Christians encountered prison at first hand, and NT exhortations such as Matt. 25:36 and Heb. 13:3 to visit those in prison clearly had immediacy. The best known prisoner in the NT is the apostle Paul; he himself refers to the many times he was imprisoned (2 Cor. 6:5; 11:23), and the phrase "the prisoner of Christ Jesus" is almost a Pauline title (Philem. 1, 9; Eph. 3:1; 4:1; 2 Tim. 1:8). This designation is in part ironic—if Paul is *Jesus*' prisoner, in reality he is free! The accounts of miraculous deliverances from prison found in Acts 12:6–10 and 16:25–26 also serve to stress that God's power is greater than all the chains and prisons that humanity can devise. ***See also*** Cities; John the Baptist; Joseph; Paul.

prize, either the spoils of war (as in Jer. 21:9) or something won in an athletic contest. Paul employs the latter as a metaphor for salvation (Phil. 3:14), the imperishable nature of which he contrasts with the perishable wreaths (made of parsley, celery, etc.) coveted by the athletes of Greece and Rome (1 Cor. 9:24–25). ***See also*** Battle; Crown; Games; War.

Prochorus (prok´uh-ruhs), one of the seven in the Jerusalem church appointed by the apostles to take care of the widows and the poor (Acts 6:1–6). ***See also*** Hellenists.

proconsul (proh-kon´suhl), a former Roman consul who served in consular rank as the governor of a province or in command of an army. Asia and Africa were always governed by former consuls. Other senatorial provinces might be governed by praetors. The proconsul Sergius Paulus became a Christian when he heard and saw what Paul and Barnabas were about (Acts 13:7–10), and it was when Gallio assumed his duties as proconsul of that Roman province of Achaia (modern Greece) that some of Paul's opponents

leveled charges against him before that Roman official (Acts 18:12–17).

procurator (prok´yuh-ray´tuhr), an agent who looked after a person's affairs in that person's absence. During the Imperial period (after 31 B.C.), the procurator was an agent of the Roman emperor who was either a freedman or member of the equestrian class. Such agents might administer departments such as the mint, gladiatorial schools, or mines. The primary function of such agents was to look after the provincial interests of the emperor. In imperial provinces the procurator was under the legate. In senatorial provinces the procurator was more independent and might even serve as a check on the governor of the province. An equestrian procurator might also be assigned to govern minor provinces such as Thrace and Judea, which had no troops garrisoned in them. He would sometimes be dependent upon the governor of a larger, neighboring province. Contrary to some translations, Pontius Pilate (Matt. 27:11), Felix (Acts 23:24), and Festus (Acts 24:27) are designated as "governor" rather than "procurator" in the NT. P.P.

prodigal son, the younger son, who wastes his inheritance in Jesus' parable (Luke 15:11–32). He experiences his father's forgiveness while his dutiful elder brother protests the father's actions.

Return of the Prodigal Son, detail. Rembrandt, ca. 1668.

prognosticators, the archaic KJV translation of those who "predict what shall befall you" (Isa. 47:13). The prophet castigates faith in astrology, which is at issue in this verse.

promise, an assurance of some future act. Although absent as a specific term in the OT, the concept of promise runs throughout its narrative. The prediction of innumerable offspring to childless Abraham and Sarah (Gen. 15:5; 17:6–7; 22:17–18), of a land for Israel (Gen. 15:18–21; 50:22–25), of the perpetual rule of David's descendants (2 Sam. 7:16), and of a future world to God's liking (e.g., Isa. 11:1–9) all function implicitly as promise. Later Jewish traditions explicitly link God's promises to the future world, giving it an eschatological character. The Syrian *Apocalypse of Baruch* says that already in Abraham "the promise of future life was planted" (57:2) and will be harvested in the future world promised by God (14:13).

In the NT, the word "promise," both as noun and verb, is used extensively. Paul found scriptural authority for his Gentile mission in God's promise to Abraham through whom all nations (i.e., Gentiles) would be blessed (Rom. 4:9–25; Gal. 3:6–29). Through faith in Christ, God's promise was being fulfilled, and Gentiles were becoming Abraham's offspring (Rom. 4:16), members of the children of promise (Rom. 15:8–12) without reference to the law. The inclusion of the Gentiles, however, does not nullify God's promises to the Jews (Rom. 9:4). Ultimately, Jews and Gentiles will gather as one people of God (Rom. 11:25–26).

The author of Hebrews sees in Jesus the realization of the promises given to but not realized by the ancients (11:39–40). Even though the new promises surpass the old, the inheritance even of the new is uncertain without obedience (4:1; 6:11–15; 10:36). The continuity forged by Paul between the promise to Israel and fulfillment in Christ is, however, missing in Hebrews. ***See also*** Abraham; Covenant; Eschatology; Gentile; Law; Torah. C.J.R.

prophet (Heb. *nabi';* Gk. *prophētēs*), a person who serves as a channel of communication between the human and divine worlds. The biblical prophets played a crucial role in the development of Judaism and Christianity and influenced

A prophet, as depicted in a sixth-century mosaic at San Apollinare in Classe, Ravenna, Italy.

later Western thought by becoming the paradigm for identifying authentic divine messengers. Since their appearance in ancient Israel, the prophets have been understood in a number of different ways, both by scholars and by general readers of the Bible. Particularly in Christian tradition, the prophets have been regarded as predictors of the future, whose words pointed to the coming of Jesus and to the future course of world history. More generally, the prophets have been considered moral and ethical innovators, who brought Israelite religion to a higher level of development than it had previously achieved. In the twentieth century, many of the traditional understandings of the prophets have been questioned, and they have been variously portrayed as great preachers, as moral philosophers, as raving ecstatics, as isolated mystics, as cultic officials, as political analysts, and as keepers of old Israelite traditions.

The great variety of ways in which the OT prophets have been described suggests that they were multifaceted figures and that Israelite prophecy itself was a complex phenomenon. While it is possible to support any given picture of the prophets by appealing to the OT evidence, no single picture can incorporate all of the biblical data. Various types of prophets existed in Israel, and individual prophets also had unique characteristics they did not share with other prophets. However, once this diversity is recognized, it is possible to make some broad generalizations about the OT prophets and the roles that they played in Israelite religion and society.

Titles: The most common prophetic title used in the OT is *nabi'*, a word usually translated in the Septuagint (LXX) by the Greek word *prophētēs* and in English versions by the general term "prophet." The etymology of the title is uncertain, but it may mean "one who calls" or "one who is called." Although this title was used throughout Israel in all historical periods, it did not have the same connotations for all OT writers. In the Deuteronomistic history and the literature influenced by it (Deuteronomy, Joshua, Judges, Samuel, Kings, Hosea, Jeremiah), "prophet" is the preferred title for people who were considered legitimate links between the human and divine worlds, while other titles were used for figures who were not thought to be legitimate. In this literature prophets were accorded high status and played an authoritative role in Israel's religious life (Deut. 18:9–22).

On the other hand, OT writings from Judah and Jerusalem (Amos, Micah, Isaiah, Chronicles) use the title "prophet" less frequently, and it often appears in negative contexts. In this literature the preferred designation for prophetic figures is "visionary" (Heb. *ḥozeh*), a title that refers to the distinctive means by which these individuals received their revelations. Visionaries seem to have been active primarily during the monarchical period (ca. 1004–586 B.C.), when some of them were members of the royal establishment in Jerusalem (1 Chron. 21:9; 25:5; 29:29; 2 Chron. 9:29; 12:15; 19:2; 29:25, 30).

In addition to the titles "prophet" and "visionary," the OT mentions three other titles that were not in common use. In 1 Samuel 9, Samuel is called a "seer" (*ro'eh*), a title that was already archaic in the time of the OT writers (1 Sam. 9:9). A seer appears to have been a specialist in communicating with God through visions, dreams, or divination, a function that was later taken over either by prophets (Deut. 18:9–22) or by various diviners and priests. Although there are some late references to seers (2 Chron. 16:7, 10), it is likely that the seer disappeared from Israel early in the monarchical period. More frequently used is the title "man of God," which appears particularly in the prophetic stories set in the time of Elijah and Elisha (1 Kings 17–2 Kings 10). A "man of God" may have originally been someone able to use divine power in miraculous ways, but it is likely that the title was eventually given to anyone who enjoyed a special relationship to God. During the same period, the writers of Kings speak of prophetic groups called "sons of the prophets." These groups were clearly hierarchically structured prophetic guilds that flourished for a brief time in northern Israel (ca. 869–842 B.C.) and played an important role in the overthrow of the dynasty of Omri (1 Kings 17–2 Kings 10).

Origins and Development: For many years historians assumed that prophecy was a uniquely Israelite religious phenomenon that had no parallels elsewhere in the ancient Near East. However, during the past century several archae-

ological discoveries have shown this assumption to be false. The most important of these finds occurred at the Mesopotamian city of Mari, where excavators uncovered letters written in the eighteenth century B.C. Several of these texts describe the activities and messages of various types of oracle givers whose words and actions resemble those of the later OT prophets. Some of those early figures bear special titles, such as "answerer" and "ecstatic," and both at Mari and at the ancient Syrian city of Emar titles apparently related to the common Hebrew designation *nabi'* ("prophet") are attested. Archaeologists have also discovered Assyrian texts from the OT period itself (ca. 680–627 B.C.) that contain collections of oracles from "ecstatics," "shouters," "revealers," and "votaries." From Palestine have come inscriptions mentioning various kinds of oracle givers, including the visionary, a title that is given to some of the OT prophets.

All of this extrabiblical evidence indicates that prophetic activity existed elsewhere in the ancient Near East both before and during the biblical period, and some scholars have therefore suggested that prophecy originated on the periphery of Mesopotamia, in Canaan, or even in Egypt, and then was borrowed by the Israelites. At the moment there is no way to prove or disprove this hypothesis, although it is important to note that there is no biblical evidence to indicate that Israel recognized prophecy as an import. In addition, anthropological studies of prophetic phenomena show that prophecy can arise spontaneously in any society where the necessary social and religious conditions are present. There is therefore no reason to assume that prophets could not have appeared in Israel without outside cultural influences.

The angel carries the prophet "Habakkuk" by the hair from Judea to Babylon, an incident in the deuterocanonical Bel and the Dragon (33–39); seventh-century A.D. relief.

Although the OT locates most prophetic activity during the period of the monarchy, some biblical traditions place the origins of prophecy at the very beginning of Israel's history. Even if the references to the prophetic activities of Abraham and Moses are treated as retrojections from later times (Gen. 20:7; Num.12; Deut. 18:9–22), the fact that Miriam, Deborah, and others are identified as prophets may indicate that prophecy had important religious and social functions in some early Israelite groups (Exod. 15:20–21; Judg. 4:4–10; 6:1–10). It is at least clear that in the period just before the rise of the monarchy (eleventh century B.C.) prophets were well established at some of Israel's sanctuaries. Samuel played important religious and governmental roles at several Israelite cult centers and was involved in the creation of the new central government (1 Sam. 3–16). Thereafter, prophets were a regular part of Israel's public life, both in Judah in the south and in Israel in the north. They related to the government and to the Temple in various ways, some supporting the royal establishment or working inside it and some standing outside and advocating radical change. Although prophetic attitudes changed during the monarchical period, it is difficult to detect major changes in the institution of prophecy itself. Those relatively late prophets who wrote books (e.g., Jeremiah) do not seem to have been markedly different from the earlier ones who did not (e.g., Elijah). There is no evidence to suggest that the growth of prophecy followed an evolutionary pattern.

Just as it is difficult to determine when prophecy began in Israel, so also it is difficult to identify the point at which prophecy ceased. Prophetic activity did continue after the Exile (sixth century B.C.), and prophets such as Zechariah and Haggai helped to shape the restored community in Jerusalem. However, after the Exile prophecy seems to have lost much of its influence, and prophets became much less visible. In spite of the later rabbinic claim that prophecy ceased in the early postexilic period (after Haggai, Zechariah, and Malachi), it is likely that prophets had minor official duties in the worship practices of the Second Temple (1 Chron. 25). Outside of this officially sanctioned activity, prophecy seems to have continued only in peripheral groups that left no imprint on the OT record.

Personal Experiences: The prophet's experiences with the divine world were essentially private and were difficult to communicate even in the best of circumstances. It is therefore not surprising that the prophets said little about their encounters with God and concentrated instead on the visual or aural messages they re-

ceived on these occasions. Only a few of the prophets even described their initial "calls" to prophesy (Amos 7:15; Isa. 6; Jer. 1:4–10; Ezek. 1–3), and still fewer spoke in detail of the experience that gave rise to a particular oracle (1 Kings 19:9–18; 22:17–23).

Nevertheless, enough clues have been preserved in the OT to suggest that Israelites thought of the prophetic experience as one that occurred when people were possessed by the spirit of God. "The hand of the Lord" fell upon them (1 Kings 18:46; 2 Kings 3:15; Jer. 15:17; Ezek. 1:3); the spirit of God "rested on them" (Num. 11:25–26) or "clothed itself" with them (Judg. 6:34). In this situation they were no longer in control of their own actions and words but were completely dominated by God. They felt compelled to speak the divine message that had been given to them (Amos 3:8; Jer. 20:9). Because of the feelings of helplessness and terror that accompanied possession by God's spirit, many prophets viewed the experience negatively and tried unsuccessfully to avoid it (Jer. 1:6; 11:18–12:6; 15:15–21; Ezek. 2:1–3:15; cf. Jon. 1:1–10).

Behavior and Speech: During their possession experiences, the OT prophets seem to have exhibited characteristic patterns of behavior and speech which allowed them to be identified as prophets. The details of these patterns are unclear, and they may have varied somewhat according to the historical, geographical, and social settings of the prophets' activities. However, the existence of characteristic prophetic behavior is suggested by the fact that the Hebrew verb "to prophesy" sometimes actually means "to act like a prophet" or "to exhibit the behavior that is typical of prophets." Such behavior could be recognized by all Israelites, although some groups evaluated it positively while others did not. In some instances it was understood as a sign of divine legitimation and favor (Num. 11:11–29; 1 Sam. 10:1–13), while in other cases it was thought to be an indication of madness or of possession by an evil spirit (1 Sam. 18:10–11; 19:18–24; 1 Kings 18:26–29; Jer. 29:24–28).

Some of the OT prophets were probably ecstatics whose possession behavior was marked by psychological and physiological symptoms such as reduced sensitivity to outside stimuli, hallucinations or visions, loss of control over speech and actions, and a sense of being out of touch with reality. The intensity of these symptoms and the degree to which the prophets could control them probably varied, and it is unwise to generalize about the degree to which ecstasy influenced the prophets' messages. Sometimes ecstasy was incapacitating and dangerous (1 Sam. 19:18–24; 1 Kings 18:26–29), but among the writing prophets, if ecstasy existed at all, it was accompanied by controlled actions and intelligible speech (Jer. 4:19; 23:9; Ezek. 1:1–3:15).

As part of their characteristic behavior, some prophets wore distinctive clothing or bore a special mark that identified them as a prophet or as a member of a prophetic guild (1 Kings 20:35–41; 2 Kings 1:8; Zech. 13:4). Others sometimes performed symbolic acts, either as dramatic reinforcement for an oracle (Hos. 1:4–9; Isa. 7:3; 8:1–4; 20:1–6; Jer. 19:1–15; 27:1–28:17) or as a way of actually bringing into existence the state of affairs being described in the oracle (2 Kings 13:14–19; Ezek. 4:1–8).

One of the clearest marks of prophetic behavior was the stereotypical way in which the prophets constructed their oracles. Oracles often began with an account of the commissioning of the prophetic messenger, an account that was followed by an accusation against an individual who had violated Israel's covenant law. After the accusation, the prophets delivered an announcement of judgment directly to the accused. The announcement usually began with the "messenger formula" ("thus says the Lord"), which identified the sender of the message and gave the authority for the oracle of judgment (1 Sam. 2:27–36; 13:11–14; 15:10–31; 2 Sam. 12; 1 Kings 11:29–40; 13:1–3; 14:7–14; 17:1; 20:35–43; 21:17–22; 22:13–23; 2 Kings 1:3–4, 6; 20:14–19; 21:10–15; Jer. 20:1–6; 22:10–12, 13–19, 24–27; 28:12–16; 29:24–32; 36:29–30; 31:17). A variation on this speech pattern was used by prophets in Judah and Jerusalem, who sometimes began their oracles with the cry "alas," followed by one or more participles describing the addressee and indicating the crime. This introduction was followed by an announcement of judgment (Amos 5:18–20; 6:1–7; Isa. 5:8–10, 11–14, 18–19, 20, 21, 22–24; 10:1–3; 28:1–4; 29:1–4, 15; 30:1–3; 31:1–4; Mic. 2:1–4).

Social Context and Functions: The OT prophets did not carry out their activities in isolation but were an integral part of their society. Because divine possession was not a continuous experience for any of the prophets, they played various social roles in addition to carrying out their prophetic activities. Prophets like Amos prophesied only occasionally and were normally involved in secular occupations (Amos 1:1; 7:14–15). Others, such as Jeremiah and Ezekiel, were priests who were occasionally transformed into prophets (Jer. 1:1; Ezek. 1:3). While some prophets may have had full-time responsibilities in the Temple or the royal court, others carried out religious tasks that did not always involve prophecy (1 Chron. 25:1–8; 2 Chron. 20:1–23; 34:30).

In addition to being involved in normal community activities, the prophets also received from their societies support and legitimation. Anyone could claim to have received a message from God, but that person could become a prophet only when a group of people recognized the prophetic claim as genuine and accepted the prophet's authority. Social support was sometimes provided by an organized group of disci-

ples (Isa. 8:16), but usually the process was more informal (Jer. 26). Prophets who could not obtain at least a minimal amount of social support were unable to influence their societies and were in danger of being branded false prophets or lunatics. On the other hand, prophets who were considered authoritative by at least one group were usually tolerated by the rest of Israelite society. The prophets seem to have had unrestricted access to the king, the royal court, and the Temple and were not harassed unless their messages became too strident and threatening to the society (Jer. 26:1–24; 38:1–13). Normally prophets were not held responsible for their words or actions because they were under the direct control of God (Jer. 26:12–16).

All OT prophets shared the common task of delivering to individuals or groups the divine messages that they received during their prophetic experiences. However, the prophets had various social and religious functions depending on their social locations. Those prophets who were part of the royal court or who had regular roles in the Temple worship were usually concerned to preserve and strengthen the social structure. They were certainly capable of criticizing current institutions and advocating change, but they wanted to be sure that change took place in an orderly way. On the other hand, prophets who had no regular involvement with Israel's powerful social institutions were more likely to advocate radical change, even at the expense of social stability.

Theology: The OT prophets were firmly rooted in history, and this fact has important implications for understanding their theology. Because the prophets were not all members of the same social or religious group, they inherited different historical and theological traditions. All of the prophets knew the basic facts of Israel's history and shared the major elements of Israelite faith, but they understood these things in somewhat different ways and used different words to speak about them. In addition, the prophets spoke to specific groups of people and directed oracles to particular historical and social situations. The historical dimensions of prophecy make it difficult to talk about prophetic theology in general. Instead it is necessary to examine the theologies of individual prophets and to appreciate the unique shape that each of them gave to divine revelation. However, once the particularity of OT prophecy has been recognized, it is possibly to abstract some general theological beliefs that were held by all of the prophets.

All of the prophets held the fundamental belief that Israel had been elected by God and enjoyed a special relationship with God by virtue of that election. The mutual obligations involved in this relationship were spelled out in various covenants, particularly the covenant at Sinai (Exod. 19–Num. 10; Deuteronomy) and the covenant made with the house of David (2 Sam. 7). However, most of the prophets whose words have been preserved in the OT also agreed that the people of Israel and Judah had refused to fulfill their obligations and had rebelled against God. The prophets described this rebellion in various ways (cf. Isa. 1:2–6; Jer. 2:2–37; Ezek. 16), but they seem to have been concerned with all breaches in the divine-human relationship. Deviations in ethical behavior, social injustice, the worship of other gods, and religious abuses were all condemned equally because they were considered symptoms of Israel's general religious illness (Isa. 1:9–17).

The prophets also agreed that Israel's rebelliousness would be punished, although they did not always agree on the nature of the punishment or its severity (cf. Isa. 1:7–8; Jer. 7:1–15; 14:1–15:4; Amos 4:6–12). Some, such as Isaiah and Ezekiel, believed that God would punish Israel but would remain faithful to the promises that had been made to David; Israel would remain the elect people of God. Others, such as Jeremiah, at least considered the possibility that God's punishment would terminate the divine-human relationship. Prophetic disagreements on this point became particularly sharp during the Exile, when the very existence of Israel was in question.

However, God's final word through the prophets was one of hope and promise. No matter what the people did, God would remain faithful and would return the people to their land, where they would enter into a new relationship with God.

Early Christian Prophets: Prophecy played an important role in Christianity from the very beginning (Acts 2:14–21). The early church used OT prophecy to interpret the life and teachings of Jesus, who himself was recognized as a prophet (Matt. 13:57; 21:11; Luke 4:24; John 4:19; 9:17). After the resurrection, prophecy became one of the gifts of the Spirit and at least in some congregations was a normal part of worship (1 Thess. 5:20; 1 Cor. 12:28–29; 14:26–32). However, prophecy soon became the province of a specialized office in the church, and prophets were ranked with apostles and teachers as church leaders (Acts 11:27; 13:1; 15:32; Eph. 2:20; 3:5; 4:11; James 5:10; 1 Pet. 1:10; Rev. 22:6–9). The presence of so many prophets caused major problems with false prophecy and made it necessary to devise tests to determine the validity of prophetic oracles (Matt. 7:15; 24:11, 24; Mark 13:22; Acts 13:6; 2 Pet. 2:1; 1 John 4:1; Rev. 2:20; 19:20; 20:10). Difficulties in recognizing false prophets may have led church leaders to try to suppress prophecy altogether and probably hastened the disappearance of prophets from the Christian community.

prophetess (Heb. *nebi'ah*), a woman who serves as a channel of communication between the human and divine worlds. In their prophetic behavior and religious functions they are not distinguished from their male counterparts.

According to some traditions, prophetesses played a central role in Israel's early history. The prophetess Miriam is said to have composed a song to celebrate Israel's crossing of the sea (Exod. 15:20–21), while the prophetess Deborah "judged" Israel and helped to lead the people in battle (Judg. 4:1–10). In a much later period, the prophetess Huldah appears as an important religious official to whom King Josiah sent messengers to inquire of God (2 Kings 22:14–20). In Nehemiah's account of the reconstruction of Jerusalem, he reports opposition from several prophets and the prophetess Noadiah (Neh. 6:10–14).

In NT times, the prophetess Anna was one of the first to recognize Jesus as the Messiah (Luke 2:36–38). Prophetesses were also found in some early churches, where they occasionally became involved in disputes over the direction of the church (Rev. 2:20). ***See also*** Prophet.

propitiation. ***See*** Expiation.

proselyte (pros´uh-lit), a convert from one religious faith or group to another. In biblical studies this term refers especially to Gentiles who became Jews. In the OT many laws recognize the rights and place of resident aliens, non-Israelites living permanently in Israel. They had to observe certain laws, could offer sacrifice and, if circumcised, could take part in Passover. Such open association with Israelites probably led to their constant assimilation into Israel. In NT times proselytes to Judaism were required to accept one God and Jewish ethical and religious observances; males had to be circumcised (though a few Hellenistic Jewish authors do not mention this painful requirement). Later rabbinic sources also speak of a ritual immersion (not baptism in the Christian sense) and a sacrifice at the Temple as part of the conversion rite, but firm evidence for these practices in the first century is lacking (*b. Yebam.* 46–47).

From the second century B.C. through the fourth century A.D. some evidence suggests that many Gentiles were attracted to Judaism because of its monotheism, sexual ethics, and Sabbath observance. In addition, Jews may have actively sought converts during this period (see Matt. 23:15; Josephus *Against Apion* 2.39), in contrast to later centuries when converts were discouraged because of sanctions by Christian civil authorities and developments internal to Judaism.

Acts mentions proselytes among those listening to Peter (Acts 2:10) and Paul (13:43) and a proselyte, Nicolaus, as one of the seven deacons (6:5). Acts also mentions those who "fear God" or "reverence God." These expressions may simply indicate someone with a proper attitude toward God whether Jew or non-Jew, but some usages (e.g., 13:16, 26) have suggested to commentators that the Jewish community recognized a class of members who did not fully embrace Judaism, especially circumcision, but who kept some of the fundamentals of the law. Except for one third-century A.D. inscription from Asia Minor, no direct evidence exists for such an institutional class of "God-fearers." However, it is probable that many Gentiles were friendly to and interested in Judaism and had some association with the synagogues. This same fluid group may have been open to Christian as well as Jewish proselytism. ***See also*** Conversion. A.J.S.

proverb (prov´uhrb), a short, popular saying that communicates a familiar truth or observation in an expressive and easily remembered form. The term is applied to a variety of sayings in the Bible. The most common example is the folk saying drawn from human experience and characterized by picturesque, insightful, witty, or even amusing comment on human behavior or experience (e.g., Prov. 16:18, 27:15; 29:2; Luke 4:23). The majority of these proverbs are composed of two lines in a poetic form that closely links the first line with the second (a couplet). They occur in several distinct forms: those based on direct correspondence or association (Judg. 8:21; Prov. 9:10; Gal. 6:7), on contrast (Prov. 11–13, 18:23; Jer. 23:28; John 1:46), on comparison (Gen. 10:9; Prov. 20:2; Ezek. 16:44; Hos. 4:9), on what is futile or absurd (Prov. 1:17; Amos 6:12; Jer. 13:23), on the characterization of certain persons (the fool, Prov. 1:7, 32; the adulteress, Prov. 7:6–27; the lazy, Prov. 6:6–11; 24:30–34; 26:15), on proper priorities (1 Sam. 25:22; Prov. 22:1; 25:4; 27:5), and on the consequences of actions (Jer. 31:29; Hos. 8:7; Prov. 26:27) or character (Prov. 15:13; 30:32–33; 2 Pet. 2:22). However, many of the biblical proverbs are not simply maxims or truisms but express religious and ethical interpretations of Israelite faith (e.g., Prov. 3:1–12, 27–35; 6:16–19; 14:12), and even the more humanistic of the proverbs were collected not simply for their practical value but to provide instruction in the proper ordering of one's life under God (note Prov. 1:2–7).

The term "proverb" can also refer to a variety of speech and literary forms: a figurative saying

that was not easily understood, similar to a parable or allegory (so translated in many versions; Ezek. 17:2; 20:49; cf. John 10:6; 16:25, 29); poetry in ode or ballad form (Num. 21:27–30); a teaching psalm, used with riddle, dealing with a perplexing moral problem (Ps. 49:4); a wisdom discourse (Job 13:12; cf. 27:1); a byword used to taunt or jeer (Deut. 28:37; Jer. 24:9; cf. Isa. 14:4); or a lament (often translated "taunt song" in newer versions; Mic. 2:4; Hab. 2:6). ***See also*** Parables; Parallelism; Proverbs, The; Riddle; Wisdom. D.R.B.

Proverbs, the, an OT book bearing the traditional title "Proverbs of Solomon," which disguises the fact that this work is made up of several collections, as indicated by the presence of subtitles.

Chaps. 1–9, subtitled "The Proverbs of Solomon Son of David, King of Israel," are basically wisdom poems on various topics: the value of wisdom, evils the wise should avoid, etc. The most striking feature is the personification of Woman Wisdom (1:20–33; 8:1–36; 9:1–6), who is balanced against the "stranger-woman," and Dame Folly (9:13–18). Their invitations are in stark contrast: to life or to death. These chapters open with a statement of purpose (1:1–6) and contain fully developed poems (e.g., 2:1–22 on the benefits of wisdom), in contrast to the disparate sayings that dominate the rest of the book.

The subtitle "The Proverbs of Solomon" in 10:1 introduces a collection of sayings characterized by parallelism. These are pithy sayings drawn from experience and traditional teachings that usually indicate a moral value (honesty, diligence, self-control, etc.). The subtitle "The Words of the Wise" may have originally stood at 22:17 (as in the Septuagint) to indicate a series of admonitions, usually with motive clauses, that extends down to 24:22. This section shows a clear knowledge of the "teaching" of the famous Egyptian sage Amenemope. Another subtitle, "These also are Sayings of the Wise," introduces a short collection, 24:23–34. Chaps. 25–29 are introduced in 25:1 as "Proverbs of Solomon that the Officials of Hezekiah King of Judah Copied"; these sayings resemble those in chaps. 10–22. A subtitle in 30:1 attributes the following words to "Agur, Son of Jakeh," presumably a non-Israelite. Several numerical (x, $x + 1$) sayings complete the chapter. A subtitle in 31:1 reads "The Words of King Lemuel," but vv. 2–9 are spoken by his mother. The compilation concludes with an acrostic poem in praise of the virtuous wife (31:10–31).

OUTLINE OF CONTENTS

The Proverbs

The book is best outlined as a series of collections:

I. Wisdom poems (1:1–9:18)
II. Wisdom sayings (10:1–22:16)
III. Admonitions (22:17–24:22)
IV. "Sayings of the Wise" (24:23–34)
V. "Proverbs of Solomon": wisdom sayings (25:1–29:7)
VI. "The words of Agur" (30:1–33)
VII. "The words of King Lemuel" (31:1–9)
VIII. Poem on the ideal wife (31:10–31)

In its present form the book is probably to be dated in the postexilic period (late sixth century B.C. on), and chaps. 1–9 function as an introduction to the collections. As a whole, the work intends to teach the youth how to cope with life through observation, docility, and fear of the Lord (1:7). The perspective is optimistic: wisdom (equated with righteousness) brings life; folly (equated with wickedness) leads to destruction. Many if not most of the sayings probably go back through oral tradition to the teaching in the family and clan. There may have been a time during the monarchy when, on the analogy of Mesopotamia and especially Egypt (which manifestly influenced Israel), a school flourished in Jerusalem for the training of courtiers (see 25:1). ***See also*** Parallelism; Poetry; Proverbs; Wisdom.

providence, one of the most commonly held and most vigorously debated beliefs in both ancient and modern times: that there is a benevolent and purposeful ordering of all events of history. Nothing happens by chance; though not always perceptible to human understanding, there is a divine or cosmic plan to the universe, a reason for everything.

One philosophical version of this concept is "determinism" or (its negative expression) "fatalism": everything is determined by a higher power, destiny is a matter of fate, one can do nothing to shape one's own destiny, what will be will be. Such a view results in human resignation (quietism/do-nothing-ism).

Another, somewhat more positive, version was the Stoic view that "world-reason" permeated the cosmos and could be recognized in all natural and historical phenomena. Stoic philosophy was designed to put one in harmony with this principle of world-reason. The end result was the achievement of perfect serenity through oneness with what is and shall be.

Even less philosophical people have always asked "Why?" when seeking to understand life

and history. Reading the stars or the entrails of sacrificial animals or consulting the Delphic oracle were favorite means among ancients for determining the relationship of what is to what shall be. Such techniques provided a measure of reconciliation between learned response from normal cause and effect relationships and the bizarre, the paradoxical, the unexpected.

The communities of faith reflected in the documents of the Bible also held to a view of providence. In contrast to the foregoing, however, God the Creator was held to be personally responsible for preserving and regulating the created order. In this context, providence is related to the notions of "election" and "predestination." This God has a plan and purpose for his world. Providence is not a principle of orderliness or reason; rather, providence is the will of the Creator who is actively involved in moving his creation to a goal. History is not a cyclical process of endless repetition; history is being moved toward the predetermined end.

In the OT and Jewish literature, the Book of Job and the Wisdom of Solomon represent two classical locations for this confidence regarding providence. Here, as in other texts, the key terms often translated "providence" are really "foreknowledge" or "foresight" (which, indeed, is the etymological Latin meaning of "providence"). While humans see and judge from the limitations of time and space, even when able to lean on the recorded wisdom of prior generations, God sees the end from the beginning. In spite of evil and all that is perplexingly enigmatic in life, the message of the OT and subsequent Jewish literature is to trust in the providential care and good will of the Creator (Deut. 32:7–43; Job 10:12; Pss. 74:12–17; 104:27–30; cf. Wisd. of Sol. 14:3; 17:2; 3 Macc. 4:21; 5:30; 4 Macc. 9:24; 17:22).

In the NT, the basis for such an invitation to trust providence is Jesus Christ. He becomes, through his life, death, and resurrection, the guarantor that God's providential goal is salvation rather than destruction. The belief that history has a saving goal is grounded in his coming. The earliest Christians believed and preached this understanding of providence in a great variety of verbal expressions and human situations (e.g., Matt. 6:25–33; 10:29–31; Rom. 8:28–39; 2 Cor. 4:11–18; 1 Pet. 1:3–9). ***See also*** Astrologer; Election; God; Grace; Magic and Divination; Oracle; Predestination; Salvation; Stoics. J.E.A.

provinces, administrative areas set up within the Roman Empire. The Latin term, *provincia,* originally referred to a definite sphere of action. In the late Republic it was applied to territories, Asia, Gallia, and Narbonensis. Under Augustus (27 B.C.–A.D. 14) the empire was made up of twenty-eight provinces, some created by dividing larger provinces like Gaul, Spain, and Macedonia. They also included a number of allied states ruled by client kings. Many of the provinces consisted of territory that had been directly annexed through conquest: Sicily, Sardinia, Corsica, Spain, Macedonia, Cyprus, Illyricum, Cilicia (southeast Asia Minor), Syria, Gaul, Egypt, and most of the Danube and German territories. The conquest of Britain and Dacia (modern Romania) was completed by later emperors. Other provinces came into being as bequests from native kings, who sought to ensure a safe transition for their supporters: Asia, Bithynia (northwest Asia Minor), and Cyrene. Judea became a Roman province when Herod the Great's son proved unable to govern. The corn-producing area of the Bosporus was unusual in remaining a client kingdom.

In 27 B.C. the senate's grant of *provincia* to Augustus made the emperor responsible for those provinces that were not entirely pacified (hence "imperial provinces"). As *princeps* (Lat., "prince") Augustus had supreme command of the army. The senate retained control of provinces (hence "senatorial provinces") in which military presence was not required: Sicily, Sardinia and Corsica, Illyricum, Macedonia, Greece, Asia, Bithynia, Crete and Cyrene, and Africa. However, legions were stationed in Africa, Illyricum, and Macedonia during the early principate. Proconsuls or propraetors were sent to govern senatorial provinces for a year term. However, the emperor could always overrule a senatorial governor. The emperor also had financial agents in those provinces who took care of the imperial estates and served as a watch on the governor. Since the agents could bring harsh retribution on rapacious officials, these agents might be more powerful than the governor. The imperial provinces were governed by legates of consular or praetorian rank. Their appointments lasted as long as the emperor chose to retain them in office. They were responsible only to the emperor. Egypt, whose grain supply was crucial to the city of Rome, remained the private possession of the emperor. It was governed by a prefect.

A province was essentially the network of cities within its boundaries. Those cities formed the political and social nucleus of each province and were concentrated along the coasts or major rivers. In the eastern provinces urbanization had resulted from the hellenization of the area after Alexander's conquest. The Romans inherited a dense and ready-made network of cities. In the western provinces the only cities were those of Phoenician and Greek foundation. Under Augustus urbanization was extended in Gaul and Spain. Towns and cities served to diffuse Greco-Roman culture. In areas such as Germany where Rome could not build an administrative structure based on cities, its rule was a failure.

Most of the thousand or so cities of the empire were on the order of ten to fifteen thousand persons. Only a few, Alexandria, Antioch, and Carthage, had several hundred thousand.

Inland there might be great stretches with no cities at all.

While the areas to which 1 Peter is addressed are the names of Roman provinces (1 Pet. 1:1), scholars are not agreed on whether or not the author of Acts consistently used them, or on occasion also used ethnic designations for various areas. Macedonia and Achaia (Acts 19:21) are surely meant as provinces, but there is question whether the reference to "Galatia" in Acts 16:6 means the province of that name, or the older, more limited area occupied by the Gauls, and hence ethnic Galatia. The same problem occurs in trying to determine to whom Paul addressed his Letter to the Galatians; one does not know whether that referred to the Roman province, or to the ethnic area. ***See also*** Roman Empire. Psalm 151, a psalm included at the end of some manuscripts of Psalms in the Septuagint (LXX), the ancient Greek OT, where one manuscript, Codex Sinaiticus, numbers it Psalm 151. It is not found in Psalms in the Jewish canon of Scripture, which enumerates 150 psalms; however, the Hebrew original has turned up in 11QPs[a], a manuscript containing both canonical and noncanonical psalms discovered at Qumran among the Dead Sea Scrolls.

The Hebrew original makes it clear that the Greek version is a summary of two seemingly autobiographical psalms, the one telling the story of the anointing of David, the young shepherd, maker of instruments and singer of psalms praising the Lord's deeds, and the other telling of David's defeat of Goliath. The psalm is significant because it reflects the developing role of David in Second Temple Judaism (515 B.C.–A.D. 70) as founder of the worship of the Temple and writer of its hymns, as the anointed of God, and even as inspired "prophet" as the consequence of Psalms becoming Scripture.

The Hebrew psalms behind Psalm 151 seem to antedate the Qumran community, indicating that they must have originated prior to the second century B.C. The presence of this psalm both in 11QPs[a] and the LXX suggests that Psalms was a somewhat fluid collection up until the first century A.D. Psalm 151 is part of the Greek Orthodox Bible, where it is printed at the end of Psalms. It has recently been included as an individual item in the RSV Apocrypha because of its role in Eastern Orthodoxy. ***See also*** Apocrypha, Old Testament; Psalms; Septuagint; Scrolls, The Dead Sea; David. Psalms (sahmz), **the,** collection of some hundred and fifty songs, prayers, and various other less easily classified compositions that forms the nineteenth book of the OT. Ascribed by tradition to King David, the Psalms have, since late antiquity, played a central role in synagogues and churches; not only have they figured prominently in Jewish and Christian liturgies, but they have, by their style and their words, inspired later writers to compose psalm-like prayers and hymns, both for public worship and private piety. Probably no book of the Bible was known so well to medieval Christendom as the Psalms, and even today this book enjoys a unique place in the hearts of all readers of the Bible.

Diversity: By any standard, these prayers and songs are a heterogeneous lot, differing widely in such matters as date of composition, style, literary form, and original purpose and life-setting. This great variety was, for centuries, obscured not only by their collective attribution to David, but by the very fact of their having been grouped together in a single book and unified under a single name. "Psalm" goes back to the Greek *psalmos,* used by translators to render the Hebrew *mizmor,* "song," a word that appears in the titles of some psalms. In Hebrew the book is known most commonly as *sefer tehillim,* "book of praises," a convenient catchall. Another name for the book, "Psalter," goes back to the Greek *psalterion,* a stringed instrument. As modern scholarship has continued to study the Psalms, however, the differences between them have more and more become the focus of inquiry.

To be sure, some differences had always been apparent. On the most basic level, some psalms have a clearly celebrative quality, glorifying God's powers or historic deeds or offering thanksgiving for a particular intervention (recovery from illness [e.g., Ps. 30], for example, or triumph over "enemies" [e.g., Pss. 30, 54]). Others are, equally clearly, of a petitionary character, lamenting the speaker's dire straits and appealing for divine help (e.g., Pss. 6, 140). Some psalms seem to be intended for recitation by an individual, a particular "I" who appears in the text (e.g., Pss. 23, 130), while in others the words are apparently to be sung or recited by a group, a choir, or the community as a whole (e.g., Pss. 113, 132). But so long as the Psalms were attributed to David (or occasionally to other ancient figures), these differences—to the extent that they were noticed—were ascribed to circumstances in the author's own life: one psalm was composed upon a happy occasion, another in time of distress; in one David speaks on his own behalf, in another on behalf of his people, etc. In fact, early, anonymous scribes apparently sometimes added a brief phrase at the beginning of a psalm, seeking in that way to connect it to some event in the life of its presumed author (see, e.g., Pss. 34:1; 51:2).

Authorship and Date: This approach to the Psalms as personal, occasional lyrics showed remarkable resilience even after the mid-nineteenth century, when the tradition of Da-

vidic authorship came to be widely questioned. With the steady advance of biblical scholarship, however, and especially with the availability of comparative material from ancient Egyptian and Babylonian literature, such notions eventually began to be abandoned. Not only did scholars now hesitate or refuse to date psalms to the time of David (in general they were dated much later, some writers at the turn of the twentieth century even denying the possibility that any of the psalms predated the Babylonian exile), but they began increasingly to treat the Psalms as "stock" compositions, composed by anonymous bards to be recited again and again by individuals or communal choirs either as part of community worship or in times of private joy or distress.

The general lines of this approach have continued to be pursued by contemporary scholars, albeit with some revision. In particular, the matter of dating has undergone another radical shift, due in part to certain striking resemblances discovered between the language of some psalms and that found in the ancient literature of Ugarit, a city somewhat to the north of biblical Israel. On this basis, compositions such as Psalms 29 and 68 have not only been dated far earlier than before but are now believed by some to be among the oldest parts of the Hebrew Bible. By contrast, certain other parts of the Psalter (e.g., Pss. 1, 119) bespeak an entirely different age and mentality: some have dated them among the youngest parts of Hebrew Scripture.

Types: The Psalter is thus a heterogeneous collection or, more likely, a collection of subcollections spanning many centuries. The editorial note at Ps. 72:20 is one visible seam, perhaps indicating the existence of an earlier smaller "psalter" called "the Prayers of David son of Jesse." More fundamentally, the fifteen "Songs of Ascents" (Pss. 120–34) present a discernible subgroup, as do the psalms attributed to the "sons of Korah" (Pss. 42, 44, 47, 48, 49, 84, 87), Asaph (Pss. 50, 73–83), and the like. Moreover, the predominance of reference to God by the word "Elohim" in Psalms 42–83 has led scholars to view this group as being of distinct provenance or editing, especially in view of the overlap between some of its psalms and those that precede it in our Psalter (thus, Ps. 53 is a doublet of Ps. 14; Ps. 70:2–6 = Ps. 40:14–18; Ps. 71:1–3 = Ps. 31:2–4; cf. Ps. 108, which is a doublet of Pss. 57:8–12 and 60:7–14). It has been theorized that all these materials, which had originally been written at different times and for different purposes, were gradually gathered together into collections by various groups in several locations and were still later combined into a single Psalter.

Besides considering the evolution of the Psalter as a book, modern scholars have especially concerned themselves with classifying the Psalms into different types, largely on the basis of the distinctions listed above (i.e., communal vs. individual psalms; "praise" vs "petition/lament"), and with trying to pin down particular conventions, characteristic forms, phrases, or themes associated with each type.

Purpose or Use: Of special concern has been the question of how various types might have fit into the daily life of ancient Israel. Because of the frequent mention of God's "house" or "palace" and sanctuary appurtenances, as well as of the psalmist's appearing or bowing down "before God," many psalms have been thought to have been composed for one of Israel's ancient religious sites and especially the Jerusalem Temple. Indeed, some scholars have asserted that virtually all the psalms in our Psalter were composed for worship at a religious site and constituted nothing less than the verbal equivalent or accompaniment to the offerings of incense and sacrificial animals that comprised Israel's regular service of God. Objections have been advanced to this claim; nonetheless, the "liturgical connection" is now widely accepted for many psalms. Numerous hymns, for example, appear by their wording intended for recitation at annual religious festivals (though the precise character of some of these observances is still in dispute). Similarly, it has been argued that some "psalms of the individual," both petitions and thanksgivings, were intended specifically to be recited at a sanctuary, the thanksgivings presumably accompanying an actual offering.

This, in turn, has caused critics to reassess the language of the Psalms. In the light of the proposed religious milieu of many of them, references to the "presence," "face," "protection," "wings," and the like of the Deity take on a new concreteness. So, more generally, the practice of many critics in approaching the words of particular psalms has been to seek to concretize them, to tie them down to processionals, priestly blessings, and other cultic regalia, or to link the requests for divine "goodness" or "blessing" to the somewhat mundane but vital concerns for adequate rainfall, a good harvest, and other necessities that might have shaped Israel's communal worship. This approach has often proven quite convincing.

For much the same reason, the very vagueness of many petitions has aroused the suspicion of some critics: who, for example, are the otherwise unspecified "enemies" from whom the psalmist seeks to be protected? And why is his salvation in psalms of thanksgiving so often presented in floridly metaphorical but hardly specific language? It has been argued that the language of many praises and complaints is left purposely vague so as to allow the composition to be reused by a variety of different speakers, each making reference to his particular case, but in language that gives more the illusion than the substance of specificity.

All this in turn has tarnished, at least in the eyes of some, the "spirituality" of the Psalter, since many of its most sublime passages have

had to be reunderstood (and in some cases retranslated) in somewhat less lofty terms. Part of this "de-spiritualization" is an illusion created by the gap between worship in ancient Israel and worship in modern-day settings. The latter seems predicated on the very distance or elusiveness separating Deity and worshiper; the former, at least in its liturgical setting, was, on the contrary, based on the fact of divine presence, an absolute reality. What to moderns may seem mechanical and hopelessly concrete takes on quite a different aspect when restored to such a setting and mentality. Moreover, declarations of fealty, dependence, and so forth acquire a solemn significance when uttered publicly at the very "dwelling place" of the Deity: they are indeed what many psalms seem to represent them as, verbal offerings, thus wholly comparable to sacrifices, tributes in the most concrete sense.

This notwithstanding, a liturgical setting cannot be posited for all the Psalms—many, especially those whose language suggests a late date of composition, seem clearly to belong elsewhere, to private piety or possibly to noncultic yet communal worship. Indeed, it has been argued that much material in the Psalter originally tied to public worship came gradually to have a life outside of it as well. Political events may have had a role in such an evolution. The destruction of old religious sites as well as the centralization of worship may have encouraged the establishment of nonsacrificial rites in the former places of sacrifice, with psalmody taking on an increased importance. Similarly, the Babylonian exile may have served to give the verbal component of worship a new independence. Whatever its causes, such a gradual shift might not only explain the scarcity of worship references in late psalms but would suggest that even originally cultic material may later have come to be "reread," understood in new ways and used in new circumstances.

David depicted composing psalms, a role that tradition ascribes to him; page from the *Paris Psalter* (900).

Such a "rereading" tendency seems amply attested not only in the latest parts of the Psalter but in such extrabiblical documents as the writings of the Qumran community that were found among the Dead Sea Scrolls. Indeed, the very existence of our present Psalter, with its integration of diverse materials, may be due to just this process: festive hymns, prayers, and songs that had once been designed for the sanctuary all eventually became "praises" (*tehillim*) suitable for worship in any setting. In fact the Psalms were, in the apparent view of one manuscript from Qumran ($11QPs^a$), now nothing less than revealed Scripture, "praises" and songs spoken by David through divinely sent wisdom and even "in prophecy." And so they have remained.

Psalms of Solomon, a group of eighteen pseudepigraphical psalms, extant only in Greek and Syriac but possibly composed originally in Hebrew. According to the commonly accepted view, the psalms were compiled around the middle of the first century B.C. The political allusions in them seem to reflect the conquest of Judea by the Roman general Pompey (63 B.C.). The psalms themselves treat various topics. Notable is a lament on Israel's troubles, a hymn of messianic hope, and various others that deal with religious and political themes. ***See also*** Pseudepigrapha.

Psalter (sawl´tuhr). **1** A name designating the biblical book of Psalms. **2** A name for a collection of biblical psalms used in worship. A number of such collections have survived from the early Middle Ages, often combined with portions of the Gospels. ***See also*** Psalms, The.

Pseudepigrapha (s*oo*´duh-pig´ruh-fuh; Gk., "writings with false superscriptions"), a collection of some sixty-five documents connected with but not part of the OT and written by Jews or Christians, for the most part during the three centuries before and the two centuries after the

beginning of the Christian era. They are called "pseudepigrapha" because, in many cases, the person with whom they are identified was not the author. By the time of Jesus of Nazareth and the Jewish rabbi Hillel, the religious person in early Judaism (ca. 250 B.C.–A.D. 200) had a collection of writings that were regarded as paradigmatic for all aspects of life. This collection was the Hebrew Bible, or the Christian OT. By the first century A.D., almost all the writings in this collection were perceived as divinely inspired; by the middle of the second century, the OT canon was considered closed.

So powerful was the influence of the OT that contemporary religious writings were almost always the result of reflections and meditations on these Scriptures or expansions of them; all language, symbols, and metaphors were shaped by these texts in a way virtually unparalleled in the history of ideas. For example, when the author of *The Testament of Judah* (chaps. 3–7) describes the Maccabean wars, he refers to them in OT forms and paradigms: Dan and Judah pretend to be "Amorites" and they fight against the "Canaanites." Indeed, a great hindrance in perceiving the dates of these early Jewish writings is the penchant for referring to contemporary events in terms of past cataclysms; for example, the Roman destruction of Jerusalem in A.D. 70 is described with prose and poetry borrowed from old descriptions of the sixth-century B.C. conquest of Jerusalem by the Babylonians. Thus, the author of *4 Ezra* laments over Rome's conquest of Jerusalem with the words: "Are the deeds of those who inhabit Babylon any better? Is that why she has gained dominion over Zion?" (4 Ezra 3:28).

The sixty-five documents of the OT Pseudepigrapha are often attributed to one or another of the Hebrew patriarchs. They were written by Jews or Christians during the three centuries before and the two centuries after the beginning of the Christian era. One writing, *Ahiqar,* predates this period and is included because of its importance for the study of early Judaism and the origins of Christianity. Some writings postdate A.D. 200. These are included because they provide valuable information regarding the development of Jewish traditions and cycles, contain perhaps an edited version of an otherwise lost early Jewish document, or preserve much earlier Jewish traditions. Hence, some writings in the OT Pseudepigrapha clearly predate the destruction of Jerusalem in A.D. 70; others certainly date from that cataclysmic event until the defeat of the proclaimed messianic warrior Simon Bar Kokhba in 135; others probably can be dated prior to 135 or 200, when the Mishnah (i.e., Jewish oral traditions) was codified; other Jewish writings are extant only in later Christian versions. One must be careful to distinguish, for example, between a book like *Jubilees,* which certainly dates from the second century B.C., and a work like *The Ascension of Isaiah,* which is a composite of Jewish and Christian lore. Guidance regarding the dates, origin, and theological importance of each document in the Pseudepigrapha is now provided in a new edition: James H. Charlesworth (ed.), *The Old Testament Pseudepigrapha* (Garden City, NY: Doubleday, 1983); all quotations from the Pseudepigrapha are taken from this collection of translations.

It must be emphasized that the term "Pseudepigrapha" is used because of custom, tradition, and wide international acceptance. In no way does this term indicate what the Greek original denotes: "writings with false superscriptions." No longer do scholars use the term in its etymological sense, even though many of the documents are incorrectly assigned (sometimes, perhaps, by much later scribes) to such figures as Enoch, Abraham, Moses, Solomon, Elijah, and Ezra.

The documents in the Pseudepigrapha can be arranged under five loosely defined genres.

Apocalyptic Literature and Related Works: This category includes nineteen documents:

1 (Ethiopic Apocalypse of) Enoch
2 (Slavonic Apocalypse of) Enoch
3 (Hebrew Apocalypse of) Enoch
Sibylline Oracles
Treatise of Shem
Apocryphon of Ezekiel
Apocalypse of Zephaniah
4 Ezra
Greek Apocalypse of Ezra
Vision of Ezra
Questions of Ezra
Revelation of Ezra
Apocalypse of Sedrach
2 (Syriac Apocalypse of) Baruch
3 (Greek Apocalypse of) Baruch
Apocalypse of Abraham
Apocalypse of Adam
Apocalypse of Elijah
Apocalypse of Daniel

Either the author or a subsequent scribe gave these titles to the documents now preserved almost always in late manuscripts, although fragments of some documents in the Pseudepigrapha have been discovered among the Qumran literature (Dead Sea Scrolls). The noun "Apocalypse" comes from the Greek word meaning a "revelation" or "disclosure." Thus, these documents contain a revelation of what is occurring in the heavens above the earth or what is to happen in the impending future. Such disclosures are usually graphically illustrated with visions and auditions, and there are often cosmic trips by Enoch or other "holy ones" into the hidden reaches of our universe.

Yet, the reason for these descriptions is not so much cosmology as theology; the concern is not so much with the distant world or future age as it is with the ramifications of these disclosures for the choices to be made in the present, earthly

world. Hence, an ethical dimension is often implicit, even at times explicit, as in *1 Enoch* 101:1: "Examine the heaven, you sons of heaven, and all the works of the Most High; and be afraid to do evil in his presence." The moral import of apocalyptic thought is emphasized, for example, in *2 Enoch* 39–66, where Enoch returns to the earth and instructs his sons regarding righteousness, and in *The Testaments of the Twelve Patriarchs* (see below), where each of the twelve sons of Jacob instructs and admonishes his sons. At least one apocalyptic writing laments the present state of the world and is pessimistic; note, for example, *4 Ezra* 7:48–49 [118–119]:

> O Adam, what have you done? For though it was you who sinned, the fall was not yours alone, but ours also who are your descendants. For what good is it to us, if an eternal age has been promised to us, but we have done deeds that bring death?

Other apocalypses contain a yearning for a new, glorious age, which seems to be dawning; note, for example, *2 Baruch* 73:1–2:

> And it will happen that after he has brought down everything which is in the world, and has sat down in eternal peace on the throne of the kingdom, then joy will be revealed and rest will appear. And then health will descend in dew, and illness will vanish, and fear and tribulation and lamentation will pass away from among men, and joy will encompass the earth.

The character and date of the apocalyptic works already listed may be succinctly suggested. *1 Enoch,* a most important apocalypse replete with divine information about the world and history, is a Jewish composition; it is composite and dates from the third century B.C. to the first century A.D. (probably the first half). *2 Enoch,* also a brilliant apocalypse with penetrating insights into our universe and humanity, is extant only in Slavonic; the original Jewish core probably dates from the end of the first century A.D. *3 Enoch* is Jewish and in its present form dates from the fifth or sixth century A.D. It is not the work of one author, but rather the deposit of many traditions; portions of the writing probably date from the first or second century A.D.

Leather manuscript fragment in Greek of the *Sibylline Oracles,* ca. the fourteenth century A.D.

The Sibylline Oracles, which predict future woes and calamities, comprise both early Jewish and later Christian writings, dating from the second century B.C. to the seventh century A.D. They usually served as political propaganda. *The Treatise of Shem* clarifies the features of a year according to the house of the zodiac in which the year begins; although difficult to date, the document seems to be an Alexandrian composition from the end of the first century B.C. *The Apocryphon of Ezekiel* is lost, except for quotations and an excerpt in both the writings of the fourth century church father Epiphanius and the Babylonian Talmud. The original Jewish document dates from sometime around the turn of the era. *The Apocalypse of Zephaniah* is only partly preserved; the original Jewish work probably describes Zephaniah's travels to heaven and Hades and was written around the turn of the era.

The fourth book of Ezra (*4 Ezra*) is a Jewish work that postdates the destruction of the Temple in A.D. 70; a later Christian altered its pessimistic tone by prefixing two chapters and affixing two others. *The Greek Apocalypse of Ezra* records Ezra's visions of heaven, hell, and the Antichrist; in its present form, this apocalypse is Christian, is rather late (perhaps as late as the ninth century), and is a mixture of Jewish and Christian sources. *The Vision of Ezra* is Christian but is clearly in the cycle of Ezra writings like *4 Ezra* and *The Greek Apocalypse of Ezra;* it dates from between the fourth and the seventh centuries. *The Questions of Ezra* is Christian and like *The Vision of Ezra* is placed within the Ezra cycle; its date has not yet been determined. *The Revelation of Ezra* concludes the Ezra cycle; somewhat like *The Treatise of Shem,* it describes the nature of the year according to the weekday in which it begins. It is Christian and difficult to date, certainly predating the ninth century, the date of the extant manuscript. *The Apocalypse of Sedrach,* in its present form, is Christian and perhaps as late as the fifth century, but it obviously preserves material from the early centuries of the present era.

The Syriac Apocalypse of Baruch (2 Baruch), a Jewish work that is far more optimistic than *4 Ezra* and probably a later reaction to it, dates from around A.D. 100. *3 Baruch* is either a Christian work that utilized Jewish traditions or a Jewish work that has been edited by a Christian. The latter possibility seems more probable. The Jewish writing would date from the first or second century A.D.

PSEUDEPIGRAPHA

The Apocalypse of Abraham is extant only in Slavonic; the early Jewish core is dated by most scholars between A.D. 70 and 150. *The Apocalypse of Adam,* in its present form, is Gnostic, but not Christian Gnostic, and several scholars have argued or suggested that it derives from Jewish traditions or sources that are from the first century A.D. *The Apocalypse of Elijah,* a composite work of Jewish and Christian materials, was probably written between A.D. 150 and 275; the Jewish material is obviously even older than the earliest date of the composite work. *The Apocalypse of Daniel,* according to some scholars, contains very early, perhaps fourth-century A.D. sections; the present work clearly dates from the beginning of the ninth century but contains Jewish traditions that may be centuries earlier.

Testaments: The second genre of documents in the OT Pseudepigrapha is "Testaments" (often with apocalyptic sections); this group contains the following documents:

- Testaments of the Twelve Patriarchs
- Testament of Job
- Testaments of the Three Patriarchs
  - Testament of Abraham
  - Testament of Isaac
  - Testament of Jacob
- Testament of Moses
- Testament of Solomon
- Testament of Adam

OT narratives usually provide the setting for these "Testaments." Although there was no concrete genre to bind the authors, there is a shared structure or format to most of these writings. The OT patriarch, on his death bed, calls his sons and followers around him in order to convey his last words of instruction and perception. These testaments (or last wills) contain moral instruction and are often dramatized by visions into the future. In a certain sense, this genre was influenced by Jacob's testament to his sons (Gen. 49).

The Testaments of the Twelve Patriarchs, in its present form, is a Christian work that probably dates from the second half of the second century A.D. Most scholars are convinced, however, thanks to the recovery of the Testaments of *Levi, Judah,* and *Naphtali* (from *The Testaments of the Twelve Patriarchs*) among the Qumran scrolls (and thus their clearly pre–A.D. 70 dates), that the work is originally a Jewish composition that dates from the second or first century B.C. This extremely important document is a depository of Jewish ethics, but there are also apocalyptic sections and a significant belief in two Messiahs (found also in the Qumran literature): "And there shall arise for you from the tribe of Judah and [the tribe of] Levi the Lord's salvation" (*T. Dan* 5:10).

The Testament of Job is a Jewish work that urges the embodiment of an endurance like Job's; it was written around the turn of the era. *The Testaments of the Three Patriarchs* (or the Testaments of *Abraham, Isaac,* and *Jacob*) are three works organically linked, with two Christian writings, the Testaments of *Isaac* and *Jacob,* successively evolving from *The Testament of Abraham,* originally a Jewish work that probably dates from around A.D. 100. *The Testament of Moses,* which purports to be Moses' farewell exhortation to Joshua, is a Jewish composition that obtained its present form shortly after the turn of the era; it is only partly preserved in one Latin palimpsest.

The Testament of Solomon is a folk story about how Solomon built the Temple using magic and demons but fell from God's favor because of his love for an idolatrous Shummanite woman. As extant, it dates from around the third century A.D. While it is possible, as some scholars have argued, that an underlying Jewish writing dates from the first century, it is clear that portions of the Testament represent first-century Palestinian Jewish ideas. *The Testament of Adam* is a composite work containing the Horarium (Hours of the Day), the Prophecy, and the Hierarchy (of the Heavenly Powers); it reached its present Christian form before the end of the third century A.D. In their original form, however, the Jewish portions may be at least a century earlier.

Expansions of the OT and Other Legends: The third genre of documents in the OT Pseudepigrapha contains the following documents:

- The Letter of Aristeas
- Jubilees
- Martyrdom and Ascension of Isaiah
- Joseph and Asenath
- Life of Adam and Eve
- Pseudo-Philo
- Lives of the Prophets
- Ladder of Jacob
- 4 Baruch
- Jannes and Jambres
- History of the Rechabites
- Eldad and Modad
- History of Joseph

These documents especially demonstrate the creative force of the OT; with only one exception, they expand upon and embellish the narratives and stories of the OT.

Ethiopic text of 1 Enoch 48.

The Letter of Aristeas—the exception just mentioned—is an apology primarily for the Septuagint but also for the Temple; it dates from the first half of the second century B.C. *Jubilees* is a conservative writing that celebrates the supremacy of the Law and the Sabbath, directs polemics against a lunar calendar, and extols Jewish exclusiveness. It is a rewriting of Gen. 1:1 through Exod. 12:50 and is ostensibly a revelation to Moses by the Angel of the Presence. It was written during the second century B.C., probably not long before 105 B.C. *The Martyrdom and Ascension of Isaiah* (chaps. 1–5) is Jewish and was composed certainly long before the end of the first century A.D. and probably around 100 B.C. Joined to the *Martyrdom* is the "Vision of Isaiah" (chaps. 6–11), a Christian work, which predates the third century A.D. Later interpolated into the *Martyrdom* is another Christian work, the so-called *Testament of Hezekiah* (3:13–4:22), which dates perhaps from the end of the first century A.D. The three sections were combined before the fourth century.

Joseph and Asenath, a romance between Joseph and Pentephres's daughter, is an expansion of Gen. 41:45. The leading scholars today see this work as dating from around A.D. 100, if not earlier. *The Life of Adam and Eve,* an expansion of Genesis 1–4, dates from the first century A.D., perhaps the first half. *Pseudo-Philo,* a rewriting of Genesis through 2 Samuel, with legendary expansions, was written either between A.D. 70 and 135 or just before 70. In it (40:5) a memorable lament attributed to Seila, Jephthah's daughter (cf. Judg. 11:30–40), includes the following lines:

May my words go forth in the heavens,
and my tears be written in the firmament!
That a father did not refuse the daughter
whom he had sworn to sacrifice, . . .

The Lives of the Prophets, devoid of some Christian accretions, is a deposit of folklore regarding the lives and deaths of twenty-three prophets; the account is enriched with folklore and legends, many undoubtedly popular in and around Jerusalem. It was written in or just before the first century A.D. *The Ladder of Jacob,* preserved only in the *Explanatory Palaia,* a medieval Slavonic text, is an expansion on Jacob's dream at Bethel (Gen. 28:11–22). Some scholars have seen behind chaps. 1–6 an early Jewish document, dating perhaps from the late first century A.D.; chap. 7 is a Christian work, once independent, but now an appendix to the pseudepigraphon. *4 Baruch,* an expansion on Jeremiah, was written shortly after A.D. 100; it is a Jewish writing edited by a Christian. *Jannes and Jambres,* a tale about the Pharaonic magicians who opposed Moses (Exod. 7–8; cf. 2 Tim. 3:8–9), derives from many diverse, very early legends. As a book, it is Christian in its present edited form, but it certainly goes back to Jewish traditions that predate the first century A.D.

The History of the Rechabites, a legendary expansion of Jeremiah 35, as extant, is a Christian work that predates at least the sixth century, but there are reasons to speculate that portions preserve early Jewish traditions. The core chapters may derive from a Jewish writing that predates A.D. 100. *Eldad and Modad* is lost, except for one quotation in *The Shepherd of Hermas;* if a Jewish pseudepigraphon, it is very early and is an expansion of Num. 11:24–30. *The History of Joseph,* an elaborate legend based on Gen. 41:39–42:38, is difficult to date, but originally it may be both early and Jewish. It certainly predates the extant sixth-century papyrus.

Wisdom and Philosophical Literature: The fourth genre of documents in the OT Pseudepigrapha contains the following works:

Ahiqar
3 Maccabees
4 Maccabees
Pseudo-Phocylides
The Sentences of the Syriac Menander

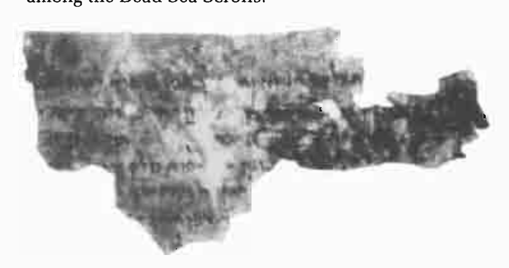
These writings preserve some of the insights of ancient wisdom, not only within early Judaism but also in surrounding cultures. Here, we confront the universalistic truths so essential for sophisticated and enlightened conduct and behavior in all facets of life, secular and religious. Jews tended to borrow philosophical truths from other cultures, frequently but not always recasting them in light of the Torah.

Ahiqar, an Assyrian composition of the late seventh or sixth century B.C., predates the period covered by the OT Pseudepigrapha; it is included among the Pseudepigrapha, however, because it is important for an understanding of the thought of early Judaism, is cited by the author of Tobit (1:21–22), and is not found in other collections of ancient literature. *3 Maccabees,* primarily a humorous account of divine intervention that saved the Jews from persecution by Ptolemy IV Philopator, was written near the turn of the era, perhaps even as early as the early decades of the first century B.C. *4 Maccabees,* a philosophical diatribe influenced by Stoicism and Greek rhetoric, was composed probably sometime in the century preceding the destruction of Jerusalem in A.D. 70. *Pseudo-Phocylides,* Jewish maxims attributed to an Ionic poet who lived in the sixth century B.C., was compiled perhaps between 50 B.C. and A.D. 100. *The Sentences of the Syriac Menander* is a florilegium (collection) of old wisdom sayings probably compiled by a Jew around the third century A.D. The work is at times strikingly similar to *Ahiqar* and to Ecclesiasticus (The Wisdom of Jesus the Son of Sirach).

Prayers, Psalms, and Odes: The fifth, and final, genre of documents in the OT Pseudepigrapha contains the following writings:

More Psalms of David
Prayer of Manasseh
Psalms of Solomon
Hellenistic Synagogal Prayers

Prayer of Joseph
Prayer of Jacob
Odes of Solomon



Some of these poetic compositions are influenced by the thought and style of the Davidic Psalms, while others show the more free developments of poetic style characteristic of early Jewish hymns.

More Psalms of David contains five additional psalms of David and some verses of a sixth; these were composed over a wide period of time. One dates from the third century B.C., while others date from the second century B.C. to the first century A.D. Sometimes the reference to David is palpable; note, for example, Psalm 151A, v. 1:

I was the smallest among my brothers,
and the youngest among the sons of my father;
and he made me shepherd of his flocks,
and the ruler over his kids.

The Prayer of Manasseh, often included in the Apocrypha, a beautiful and penetrating penitential prayer, was composed by a Jew around the turn of the era. *The Psalms of Solomon* preserves eighteen psalms written by pious Jews near or in Jerusalem during the last half of the first century B.C. *The Hellenistic Synagogal Prayers,* Jewish prayers identified behind books seven and eight of the *Apostolic Constitutions,* are difficult to date. They were probably composed during the second and third centuries A.D., if not earlier. *The Prayer of Joseph,* as extant, is more typical of the works collected under the category "Expansions of the Old Testament"; it is only partially preserved, but there are reasons to date it to the period between A.D. 70 and 135. *The Prayer of Jacob* is lost, except for twenty-six lines preserved in a papyrus fragment. It is a Jewish prayer that is difficult to date, but it must predate the extant fourth-century papyrus. *The Odes of Solomon,* a Christian collection of forty-two odes significantly influenced by the literature of early Judaism, especially the Qumran scrolls, was composed around A.D. 100 and is strikingly similar to the Gospel of John.

Aramaic fragment of 1 Enoch 22 found among the Dead Sea Scrolls.

The new edition of the OT Pseudepigrapha (see above) also contains a supplement of thirteen Jewish works preserved primarily or only in quotations by the fourth century bishop and church historian Eusebius, who found them almost always in a now lost work by Alexander Polyhistor, who lived in the first century B.C. Some of the excerpts are fascinating. For example, Aristobulus, a brilliant Jewish philosopher influenced by Pythagorean, Platonic, and Stoic ideas, argued that Pythagoras, Socrates, and Plato heard God's voice. Artapanus, a Jewish historian who lived in the second century B.C., even suggested that all the greatness of Egyptian culture, including idolatry and polytheism, was to be attributed to the work of Abraham, Joseph, and Moses. ***See also*** Apocalyptic Literature; Apocrypha, Old Testament; Bible; Canon; Josephus; Mishnah; Music; New Testament; Old Testament; Philo; Prayer; Pseudonym; Rabbi, Rabboni; Scrolls, The Dead Sea; Septuagint; Talmud; Wisdom. J.H.C.

pseudonym, a fictitious or assumed name. As a matter of convention in the intertestamental period, many writers assumed the names of various persons mentioned in the OT, including Adam, Enoch, Moses, Job, Ezra, and the twelve sons of Jacob, to draw upon that individual's authority or symbolic importance. The book of Daniel is pseudonymous, while, in the NT, such Letters are attributed to James, Peter, Jude, and, in some cases, to Paul. ***See also*** Apocrypha, Old Testament; Pseudepigrapha.

Ptolemais (tol´uh-may´uhs). ***See*** Acco.

Ptolemy (tol´uh-mee), the dynastic name of the kings who ruled Egypt after the death of Alexander the Great. **1** Ptolemy I, "Soter" (d. 283/2 B.C.), founder of the dynasty. He established the administrative and military structure of Egypt. He also created a hellenized Egyptian cult around

Ptolemy IV on a gold coin; on his head is a crown formed of the sun's rays.

the god Serapis for the Greek populace and established the "museum," the library at Alexandria that would make the city the center of learning and research throughout the Hellenistic period. **2** Ptolemy II, "Philadelphus" (ruled 283–246 B.C.), who adopted the Egyptian custom of marrying his full sister, which scandalized his Greek subjects. Under his reign the hellenization of Egypt and the ascent of Alexandria to intellectual prominence continued. During his reign the Greek translation of the Hebrew OT, the Septuagint (LXX), was begun. **3** Ptolemy III, "Euergetes," who ruled from 246 to 222/21 B.C. **4** Ptolemy IV, "Philopator," who ruled from 221 to 204 B.C. **5** Ptolemy V, "Epiphanes" (ruled 204–180 B.C.), who was crowned according to ancient Egyptian rites in 197 B.C., an event commemorated on the Rosetta Stone. **6** Ptolemy VI, "Philometor" (ruled 180–145 B.C.), who shared rule with his brother, Ptolemy VII. **7** Ptolemy VII, "Neos Philopator" (145–144 B.C.). **8** Ptolemy VIII, "Euergetes II," who ruled from 140 B.C. to 116 B.C. The second half of the second century was characterized by considerable strife between the brothers and constant wars with various factions in Syria. **9** The children of Ptolemy IX, Cleopatra Bernice (81–80 B.C.) and sons Ptolemy X and XI (80 B.C.), with whose deaths Ptolemaic rule ended. **10** The illegitimate Ptolemy XII, who took the throne and ruled until 51 B.C. His two sons were killed fighting Julius Caesar and were followed on the throne by their sister Cleopatra VII, who had a child by Julius Caesar and was later married to Mark Antony from whom she received territory in Syria and Palestine. She committed suicide when she and Antony were defeated by Octavian (Augustus) in 31 B.C. ***See also*** Egypt; Rosetta Stone. P.P.

Puah (py*oo*´uh), a name derived from two Hebrew words in the OT. **1** Derived from Hebrew *pu'āh,* one of the Hebrew midwives who cleverly disobeyed the Pharaoh's orders and spared the Hebrews' male children (Exod. 1:15). Derived from Hebrew *pu'āh* it refers to the following: **2** The son of Issachar and head of the clan of the Punites (1 Chron. 7:1). The name also occurs as Puvvah (Gen. 46:13) and Puvah (Num. 26:23). **3** The father of Tola, one of the judges of Israel (Judg. 10:1).

publicans, tax and toll collectors in the Roman Empire. Contracts for collecting taxes in a region were farmed out, usually to wealthy foreigners. They in turn hired local inhabitants to collect the taxes, such as Zacchaeus, who was a chief tax collector in Jericho (Luke 19:1). Farmers who tried to move their goods to a market outside their immediate territory were subject to tolls which ate up any monetary profit. Goods sold in certain markets were also subject to taxes and farmers were generally destitute or in debt to moneylenders and tax collectors. Sometimes community leaders were forced to collect taxes in their districts. The publicans were personally responsible for paying the taxes to the government, but they were in turn free to collect extra taxes from the people in order to make a profit. Opportunities for theft, fraud, and corruption abounded and tax collectors were generally despised in Greco-Roman literature, including the NT. Among Jews they were also rejected because they had contact with Gentiles and were ritually unclean. "Publicans and sinners" are cited together as examples of undesirable types (Matt. 9:11; 11:19; Luke 15:1). In a surprising reversal of cultural norms, Jesus compares tax collectors and harlots favorably with the Jewish leaders because the tax collectors and harlots are believing in Jesus and entering the kingdom and the leaders are not (Matt. 21:31). Zacchaeus believes in Jesus and says that he will repay fourfold those whom he has defrauded (Luke 19:8). ***See also*** Tribute, Tax, Toll. A.J.S.

Publius (puhb´lee-uhs), the chief magistrate of the Island of Malta when Paul was cast ashore there by a shipwreck (Acts 28:1). Because Paul healed Publius's father of fever and dysentery, the people of Malta showed Paul and his companions much kindness (Acts 28:7–10).

Pudens (py*oo*´dinz), known only as a greeter of Timothy (2 Tim. 4:21), unless he was Pudens the friend of the Latin poet Martial. ***See also*** Claudia; Eubulus; Linus.

Tiglath-pileser III, king of Assyria 745–727 B.C., is also called "Pul" in the Bible; relief from Susa, eighth century B.C.

Pul (puhl), the name by which Tiglath-pileser III, king of Assyria, was known in the Babylonian King List A and the Ptolemaic Canon. Pul may be a shortened and familiar form of the second element, *-pileser,* a wordplay on the Akkadian word *pulu,* "limestone block." This nickname was not used in contemporary documents and never served as a royal name. Late biblical writers learned the name in Babylonia and were confused as to the king's true identity (2 Kings 15:29; 2 Chron. 5:26).

pulse, a porridge of meal and legumes. It is a term in the KJV where the RSV has "vegetables" in Dan. 1:12, 16; it was food for Daniel and his companions at their request, so they could avoid defilement with unclean foods.

punishment, everlasting, the concept that after death an individual can be subjected to ongoing retribution for evil acts committed during life. The idea developed slowly over a long period of time. The ancient Hebrews, like the other Semitic peoples of the ancient Near East, believed that at death the human person lost earthly life but did not go out of existence entirely. They had no notion of an immortal soul separable from the body. Rather, they believed that the dead had a shadowlike or phantomlike existence in the realm of the dead. The realm of the dead was usually located under the earth. It was called by various names, most commonly Sheol. This name is related to the verb "to inquire" in Hebrew and probably reflects the practice of seeking oracles from the dead. In the OT Sheol is not particularly a place of punishment. Existence there is characterized by weariness and forgetfulness.

The notion of eternal punishment does appear a few times in the OT, though not particularly associated with Sheol. In Isa. 66:24 it is said of the wicked that "their worm shall not die, their fire shall not be quenched, and they shall be an abhorrence to all flesh" (RSV). In Daniel 12:2 it is said that some will rise from the dead to shame and everlasting contempt.

In 2 Kings 23:10 the Valley of Hinnom, a ravine south of Jerusalem, is mentioned as a place where children were burned as sacrifices to the god Molech. Perhaps as early as the third century B.C., this valley came to represent the place of eternal punishment (*1 Enoch* 27; 90:26–27; 2 Esdr. 7:36). This notion appears in the NT, where the valley is called Gehenna (e.g., Matt. 5:22). In Jewish literature of the Greco-Roman period and in the NT, the punishment envisaged in this valley is a fiery one. The book of Revelation does not use the term Gehenna but speaks of a lake of fire in which the wicked will be punished (Rev. 20:14–15).

The notion of eternal punishment was greatly elaborated in the early Christian apocalypses that came to be called apocryphal (to the NT). In *The Apocalypse of Peter,* for example, various places of punishment are revealed. In each case the mode of punishment suits the sins for which the lost souls are being punished. It is this later tradition that Dante incorporated in his *Inferno.*

Today there is a range of interpretations of this tradition among Christians. Fundamentalists and some conservative evangelicals believe that hell is an actually existing, physical place and that various horrible physical afflictions will be visited there upon sinners in eternity. A moderate view holds that hell is not a specific place and that God is not preparing physical punishments for the wicked. Hell is rather the state of eternal separation from God. It is the conscious loss of the presence of God and of heavenly bliss. Some liberals understand language about everlasting punishment symbolically. From this point of view, these symbols express something about earthly life, not about an afterlife. Hell may be interpreted as the state in this life of hardened rebellion against God, a state of disobedience beyond forgiveness and redemption. Support for this view is found in the Gospel of John. There the opposite of everlasting punishment, eternal life, is presented primarily as a quality of life in the present: real life, abundant life. ***See also*** Apocalyptic Literature; Eschatology; Heaven; Hell; Judgment, Day of.

A.Y.C.

pur. ***See*** Purim.

purge, to cleanse of impurities. The term appears in a variety of contexts: to cleanse a land of idolatry (2 Chron. 34:3, 8); to atone for sin or purify from iniquity (1 Sam. 3:14; Pss. 65:3; 79:9; Isa. 6:7; Heb. 1:3; 10:2; 2 Tim. 2:21); and to prepare a new altar for use in Temple sacrifice (Ezek. 43:20, 26). The purging or refining of metal was used as a metaphor for expiating sin (Isa. 1:25; Mal. 3:3). The removal of undesirable persons could be expressed as an explicit purging of rebels from the land (Ezek. 20:38) or metaphorically as the purging of a threshing floor (Matt. 3:12; Luke 3:17) or the purging of a lump of leaven (1 Cor. 5:7).

purify, purification. ***See*** Purity.

Purim (pyoo´rim), **the Feast of,** a minor holiday of the Jewish calendar based upon the account in the book of Esther. King Ahasuerus of Persia was persuaded by his minister, Haman, to destroy all the Jews in his kingdom on a day chosen by the drawing of lots (Heb. *purim*). The king's Jewish wife, Queen Esther, along with her cousin, Mordecai, foiled the plot and saved her people. The holiday is preceded by the Fast of Esther, commemorating the period of assembly and fasting before the deliverance. On Purim, according to Talmudic practice, the Megillah (Scroll of Esther) is read in the synagogue, charity is distributed, gifts of food are ex-

changed, and a festive meal is eaten. ***See also*** Esther. L.H.S.

purity, the condition of being free from any physical, moral, or ritual contamination. In the Hebrew Bible people may contract impurity by contact with a corpse, certain dead animals, the involuntary flow of fluids from the sexual organs, a disease such as *tsara'at* (usually mistranslated as "leprosy"), or the eating of prohibited foods. Certain objects are regarded as pure (*tahor*) but may be rendered impure (*tame'*) as a result of contact with an impure person who has not undergone purification rites. While impure, a person is enjoined from certain actions, primarily contact with the Temple or its religious practices.

Although aspects of the demonic may have been present in the earliest conceptions of ritual impurity, the Hebrew Bible understands moral impurity (i.e., sinfulness) to be the underlying cause of physical impurity. Both were seen as defilement of the individual and, therefore, in need of purification. The moral imperfection represented a defilement from within, a rebellion against God's law. The physical signs of impurity were seen as the symptoms of this moral or religious imperfection. In all cases, this impurity, being contagious, had to be gotten rid of. This necessitated the complex system of purificatory rituals.

Specific rites of purification were enjoined for the various forms of ritual impurity. The process of purification consisted of several stages: a waiting period of from one day to several months, depending upon the nature of the impurity, counting from the time of the cessation of the cause of pollution; a cleansing agent such as water (Lev. 15:16), fire (Num. 31:23), or blood (Lev. 14:25); and the offering of a sacrifice.

The duty of the priest was to maintain the ritual purity of Israel and its sanctuary. Thus, the laws of purity are found mainly in the priestly documents in such biblical books as Leviticus and Numbers. At the same time, the purificatory rites were not automatically efficacious. Purification only worked if the person was free of immorality and repentant of the evil that caused impurity. Hence, the role of the priest was to administer the rites that removed the last vestiges of impurity from the conscience of the worshiper. This was the case not only for the individual but for the nation as a whole. Once a year, on the Day of Atonement, Israel had to atone as a community, the priestly house had to be atoned for, the altar had to be cleansed, and the sanctuary itself purified. In this way the priests preserved the purity of the nation, and the presence of God continued to dwell among Israel.

Ritual purity and impurity were particularly important in the literature of the Dead Sea Scrolls. The sect of Qumran was itself extremely strict and maintained the standards of priestly purity even in its everyday life. The *Temple Scroll* envisaged a society in which the Torah's laws of purity would be strictly observed. The sect emphasized repeatedly that purification rites were only efficacious if undertaken after repentance and with a pure heart. Very similar practices were part of the religious life of the Pharisees and the early Tannaim (those who handed on traditions).

Christian doctrine likewise states that impurity is a spiritual or moral quality that comes from within. The blood of Jesus is understood as the agent that has purified all people once and for all. Jesus is believed to serve simultaneously as the last sacrifice necessary as well as the intercessor high priest (see the Letter to the Hebrews). Thus, in Christian theology the elaborate system of biblical purity is abrogated.

The Jewish tradition, although forced to give up the sacrificial ritual due to the destruction of the Jerusalem Temple, retained the laws of ritual purity wherever possible. Therefore, the immersion of a woman in the *miqweh* (ritual bath) after menstruation remained a requirement of Jewish law. The ritual washing of the hands is an example of a rabbinic enactment that extended the laws of purity from the Temple to the home. ***See also*** Priests; Worship. L.H.S.

purple, a distinctive dye color associated with royal garb. Such dye was a product of the Syrian and Phoenician coastal zone whose people maintained a monopoly on the item through much of history. It derived from a distinctive combination of colors acquired from gastropods of the Muricidae family that lived in Mediterranean waters of the region. Various shades were mixed, primarily red to purple. "The purple" came to stand for the color, cloth dyed in it, people who wore it, and classes rich enough to afford it, like royalty.

Specifically, the dye was extracted from the secretion of the hypobranchial gland of the mollusks, and the most popular shades were produced by a double-dyeing treatment. From the middens of shells along the north Mediterranean coast of Lebanon and Syria, the *Murex brandaris* and *Murex trunculus* were the most frequently used sources. The limited habitat and the small amount of dye extractable from each shell made the product especially valuable.

Biblical references to blue and scarlet together with purple are extensive (Exod. 25:4; 36:35), and the colors were prized for priestly vestments in Israel's tradition. A good wife was clothed in purple (Prov. 31:22), Solomon's palanquin seat was purple (Song of Sol. 3:10), Jesus was temporarily cloaked in purple during his pre-execution incarceration (Mark 15:17–20; John 19:2–5), the rich man's clothes included purple in the parable of the rich man and Lazarus (Luke 16:19), Lydia of Thyatira was a trader of purple goods when she became

Christian (Acts 16:14), and purple figured in the eschatological vision of the harlot condemned, meaning Rome (Rev. 17:4; 18:12, 16).

While Israel imported its purple, as did others, Solomon specified that men skilled to work in "purple, crimson, and blue fabrics" be included in the Phoenician work force he obtained from Hiram, king of Tyre (2 Chron. 2:7), in response to which Hiram sent one Huramabi (2:14), and the work was done (3:14). R.S.B.

purse (KJV: "girdle"), a leather pouch in which money was carried (Prov. 7:20; Hag. 1:6; Luke 22:35–36). Jesus forbade his disciples to carry money in their purses, as evidence of their trust that God would provide for them through the generosity of others (Matt. 10:9). The Gospel of John reports that Judas Iscariot was in charge of the common funds used by Jesus and his disciples (John 12:6; 13:29).

Put (poot). **1** The third son of Ham (Gen. 10:6; 1 Chron. 1:8). **2** A region in Africa, probably located in Libya. Warriors from Put fought on the side of the Ethiopians and Egyptians when the Assyrians captured No-amon (Thebes) in 663 B.C. (Nah. 3:9; Ezek. 30:5).

Puteoli (py*oo*-tee´oh-lee; from the Lat. either for "small wells" or for "stink"), the seaport (modern Pozzuoli) just west of Naples where, according to Acts 28:13–14, Paul landed on his way to Rome and stayed seven days with the local Christian community. The apocryphal *Acts of Peter* has Peter also landing at Puteoli en route to Rome after Paul had departed for Spain.

Founded probably in the sixth century B.C. by Greek colonists from Samos, Puteoli was originally a port of Cumae named Dicaearchia. In 215 B.C., the Romans garrisoned the town against the Carthaginian general Hannibal and renamed it Puteoli. In 194 B.C., it became a Roman colony. During the first century A.D., Puteoli was the major port of Italy, where Alexandrian grain ships (like Paul's) docked to unload cargo for Rome. ***See also*** Paul.

C.H.M.

pygarg (p*i*´gahrg), an obsolete term for a white-rumped ungulate; the KJV uses this term where the RSV has "ibex" in Deut. 14:5.

pyramids. ***See*** Burial.

Pyramid Texts, the, a collection of magical spells relating to the rebirth and eternal glory of the king of Egypt. The texts occur in several pyramids of kings and queens from the end of the fifth dynasty to the eighth dynasty (ca. 2350–2160 B.C.). The texts are not found in the earlier, great pyramids of Giza. First discovered by scholars in 1881, the texts are carved on the walls of the burial complex inside the pyramid. Each pyramid has its own particular collection of spells. The intent of the spells was to affirm—even bring about—the resurrection and ascent to the sky of the deceased ruler. The spells generally predate the pyramids in which they are inscribed and are often quite archaic. They represent the oldest corpus of religious texts from Egypt and underlie the later Coffin Texts and Book of the Dead, in which the afterlife is no longer a royal prerogative. ***See also*** Egypt; Pharaoh; Resurrection. H.B.H.

Pyrrhus (pihr´uhs), the father of Sopater of Beroea, who accompanied Paul on his last journey to Jerusalem (Acts 20:4).

Opposite: Ancient Romans as depicted in the "Imperial Procession" portion of a frieze of the *Ara Pacis Augustae* (altar of the peace of Augustus), 13–9 B.C.

QR

Q

Q, a hypothetical collection of the sayings of Jesus that predated the Gospels of Matthew and Luke. According to the Two-Document Hypothesis, Matthew and Luke independently used Mark and another documentary source, consisting largely of sayings of Jesus. Originally referred to as "the *logia*" (oracles), "L" (H. J. Holtzmann), the *Spruchsammlung* (C. H. Weisse), or the *Redensammlung* (C. Weizsäcker), it came in the twentieth century to be known simply as "Q" (from German *Quelle*, "source"), the coinage of J. Weiss.

The following Synoptic pericopae are normally assigned to Q (cited by Lucan versification): 3:7–9, 16b–17; 4:1–13; 6:20b–23, 27–33, 35c, 36–37b, 38c, 39–49; 7:1b–2, 6–10, 18–19, 21–23, 24–28, 31–35; 9:57–60; 10:2–16, 21–24; 11:2–4, 9–20, 23, 24–26, 29–35, 39–44, 46–52; 12:2–12, 22–31, 33–34, 39–40, 42b–46, 49, 51–56, 58–59; 13:18–21, 24, 26–30, 34–35; 14:11 (18:14); 14:16–24, 26–27; 14:34–35; 15:4–7; 16:13, 16, 17, 18; 17:1b–2, 3b–4, 6b, 23–24, 26–27, 30, 33–35, 37b; 19:12–13, 15b-26; 22:28–30. In several other instances Matthew and Luke exhibit sufficient agreements against Mark to raise suspicions that a version of Q overlapped with Mark: Luke 3:2–3 (less likely, 3:21–22); 4:16; 11:21–22 (some have also suggested Luke 10:25–28 and 14:5). Some pericopae, attested in only one Gospel but occurring in a predominantly Q context and cohering with Q's style, might also be tentatively ascribed to Q: Luke 6:24–26; Matt. 5:41; Luke 6:34–35b; 9:61–62; 11:27–28; 12:13–14, 16–21; 15:8–10; 17:20–21, 28–29. Q thus amounts to somewhat over four thousand words, or approximately the same number as in 2 Corinthians.

The nearly verbatim agreement of Matthew and Luke in reproducing such Q pericopae as Luke 3:7–9; 11:19–20, 24–26, 31–32; and 13:34–35 and significant agreements between Matthew and Luke in the relative order of Q texts indicate that the Evangelists probably used Q in written form rather than as a set of oral traditions. Although Q contains a number of Semitisms, none provides convincing evidence that Q ever existed as an Aramaic document; indeed, Q's Greek does not fit the profile typical of translation Greek and contains a variety of constructions possible only in Greek.

In regard to the order of Q, the nearly unanimous verdict is that Luke better represents Q, with the probable exceptions of Luke's positioning of the second and third temptations (Luke 4:5–8, 9–13), the saying about losing one's life (Luke 17:33; Matt. 10:37), the sequence of the first two woes against the Pharisees (Luke 11:39–41, 42), the order of clauses in Luke 13:28–29, and Luke 17:37b.

The genre of Q has been described variously from that of a prophetic book (M. Sato; R. Horsley) to "sayings of the sages" (Robinson). Others, notably J. Kloppenborg and H. Koester, suggest that the compositional history of Q is complex (also A. D. Jacobson) and that while Q began as a sayings collection resembling a Near Eastern instruction, it was transformed by various additions, finally assuming a protobiographical format. Nevertheless, there is no indication of the presence of a passion account nor, more importantly, any indication that the framers of Q understood the death of Jesus to have special salvific importance.

The provenance of Q is probably Galilean, where it originated in scribal circles familiar with both instructional wisdom and Israel's prophetic traditions. Its primitive Christology is based on the association of Jesus with heavenly Wisdom and with the Son of Man title.

Q apparently disappeared after having been absorbed by Matthew and Luke. Some have argued that Mark used Q and others suggest that the Coptic *Gospel of Thomas* bears a genetic as well as generic relationship to Q. Neither conclusion has been established convincingly. ***See also*** Synoptic Problem, The.

Qadisha (kah-dee´shah; Heb., "the holy [river]"), modern Nahr Abu 'Ali, a river that flows from the upper slopes of the Lebanon range northwest to the Mediterranean which it enters at the city of Tripoli. The modern park containing the few remaining cedars of Lebanon is in the upper gorge of the river, but there is no evidence for the conjecture that it was the route used for transporting the cedars sent by Hiram of Tyre to Solomon for the construction of the Temple (cf. 1 Kings 5:1–12).

qesita (kes´-i-tah). ***See*** Kesitah.

quail, a small plump gamebird. It is generally agreed that the Hebrew word translated "quail" in the OT (*selaw*) denotes the common quail (*Coturnix coturnix*). Its plumage is of a sandy brown base color with black and pale streaks. The quail breeds in Europe and western Asia and passes through Palestine and Sinai on its way to its winter quarters in Africa.

During the Exodus large flocks of quail provided the Israelites with the food God had

Quail; Coptic tapestry, third or fourth century A.D.

promised them (Exod. 16:13; Num. 11:31; Ps. 105:40). The large numbers so easily collected by the Hebrews (over a hundred bushels per person) can be explained by the fact that the quail, though a strong flyer over short stretches, is dependent on the wind to cover large distances. Changes in the wind direction force it to the ground and make it easy prey. In ancient Egypt quails were potted and pickled in large quantities, but excessive hunting has now considerably decreased their numbers. I.U.K.

quarries, sources of construction stone, whether cut from the sides of outcrops or dug from beneath soil layers.

The labor involved was immense (1 Kings 5:13–18) for large projects, and sometimes proverbially dangerous (Eccles. 10:9). In prosperous times the products were commercially available (2 Kings 12:12; 22:6; 2 Chron. 34:11). Finishing the product was sometimes done at the quarry site (1 Kings 6:7), whether for economic, religious, or aesthetic reasons, and the labor could be under royal project command as well (2 Chron. 2:2, 18).

Quarrying techniques were extensively developed in ancient Egypt, where the blocks for the Old Kingdom pyramids were cut from quarries far up the Nile and floated downstream on barges, sometimes guided by two or three pilot boats to keep the load under way and navigable. Aswan was the site of famous granite quarries, and the techniques were similar in quarrying sandstone or limestone in Palestine. Cuts outlining the blocks were made with picks. Wedges of wood were then inserted and wetted, and the swelling forced the block loose from its setting. Ledges created by the removal of stone blocks were found beneath the Byzantine church at modern Tell Hesban in 1971, adding another to the large registry of quarry sites in the archaeological record. Evidence of informal quarrying for previously used stone is found at almost every large archaeological site. The economy of trimming an already available block versus having to quarry a new one was nearly irresistible to ancient builders, as it is also to modern builders. R.S.B.

Quartus (kwor´tuhs), a companion of Paul who joins him in sending greetings in Rom. 16:23.

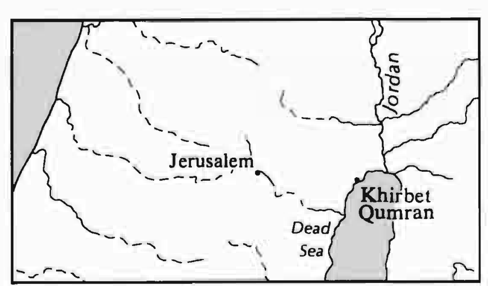
quaternion (kwah-tuhr´nee-uhn). *See* Squad.

queen, a woman sovereign, consort or wife of a king, or a mother of a king. Israel, unlike other nations around it, knew no legitimate female sovereigns. Two such foreign queens are mentioned in the Bible, the queen of Sheba (1 Kings 10; 2 Chron. 9) and Candace, queen of the Ethiopians (Acts 8:27). Although not mentioned in the OT, Hatshepsut of Egypt was one of the important pharaohs in the eighteenth dynasty (ca. 1500 B.C.). Athaliah (2 Kings 8:26; 11:1–4) was queen mother who usurped the throne of Israel for seven years upon the death of her son, Ahaziah. A king's wife in ancient Israel apparently had no official function. Marriages were often contracted to cement alliances with other nations (2 Sam. 3:3; 1 Kings 3:1; 16:31; 2 Kings 8:25–27). The queen mother had a more important role than the queen consort in both Israel and surrounding nations (1 Kings 2:19; 15:13). ***See also*** Athaliah; Candace; Esther; Jezebel; Sheba, Queen of. F.S.F.

Queen of Heaven, a high goddess worshiped by some Jews living in Jerusalem and Egypt in the time of Jeremiah (late seventh–early sixth centuries B.C.; Jer. 7:18; 44:17–19, 25). Jeremiah rejected this worship as idolatry and interpreted the fall of Jerusalem as punishment for such worship. In the first century A.D., the mother goddess of Ephesus, called Artemis by the Greeks, the Syrian goddess Atargatis, and the Egyptian Isis were all worshiped as Queen of Heaven. In the book of Revelation, this high goddess worshiped under many names is Christianized, so to speak, and presented as the Heavenly Israel (Rev. 12).

quern (kuhrn), a stone with a flat or slightly concave surface used for grinding grain into meal by hand. Most samples are basalt or limestone in Palestine, and the grain was pulverized by being crushed with a hand-held grinding stone repeatedly kneaded over the grain against the quern surface. Such an activity is probably presumed in Jesus' saying in Matt. 24:21.

quicksands. *See* Syrtis.



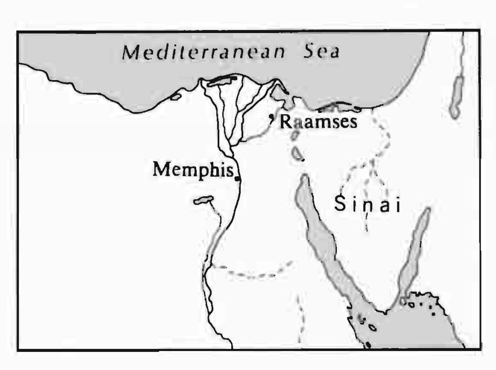
Quirinius (kwi-rin´ee-uhs), **P. Sulpicius,** Roman consul who held the position of governor (legate) of Syria for several years, beginning in

A.D. 6. He is the "Quirinius" (KJV: "Cyrenius") of Luke 2:2, during whose administration the "enrollment" took place and Jesus was born in Bethlehem. The historian Josephus tells of a census carried out under Quirinius's authority in A.D. 6 or 7, after the banishment of Archelaus, the ethnarch of Judea, Samaria, and Idumea. The property of Judea's Roman subjects, now to be governed directly by a Roman prefect, was assessed for the purpose of levying taxes. Apparently this is the census ("enrollment") of Luke 2:1–3. Two problems, however, await resolution. The first and most serious is the discrepancy of at least ten years between Luke's dating of the events surrounding Jesus' birth to the time of Herod the Great (Luke 1:5; cf. Matt. 2:1–22), who died in 4 B.C., and Josephus's dating of Quirinius's census. The second is the difference between Luke's reference to "all the world" being enrolled and Josephus's limitation of the census to the former territory of Archelaus. Various possible solutions to these problems have been proposed, but none has received general acceptance. The problems simply underscore the uncertainty of the historical information available to Luke regarding the circumstances surrounding the birth of Jesus. ***See also*** Archelaus; Enrollment; Herod. F.O.G.

quiver, a container for carrying arrows, usually made of leather and carried on the back or over the shoulder. The quiver was standard equipment for archers, both hunters (Gen. 27:3) and soldiers (Job 39:23; Isa. 22:6). Figuratively speaking, Lam. 3:13 attributes the distress that accompanied Jerusalem's fall to the arrows of God's quiver (Heb. *benê ashpâh,* "sons of the quiver"). This connection between arrows and quivers was so well known that biblical writers used these objects as symbols for the relationship between children and parents (Ps. 127:5), the servant and God (Isa. 49:2), and war and death (Jer. 5:16). ***See also*** Archers; Arms, Armor; Weapons. G.L.M.

Qumran, Khirbet (koom´rahn, kihr´bet), the site of the settlement, probably Essene, that produced the Dead Sea Scrolls. It lies eight and a half miles south of Jericho on the first shelf of hills above the west shore of the Dead Sea. ***See also*** Scrolls, The Dead Sea.

Qurun Hattin (koo´roon hah-teen´). ***See*** Hattin, Horns of.



R

Ra (rah). ***See*** Re.

Raamah (ray´uh-mah; also Raama, 1 Chron. 1:9), the Cushite father of Sheba and Dedan (Gen. 10:7), hence an Arabian locale and people. Famous as a spice trading source (Ezek. 27:22), its location is, while uncertain, probably in southwest Arabia near modern Ma'in.

Raamses, Rameses (ray-am´seez), one of two store-cities (KJV: "treasure-cities," the other was Pithom) built by the Hebrews for Pharaoh (Exod. 1:11). The reference in Gen. 47:11 to the "land of Rameses," an area where Joseph settled for his father and brothers at the order of an earlier pharaoh, is anachronistic. It was from Raamses that the Israelites departed on the Exodus (Exod. 12:37; Num. 33:3, 5). The Egyptian name of this city was *Per-Ramessu,* Piramesse, "House of Ramesses." Named after Ramesses II (1279–1212 B.C.), who is often considered the pharaoh of the Exodus, Raamses served as the delta residence for the succeeding kings of the nineteenth and twentieth dynasties (ca. 1212–1070 B.C.). For many years, scholars identified Raamses with Tanis (Heb. *Zoan*), modern San el-Hagar in the Egyptian delta, where many monuments inscribed with the name of Ramesses II and his successors were discovered. However, it was determined that all of these Ramesside period monuments were moved to Tanis from somewhere else. It is therefore most probable that Raamses is to be placed in the area of modern Khatana-Qantir on the Pelusiac branch of the Nile, about fifteen miles south of Tanis. Evidence for a palace of Sety I (1291–1279 B.C.) and Ramesses II and the houses of high officials of the Ramesside period was found there, within an enormous city stretching more than a mile from Qantir south to Tell el-Dabaa (which is the site of the earlier Hyksos capital of Avaris). ***See also*** Pithom; Ramesses; Zoan. J.M.W.

Rabbah (rab'uh). **1** A city of Judah (Josh. 15:60) in the district with Kiriath-jearim, identified tentatively with modern Khirbet Hamideh. It appears as Rubute in several ancient extrabiblical sources: Tell Amarna Letters, nos. 287, 289, 290; Taanach Tablet no. 1; Thutmose IV's topographical list, town no. 105; and Shishak's list, town no. 13.

2 The only town (alternately Rabbat of the Ammonites or Rabath-Ammon, meaning the "great" or "capital" of the Ammonites) mentioned in the Bible as specifically Ammonite. It is modern Amman, located about twenty-four miles east of the Jordan River and twenty-three miles northeast of the Dead Sea.

Recent excavations on Jebel el-Qalah, the citadel of the ancient city, indicate at least sporadic occupation throughout the Bronze Age and a fairly heavily fortified town of about 1750–1550 B.C. Salvage excavations at the old Amman Civil Airport have uncovered a structure believed to be a mortuary dating to the thirteenth century B.C. The citadel excavations reveal tenth–ninth-century B.C. phases of a defense wall, quite possibly related to David's siege of the city and the later rebuilding (2 Sam. 11:1; 12:26–31). Iron Age II remains date to the eighth and seventh centuries B.C., with evidences of destruction that recall the rebukes of Amos (Amos 1:14), Jeremiah (Jer. 49:2, 3), and Ezekiel (Ezek. 25:5) against Rabbah and the Ammonites.

Rabbah was renamed Philadelphia after it was captured by Ptolemy Philadelphus (third century B.C.), and it flourished as a Hellenistic city, as fortified walls and structural remains testify. Architectually, the second-century A.D. Roman remains are what are prominent today, especially the Nymphaeum, columned street, and large amphitheater in downtown Amman. ***See also*** Ammonites. N.L.L.

Rabbi, Rabbouni (rab'*i*, ra-b*oo*h'n*i*; Heb., "My Great One"), a title that took on a meaning of general respect, "My Master," or a specific meaning, "My Teacher." In the OT, *rab,* without the possessive, is used in the construct meaning "chief" or "officer" of something (2 Kings 18:17; 25:8). In the Mishnah and Tosefta (third century A.D.), the absolute *rab* had come to mean a master as opposed to a slave and a teacher of students, specifically one authorized to teach and judge matters of Jewish law. In second- to fourth-century inscriptions, *rabbi* is used as an honorific title for prominent individuals, equivalent to "sir." The NT has two forms of the title, *rabbi* and *rabbouni* (in the best manuscripts), which probably reflect first-century Hebrew and Aramaic pronunciations. Later pronunciations attested in the Targums (translations of Hebrew Scriptures into Aramaic) and inscriptions are *rebbi, ribbi, rib,* and *ribboni.* "Master" is sometimes used to translate *Rabbi* in the NT.

In the NT, *Rabbi* is used mostly in direct address of Jesus as a person of respect or teacher. In Mark, Jesus' disciples call him *Rabbi* (9:5; 11:21; 14:45), and a blind man addresses him as *Rabbouni* (10:51), all in contexts where Jesus is acting rather than teaching. In John, both *Rabbi* (1:38) and *Rabbouni* (20:16) are explicitly interpreted to mean "Teacher." The other Johannine usages are consistent with this understanding or the more general title of respect (1:49; 3:2, 26; 4:31; 6:25; 9:2; 11:8). Matthew also connects the title *Rabbi* with both teaching and social status, says it pertains to Jesus alone, but rejects its use in his community (23:7–8). Thus, only Judas calls Jesus "Rabbi," as he is betraying him (26:25, 49), and the other disciples address him neither as "Rabbi" nor as "Teacher" (a term used only by outsiders) but rather as "Lord" (8:21, 25; 14:28, 30; 18:21). Apart from Matthew, Mark, and John, no other NT document uses *Rabbi.* A.J.S.

Rabmag (rab'mag). ***See*** Nergal-sharezer.

Rabsaris (rab'suh-ris), a title of Assyrian and Babylonian officials. **1** An official who appears as one of three Assyrian officials sent by Sennacherib to convince King Hezekiah to surrender (2 Kings 18:17–37). **2** Two Babylonian officials who appear in Jerusalem in the time of Nebuchadnezzar's destruction of it (586 B.C.; Jer. 39:3, 13). **3** An official mentioned as being in charge of the youths in Nebuchadnezzar's palace (Dan. 1:3).

The term Rabsaris should be translated "Chief [of the] Eunuch[s]"—the element *saris* derives from Akkadian *sha-rēshi,* "eunuch"—and the title should be treated literally. The Akkadian term *Rab-sha-rēhi* is the reading of the logograms LÚ.GAL.LÚ.SAG as well as LÚ.GAL.SAG and is the origin of the Aramaic *rbsrs* attested on a docket from Nineveh as well as of *Rab-saris* in Hebrew. Because of the important governmental role of the *Rab-sha-rēshi* and many *sha-rēs his,* scholars have sometimes been loath to take the term at face value and to acknowledge that all such officials were necessarily castrates; instead, they have assumed that only those *sha-rēshis* who were palace and harem officials were eunuchs and that otherwise the term was simply a designation for a type of governmental official. Since some *sha-rēshis* were undoubtedly eunuchs, and given the usual meaning of the Akkadian loan word *sha-rēshi* (*saris* in West Semitic), it is more reasonable to assume that all such officials—*sha-rēshi* and *Rab-sha-rēshi*—were castrates (unless there is compelling evidence to the contrary in a specific instance). The eunuch's lack of a familial support group, absence of descendants to whom he might wish to transfer wealth and office, and perhaps the contempt of other sectors of the society directed his loyalty and devotion

to the crown and its interests. Accordingly, while the *Rabsaris* might be a high harem or court official (Dan. 1:8), he would normally serve in the imperial and military administration in a high-ranking and powerful position. The *Rab-sha-rēshi* was dispatched on military missions, and the term may even denote the commander-in-chief. I.T.A.

Rabshakeh (rab'shuh-kuh), one of the emissaries sent by the Assyrian king Sennacherib (705–681 B.C.) to Hezekiah, the king of Judah (727–698 B.C.), with a demand for a ransom, which Hezekiah paid out of the Temple treasures. When a further demand for surrender was relayed by Rabshakeh, the prophet Isaiah promised Hezekiah that God would prevent Jerusalem from falling into Sennacherib's hands. A plague subsequently visited on the Assyrian army caused Sennacherib to withdraw from Judah. He was later slain by two of his sons (2 Kings 18:13–19:37; cf. Isa. 36–37). ***See also*** Sennacherib.

raca (rah'kah; KJV, Matt. 5:22), an obscure term of abuse, probably from the Aramaic meaning "empty one," which then takes on the meaning "empty-headed" or "fool." The RSV translates "whoever says 'Raca'" as "whoever insults."

race, racing, contest of speed or endurance. The metaphor of the footrace seldom occurs in the OT (Ps. 19:5; Jer.12:5; Eccles. 9:11), probably because competitive sports had no significant place in the social life of ancient Israel. When a gymnasium was erected in Jerusalem by the hellenizing high priest Jason early in the second century B.C., the devout Jews declared that "new customs" were being introduced "contrary to the law" (2 Macc. 4:7–17). From prehistoric times, however, the Greeks had promoted athletic contests in association with their religion: e.g., the Olympic games were held in honor of Zeus, the Isthmian games in honor of Poseidon. Competitive sports included boxing, wrestling, jumping, discus and javelin throwing, and, above all, the chariot, horse, and foot races.

Metaphorical allusions to the footrace are numerous in the NT, particularly in the Pauline corpus (see, however, Heb. 12:1–2, 12–14). In his travels among the Greeks, Paul was able to observe some of the pan-Hellenic contests (e.g., at Corinth and Ephesus). This probably accounts for the several uses that he makes of the Greek root referring to the place of sporting combat, the contest itself, and any kind of strenuous combat or contest (1 Thess. 2:2; 1 Cor. 9:25; Phil. 1:30). From one perspective, Paul viewed the Christian's life as an intense striving, a combat requiring self-discipline and strenuous training. In running this race, one must exert one's energies to the full, throwing off clinging sin, contending for the faith, and persisting in the race to the finish line (1 Cor. 9:24–27; Phil. 1:27–30; 3:13–14; 1 Thess. 2:2; cf. Col. 1:28–29; 1 Tim. 4:7–10; 2 Tim. 4:7–8; Jude 3). In a similar vein, the writer of the Letter to the Hebrews exhorts his Christian readers to run their "course" unencumbered in any way, cheered onward by many witnesses including the martyrs of the past, with eyes fixed upon Jesus "on whom faith depends from start to finish" (Heb. 12:1–2, NEB). The victors in the race "in which we are entered" are to receive "the crown of righteousness"—"an imperishable wreath," not woven of fading leaves like those so proudly worn by winners in the Greek games (2 Tim. 4:8; 1 Cor. 9:25; Phil. 3:12–16; 1 Tim. 6:11–12). Other NT passages probably also allude to the footrace or athletic contest (Rom. 9:16; 15:30; Gal. 2:2; 5:7; Phil. 2:16; Col. 2:1; Acts 13:25; 20:24; 2 Tim. 2:5). ***See also*** Crown; Games. J.L.P.

Rachel (ray'chuhl), the more favored of the two wives of Jacob. While looking for Laban his kinsman, Jacob met Rachel at a well; he entered Laban's household, fell in love with Rachel, and agreed to serve Laban for seven years as a bride-price for her. When her elder sister Leah was substituted for Rachel at the bridal feast, Jacob married Rachel a week later and agreed to serve another seven years for her (Gen. 28:9–20). Rachel was barren in the early years of her marriage, during which time Leah bore Jacob four sons. To maintain her position vis-à-vis her co-

Jacob meets Rachel at the well (left) and then bargains to serve her father, Laban, for seven years in exchange for her hand in marriage (Gen. 29:10–20); detail from a thirteenth-century French miniature.

wife Leah, Rachel offered her handmaiden Bilhah to Jacob as a surrogate mother, a custom known from Near Eastern sources (Gen. 30:1–8). These children fulfilled Rachel's wifely responsibility; when Bilhah bore sons, Rachel named the first Dan, "God has vindicated me [Heb. *danni*] . . . and given me a son" (Gen. 30:6) and the second Naphtali after the fateful contest she waged (Heb. *niphtalti*) and won from her sister (Gen. 30:8). Rachel was clearly the dominant wife in the marriage. When Leah's son Reuben found mandrakes (a fertility symbol), Rachel was able to offer a night with Jacob in trade (Gen. 30:14–16).

Rachel finally bore a son, Joseph. Her favored position among the wives continued, and during their return to Canaan, Jacob placed Rachel and Joseph (Gen. 33:1–2) in the least exposed position. Leah supported Jacob's decision to leave Laban's household and Rachel took with her the family teraphim (household images). When Laban searched for them, Rachel hid them in her camel cushion and sat on them, pretending that she was menstruating (Gen. 31:32–35). The images apparently were buried under the terebinth near Shechem (Gen. 35:4). Rachel died bearing Benjamin and was buried in the later tribal territory of Benjamin (Gen. 35:16–21). She and Leah are mentioned as the matriarchs of Israel in Ruth 4:11. She is also remembered in a poetic passage in Jer. 31:15, in which the voice that the prophet hears is the voice of Rachel weeping for her children; in this passage Rachel is the personification of the land and nation as the bride of God who is weeping for her exiled son Ephraim. The historicity of Rachel and Leah is a matter of speculation. They are considered the matriarchs of the tribes that formed the tribal federation (amphictyony) of the period of the judges. Joseph had two tribes, Ephraim and Manasseh. The former was the dominant tribe of the Northern Kingdom; moreover, the tribe of Benjamin was the object of civil war and was later the home of Saul, first monarch of the United Kingdom. The fact that Leah means "cow" and Rachel means "ewe" has led to speculation that the rivalry between the two reflected rivalry between sheep herders and cattle herders, or that they were projections of totemic symbols of early groups of tribes (the Leah tribes and the Rachel tribes) that joined the tribal federation. T.S.F.

Raguel (ruh-gy*oo*ʹuhl), the name in the KJV for Reuel, the father-in-law of Moses (Num. 10:29). ***See also*** Jethro; Reuel.

Rahab (rayʹhab). **1** The harlot who sheltered Joshua's men when they came to spy on Jericho (Josh. 2). She defied the orders of the king of Jericho, misdirected the king's men, and then helped Joshua's men escape from Jericho by climbing down a rope from her home which was built against the city wall. Rahab is portrayed as motivated by a genuine fear of God and a belief that he would conquer the city; she asked in return that the men swear to her that they would spare Rahab and her family when they returned to conquer. Rahab was to signal the invaders by tying a length of crimson cord to her window (Josh. 2:18). When the Israelites did conquer Jericho, only Rahab and her father's family were saved (Josh. 6:25). According to later Jewish legend, Rahab was one of the four most beautiful women in history. She became a righteous convert, married Joshua, and was the ancestor of eight prophets (including Jeremiah), and of Huldah the prophetess *(b. Meg.* 15a). In the NT, Rahab is cited as a heroine of faith (Heb. 11:31) and of righteous works (James 2:25), and is included in Jesus' ancestry by Matthew (1:5). **2** The mythical chaos dragon whom God killed in battle and thus made an orderly creation possible (Isa. 51:9; Ps. 89:10). **3** A pejorative name for Egypt (Ps. 87:4; Isa. 30:7). rain. ***See*** Farming; Palestine.

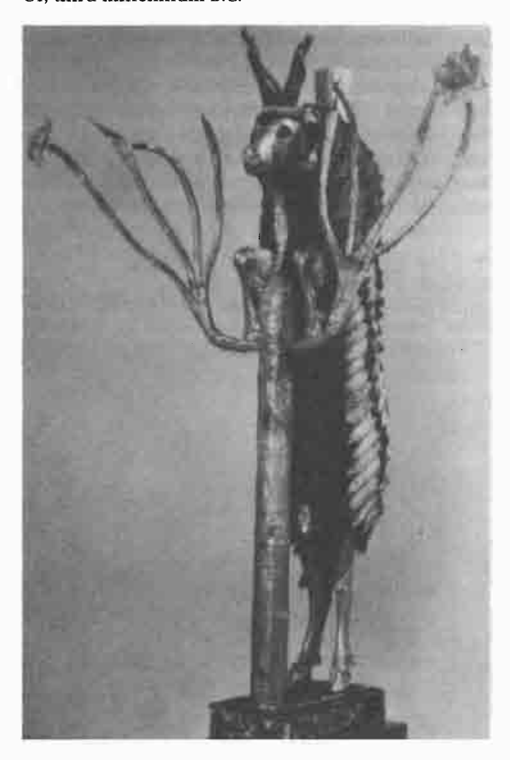
rainbow, a multicolored arc in the sky caused by refraction of sunlight through droplets of water. First mentioned in Gen. 9:12–13, the rainbow appears as a sign of God's covenant promise not to destroy the world by flood again. The Hebrew word *qeshet* means both "bow" and "rainbow." Lam. 2:4 and Hab. 3:9–11 depict it as an instrument of divine wrath, its arrows (e.g., lightning, thunderbolts, rains) released earthward (cf. Ecclus. 43:11–21). An ancient illustration of the god Ashur depicts him drawing a rainbow as a weapon. Gen. 9:12–13 thus suggests a *spent* bow. Ezek. 1:28 associates the rainbow with a manifestation of divine glory

The god Ashur using a rainbow as a bow; fragment from a glazed brick, Assyrian, ninth century B.C.



(cf. Rev. 10:1). ***See also*** Covenant; Flood, The; Noah; Sign. J.W.R.

raisins, sun-dried grapes used for food (Song of Sol. 2:5), gifts (1 Sam. 25:18–31; 2 Sam. 16:1–4), military rations (1 Chron. 12:40), or religious offerings (Hos. 3:1; Isa. 16:7; Jer. 7:18). They were nourishing and traveled well both unprocessed and pressed into cakes.

Ram (ram; Heb., "God [is] high, exalted"; cf. Ab*ram*, Ahi*ram*, Am*ram*, Adoni*ram*, Jo*ram*). **1** The son of Hezron, an ancestor of David according to Ruth 4:19 (Greek versions read "Aram"; cf. Matt. 1:3, 4) and 1 Chron. 2:9 (brother of Jerahmeel). **2** The son of Jerahmeel, who was the son of Hezron (1 Chron. 2:25, 27). **3** An ancestor of Elihu's "family" (tribal division; Job 32:2).

ram, a male sheep (Heb. *'ayil*), frequently mentioned as a sacrificial offering in OT priestly legislation (Lev. 5:15; 8:18–29; Num. 7:15). God provided a ram as a substitute for the sacrifice of Isaac (Gen. 22:13). Rams' skins were used for the covering of the tabernacle (Exod. 36:19), and a ram's horn (Heb. *shophar*) was used to call Israel to battle and to worship. Ps. 114:4 describes the earth's agitation at God's appearing as mountains "skipping" like rams. The two-horned ram of Daniel's vision (Dan. 8) represented the kings of Media and Persia. There is no equivalent word in the NT. P.A.B.

The "Ram in a thicket" from a royal grave at Ur, third millennium B.C.

Ramah (ray'muh; Heb., "height"), a name given alone and in combination with other words to several places in Palestine. **1** Ramah of Benjamin, which is identified with modern er-Ram, about five miles north of Jerusalem and west of Geba and Michmash on the border of Israel and Judah. It is unexcavated but surface exploration indicates occupation begins about the twelfth century B.C., and it can be associated with a number of OT passages.

Deborah judged between Ramah and Bethel (Judg. 4:5). Baasha, King of Israel (ca. 902–886 B.C.), fortified Ramah, but, by an alliance with Ben-hadad of Damascus, Asa of Judah (ca. 908–872) tore it down (1 Kings 15:17–22). According to Isa. 10:29 the Assyrians advanced toward Jerusalem through Ramah. Ramah is mentioned in Hosea's cry against Israel (Hos. 5:8), and Jeremiah was set free there (Jer. 40:1). Ramah is among those towns listed with inhabitants following the Exile (Ezra 2:26; Neh. 7:30). Rachel was associated with this town (Jer. 31:15; Matt. 2:18).

2 Ramah of Ephraim. The Ramathaim-zophim of 1 Sam. 1:1 in the RSV would be better translated "a man of Ramathaim, a Zuphite from the hill country of Ephraim" (NEB). It is thereafter called Ramah in the story of Samuel, but it is probably to be distinguished from Ramah of Benjamin. Samuel's hometown was Ramah; he returned there periodically, and he was buried there (1 Sam. 7:17; 25:1). David was pursued by Saul to Ramah (1 Sam. 19:18–24).

This may be the Arimathea of the NT (Matt. 27:57; John 19:38) and may be identified with modern Rentis, about eighteen miles east of Joppa.

3 A border town in Asher (Josh. 19:29); a location to the north in the vicinity of Tyre seems to be indicated. Its identification is unknown, but it is usually associated with modern Ramieh near the south border of Lebanon.

4 A fortified town in Naphtali (Josh. 19:36), probably located at modern er-Ramah in the Valley of Beth-kerem about twenty miles east of Acco.

5 Ramah of the Negeb or Ramath-negeb (Josh. 19:8) in the lands of the tribe of Simeon. Here David sent some of his spoil from the Philistines (1 Sam. 30:27). Ramath-negeb is mentioned in Arad ostraca no. 24, and its context suggests it was an outpost facing the Edomite threat; therefore it has been identified with modern Khirbet Ghazzah southeast of Arad and on the southeast edge of the Negeb. ***See also*** Samuel; Samuel, The First and Second Books of. N.L.L.

Rameses (ram'uh-seez). ***See*** Raamses, Rameses.

Ramesses (ram´uh-seez; Egyptian, "Re [the sun god] is born"; also Ramses, Rameses), the family name of eleven kings of Egypt during the nineteenth and twentieth dynasties (ca. 1293–1070 B.C.). This era is often referred to as the Ramesside period. The Ramesside pharaohs were buried in the Valley of the Kings in western Thebes, but they lived in the eastern delta at Piramesse (see below). The principal kings of the Ramesside period are the following. **1** Ramesses I (1293–1291 B.C.), an army general who founded the nineteenth dynasty. His son was Sety I (1291–1279 B.C.), whose reign included military campaigns into western Asia in which the Hittites were defeated and various Palestinian cities were conquered. **2** Ramesses II (1279–1212 B.C.), son of Sety I, sometimes called "the Great" by early scholars. In the fifth year of his reign, he fought a great battle against the Hittites at Kadesh in Syria. This king was a very active builder throughout Egypt and Nubia; he also liked to have his name inscribed on the monuments of earlier kings. He founded the city of Piramesse (the biblical Raamses) in the eastern delta as the new royal residence. Many biblical scholars consider Ramesses II the pharaoh of the Exodus. **3** Merenptah (1212–1202 B.C.), a son of Ramesses II. A stele set up to record some of this king's victories includes the words "Israel is desolated and has no seed"; this is the first documented mention of Israel in the ancient Near East and has led some scholars to suggest that Merenptah was the pharaoh of the Exodus (which would make Ramesses II the pharaoh of the oppression). **4** Ramesses III (1182–1151 B.C.), the son of the first king of the twentieth dynasty, Setnakht. He successfully fought off an invasion of Egypt by the Sea Peoples from the northern Mediterranean region in the eighth year of his reign. One tribe included among the Sea Peoples was the Peleset (the biblical Philistines), who subsequently settled in southwest Palestine. **5** The later Ramesside kings, Ramesses IV–XI (1151–1070 B.C.), ruled over a country decaying economically, politically, and militarily. The Egyptian Empire in Palestine probably ended in about the reign of Ramesses VI (1141–1134 B.C.). ***See also*** Exodus; Pharaoh.

J.M.W.

Ramoth (ray´moth). ***See*** Ramoth-gilead.

Ramoth-gilead (ray´muhth-gil´ee-uhd), a levitical city of the tribe of Gad. In the tribal inheritance, Ramoth-gilead was assigned to Gad and became both a levitical city and a city of refuge (Josh. 21:38; 1 Chron. 6:80; Deut. 4:43; Josh. 20:8). It was located east of the Jordan River in an area that later became the shifting border between Syria and Israel. During Solomon's reign it was a chief town of a tax district (1 Kings 4:13). King Ahab of Israel was killed there (1 Kings 22) and there the prophet Elisha anointed Jehu king of Israel (2 Kings 9:1–16). The precise location is unknown although two major possibilities are Tell el Husn near Irbid and Tell Ramith. The latter is the more likely location and is situated further east near the current Jordanian-Syrian border.

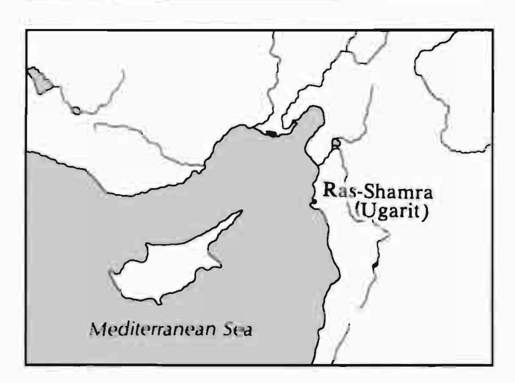
ransom. ***See*** Redemption.

Rapha (ray´fuh; Heb., "he [God] has healed"), a clan head, the son of Benjamin (1 Chron. 8:2).

Ras-Shamra (rahs-shahm´ruh), the modern Arabic name of the site of the ancient city of Ugarit. Ras-Shamra lies beside the Syrian coast of the Mediterranean Sea at roughly the northern latitude of Cyprus. Inscriptions from the site establish its identification as Ugarit. The name "Ugarit" perhaps means "field" (Ugaritic *ugar*) or the like. The existence of Ugarit was known prior to excavations at Ras-Shamra from reference to the city in an Amarna letter, but the importance of the site could not have been guessed apart from the work of archaeologists.

The site attracted the attention of archaeologists in 1928 when a peasant happened upon a thirteenth-century B.C. tomb. This discovery occurred at coastal Minet el-Beida (Arabic, "White Harbor"; Gk. *leukos limēn*) close to Ras-Shamra. The excavation of both sites began in 1929 under the direction of the French archaeologist C. F. A. Schaeffer. The excavation of Ras-Shamra has continued throughout this century, interrupted by World War II (1939–1947) and occasionally during the 1970s (by the Yom Kippur War, 1973). The *tell* or mound of Ras-Shamra is trapezoidal, with a maximum length of approximately 3,300 feet (1,000 m.) and a width of 1,650 feet (500 m.). A fresh-water stream flows to the Mediterranean Sea by Minet el-Beida.



Five Phases: The excavators of Ras-Shamra have divided its material remains into five major phases. A level of the remains of the site corresponds to each phase.

The earliest level is assigned the number V. According to radiocarbon data, its material belongs to the seventh and sixth millennia B.C. The first inhabitants of the location did not use pottery, although they possessed crude clay figurines of a sort usually associated with primitive fertility religion. Stone tools and weapons have been found in this level, and the site may have been surrounded by a crude wall.

Level IV at Ras-Shamra represents what archaeologists call the Chalcolithic Age (in the fifth millennium). The pottery from this level is similar to pottery found elsewhere in the Mediterranean, at first to the pottery of Cyprus, later to the pottery of Tell Halaf on the frontier between Syria and Turkey.

Level III begins with the decline of the Chalcolithic Age (ca. 3500 B.C.) and is followed by an intrusion of Ubaid culture. The intrusion

RAS-SHAMRA

ends abruptly. Ubaid culture seems to have spread from Mesopotamia. This level continues into the Early Bronze Age (ca. 3000 B.C.) and terminates after the appearance of "Khirbet Kerek" pottery, a type of pottery known also from ancient Palestine (ca. 2500 B.C.).

Level II encompasses remains dated to ca. 2100–1600 B.C. Egyptian artifacts are relatively common for this period; city life flourished at Ugarit, and two monumental temples, for Baal and Dagon, were built, perhaps on the site of earlier sanctuaries. In the latter part of this phase Ugarit suffered a decline associated with the era of the Hyksos in Egypt (ca. 1750–1550).

The final level of the tell (I) includes material from the Late Bronze Age (1500–1200 B.C.). To this level belong the cuneiform texts of Ras-Shamra as well as the imposing royal palace of Ugarit. The royal palace was one of the largest palaces of its day. This was the "golden" age of the city. It ended abruptly ca. 1200 B.C. in conjunction with the general movements of the Sea Peoples, invaders from Crete and other Greek islands (the Philistines among them), into the ancient Near East. No significant habitation occurred at Ras-Shamra after this period.

Cuneiform Texts: By far the most important discoveries at Ras-Shamra have been the deposits of cuneiform texts recovered from a number of locations on the tell. "Cuneiform" texts are so called because they are produced by impressing wedge-shaped marks (Lat. *cuneus*, "wedge") on clay. Allowed to harden or baked, these clay texts are durable and survive long after papyrus and other writing materials decay. At Ras-Shamra, a large number of cuneiform texts were written with symbols for syllables (syllabic cuneiform) in the Akkadian language. A second variety of text displayed a previously unknown script that proved to be alphabetic (alphabetic cuneiform). Quickly deciphered, thanks to the labors of linguists Charles Virrolleaud, Hans Bauer, and Eduard Dhorme, these alphabetic texts revealed a previously unknown Semitic language having affinities with biblical Hebrew. This language is now called Ugaritic.

Syllabic cuneiform texts have come primarily from the royal palace of Ugarit. They reveal the

Weight in the form of a human head found at Ras-Shamra; thirteenth century B.C.

history, economy, society, and religion of the ancient city. Alphabetic texts have come from scattered spots on the tell including not only the royal palace, but also a priestly "library" in the vicinity of the Dagon and Baal temples. These texts sometimes treat daily matters, but among the alphabetic texts have been found fine literary works divisible roughly into the categories "myths" and "legends." The most important Ugaritic texts come from the fourteenth century B.C., although many scholars assume that a period of oral transmission preceded commitment of the literary works to writing. The Ugaritic texts have thrown extraordinary light on the OT. Composed as poetry, they exhibit stylistic devices known from the Hebrew Bible with a vocabulary cognate with that of the OT. They tell of the deeds of gods worshiped in Israel's environment (El, Baal, Asherah, Anat) and even reveal for the first time a legendary patriarch Danel known also in the OT ("Daniel"; Ezek. 14:14, 20; 28:3).

Ugarit at Its Height: At its height, Ugarit was a thriving city. The metropolis was the administrative center of a small kingdom that followed political tides and was subject at times to Egypt, at times to the Hittite Empire. Personal names reveal a diverse population in the kingdom, with a large Hurrian element. The countryside produced a variety of agricultural products—olive oil, grain, wines. Seafaring was important to the city; votive anchors have been recovered from its Baal temple.

Baal Zaphon was the chief god of the city, although in lists of gods he ranks below others. Alongside El, Baal plays an important role in the myths of Ugarit. Nonmythic texts reveal the veneration of a host of gods and goddesses. Of public ritual, very little is known directly. It is widely assumed that the affairs of the cult at Ugarit were coordinated with the concerns of

the farmer. Private religion is still more difficult to reconstruct, although the existence at Ugarit of an institution called the *marzeah*, a type of funerary observance, is of interest because of a biblical reflection of it (Jer. 16:5). Mortuary concerns may have played an important role in the piety of ancient Ugarit's people. ***See also*** Amarna, Tell el-; Anat; Asherah; Baal; Dagon; Daniel; El; Writing.

R.M.G.

raven, a glossy black corvine bird. The Hebrew word translated "raven" (*orebh*) in the OT probably refers to the true raven (*Corvus corax*) as well as to other members of the crow family (*Corvidae*), which includes the rook, the jay, the fan-tailed raven, the jackdaw, and the hooded crow. Although an object of God's care (Job 38:41; Ps. 147:9; Luke 12:24), the raven is an unclean bird (Lev. 11:15; Deut. 14:14) mentioned for its habit of picking at the eyes of its prey (Prov. 30:17) and for its tendency to live in ruins (Isa. 34:11). In Gen. 8:7 Noah sends a raven out to look for land, and in 1 Kings 17:4 Elijah is fed by ravens. I.U.K.

Re (rah; also Ra), the Egyptian sun god in his manifestation as the sun at its zenith. In Egyptian mythology Re was the son of the earth god Geb and the sky goddess Nut; his two children were the god of light, Shu, and the goddess of dew and moisture, Tefnut. Re journeyed across the sky each day in his solar bark (boat). The principal center of worship for Re was Heliopolis. Re is usually depicted as a man with a falcon's head surmounted by a sun disk. The cult of Re was sometimes combined with that of other deities to produce composite deities, e.g., Amun-Re or Re-Horakhty.

The worship of Re was intimately bound up with that of the pharaoh, who was considered the son of Re. The first king we know to have been officially called "son of Re" was Khafre (Gk. *Chephren*) in the fourth dynasty (ca. 2613–2494 B.C.); from the fifth dynasty (ca. 2494–2345 B.C.) on, Egyptian kings regularly claimed to be the son of this god. The throne name (also called the *prenomen*) of many pharaohs included the name of this god; e.g., *Nebmaatre*, "Re [is] the lord of truth," was the *prenomen* of Amenhotep III, while *Menkheperre*, "Established is the form of Re," was the *prenomen* of Thutmose III. The family name *Ramesses*, "Ramesses" meaning "Re is born," was held by no less than eleven kings of the nineteenth and twentieth dynasties (ca. 1293–1070 B.C.).

Although Re is not mentioned in the Bible, references to, or influences associated with, the cult of the sun god can be seen in several places. For example, in Gen. 41:50 and 46:20, Joseph's wife, Asenath, is described as the daughter of

The Egyptian sun god Re; bronze statue, Egypt, first millennium B.C.

Potipherah, a priest of On (Heliopolis; Gk., "City of the Sun"). In Mal. 4:2, the mention of a winged sun recalls the Egyptian motif of the winged sun disk, although this motif also occurs elsewhere in the ancient Near East. The biblical view that human beings were created in God's image (e.g., Gen. 1:26–27; 5:1) recalls a passage in a late third-millennium B.C. Egyptian text in which humankind is described as being created in the likeness of Re. Many scholars also think that certain words and phrases in Psalm 104 derive from the Hymn to Aton (a hymn of praise directed to the sun disk worshiped as a deity by the heretic pharaoh Akhenaton, who ruled Egypt in 1350–1334 B.C.); such parallels are probably due to concepts and motifs being passed on down through the years rather than to any direct relationship between these chronologically distinct texts. ***See also*** Akhenaton; Asenath. J.M.W.

reader-response criticism. Attention to the reader in literature may be seen as part of a larger universal move from the modern to the postmodern, with the modern characterized in terms of the ideal of epistemological certainty and the postmodern characterized in terms of instability and indeterminacy. Instead of attempting to

READER-RESPONSE CRITICISM

ground text or world in some foundationalist way, critics have given attention to the mode of existence of texts and the mode of existence of the worlds projected by texts. The reader's perception is vital in the new postmodern poetics.

Development: It is instructive to see how the reader came to be the center of attention in different literary traditions in terms of the modern/postmodern dialectic. Structuralist and formalist views of literary texts in Europe and America form one background against which attention to the reader developed. In Europe, it was against the background of the structuralism growing out of the work of Ferdinand de Saussure; in America, it was against the background of the New Criticism. In an early phase of Russian and East European formalism, the reader's perception was eschewed. Roman Jakobson took the position that a scientific poetics must forego all valuation. Viktor Sklovski, however, disagreed, emphasizing that perception is central, that a work composed as literature can be perceived as nonliterary and vice versa. Artistry, then, is a result of the kind of perception we have.

Important theoretical moves were made in East European formalism that bear upon the organization of the literary work of art, the role of the individual and the community in aesthetic evaluation, and literary history. East European formalist movements ceased functioning as early as the late 1920s on account of pressure from doctrinaire Soviet Marxists, and exemplary texts of the formalists were not available in translation until the sixties and seventies. As movements in the structural and semiotic study of narrative, poststructuralism, and deconstruction have become influential, however, arguments and developments in East European formalism (structuralism) have been recapitulated. These developments were revived in large measure beginning with the work of Hans Robert Jauss at the University of Constance in West Germany in the late 1960s. The inaugural address of Jauss has been enshrined as "the origin of modern reception theory" in West German literary criticism. Jauss declared that the approach he advocated must begin where Marxist and formalist schools end. In formalism and Marxism, the true role of the reader is ignored and the reader is reduced to philosophical assumptions. The goal of Jauss was the actualization and transformation of past art into the present.

Views of the role of the reader in structural semiotics, poststructuralism, and deconstruction associated with scholars such as Roland Barthes, Umberto Eco, and Jacques Derrida are associated with reader-oriented interpretation and may be appreciated against the background of formalism. Barthes sees the structure of a text as dynamic and involving the reader in a process of analysis without a final synthesis or end. Eco sees the process of reading as involving moves both within the text (intensional) and outside the text (extensional). The various levels and sublevels of textual and extratextual realities are interconnected, and the reader moves back and forth within and outside of the text to produce meaning. Derrida sets knowledge, language, meaning, and interpretation not simply within a dynamic cultural context but within a larger context of power and authority. The language and logic that form the resources of an author cannot be dominated absolutely by an author. The author uses them by being governed by them. A deconstructive reader seeks to discover relationships between what the author commands and what the author does not command of the patterns of the language used by the author. A deconstructive reading gives conscious attention to the impulse toward and result of the synthesizing of the conventional reading process in order to break their "domination."

Scholars in the phenomenological tradition have made a contribution to reader-oriented literary study from a different beginning point than structuralism. The phenomenological approach is represented by Roman Ingarden and Wolfgang Iser. Ingarden came to the question of the literary work of art and its cognition in the 1930s as a philosopher concerned with the formal structures common to all works of literature and with the nature of cognition that is a valid and true reconstruction of the literary work. Ingarden emphasized the work as an aesthetic object that is constituted or concretized through the intentional act of reading. The complexity of the literary work and its total apprehension is such that the experiencing ego cannot give itself equally to all of the components involved. There is constant change with regard to which components are central at any given moment. The same literary work, therefore, is apprehended in various changing perspectives.

Wolfgang Iser is a contemporary literary critic who defines his approach to the reading process as phenomenological. He emphasizes that in considering a literary work one must consider not only the actual text but also in equal measure the actions involved in responding to the text. Iser makes the "gaps" and completion of "gaps" by the reader the central factor in literary communication. The place where language is broken up and reconstituted is marked by gaps in the text that the reader must fill in. It is when the reader bridges the gap that communication begins.

Rhetorical and psychological approaches have given attention to the reader. The rhetorical approach that emphasizes the author's imposition of a textual world upon the reader maintains the autonomy of the text by viewing the reader as a textual reality, with the actual reader carrying out procedures dictated by the author. Wayne Booth is identified with the rhetorical approach. According to Booth, as an

author writes, the author creates an implied version of himself or herself. The actual reader gains access to the implied author by the narrative's explicit commentary, the kind of tale the author tells, meanings that can be extracted, and the moral and emotional content of the action and experiences of the characters. As the actual reader builds up the picture of the implied author, the reader is assuming the role dictated by the author. Alongside the implied author, then, is the implied reader. As a reader reads, the reader becomes the self whose beliefs coincide with those of the author. The reader who would enjoy the work fully must subordinate his or her mind and heart to the book.

Norman N. Holland dealt with the question of the relationship between patterns found objectively in the text and a reader's subject experience of the text. In his later work, Holland came to the conclusion that viewing the literary text as the embodiment of the psychological process has limitations. In his work, Holland emphasizes the effect of personality on perception and the response of readers in terms of their own "life style." The literary text is seen as a constraining reality, an "other" over against the reader. Holland conceives of the literary response, however, as one indivisible transactive process in which a reader acts across and through the text to achieve an experience in himself or herself.

Perhaps the best-known American representative of reader-response criticism is Stanley Fish. The background for the work of Fish was New Criticism's view of the independence and the self-sufficiency of the literary work of art and its attention to close reading of the literary work itself instead of to extrinsic matters such as history and biography. Fish initiated his approach when he decided that the essential factor in meaning is not the spatial form of text on the page but the temporal process of reading. From a later perspective, Fish acknowledged that his early work was not radical enough, that he had been retaining the most basic of new-critical principles—the integrity of the text—in order to claim universality and objectivity for his method. When Fish discerned that literature is a conventional category depending upon subjective perception, he moved in a radical way away from new-critical assumptions. There is no basic or neutral literary language uncolored by perception and response. The conclusion is that it is the reader who makes literature.

The importance of the reading community and the influence of the reading community upon the individual reader have been stressed by Fish, but perhaps most significantly by Richard Rorty. Rorty and Fish suggest that it is unnecessary, futile, and improper to ask questions about truth values outside of the specific context in which readers operate—other than to agree on pragmatic universals such as "success."

Reader-Response Criticism and the Bible: Whether reader-response criticism of the Bible is viewed positively or negatively, and the way that such criticism is practiced, depend in part upon the worldview of the critic and the role and function of the Bible in that worldview. Critics who are committed to a modern Enlightenment paradigm will seek to eliminate or reduce the subjective character of study. If these critics utilize reader-response criticism, it will take the form of an objective search for the implied reader or for the strategies followed by the author in influencing the reader (rhetorical criticism) that can be demonstrated as existing in the ancient world. Critics who have been influenced more decisively by postmodernism are utilizing the rich resources of reading for actual readers. Serious interaction with the text is facilitated by reader-response criticism. Readers are freed to make sense for themselves. This method allows readers to interact with the text in light of their own context, linguistic and literary competence, and need, as well as in light of the potentialities of the text.

Religious concerns of the text may be appreciated more fully in a reader-oriented approach. In the historical-critical approach, such concerns were distanced in order that they might be studied with proper scientific tools. The literary study of the Bible, as literary study in general, approaches texts today not to ground their world in some objective fashion but to create a world or worlds with which readers are related. The world of the reader of the biblical text will be seen as "like" the biblical world in some way satisfying to the reader. A type of knowledge may result from the experience of reading that is different from the knowledge gained by conventional scientific methodologies. Levels of meaning and knowledge may be experienced that became lost with the Enlightenment paradigm.

Reader-response approaches are not essentially opposed to more conventional biblical and literary studies. Historical and sociological exegesis, for example, are not precluded in reader-response criticism. They are reconceptualized and relativized but not made illegitimate as such. The world discerned by historical and sociological exegesis will be seen as the originating circumstances for the text and the world of the text. ***See also*** Bible; Biblical Criticism; English Bible, The; Hermeneutics; Literature, The New Testament as; Literature, The Old Testament as; Narrative Criticism; New Testament; Old Testament.

Reaiah (ree-ay'yuh; Heb., "Yah [God] has seen"). **1** A descendant of Judah of the clan of the Zorathites (1 Chron. 4:2). **2** A descendant of Reuben (1 Chron. 5:5). **3** A family group ("sons of Reaiah") of Temple servants (Nethinim) who returned from the Babylonian captivity with Zerubbabel (Ezra 2:47; Neh. 7:50).

reaping, the harvesting of grain. The term is used figuratively for the final judgment (Matt. 13:24–30, 36–43; Rev. 14:15–16), evangelism (Matt. 9:37–38; Luke 10:2; John 4:35–36; Rom. 1:13), and recompense for good (Hos. 10:12; 2 Cor. 9:6; Gal. 6:7–8) or evil (Job 4:8; Prov. 22:8; Hos. 8:7; 10:13; Gal. 6:7–8). ***See also*** Farming.

Reba (ree'buh), one of the five kings of Midian killed by the Israelites (Num. 31:8). His territory was assigned later to the tribe of Reuben (Josh. 13:21).

Rebekah (ri-bek'uh), the wife of Isaac, the daughter of Bethuel (Abraham's nephew), the sister of Laban, and the mother of Jacob and Esau. Genesis 24 recounts how Abraham's servant came to his homeland to find a wife for Isaac, and how (in response to prayer) he found Rebekah at the well and she brought him home. Similar stories about Rachel (Gen. 29:9–12) and Zipporah (Exod. 2:16–20) indicate that girls could be found at the wells and were not enjoined from talking to strange men. The negotiations for Rebekah's marriage were carried out by her brother Laban, an indication that Bethuel was old or infirm. Because of this and the curious episode in Gen. 26:6–11, in which Isaac claimed that Rebekah was his sister, some scholars have suggested that Rebekah entered into a special type of marriage, the "wife-sister" marriage, which conferred special status on the wife; others have contested this interpretation.

Rebekah was barren for twenty years, but conceived the twins Jacob and Esau after Isaac interceded with God. During her pregnancy she received an oracle that the twins would beget separate nations, and that Jacob would be dominant despite Esau's status as firstborn (Gen. 25:20–26; cf. Rom. 9:10–13). Jacob was clearly Rebekah's favorite, and she instigated the plot by which she covered Jacob's arms and neck with goatskins and sent him in to impersonate the firstborn Esau so that he would get Isaac's blessing (Gen. 27:1–29); she then convinced Isaac to send Jacob to his kinspeople to find a wife in order to take him out of the path of Esau's anger (Gen. 27:41–28:5). Nothing more is known about Rebekah other than the fact that she was buried in the Cave of Machpelah (Gen. 49:31). The only story about Rebekah and Isaac that does not deal with the succession of the patriarchs is the tale about Isaac pretending that Rebekah was his sister in the land of Abimelech, the king of Gerar (Gen. 26:6–11), which is a doublet of the story of Abraham and Sarah in Gerar (Gen. 20). T.S.F.

rebirth. ***See*** Conversion; Regeneration.

receipt of custom, ASV translation for revenue or tax office, the place where tolls or customs taxes were paid (Matt. 9:9; Mark 2:14; Luke 5:27). ***See also*** Tribute, Tax, Toll.

Rechab (ree'kab). **1** The son of Rimmon who, with his brother Baanah, was a captain of Ishbosheth's bands. After Abner's death, the two brothers murdered Ishbosheth and brought his head to David, whom they expected to be pleased; instead, he had them executed (2 Sam. 4). **2** An ancestor of Jehonadab (Jonadab), a Kenite (1 Chron. 2:55) who supported Jehu's coup (2 Kings 10:15). Toward the end of Jehu's monarchy (ca. 816 B.C.), a group of his followers called "Rechabites" came to Jerusalem to escape Nebuchadnezzar's invasion. They apparently lived in tents, avoided agriculture, and drank no wine in accordance with the principles of Jehonadab. Jeremiah cited them as an example of fidelity to prior commitments, in contrast to the unfaithful Judeans. Although Judah had therefore to be punished for her infidelity, Jeremiah assured the Rechabites that there would always be a descendant of Jonadab (Jer. 35). ***See also*** Abner; Ishbosheth; Nazirites. F.E.G.

reconciliation (Gk. *katallagē*), a term indicating the changed relationship for the better between persons or groups who formerly were at enmity with each other. The NT encourages reconciliation between estranged parties (Matt. 5:24; Luke 12:58) and spouses (1 Cor. 7:11). But the noun and its corresponding verb most often refer to the new relationship between God and humanity effected by Christ's redemptive work (Rom. 5:10–11; 11:15; 2 Cor. 5:17–20; Eph. 2:16; Col. 1:20, 22).

For Paul the subject of the reconciling activity is always God "who through Christ reconciled us to himself" (2 Cor. 5:18). There is no need for God to be reconciled to humanity as appears in 2 Macc. 1:5; 7:33; and 8:29. To the contrary, humanity stands in need of reconciliation with God. Paul describes the human condition prior to reconciliation as weak, ungodly, and sinful (Rom. 5:6–8; cf. Eph. 2:12). But it was precisely when we were enemies that God reconciled us to himself (Rom. 5:10).

God effected this reconciliation through the death of his Son upon the cross (Rom 5:10; 2 Cor. 5:19; Col. 1:22). At other times Paul specifies this further by speaking of the "blood of Christ"

(Eph. 2:13) and the "blood of the cross" (Col. 1:20). The immediate effect of reconciliation is "peace with God" (Rom. 5:1; Eph. 2:14) so that Christians can view themselves as a "new creation" (2 Cor. 5:17). The scope of reconciliation, however, goes beyond God and the individual. The world is also affected by Christ's redemptive work (2 Cor. 5:19; Rom. 11:15). In Colossians this reconciliation takes on cosmic proportions (1:20), and in Eph. 2:11 it results in a new relationship between Jew and Gentile. Although the work of reconciliation belongs to God, Paul views his ministry as one of reconciliation and himself as an ambassador for Christ inviting others to receive this reconciliation (2 Cor. 5:18–20). ***See also*** Justification; Peace; Redemption; Salvation. F.J.M.

red, the color of healthy blood or a ruby stone. In biblical usage it is the color of the earth from which Adam was made (Gen. 2:7; the letters for "Adam" in Hebrew can also mean "ruby," and "dust" can also mean "reddish in color"), the color of Esau at birth (Gen. 25:25), the color of pottage (Gen. 25:30), of drunken eyes (Gen. 49:12), of cattle (Num. 19:2), of blood (2 Kings 3:22), of weeping faces (Job 16:16), of wine (Prov. 23:31), of sin (Isa. 1:18), of clothing (Isa. 63:1–2), of horses (Zech. 1:8; 6:2), of threatening skies (Matt. 16:3), and of the apocalyptic dragon (Rev. 12:3). In Christian liturgical practice, red is the color of martyrs and festivals. ***See also*** Scarlet. R.S.B.

redaction criticism. ***See*** Biblical Criticism.

redeemer, one who buys back a property or house that has been sold; or, a kinsman who buys back a family member who has fallen into slavery (Lev. 25:25–34, 47–55). In the OT, the term is applied in its latter meaning to God (Job 19:25; Pss. 19:14; 78:35; Prov. 23:11; Isa. 41:14; 43:14; 54:5; 60:16; Jer. 50:34). It is never used of Jesus Christ, although the term "redemption" is applied to him (e.g., 1 Cor. 1:30). ***See also*** Redemption.

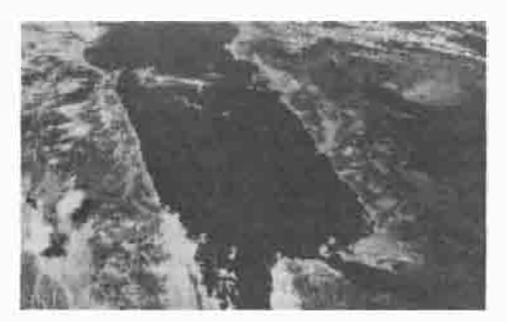
redemption, a term associated in current English usage with a transaction involving the release of an item (or person) in exchange for some type of payment. This association is not at all foreign to biblical understandings of redemption. The contexts of usage in the OT and the NT, however, add important dimensions that help in grasping the theological implications of the concept.

In the OT: In the OT, three different Hebrew roots are used to express the idea of redemption. The first is a technical legal term and is applied to the redemption of inheritance, of family members from servitude or difficulties, of tithes, or of various objects and property (e.g., Lev. 25:25, 47–49; 27:15–20; Ruth 4:1–6; Ps. 72:4, 14; Jer. 32:1–15). Often without great distinction from the first, a second root is used of the redemption of the firstborn among male children (or even of animals) by means of some payment or offering (e.g., Num. 3:45–51; 18:15–16). Where offenses and conflicts are involved, redemption can also be achieved through payment of money (e.g., Exod. 21:8, 30). Specialized usage in cases of the shedding of blood (e.g., Num. 35:12, 19) and of God acting in a redemptive manner toward his people (e.g., Exod. 6:6; 15:13; Deut. 7:8; 1 Chron. 17:21; Pss. 19:14; 25:22; 106:10; Isa. 41:14; 43:1–4; 44:21–23; 24–28; Hos. 13:14) or toward individuals in difficult or life-threatening situations (e.g., Gen. 48:16; 2 Sam. 4:9; Job 19:25; Pss. 26:11; 49:15; 69:18; 103:4) can also be found. These first two Hebrew roots are therefore somewhat synonymous, although the former is favored by certain writers (the authors of some of the psalms and Isa. 40–55, sometimes called Second Isaiah), while the latter is preferred, it would seem, by others (the authors of Deuteronomy and certain other psalms).

The specialized theological notion of redemption tends to gravitate around the third root, which is frequently used where God's relationship to his people as a whole is reestablished or restored after acts of rebellion, disobedience, or infidelity. This third root is often translated as "ransom" (e.g., Ps. 49:7–8; Exod. 21:30) or "redeem" (Ps. 130:8; in Amos 5:12, it is "bribe") and carries the sense of "atonement."

In the NT: This theological sense is the one reflected in Christian traditions and appropriated somewhat differently by NT writers. Here, the center of gravity for the notion is the profound human need for deliverance and freedom in matters of ultimate destiny and the meaning of life (e.g., Rom. 5:9; 6:6; 7:6; 8:2; cf. also 1 Cor. 2:6; Gal. 5:4; Heb. 2:14–15). Presupposed is the idea that alienation and bondage (i.e., sin) are endemic to the human condition and have far-reaching consequences. The frame of reference and goal of redemption is the salvation of God's creation. Here, the Creator becomes the Redeemer of his creatures. The redemption is represented as having been accomplished exclusively in the sacrificial death of Jesus of Nazareth (e.g., Rom. 3:23–25a; 8:23; 1 Cor. 1:30; Eph. 1:7, 14; 4:30; Col. 1:14; Heb. 9:15; 1 Cor. 6:20; 7:23; Gal. 3:13; 4:5; 1 Pet. 1:18–19; Rev. 5:9; 14:4). The proclamation of this redemption is based on Jesus' own reported understanding of the significance of the impending death of the Son of man (Mark 10:45; Matt. 20:28; cf. also Mark 8:31 and parallels), the verification of that understanding in his resurrection from the dead (1 Cor. 15:3–7; 1 Pet. 1:18–21), and the assurance expressed in the phrase "on our behalf" and related formulas of early Christian reflection, missionary preaching, and worship (e.g., Mark 10:45; 1 Tim. 2:6; Titus 2:14; Matt. 26:28; Mark 14:24; 1 Cor. 11:24; also 1 Cor. 15:3–7).

While the origins of the notion of redemption in the NT are to be traced to OT theological concepts, it would be a mistake to see the



relationship strictly in terms of the history of ideas. In the NT, the starting point is the stark reality of Jesus' death; to this are added interpretive features from OT traditions (cf. Luke 1:68, 74; 24:21) and from the earliest strata of the traditions about Jesus' ministry. That writers such as Paul were also influenced by considerations from life in the first century (e.g., human bondage and the manumission of slaves) is extremely likely. ***See also*** Assurance; Atonement; Expiation; Forgiveness; Liberty; Pardon; Reconciliation; Regeneration; Salvation; Sin; Slavery. J.E.A.

redemption of land, in the Israelite legal codes (Lev. 25:23–34) the right of Israelite landowners to regain property that had been sold. The land was considered as belonging to God and therefore the inheritances granted to the tribes divinely ordained; the laws of redemption were designed to protect the poor by keeping family inheritances intact. Provisions were made for various means through which the land could be reclaimed: the kinsman-redeemer could purchase the land (cf. Jer. 32:6–15; Ruth 4:1–4), the original owner could buy it back (Lev. 25:26–27; cf. vv. 14–16), or it would automatically revert to the previous owner every fifty years (the Jubilee Year; Lev. 25:10, 13, 28). ***See also*** Feasts, Festivals, and Fasts; Ownership; Redemption. D.R.B.

Red Sea, the narrow sea between Africa and Arabia, part of the Great Rift Valley system, about 1,450 miles (2,330 km.) long and averaging about 150 miles (240 km.) wide. The constricted southern exit through the straits of Bab el-Mandeb opens into the Indian Ocean, and the northern end divides around the Sinai peninsula, with the Gulf of Aqabah on the east and the Gulf of Suez on the west. Enclosed between hot deserts, the summer water temperature reaches eighty-five degrees Fahrenheit (29° C.).

Dangerous coral reefs and powerful north winds make navigation difficult, but trade along it was important from a very early date. How early is unknown, but the Egyptian queen Hatshepsut certainly used it for her expedition to Punt in the mid-fifteenth century B.C. Whether the Edomites utilized it to supplement their important land trade is uncertain, but King Solomon undoubtedly maintained a fleet at Ezion-geber on the Gulf of Aqabah, a fleet that made triennial journeys to south Arabia and east Africa (1 Kings 9:26–28; 10:11, 22). Jehoshaphat of Judah later attempted to do likewise, but his ships were destroyed (1 Kings 22:48).

The Red Sea, with the tip of the Sinai Peninsula at bottom.

A major problem concerns the meaning of "Red Sea" in the Exodus story, since we cannot identify the various places mentioned in that account. The Hebrew term for the Red Sea is always *yam suph,* literally "Sea of Reeds," but the Hebrews did not distinguish between "sea" and "lake." Three possible routes for the Exodus have been suggested: the southern route at, or close to, the Gulf of Suez; the central route across the marshes of Lake Timsah, now part of the Suez Canal; and the northern route, identifying *yam suph* with Lake Bardawil and assuming the Israelites followed the narrow spit of land dividing the lake from the Mediterranean. No one of these suggestions, however, has won general acceptance. ***See also*** Edom; Exodus; Jehoshaphat; Sinai; Solomon. D.B.

reed, a general term referring to tall hollow grasses growing in shallow water by streams, rivers, lakes, and marshes throughout the Holy Land. It may be identified as any one of several common plants. The giant reed (*Arundo donax*) grows to over 10 feet high forming dense thickets along lake margins (Job 40:21). Reed mace or

Common reed.

cattail (genus *Typha*), topped by a cylindrical brown spike, is often depicted as the mock scepter of Jesus in Matt. 27:29–30. The common reed (*Phragmites communis*) sports dense purple plumes atop its tall stems which move gracefully in the wind (Matt. 11:7).

The tall, sturdy stems of these grasses had diverse uses. The jagged edges of the broken stems were capable of piercing flesh (2 Kings 18:21) and may have been used as fishing spears. They are sturdy enough to have been used as a walking stick (Ezek. 29:7). Reeds were also effective as makeshift flutes, pens (3 John 13; 3 Macc. 4:20), and even as a form of measuring rod (Ezek. 40:3). ***See also*** Flags; Rush. P.L.C.

refining, the process of removing impurities from metal ore. Two verbs in Hebrew are employed metaphorically for the cleansing or purifying of persons or things either by filtering or washing, or by burning or smelting. When referring to metalworking, the process is that of melting a solid to a liquid in order to remove the dross (Isa. 1:25; Mal. 3:3), or to a process of burning in which the fire helps in the extraction of metal from an ore by enhancing chemical reactions (Isa. 48:10; Jer. 6:29; 9:6; Ps. 12:6). Copper smelting was practiced early by the Hebrews using pottery crucibles or by heating ore with charcoal in a furnace. Refining by smelting is known from Timna in the Arabah and other sites, e.g., Gerar, Rumeileh, Tel Qasile near Tel Aviv, Abu Matar near Beersheba. In 1 Peter, the refining of gold is used as a metaphor for the stronger faith that emerges after persecution (1:7). ***See also*** Furnace; Mines; Smith. R.A.C.

refuge, a place of safety or protection from enemies. Six of the levitical cities were designated as cities of refuge (Josh. 20:7–9) where one who accidently caused a death might seek asylum from avengers until his case could be judged by the elders of the city. If he was found to be innocent of deliberate murder, he could continue to live in sanctuary in the city of refuge (Num. 35:6–28; Deut. 19:1–13). God is often portrayed as a refuge or shelter for humanity, most frequently in psalms (Pss. 7:1; 11:1; 46:1; 2 Sam. 22:3; Isa. 25:4; Jer. 16:19; Heb. 6:18). ***See also*** Avenger; Cities; Priests. D.R.B.

regeneration (Lat., "rebirth"), a term associated with human hopes and longings for the dawn of a new day, the establishment of a better world, and the creation of a new humanity. The term and concept were prominent in the Hellenistic world of the first century A.D. For biblical writers, the hope of regeneration is linked to faith in the Creator, who is understood as the source of new creation through the power of his word and the work of his Spirit. These writers have very little confidence in human potential for self-regeneration.

Although the term "regeneration" does not occur in the OT, the OT prophets focused attention on an appointed hour in the future when God would make all things new, reconstitute human disposition, make resistant hearts supple, renew his covenant, and refresh spirits through the outpouring of his Spirit (e.g., Isa. 65:17–25; 66:22; Jer. 31:31–34; 32:38–41; Ezek. 36:25–28; 37:1–14; Hos. 6:1–2; Joel 2:26–32; Zech. 13:1; cf. also Isa. 2:1–5; Ps. 51:10–12). With this appointed day, the radical renewal of God's people would dawn; God's promises of judgment and blessing/salvation would be fulfilled.

NT writers declare that this day has dawned in the life (e.g., Matt. 10:7–8; 11:4–6; 12:28; 18:3; Luke 4:18–19), death, and resurrection of Jesus. The technical terms for "regeneration" are found in a few key texts, all of which are relatively late. God causes us to be "born anew," we are "born anew [by God]" (1 Pet. 1:3, 23; cf. 2:2); God "saved us . . . by the washing of regeneration" (Titus 3:5); it is necessary to be "born from above" (John 3:3, 7; cf. also 1:13; 3:5–6, 8; 1 John 3:9; 5:1–12; James 1:18, 21; for the translation "above" rather than "anew," cf. John 3:31; 19:11, 23). These are the classical locations for this terminology, but the scope of importance of regeneration in the NT is not limited to them.

Language regarding new creation and a new eschatological (promised end-time) existence dominates the fundamental orientation of all NT preaching and writing. The locus of this orientation is the resurrection of Jesus; the new creation has dawned with the dawn of Easter (e.g., Rom. 6:3–14; 8:10–17; 12:2; 1 Cor. 12:13–14; 2 Cor. 1:20–22; 3:18; 4:16; 5:17; 6:16–18; 13:3, 5; Gal. 2:19–21; 3:27–29; 6:15; Eph. 2:10, 15–16; 4:24; Col. 2:12–15; 3:1–12; Heb. 10:22; 1 Pet. 1:3–5; Rev. 1:5–6). The means through which this new reality becomes the new existence for human beings is articulated variously and with different emphases. It is imparted through the power of God's word and his Spirit, received through faith, experienced sacramentally (baptism and the Eucharist), is lived out in the obedience of responsible living, and is in constant conflict with the old existence (a future resolution of this conflict is a dimension of hope; e.g., Rom. 7:14–25; 8:21–25; cf. also Matt. 19:28–30).

Here, as elsewhere, early Christianity conducted an earnest conversation not only with its OT heritage but also with the popular religion and philosophy of its environment. Then, as now, the hope for regeneration and renewal cut a deep and wide furrow in the hearts and minds of people everywhere. ***See also*** Conversion; Eschatology; Holy Spirit, The; Mystery; Redemption; Salvation; Word. J.E.A.

Rehabiah (ree'huh-bi'uh; Heb., "Yah [God] has enlarged"), the son of Eliezer and grandson of Moses and the head of a large family group (1 Chron. 23:17; 24:21).

Rehob (ree´hob; Heb., "broad, wide." Rehob in personal names is shortened from something like "[God] made room, saved"). **1** The father of Hadadezer, king of Zobah, an Aramaean city-state north of Damascus (2 Sam. 8:3, 12). **2** A Levite of the time of Nehemiah (Neh. 10:11). **3** A site in upper Galilee (Num. 13:21). **4** A place in the plain of Accho of the tribe of Asher (Josh. 19:28, 30; 21:31; Judg. 1:31; 1 Chron. 6:75). **5** A place in Beth-shean (2 Sam. 10:8).

Rehoboam (ree´huh-boh´uhm; KJV and NT: "Roboam"), the son of Solomon by Naamah, an Ammonite princess (1 Kings 14:31). He was successor to his father as the last king of the United Monarchy and the first king of Judah after the northern tribes revolted against his rule under Jeroboam I, who was made their king. There is some uncertainty about the chronology for Rehoboam's reign. He is said to have become king when he was forty-one and to have ruled for seventeen years (1 Kings 14:21; 2 Chron. 13:7). His reign has been variously dated as starting in 937, 933, or 926 B.C., the last of which would date Rehoboam's reign as 926–910 B.C. The basic biblical narratives concerning Rehoboam are found in 1 Kings 11:43; 12:1–24; 14:21–31; and 2 Chron. 9:31–12:16.

Rehoboam's accession to the throne came under very difficult political circumstances. Solomon's policies of forced labor and high taxation to support his greatly expanded court and administrative apparatus had created a good deal of popular unrest. Added to this was his attempt at breaking up tribal loyalties by the creation, in order to facilitate tax collection, of twelve administrative districts that basically disregarded the old tribal borders. The growing resentment against such policies erupted after Solomon's death, on the occasion of Rehoboam's aborted coronation at Shechem. Rehoboam rejected the counsel of his older mentors who advised easing the people's tax burden and went instead with the guidance of his contemporaries who counseled the continuance of the policies of his father. Upon hearing this message from Rehoboam, the northern tribes revolted and instituted their own monarchy. Rehoboam unsuccessfully attempted to put down the revolt (1 Kings 12:18, 21, 24).

After the division, Rehoboam instigated border warfare against Israel (1 Kings 12:21–24; 14:30; 2 Chron. 12:15), apparently in an attempt to clear the approaches to his capital city. The threatened nature of Rehoboam's kingdom is reflected in his construction of a line of fortresses around Judah (2 Chron. 11:5–10), which may have been built either before Pharaoh Shishak's invasion or in response to it. The line ran south of Jerusalem along the central ridge, turning west south of Hebron, continued northward through the Shephelah to Aijalon, where it turned back toward Jerusalem. The sixteen stations in the line are little more than three miles apart, and the area enclosed does not include the coastal plain, with its trade routes and access to the Mediterranean, nor the plain of Beer-sheba.

Rehoboam's reign saw the Palestinian campaign of Pharaoh Shishak I ("Sheshonk," 1 Kings 14:25–28; 2 Chron. 12:2–9), founder of the twenty-second dynasty in Egypt. This invasion, which occurred in ca. 920 B.C., in Jeroboam's fifth year, included the hill country, the coastal plain, and the Negeb. The biblical account only mentions the pharaoh's assault upon Judah, but Shishak's version, on the wall of the temple at Karnak, shows 156 captives, each representing a Palestinian city, most in Israel. The section of the inscription that apparently lists sites in Judah, however, is very poorly preserved. This raid illustrates the military weakness caused by the division of the Hebrew kingdom, which resulted in such widespread destruction only five years after the death of Solomon. This destruction has been confirmed to some extent by the results of archaeology, especially at Tell Beit Mirsim, Lachish, and Beer-sheba. According to 1 Kings 14:25–28, Shishak came up against Jerusalem, and many of the treasures of the Temple and palace had to be handed over as ransom.

From the perspective of the Chronicler (2 Chron. 12:5), Shishak's invasion came as retribution for Rehoboam's infidelity to God. 1 Kings 14:22–24 provides a list of his apostasies, many of which reflect the pagan influences introduced by Solomon. The author of Chronicles (2 Chron. 11:18–22) includes a section on Rehoboam's family, somewhat problematic material without parallel in Kings, which says that he had eighteen wives, sixty concubines, twenty-eight sons, and sixty daughters. ***See also*** Jeroboam I; Shishak.

F.S.F.

Rehoboth (ri-hoh´both), a place name in the OT. Isaac's servants dug a well and called it Rehoboth (Heb., "broad places"), because they found respite from their quarrels over water rights with the herdsmen of Gerar (Gen. 26:22). The site is most often identified with modern Ruheibeh, southwest of Beer-sheba. Rehoboth-on-the-River is the home of Shaul (Gen. 36:37; 1 Chron. 1:48), one of the early kings of Edom (Gen. 36:31). The River is possibly the Brook Zered (modern Wadi el-Ḥasā) rather than the Euphrates. The site itself is unidentified. Rehoboth-Ir (Gen. 10:11) is probably not the name of a city in northern Mesopotamia but a description of Nineveh. ***See also*** Beer-sheba; Gerar; Isaac; Nineveh; Zered, The Brook. B.M.

Rehoboth-ir (ri-hoh´both-ihr´; Heb., "[the] open places of [the] city," or "city-plazas," as, e.g., in Lam. 2:12). A place built by Nimrod (in Gen. 10:11). It is thus to be interpreted either as

an otherwise unknown city between Nineveh and Calah or as a district of Nineveh. There are similar Akkadian expressions that support the latter interpretation.

Rehum (ree'huhm). **1** Apparently one of eleven leaders of groups returning from Exile (Ezra 2:2; Neh. 7:7 has "Nehum"). **2** "Commander," "high commissioner" (NEB), one of the officials sending accusation against the Jews rebuilding Jerusalem (Ezra 4:8–23). This led Artaxerxes to stop the work. This narrative cannot be dated; it is often assumed to precede the activity of Nehemiah. **3** A Levite, son of Bani, sharing in the repair of the wall under Nehemiah (Neh. 3:17; perhaps also Neh. 10:25), a "chief of the people" and signatory to the Covenant (Neh. 9:38). **4** A priest or priestly clan associated with Zerubbabel and Jeshua, perhaps an error for Harim (Neh. 12:3; cf. 12:15). ***See also*** Artaxerxes; Nehemiah, The Book of; Zerubbabel. P.R.A.

Rei (ree'ī; Heb., probably "the Lord is a friend"), a member of David's court who remained loyal during the conspiracy of Adonijah (1 Kings 1:8).

Rekem (ree'kuhm). **1** A Midianite king slain with four others by the Israelites on their way to Canaan (Num. 31:8; Josh. 13:21). **2** An eponymous ancestor of a Calebite family that was associated with the man Hebron (1 Chron. 2:43–44). **3** An eponymous ancestor (Rakem) of one of the Machir clans in Gilead (1 Chron. 7:16). **4** A town in the territory of the tribe of Benjamin (Josh. 18:27).

Release, Year of, an ancient Israelite institution by which Hebrew slaves would be released in the seventh year after their purchase (Exod. 21:2–6; Jer. 34:8–15). According to the legal tradition in Lev. 25:47–55, the Hebrew slave could be redeemed through payments by relations or released during the Jubilee Year. ***See also*** Hebrews; Jubilee; Sabbatical Year.

religion, religious, the English translations of various Greek terms appearing only in Acts, Colossians, the Gospel of John, the Pastoral Letters, James, and 2 Peter (i.e., in the later writings of the NT). The root occurring in Acts 17:22 (RSV: "very religious") and Acts 25:19 (RSV: "superstition") was commonly used in Hellenistic culture for observances offered to a deity. A second root is used in Acts 26:5 of Jewish observances and customs (RSV: "religion"), in Col. 2:18 of the "worship" of angels, and in James 1:26–27 of proper conduct toward others. The third root is found most frequently in the Pastoral Letters and is variously translated in the RSV as "religion" (1 Tim. 3:16; 5:4; 2 Tim. 3:5; Titus 2:10), "godliness" or "godly" (1 Tim. 2:2; 4:7, 8; 6:3, 5, 6; Tit. 1:1; 2:12; 2 Pet. 1:3, 6; 2:9; 3:11), "piety" (Acts 3:12), "devout" (Acts 10:2, 7), or "worship" or "worshiper" (Acts 10:23; John 9:31); this root refers both to the Christian message and to proper conduct. ***See also*** Godliness, Godly; Worship. J.W.T.

Remaliah (rem'uh-li'uh), the father of Pekah, an official of King Pekahiah of Israel (i.e., Northern Kingdom) who assassinated the king and took the throne (2 Kings 15:25; Isa. 7:1).

remnant, the portion left over after a part has been removed. Thus, it may refer to vegetation (Exod. 10:5) or human and animal life (Gen. 7:23). It often refers to that element of a community that has escaped death or exile (Jer. 24:8; Ezra 9:13–15).

In biblical thought, the remnant has been or will be saved and redeemed by God. This concept is frequently mentioned in prophetic writings since it is the obverse of the idea that God will punish the sinning people with near total destruction (cf. 1 Kings 19:15–18). Thus, Amos speaks of a nonviable or pitiful remnant in his prophecies of rebuke (3:12; 5:3; 6:9; 7:1–6; 9:1; cf. 1:8), although if the people repent, destruction of "the remnant of Joseph" may be avoided (5:14–15). This concept becomes significant in Isaiah, where a "remnant will return" to both God in repentance and the land in redemption (Isa. 7:3; 10:20–22; 11:10–16; 17:5–8; 28:5; 30:17–19; 37:4, 31–32; cf. 6:13). In Micah, "remnant" is already a term meaning "those who will be redeemed" (4:6–7; 5:2–8; cf. 2:12; 7:18–20). This understanding is evident also in Joel 3:5 (cf. Obad. 17). In Zephaniah, the righteous remnant of Israel will be redeemed (3:11–20; cf. 2:3, 7, 9).

Jeremiah's prophecies of rebuke are very harsh—they depict no surviving remnant (Jer. 6:9; 11:21–23; 15:9) or a terrible destiny for the survivors (8:3; 24:8–10). However, in his prophecies of hope, Jeremiah assures redemption to the "remnant of my flock" (23:3–4) who were led astray by their rulers (vv. 1–2). Also, God will save the "remnant of Israel" (31:7), but if the "remnant of Judah" after the Babylonian destruction emigrates to Egypt, they will forfeit God's mercies and be destroyed (42:9–22).

Similarly, Ezekiel, too, portrays the destruction of even the remnant of Judah (5:1–4, 8–17; 9:4–10). However, his cry "Ah, Lord God! Will you make a complete end of the remnant of Israel" (11:13) evokes a prophecy of redemption (vv. 14–22). The postexilic community identified themselves as the remnant (Hag. 1:12, 14; 2:2; Ezra 9:13–15; Neh. 1:2–3; 7:72). Zechariah promises the remnant a life of peace and prosperity (8:1–15), but they must adhere to moral behavior (vv. 16–17).

It is not surprising that the Qumran community, which saw themselves as the last wave of the returning exiles from Babylon, identified themselves as the "remnant" (CD 1:4–5; 1QH

6:8). So too the apostle Paul, citing prophecies from Hosea and Isaiah (Rom. 9:25–29), finally concludes that those Jews who follow Christ constitute the true remnant, "chosen by grace" (11:5). ***See also*** Prophet. J.U.

repentance, a word covering several biblical ideas that range from regret to changing one's mind or behavior so as to bring about a moral or ethical conversion. Thus in the OT God can repent (Heb. *naham*) in the sense of regret that he has made Saul king (1 Sam. 15:11). The most important aspect of OT repentance, however, is contained in the Hebrew word *shub,* which expresses the idea of turning back, retracing one's steps in order to return to the right way.

In the early stages of Israelite history, the nation was more conscious of its collective guilt than of its individual guilt. In times of national catastrophe, therefore, it celebrated cultic liturgies of repentance that included an assembly of the people, fasting, lamentation, and the confession of sin. The prophets of the eighth century B.C., however, and those who followed, leveled a strong criticism against merely cultic and liturgical repentance. Amos complains that the people did not turn to the Lord (4:6, 8, 9, 10, 11). Hosea, after describing a liturgy of repentance (6:1–3), says that Israel's love "is like a morning cloud, like the dew that goes early away" (6:4). Isaiah pleads for social justice rather than empty ritual (1:10–17; cf. 58:5–7; Amos 5:21–24). The prophets, therefore, insist upon an interior conversion manifested in justice, kindness, and humility (Mic. 6:6–8). Jeremiah calls upon Israel to acknowledge its guilt (3:11–14) and Ezekiel brings the notion of individual responsibility to a climax (3:16–21; 18; 33:10–20). For all of their harshness, however, the prophets also hold out hope to Israel. Jeremiah and Ezekiel look to a day when God will place a new heart within his people (Jer. 24:7; Ezek. 36:26–31) and Isaiah promises forgiveness to those who will repent (1:18–19).

In the NT the notion of repentance as turning to the Lord (Heb. *shub*) is expressed in the Greek verb *metanoein.* The idea is slightly modified, however, inasmuch as the Greek includes the concept of changing one's mind, coming to a new way of thinking. John the Baptist is the immediate successor of the prophets. Like them he calls the people to repentance and demands proof of authentic conversion (Matt. 3:9–10); his preaching leads to forgiveness of sins (Mark 1:4; Luke 3:3). Yet John's message also differs from that of the prophets inasmuch as his call for repentance is intimately connected to the imminent arrival of God's Kingdom and the coming of the Messiah (Matt. 3:2, 11–12; Luke 3:15–17). Moreover, John seals this repentance with a baptism of water.

Jesus' call to repentance is also closely linked to the arrival of the Kingdom (Mark 1:14–15). The summons to conversion, moreover, is associated with his own person so that a decision for or against him signifies a choice for or against repentance (Matt. 11:20–24; 12:41–42). In the eyes of Jesus all are sinners and in need of repentance (13:1–5). He comes to call sinners and not the just (Luke 5:32), and he tells parables that promise God's forgiveness to those who recognize their sinfulness (Luke 15; 18:9–14).

Paul rarely employs the term repentance (Rom. 2:4; 2 Cor. 7:9, 10) and John never does. Both authors presuppose it, however, in their concepts of faith, which demand a turning away from sin. Although the author of Hebrews seems to suggest that there cannot be a second repentance (6:4–6), the author of Revelation calls the seven churches to repentance (2:5, 16; 3:3, 19). The general tradition of the NT, therefore, is that repentance is an ongoing affair. ***See also*** Faith; Jesus Christ; John the Baptist; Justice; Kingdom of God; Prophet.

Rephaiah (ri-fay'yuh; Heb.,"Yah [God] heals"). **1** A descendant of Judah in the royal lineage of the kings of Judah (1 Chron. 3:21); the text is not clear whether this is an individual or a family group. **2** One of the leaders of the Simeonite clan of Ishi who drove out the Amalekites and settled on Mount Seir (Edom; 1 Chron. 4:42). **3** The grandson of Issachar and a leader in the clan of Tola (1 Chron. 7:2). **4** A Benjaminite descendant of Saul (1 Chron. 9:43); he is also called Raphah (1 Chron. 8:37). **5** An official of postexilic Jerusalem who helped repair the city walls (Neh. 3:9). D.R.B.

Rephaim (ref'ay-im), a noun appearing in three contexts in the Bible. **1** Those who are dead and inhabit Sheol, "shades" (Ps. 88:10), "dead" (Prov. 9:18). **2** Pre-Israelite inhabitants of Transjordan (Gen. 14:5; Deut. 2:10–11). **3** "Giants" from Philistia (1 Chron. 20:4, 6, 8; 2 Sam. 21:16, 18, 20). The relationship between these three uses is obscure.

Rephaim, Valley of, the broad valley or plain southwest of Jerusalem, modern Baqa. It was named after some early inhabitants of Palestine: thus "Valley of Giants" in the KJV (Josh. 15:8; 18:16; cf. Septuagint and Josephus [*Antiquities* 7.4.1]).

The boundary between the tribal lands of Judah and Benjamin went up the Hinnom Valley from Jerusalem, passing the northern end of the Valley of Rephaim, to the Waters of

Nephtoah (springs of Lifta today), northwest of Jerusalem (Josh. 15:8; 18:16). The Philistines encamped in the Valley of Rephaim and David met them there in battle (2 Sam. 5:18, 22; 23:13). It was known for its fertility (Isa. 17:5).
N.L.L.

Rephidim (ref´i-dim), a stopping place for the Israelites after they left the Wilderness of Sin but before they reached the Wilderness of Sinai (Exod. 17:1; 19:2; Num. 33:14–15). The people complained because there was no water there, so Moses struck a rock and water flowed miraculously (Exod. 17:1–7). Afterward the Israelites fought there against the Amalekites and were victorious after Moses, aided by Aaron and Hur, held out his rod (Exod. 17:8–16). The location of Rephidim is uncertain; some identify it with the Wadi Refayid in southwest Sinai. ***See also*** Exodus.

The miracle at Rephidim, where, according to Exod. 17:1–7, Moses struck a rock and caused water to flow out; wall painting from the catacomb of St. Callixtus, Rome, fourth century A.D.

Resen (ree´suhn), a yet unidentified city in Assyria lying "between Nineveh and Calah" (Gen. 10:12) whose construction is ascribed to Nimrod.

reservoir, a natural or artificial rock-cut storage container for the collection of rainwater. Such installations, variously called reservoirs, pools, or cisterns, were essential for settlements relying almost totally on winter rains for their water source. Even sites located close to a spring augmented their water supply by such collection methods. Early Bronze Age exploitation of water resources is attested to at Jawa, Arad, and 'Ai, but it was not until the second and first millennia B.C. that public and private reservoirs multiplied greatly as the use of plaster for waterproofing became widespread. Kings constructed cisterns to hold water for times of siege (2 Kings 20:20) and for agriculture (2 Chron. 26:10), and great rock-cut pools are referred to at Hebron (2 Sam. 4:12), Samaria (1 Kings 22:38), and Gibeon (2 Sam. 2:13). Early Israelite settlement in the less fertile hill country was in large part made possible by means of plastered cisterns.
S.L.R.

resh (raysh), the twentieth letter of the Hebrew alphabet; its numerical value is two hundred. In the early proto-Canaanite and proto-Sinaitic inscriptions the letter is represented by a pictograph of a head. The Greek rho suggests that the Hebrew form was *rosh* ("head") and that *resh* is the Aramaic name. The Greek ρ preserves the archaic form. In later times the form developed under the influence of Phoenician and Aramaic cursive scripts. The classical Hebrew square form of the letter is related to this development. ***See also*** Writing.

ר

Resheph (ree´shif), a Canaanite god of pestilence, equated in antiquity with Mesopotamian Nergal and Greek Apollo. The name "Resheph" has some connection with flame, perhaps because of the heat of fever accompanying sickness.

The cult of Resheph is attested from earliest times in Mesopotamian sources (third millennium B.C.), later at Ras-Shamra. It penetrated Egypt, especially during the eighteenth dynasty (ca. 1546–1319), where Resheph was thought a warrior. The Israelite personal name Resheph (1 Chron. 7:25) shows that Resheph had a following in the Holy Land. In the OT, Resheph comes to mean "pestilence" (Deut. 32:24; Ps. 78:48). ***See also*** Ras-Shamra.

residue. ***See*** Remnant.

rest. 1 Remainder (the most frequent meaning of the term; Gen. 14:10; 44:10; 1 Kings 11:41; 1 Chron. 11:8; Luke 12:26; Acts 15:17; Rev. 2:24).

2 The condition of repose, cessation of motion, and peaceful restoration. This meaning of the term occurs in a wide variety of biblical applications, translating several Hebrew words. The model of God's resting on the seventh day (Gen. 2:2) conditioned the Sabbath as a day of rest (Lev. 16:31), the Sabbatical Year (Lev. 25:3–6) as a year of rest for land under cultivation, and the Jubilee Year as a periodic social restoration of wealth and property (Lev. 25:8–17). The reality of needed daily rest was recognized for animals (Ezek. 34:14) as well as for humans (2 Sam. 4:5), the latter requiring peace of mind for best effect (Ps. 116:7). A special rest was sensed as a journey ended (Deut. 12:10; Rev. 14:13), and the promise of the Christian life is named as rest provided by God (Heb. 4:1) on the model of the rest promised to the Israelites in the time of Moses (Heb. 3:10–11). The quality of peace of mind or contentment is also described as rest, whether of the earth (Isa. 14:7), of individuals (Job 3:13), or

of communities (Jer. 6:16). The lack of peace of mind due to disturbance (Ps. 22:2), pain, or work (Eccles. 2:23) disrupts or destroys rest.

A particular aspect of rest is that of cessation of war, a time of peace (Josh. 11:23; Judg. 3:11, 30; 5:31). 2 Chron. 14:5 describes a peaceful rule under a king as a rest for the kingdom. Lack of international disturbance was viewed as a time of rest for the monarch (2 Chron. 20:30). Deliverance from oppression of enemies even during a siege was viewed as rest (2 Chron. 32:22).

There is a special quality of rest viewed as that given by God to those in close harmony and fellowship with their Lord. For the Israelites, it derived from fulfillment of covenant life. "'Yet thou hast said, "I know you by name, and you have also found favor in my sight." Now therefore, I pray thee, if I have found favor in thy sight, show me now thy ways, that I may know thee and find favor in thy sight. Consider too that this nation is thy people.' And he said, 'My presence will go with you, and I will give you rest' " (Exod. 33:12–14). Christian writers saw this fulfilled in the Christ for all people (Rom. 4:16; Heb. 3:1–2), and the goal of life was put as the achievement of the rest only God could thus give (Rev. 14:13). R.S.B.

restitution, a biblical concept closely related to the idea of restoration. Both, of course, are involved with sins committed against persons and/or property, either deliberately or inadvertently. Restoration appears to indicate replacement for whatever was taken or destroyed, whereas restitution seems to be repayment over and above the actual loss, analogous to what is today called "punitive" damages (e.g., Exod. 22:1–15; Lev. 6:1–7; Num. 5:5–7). For example, the ancient law found in Exod. 22:1, 4 clearly stipulates that anyone who steals an ox or a sheep must pay restitution to the owner of the animal(s). If the thief kills or sells the ox, he is required to pay restitution of five oxen; if he kills or sells the sheep, he is required to pay restitution of four sheep (cf. also 2 Sam. 12:6). If, however, the animal has not been harmed and is found safe in the possession of the thief, the culprit is required to pay double. Interestingly enough, if the thief has no means to pay this fine, he is to be sold for his theft.

In Leviticus, it is commanded that if someone robs or cheats a neighbor, that person is to restore the amount in full and add a fifth to it (Lev. 6:1–7). In addition, the guilty party was required to offer a guilt offering. This principle is reflected in the NT story of Zacchaeus, who, as a tax collector, had cheated and "gouged" the people from whom he had collected the taxes (Luke 19:1–10). After his encounter with Jesus, he voluntarily agreed to give half of his goods to the poor and to restore fourfold to anyone he had defrauded. The principle of restitution is clearly part of this episode, but Zacchaeus went far beyond the requirement of the law in this matter.

In most of the NT writings, the word group used to designate the idea of restitution or restoration has a rather different meaning, namely, that of restoring in the sense of reestablishing (Matt. 17:11; Mark 9:12; Acts 1:6; 3:21) or even healing (Matt. 12:13; Mark 3:5; Luke 6:10; Mark 8:25; but cf. Heb. 13:19, where it is somewhat closer to the OT idea but not in any "legal" sense). This probably is a result of the NT movement away from legalism. Clearly, however, the notion of restitution is continued, as was seen in the Zacchaeus story (the verb translated "restore" in this story is elsewhere used, however, to refer in a much more general sense to "paying," "repaying," or simply "giving back"). Such a principle would be an integral feature of a new community founded upon the idea of loving one's neighbor as oneself. ***See also*** Forgiveness; Law; Reconciliation. J.M.E.

restoration. ***See*** Regeneration; Restitution.

resurrection, a rising to life from death. The concept of resurrection is derived from Jewish apocalyptic literature. In earlier OT writings there is no belief in life after death (Ps. 115:17). When eventually this belief developed, it was in the form of the resurrection of the dead, rather than of the immortality of the soul (Isa. 26:19; Dan. 12:2). Resurrection is to be distinguished from resuscitation or reanimation of the physical body. It denotes a complete transformation of the human being in his or her psychosomatic totality (1 Cor. 15:35–55). This is expressed in a number of similes. The resurrected will shine like stars (Dan. 12:3). They will be like the angels (Mark 12:25). Resurrection was thought of not as an event for each individual at death but as a corporate event. God would raise all of the elect at the end of history.

The Resurrection of Jesus: The post-Easter proclamation of Jesus' resurrection is to be seen in the context of Jewish apocalyptic hope. His resurrection is an act of God, who raised him from the dead as the "first fruits" in anticipation of the general resurrection (1 Cor. 15:20). The resurrection of the believers would follow as a result of Christ's resurrection (1 Cor. 15:22).

Earliest Traditions: The earliest narratives of the Easter event are not to be found in the appearance stories at the ends of the Gospels (Mark 16:9–20, though part of the canonical text, is a post-Marcan addition). They are all later developments deriving from subapostolic times. The earliest witness to the Easter event is found in 1 Cor. 15:3–8. Paul wrote this account around A.D. 55, quoting what he had delivered to the Corinthians when he founded that community in ca. A.D. 50. But vv. 3–7 were already

The general resurrection at the end of history as depicted in a panel of the Verdun Altar, 1180.

a tradition Paul had received from others before him (v. 3). This takes us back to the time of his call to be an apostle (ca. A.D. 33) or at the latest to Paul's Jerusalem visit ca. A.D. 35 (note that Cephas and James mentioned in vv. 5 and 7 are the same two persons Paul saw on that visit, Gal. 1:18–19).

From 1 Cor. 15:3–8 we learn that the Easter faith was based not on the empty tomb (which Paul does not mention), but on the appearances of the Risen One. The word used for "appeared" is the same Greek word used elsewhere for visionary experiences. We may today characterize them as revelatory disclosures from the transcendent realm. No distinction was drawn between the resurrection and the ascension. The appearances were manifestations of the resurrected and already ascended One from heaven.

The impact of these disclosures is: first, the conviction that God had raised Jesus from the dead (note that this language is derived from Jewish apocalyptic; today we might say that God took Jesus into his own eternity); second, the consolidation of the disciples into a community, later designated "church" (Gk. *ēkklēsia*), i.e., the end-time people of God); and third, the inauguration of the community's mission to Israel and later to the gentile world.

In the Gospels: The story of the empty tomb as found in the Gospels, though in its present forms belonging to later tradition, nevertheless appears to rest on an early report of Mary Magdalene and other women that on visiting the tomb after the burial, they discovered it empty. In itself this discovery does not establish a resurrection and might conceivably suggest a mere resuscitation. It is also susceptible to other explanations, some of which are already mentioned in the Gospels (cf. Mark 15:47; Matt. 28:13; John 20:15). After the appearances the disciples welcomed the women's report as congruous with their faith in the resurrection and developed the empty-tomb narrative as a vehicle for the Easter proclamation.

The later Gospels developed appearance narratives. This results in an increasing materialization of the appearances and of the understanding of the resurrection. Jesus now walks on earth as he had walked before (Luke 24:15). He talks, eats, drinks, and invites people to touch him. The theological motivation for this materialization is often held to be antidocetic (i.e., against the idea that Jesus was a nonmaterial being), but that would probably be an anachronism. More likely it originated in a profound conviction of the identity of the risen Lord with the earthly Jesus. A further effect of the appearance narratives is a growing desire to separate the ascension from the resurrection (Luke 24:51; John 20:17). This tendency culminates in Acts 1:9–10 in a period of forty days between the resurrection and ascension (a period lengthened in later apocryphal Gnostic Gospels). As treated by Luke-Acts the ascension has a double effect on the understanding of resurrection. In Luke's Gospel it forms a conclusion to the earthly life of Jesus, while in Acts it inaugurates his heavenly reign and the period of the church. ***See also*** Ascension of Christ, The; Death; Eternal Life; Hades; Immortality; Soul; Tomb, Jesus'.

retribution, the concept of repaying persons in kind, according to their just deserts. The idea of retribution is pervasive in the Bible, and yet the term "retribution" as such occurs only twice in the RSV (Rom. 11:9; Heb. 2:12). The burden of the concept is carried by synonymous terminology ("recompense," "vengeance," "wages," "requital," "reward") and by larger legal, narrative, or oracular texts.

Retribution as a principle of human law was well established in antiquity, and biblical Israel was no exception. The most famous expression of this principle is the "law of retaliation"

(Lat. *lex talionis*), which is stated very succinctly in Deuteronomy: "It shall be life for life, eye for eye, tooth for tooth, hand for hand, foot for foot" (19:21; cf. Exod. 21:23–25; Lev. 24:19–20; Matt. 5:38–42). Interpreters are widely agreed that this formula, so brutal on the face of it, actually represented an advance over earlier legal thinking both because it allowed no favoritism and because it guaranteed that the punishment could not exceed the crime. Nevertheless, the bleak harshness of the *lex talionis* was always subject to control by the community. In Exod. 21:22 it is not the aggrieved individual who decides how the principle is to be applied in a specific case, but rather the "judges" make the determination. In Matt. 5:38–42, Jesus specifically opposes to the principle of "an eye for an eye" an ethic of nonresistance to personal insult. Paul echoes the same theme in Rom. 12:17.

A Prerogative of God: In fact, retribution in the Bible is primarily a prerogative of God. Even in the single narrative instance in which the law was literally applied by humans to a human (Judg. 1:7), the Canaanite victim attributed to God ultimate responsibility for the mutilation Israel had inflicted upon him. The prophets spoke frequently of God's just punishments for injustice and idolatry, both upon Israel's enemies and upon Israel and Judah themselves. Under the direct influence of the preaching of Jeremiah, the writers of Deuteronomy raised the retributional scheme to its most elaborate OT expression. The whole of Deuteronomy is cast in the form of a treaty between God the sovereign and the servant people Israel. Near the end of it, Moses sums up the meaning of this great covenant scheme: "See, I have set before you this day life and good, death and evil. If you obey the commandments of the Lord your God . . . then you shall live and multiply. . . . But if your heart turns away . . . I declare to you this day, that you shall perish; . . ." (Deut. 30:15–18). Here the certain connection between obedience to the will of God and blessing and life is juxtaposed to the curses and death that follow upon disobedience. God will repay his people in a manner exactly appropriate to their degree of faithfulness.

The picture of God the retributor in those texts that deal with the end of time can be summed up for the OT in Dan. 12:1–3. To those who had ceased to hope for justice in the events of human history, the late apocalyptic writer promised that at the end of time "many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt" (12:2). This motif becomes a strong one in the many NT texts that present the end of the age as The Retribution. Those who have been faithful will be separated from those who have not and all will receive their appropriate reward (Matt. 25:31–46).

Divine retribution as a magnificent heavenly model for human justice is well established in the Bible, and it serves as a bulwark against any underestimation of the seriousness with which God deals with human evil and sin. However, the Bible suggests that the relationship of God to human sin and suffering can be understood in other ways as well. Three deserve brief mention here.

The book of Job is a sustained polemic against the rather simple reward-and-punishment ideology of the popular religion of the day, such as that reflected in the "Psalms of the Two Ways" (e.g., Pss. 1, 37). The entire case of Job is absurd because a completely righteous man suffers what appear to be the punishments announced in Deuteronomy 28 as coming upon the ungodly. But God is not the author of Job's sufferings, so his sufferings cannot be explained in some retributional scheme. The conclusion of the book (42:5–6) suggests that God's comforting and saving presence more truly reflects God's nature than does the unwarranted and inexplicable suffering of the righteous.

Rather widespread in the wisdom tradition of Israel is the acknowledgment of what has come to be called "the destiny-producing deed." When a sage remarked that "he who digs a pit will fall into it, and a stone will come back upon him who starts it rolling" (Prov. 26:27; cf. Ps. 7:14–18; Eccles. 10:8–11; Ecclus. 27:25–26), he was making the rather commonsensical observation that human beings are capable of launching cause-and-effect sequences that can bring disastrous results upon themselves and upon other people. God plays no role in these chains of events and is not responsible for these results.

The Larger Framework: Most important, however, is the import of the larger framework within which the biblical notion of retribution is nested. The Bible can be viewed as a drama that begins with God and human beings living in right relationships with each other. Those relationships are then broken from the human side, and the human community consequently must endure many vicissitudes until at last God restores the original right relationships in the new age. Viewed this way, the story of the Bible is not finally the story of reward and punishment but rather of God's success in restoring the original harmony of the good world. In such a larger context, divine retribution is embraced by divine redemption; biblical writers can therefore speak of a divine determination not to destroy that which deserves destruction (Hos. 11:8–9). Even on the cosmic scale, promises Paul, the day will come when "the creation itself will be set free from its bondage to decay and obtain the glorious liberty of the children of God" (Rom. 8:21; see other expressions of this hope in Phil. 2:10–11; 1 Cor. 15:22–28). ***See also*** Law; Vengeance.

Reu (ree'*yoo*), the son of Peleg; a descendant of Shem and an ancestor of Abraham (Gen. 11:18–21). He figures in the ancestry of Jesus through Joseph (Luke 3:35).

Reuben (*roo*'bin), the firstborn son of Jacob by his wife Leah and the ancestor of the tribe that bears his name (Gen. 29:32; 35:23; 46:8; 49:2–3; Exod. 1:1–2; 6:14; Num. 26:5; 1 Chron. 2:1; 5:1, 3). Gen. 29:32 explains the name as meaning that God had seen Leah's affliction, but the name explains itself as an exclamation in Hebrew by the parents upon the birth of a boy—"Look, a son!"

Gen. 30:14–15 depicts Reuben as a child devoted to his mother who gathers mandrakes (an aphrodisiac?) and presents them to her. This leads to Jacob's returning to Leah's bed and, thus, to Leah's giving birth to Issachar (vv. 16–18). In a perhaps not unconnected episode, Reuben has intercourse with his father's concubine Bilhah, Rachel's handmaiden, after Rachel's death (35:19–22). Although for a son to lie with his father's concubine is a rebellious act indicating usurpation of authority (2 Sam. 16:21–22), in this case the story may be indicating Reuben's intention to cause his father to return to Leah's tent by "spoiling" Rachel's handmaiden, i.e., the last remaining connection to Rachel (cf. Homer *Iliad* 9.443–455). However, Reuben's act leads ultimately to his disenfranchisement as firstborn (Gen. 49:3–4; 1 Chron. 5:1–2). Nonetheless, Reuben's behavior in the Joseph story reflects the role of responsibility that belongs to the firstborn (Gen. 37:21–29; 42:22, 37).

Many scholars interpret the information about Reuben in Genesis as reflective of the fortune of the tribe: once the Reubenites had a prominent role among the Israelites and thus Reuben is the "firstborn," "the first fruits of the strength" of Jacob (Gen. 49:3; cf. Deut. 21:17). However, in the course of time, the tribe weakened (Gen. 49:4, "you shall not have preeminence"; cf. Deut. 33:6, "Let Reuben live, and not die"), and Reuben's intercourse with Bilhah is viewed as the etiological explanation for the fact that the power and right of the firstborn passed to the tribes of Judah and Joseph (as indicated by the superior influence of Judah and Joseph in the Joseph story; see also Gen. 49:8–12, 22–26; Deut. 33:13–17; 1 Chron. 5:1–2). ***See also*** Bilhah; Jacob; Leah; Reubenites. J.U.

Reubenites (*roo*'bi-n*i*ts), the tribe that carried the name of the firstborn of Jacob and Leah, Reuben (Gen. 29:32). As such the tribe is mentioned first in the list of those who leave Egypt (Exod. 6:14), in the list of the tribal leaders in the desert (Num. 1:5), and the census there (1:20–21; 26:5–10), in the blessing of Moses (Deut. 33:6), and in the apportionment of the land by Joshua (Josh. 13:15–23; see also Num. 2:10, 16; 7:30; 18:18; Deut. 13:4; Ezek. 48:31). This placement is not followed by the Chronicler, however, whose emphasis is on the Davidic dynasty and therefore Judah. Thus, Chronicles introduces Reuben as the first of Israel's sons (1 Chron. 2:1; see also 27:16), but proceeds to list the genealogy of the tribe of Judah first (2:1–4:19). The most complete genealogy of Reuben is in 1 Chron. 5:3–8.

According to Numbers 32, the Reubenites and the Gadites were granted by Moses their request to dwell in Gilead due to the pastureland available there for their cattle. The one agreed condition was that they spearhead the capture of western Canaan (see also Josh. 1:12–18). After Joshua's victories they were permitted to return to Gilead (Josh. 22:1–9). The sources (Num. 32:33–38; Josh. 13:15–23; 1 Chron. 5:8–10; 6:63–64), although not always consistent, indicate that the Reubenites settled south of Gad in Gilead, north of the Arnon River (but see Josh. 15:6; 18:17, which might indicate a Reubenite settlement west of the Jordan).

Due to the paucity of material, the history of the tribe is difficult to reconstruct. Scholarly conjecture holds that the biblical viewpoint of Reuben as Jacob's firstborn indicates that Reuben was once a powerful tribe. However, Jacob's rebuke (Gen. 49:4; cf. 1 Chron. 5:1) and Moses' blessing (Deut. 33:6) indicate that Reuben became weak. Perhaps the destruction of the Reubenite families of Dathan and Abiram due to their rebellion against Moses (an attempt to reassert the firstborn's authority? Num. 16) is a biblical attempt to explain the reason for the decline of the tribe.

The Song of Deborah (Judg. 5:15–16) testifies to the tribe's (selfish) refusal to join the battle against Sisera, but 1 Chron. 5:10 witnesses to the Reubenites' strength during the days of Saul (late eleventh century B.C.). The captivity of Reubenite families by Tiglath-pileser III of Assyria in 732 B.C. (1 Chron. 5:6) is the last historical mention of the tribe. The prophet Ezekiel (48:6–7, 31) predicts the ultimate resettlement of the tribe alongside its brethren. ***See also*** Gilead; Reuben. J.U.

Reuel (r*oo*´uhl; KJV: "Raguel," Num. 10:29; Heb., "friend of God"). **1** The son of Esau and Basemath, the daughter of Ishmael, whose descendants show Esau's ties with Edom (Gen. 36). **2** The priest of Midian, father (?) of Hobab, who gave his daughter Zipporah in marriage to Moses (Exod. 2; Num. 10:29). Perhaps he was the same as Jethro, the priest of Midian, also identified as Moses' father-in-law (Exod. 4:18; the Heb. term means a male relative by marriage). Through Reuel Midianite (Kenite) influence on Moses is conceivable. **3** A Gadite, father of Eliasaph (Num. 2:14), also cited as "Deuel" (Septuagint: "Reuel"). **4** A Benjaminite (1 Chron. 9:8). ***See also*** Hobab; Jethro; Midianites; Moses; Zipporah. H.B.H.

revelation (rev´uh-lay´shuhn), the English translation of Hebrew and Greek terms originally referring to "uncovering" or "disclosing." The act of revelation is also frequently expressed by other terms in Scripture, particularly word groups dealing with speaking and showing. Two essential features of the idea of revelation emerge from these observations: first, revelation is conceived as an unveiling of what was already true, whether as enduring reality, as past event, or as foreordained future; second, although whatever is being revealed was true all along, it was previously concealed or unknown. Thus, for knowledge to be understood as "revelation," it has to be the knowledge of the few, as contrasted with the ignorance of the many, or new knowledge, as contrasted with the ignorance of the past (e.g., 1 Cor. 2:9–10).

Human beings may, of course, reveal human secrets (Prov. 11:13), and one may speak of revelation in connection with supernatural powers opposed to God (e.g., 2 Thess. 2:3, 8). When the object of revelation, however, is fundamental truth, God is the revealer, and the knowledge that results is a gift rather than a product of human or demonic ingenuity. Thus, for example, God is said to reveal Torah (i.e., teachings of the law; Deut. 29:29), himself (1 Sam. 3:21), secrets (Amos 3:7; Dan. 2:29), power (Isa. 53:1), prophecies (1 Cor. 14:29–30), righteousness (Rom. 1:17), anger (Rom. 1:18), or the Son (Gal. 1:16).

Such revelations begin with one or a few persons, for what is commonly known does not need to be revealed. The prophet, apostle, or other agent who receives such revelations may be obliged to transmit them to others, as, for example, Amos (3:7–8) or Paul (Gal. 1:15–17). On the other hand, they may be instructed to keep some revelations hidden, whether because it would be altogether wrong to utter them (2 Cor. 12:1–4) or because they are intended for another era (Dan. 12:9; 2 Esd. 14) or even without a reason being offered (Rev. 10:4).

The principal modes by which human beings receive revelations in the biblical documents are visions (e.g., Jer. 1:11–13) and auditions (e.g., Isa. 22:14). These may come while one is awake or in dreams. God may speak directly to a human being or through an angelic intermediary, and sometimes the two modes are difficult to distinguish, as in Moses' encounter with the burning bush (Exod. 3:2–4) or Abraham's meeting with the three travelers (Gen. 18:1–19:1). Revelation may also be made available in the created order itself (Rom. 1:18–23). Revelation is not limited to extraordinary experiences; some texts seem to treat it more as a matter of inner conviction (e.g., Ps. 16:7) or the interpretation of historical events (Ps. 111:6).

From the early third century B.C. onward, the language of revelatory experience became an important element in the developing genre that we now call "apocalyptic," that is, "revelatory" literature. In such works as Daniel, 2 Esdras, Revelation, and *1 Enoch,* we meet a prophet or seer who is given access in ecstatic experiences to secrets of various kinds—about the past, the structure of the universe (e.g., *1 Enoch* 41), the heavenly court, or the future. A particular interest was the transition from the present age to the world to come. The description of such experiences evokes prophetic visions such as those of Ezekiel and also ecstatic experience such as that of Paul (2 Cor. 12:1–7). We do not know, however, to what extent the language of apocalyptic reflects actual experience or to what extent it had become purely a literary formula.

In later Christian theology, the idea of revelation underwent a broadening, so that it came to mean something very close to "the distinctive content of Christian faith" as opposed to any other form of human knowledge or thought. Scholastic and later theology from the early Middle Ages to the Renaissance came to treat reason and revelation as two antithetical modes of knowing, of which the latter must be considered superior for theological purposes. It is not clear that such a sharp distinction can be made in Scripture itself, where specifically revelatory works stand side by side with other documents (e.g., Proverbs) that claim an origin in human wisdom. ***See also*** Apocalyptic Literature; Dreams; Inspiration; Vision. L.W.C.

Revelation to John, the, the last book of the NT, also called the Apocalypse. The term "apocalypse" comes from the Greek word for revelation, which is used in the preface to characterize the work (1:1).

In modern times, the word "apocalypse" has come to designate a particular literary form. An apocalypse is a narrative account of the reception of revelation by a human individual from one or more heavenly beings. The revelation includes descriptions of the heavenly world and of a qualitatively new future. The book of Daniel in the OT is also an apocalypse, as is 2 Esdras in the Apocrypha. Revelation is the only apocalypse in the NT, although other books con-

REVELATION TO JOHN, THE

The end of the Revelation to John in the Codex Sinaiticus, an outstanding fourth-century A.D. manuscript of the Greek Bible.

tain passages of similar content, e.g., Mark 13 and parallels, 1 Thess. 4:13–18.

Author: Although the author never claims directly to be a prophet, several passages suggest such was his self-understanding (e.g., 22:9). He calls himself John (1:4). Nothing in the work links the author to John the son of Zebedee or John the Elder. Sound judgment requires the conclusion that he is a John otherwise unknown to us. His work was preserved because he was recognized as a prophet in the early church and because the work itself was accepted as a valid revelation of God's will.

Date: According to Irenaeus, a leader of the church in the second century, John saw his revelation near the end of the reign of the Roman emperor Domitian. No good reason for doubting Irenaeus's testimony has been brought forward. The book in its present form should therefore be dated to A.D. 95 or 96. Earlier traditions have certainly been incorporated. In some cases, sources with relatively fixed wording were used, in, e.g., chaps. 11, 12, and 17:10.

Occasion: The occasion of the book has often been seen as the persecution that Christian tradition says Domitian initiated against the church. Recent research has called the existence of such a persecution seriously into question. The hard evidence supports only the conclusion that under Domitian Christians were subject to the same sporadic repression they experienced under other emperors of the late first and early second centuries. Another theory is that Domitian escalated the ruler cult by insisting on new divine honors of his person. The evidence for this theory is not very strong. It seems best to conclude that John was not simply reacting to objective changes in the situation of Christians, but that with prophetic insight he interpreted the typical situation in a new way.

Content and Purpose: In Revelation John tells how he received revelatory visions from Christ and describes those visions. Most of them concern the future, but John tells them in order to interpret the experience of the first readers and to evoke a particular response to that experience. In decribing his visions, he uses traditional images. The result is that the book has two levels of meaning. The traditional images call to mind the "old story" of the conflict between the creator-god or God and a rebellious beast of chaos. The various versions of this story express in a vivid and concrete way the perennial struggle between order and chaos, life and death.

John uses these traditional images to interpret his situation. The bestial, chaotic images are applied to the Roman Empire, its leaders and friends, and the very culture related to it. The "new story," which is the second level of meaning, uses the story of conflict to interpret the relationship between the followers of Jesus and the Roman Empire. The hostility of Rome to the Christian message and way of life is revealed as a renewed rebellion of chaos against order, of creature against Creator.

The Christ of the messages exhorts the readers to remain faithful, especially in the face of hostility from their non-Christian neighbors. Another important theme is the warning not to practice immorality (i.e., idolatry) and to avoid meat sacrificed to pagan gods. These warnings teach that the faithful Christians must often be critical of their culture.

The woman clothed with the sun in chap. 12 represents the faithful people of God who will be protected by divine power in situations of adversity. Chaps. 13 and 17 allude to the emperor Nero, who slaughtered Christians in Rome ca. A.D. 64, as a symbol of political power that abuses its God-given authority. In chaps. 17 and 18 Rome is portrayed as (the new) Babylon, because the armies of Rome, like those of Babylon at an earlier date, destroyed Jerusalem and the Temple in A.D. 70.

Beginning with the seven seals, the visions focus upon the future. The five series of visions,

beginning with the seals and ending with the second unnumbered series, all have the same plot. Their common underlying pattern is threefold: (1) persecution (e.g., 6:9–11; 12–13), (2) punishment of the nations, or judgment (e.g., 6:12–17; 14:14–20), and (3) triumph of God, the Lamb, and his followers or salvation (e.g., 7:9–17; 15:2–4). By repeating this pattern, Revelation expresses the insight that reality in general and Christian life in particular are characterized by conflict and struggle. A further insight is that death is only a phase in that struggle, not the end. The new and old stories of conflict are reinforced by the example of Jesus. They are models for understanding and coming to terms with powerlessness, suffering, and death. Readers are given hope within struggle and challenged to distinguish God's cause from Satan's cause in their everyday life.

Interpretation: Revelation has always been interpreted in various ways; the twentieth century is no exception. Today fundamentalist and conservative evangelical Christians believe the book was written to predict the end of the world in our own time. Some of them expect, for example, a world war to occur in the Middle East that will involve nuclear weapons and will fulfill the prophecy of a battle at Armageddon (Rev. 16:12–16).

OUTLINE OF CONTENTS

The Revelation to John

- I. Prologue (1:1–8)
  - A. Preface (1:1–3)
  - B. Opening of a letter (1:4–6)
  - C. Prophetic sayings (1:7–8)
- II. Vision of Christ with seven messages (1:9–3:22)
  - A. Vision of Christ (1:9–20)
  - B. Seven messages (2:1–3:22)
- III. Visions of heaven and seven seals (4:1–8:5)
  - A. Vision of God (4:1–11)
  - B. Vision of the Lamb (5:1–14)
  - C. Seven seals (6:1–8:5)
- IV. The seven trumpets (8:2–11:19)
- V. Seven unnumbered visions (12:1–15:4)
- VI. The seven bowls and Babylon (15:1–19:10)
  - A. Seven bowls (15:1–16:20)
  - B. Babylon (17:1–19:10)
- VII. Seven unnumbered visions and Jerusalem (19:11–22:5)
  - A. Seven unnumbered visions (19:11–21:8)
  - B. Jerusalem (21:9–22:5)
- VIII. Epilogue (22:6–21)
  - A. Sayings (22:6–20)
  - B. Benediction (22:21)

More liberal Christians recognize that the prophecies of Revelation were addressed to the late first century and that most of them were not fulfilled in a literal, historical way. Such Christians do not understand prophecy to be primarily a matter of prediction. John's prophetic role consisted in exposing and denouncing idolatry and the abuse of power in his day. His expression of hope for a new heaven and a new earth reminds us that the Kingdom of God is not just a matter of the salvation of the individual or even the maintenance of the faithful church. The rule of God ought to encompass all of creation. Only when all are faithful and the world-order is characterized by peace and justice will God's work be complete. The readers of Revelation today are challenged by it to discern and distinguish divine and satanic forces at work in our world. ***See also*** Apocalyptic Literature; Apocrypha, Old Testament; Daniel; Nero; Roman Empire.

Rezeph (ree´zif), a town cited as having fallen to Assyria (2 Kings 19:12; Isa. 37:12) and symbolizing in part the unstoppable Assyrian force. From Assyrian royal records it is known as *Rasappa* and had served as an Assyrian provincial capital after its capture, probably by Shalmaneser III about 838 B.C. Possibly it is modern Rezzafeh about a hundred miles southeast of Aleppo, off the south bank of the Euphrates River.

Rezin (ree´zin), an Aramaic name whose original Hebrew vocalization, to judge from Greek and Assyrian transcriptions, was *raz-yohn* (Heb., "pleasant, agreeable").

1 The king of Damascus. Rezin was among those who paid tribute to the Assyrian king Tiglath-pileser III in 738 B.C., but within three years Rezin had organized an anti-Assyrian coalition consisting of Damascus, Tyre, Philistia, Israel, some Arab tribes, and perhaps Edom. When King Ahaz of Judah refused to join, the allies seized part of his territory, including Elath on the Red Sea. Rezin's attempt to take

Jerusalem and depose Ahaz failed (Isa. 7:1–10), however, and Tiglath-pileser soon crushed the allies. After neutralizing Phoenicia and Philistia in 734 B.C., he devastated Rezin's territory in 733. Damascus survived, but the following year, bereft of its allies, the city fell, and Rezin was executed (2 Kings 16:5–9).

2 The ancestor of a group of Temple servants in the postexilic period (Ezra 2:48; Neh. 7:50). ***See also*** Ahaz; Isaiah, The Book of; Pekah.

J.J.M.R.

Rezon (ree´zuhn; Heb., "potentate"), the son of Eliadah (1 Kings 11:23), one of two foreign and one Israelite adversaries raised by God against Solomon. In this context, they are raised up against Solomon on account of Solomon's sin in taking foreign wives. He is sometimes identified with Hezion (1 Kings 15:18), the Aramean Rezon who mutinied against Hadadezer and established in Damascus an independent fiefdom that broke free of Israelite hegemony.

Rhegium (ree´jee-uhm), a Greek colony (modern Reggio di Calabria) located at the southwestern tip of the Italian boot, opposite Messana in Sicily. Although a Roman ally as early as the Punic Wars, Rhegium maintained a Greek character into the time of the Roman Empire. In spite of numerous earthquakes, it remained well populated throughout the first century A.D. and was a center for Pythagorean philosophy. Unfavorable winds hindered navigation between the narrow straits, perhaps explaining Paul's delay there (Acts 28:13).

rhetorical criticism, the art of discovering and describing the ways in which a text is persuasive. The purpose of rhetorical criticism is to determine how texts work as documents of persuasion and then to interpret them in the light of this determination.

Rhetorical Criticism of the Hebrew Bible: James Muilenburg's 1968 presidential address to the Society of Biblical Literature, "Form Criticism and Beyond," made a major contribution to the rhetorical study of the OT. Pointing out the limitations of form criticism of the Hebrew Bible, Muilenburg noted that form criticism was often unable to give proper attention to the unique characteristics of individual texts, primarily because of its heavy emphasis on particular texts as representatives of a genre. Earlier, Muilenburg's well-known commentary on Isaiah 40–66 had focused attention on Second Isaiah's use of poetic form, imagery, and many other strategies of style and structures of arrangement as techniques of persuasion. More recent rhetorical critics of the OT have been influenced by the New Rhetoric, structuralism, and other kinds of literary criticism (see especially *The Postmodern Bible*). Their rhetorical criticism has thus tended to be much less interested in diachronic (historical) concerns than in synchronic analyses of Hebrew Bible texts in their present form (for further discussion, see *Rhetorical Criticism of the Bible* and especially Hauser's extensive treatment of the most important works of OT rhetorical criticism, pp. 14–20).

Rhetorical Criticism of the New Testament: Because of the pervasiveness of rhetorical instruction as an integral part of the curriculum of Greek and Roman education (normally, the education sequence was grammar, rhetoric, philosophy or grammar, rhetoric), there is considerable historical justification for doing rhetorical criticism of the NT. Those who knew how to write persuasively had probably learned it in rhetorical school. Most NT rhetorical criticism of the 1970s and 1980s focused primarily on the Letters of the NT and the influence on the Letters of rhetorical precepts developed for speeches.

During the 1990s, NT rhetorical critics have widened their knowledge of Greco-Roman rhetoric: the rhetorical handbooks, rhetorical speeches, and instruction in exercises of composing partial speeches (Gk. *progymnasmata*), such as the *chreia* (a concise reminiscence aptly attributed to some character) and its elaboration, and composing full speeches, known as declamation. Rhetorical critics of the NT are now using all three sources to reconstruct what rhetoric was in order to use this knowledge in analyzing NT texts.

Greco-Roman rhetoric had five parts: memory and delivery (which had to do with oral discourses) along with invention (the use of topics), arrangement, and style. Rhetorical criticism of the NT has focused great attention on the last three: invention, arrangement, and style. Greco-Roman rhetoric recognized three genres, or *genera,* of speeches: judicial, epideictic, and deliberative. Standard topics were associated with each of the three. Judicial rhetoric was the rhetoric of the law courts, and it concerned the guilt or innocence of the person charged with some offense. The standard topics of epideictic rhetoric were praise and blame, and those of deliberative rhetoric were advantage and honor. Aristotle in his *Rhetoric* pointed out that each *genus* of rhetoric had a time that was most proper to it: judicial rhetoric had mostly to do with the past, deliberative rhetoric mostly the future, and epideictic rhetoric mostly the present.

Arrangement (Lat. *dispositio*) has been of great interest especially to Pauline scholars. Most speeches were begun with an *exordium* that introduced the speaker, the *ethos* (character) of the speaker, and sometimes also the topics of the speech to the audience. This was often followed by a *narratio* ("statement of facts") in which the speaker expressed in the most advantageous way the events that had led up to the occasion for the speech. This was sometimes

followed by a *partitio* or *propositio* in which the proof that was to follow was divided into parts. Then came the proof (*probatio*) in which the major argumentation of the speech was done. The major points of the speech, which had often been announced in the *exordium* or *partitio*, were then recapitulated in the *peroratio*, which also usually included an appeal to the emotions of the audience.

Many rhetorical critics of the Pauline and pseudo-Pauline Letters have found these precepts for arrangement germane to the arrangement of the Letters. Form criticism had shown that the Letters have epistolary prescripts, followed by thanksgiving prayers, the Letter body, and finally the closing of the Letter. The form critic Paul Schubert had pointed out that the "vital theme" of the Letter was usually stated in the thanksgiving prayer. This insight led rhetorical critics to propose that the thanksgiving prayer, in certain Pauline and pseudo-Pauline Letters, had the same function as the *exordium* in rhetorical speeches. Some rhetorical critics also include the epistolary prescript in what they understand to be the *exordium* of the Letters, because it too has an exordial function: introducing the writer and the writer's *ethos* to the readers and/or hearers of the Letter. More recently, however, other rhetorical critics have questioned the use of precepts for the arrangement of speeches to determine the arrangement of the Letters. The question of the extent to which speech rhetoric is applicable to the rhetoric of the Letters continues to be debated by rhetorical critics. All rhetorical critics appear to agree, however, that rhetorical style affected epistolary style, and many agree that rhetorical invention affected the use of topics in the Letters.

Patterns of Persuasion in the Gospels, by Burton L. Mack and Vernon K. Robbins, was a groundbreaking set of essays that applied the precepts for the elaboration of the *chreia* to the NT Gospels. They demonstrate the likelihood that several passages in the Gospels were composed according to rather standard patterns of the ways that *chreiai* were elaborated. The arrangement of the elaboration of a *chreia* is related to the arrangement of a speech (see above). Robbins's *Jesus the Teacher: A Socio-Rhetorical Interpretation of Mark* encourages NT exegetes to be "socio-rhetorical" critics, weaving together literary insights (which Robbins calls the "inner texture" of the text) with analysis of the text's intertexture (studies in intertextuality, i.e., its use of and dependence on other texts), its social and cultural texture, and its ideological texture. ***See also*** Bible; Biblical Criticism; Hermeneutics; Narrative Criticism; New Testament; Old Testament.

F.W.H.

Rhoda (roh´duh), a slave, servant, family member, or follower of Jesus in the home of Mary, the mother of John Mark, in Jerusalem. When Peter was miraculously released from prison and came to the house, she answered his knock but was so overcome with joy that she ran and announced his presence to the others assembled in prayer without first letting him in (Acts 12:12–16). ***See also*** Mark; Mary; Peter.

Rhodes (rohdz), an island off the southwest tip of Asia Minor (1 Macc. 15:23; Acts 21:1). In biblical times this small island republic was a cultural center and a center of higher education. It was also known for its healthful climate. Caesar and Cicero both went there to study rhetoric and philosophy. Tiberias retired there from the turmoil at Augustus's court from 6 B.C. until A.D. 2.

In the third century B.C. the Rhodian navy guarded seaborne trade in the Mediterranean. Its famed colossal statue of Apollo was destroyed by an earthquake in 227/26 B.C.

Roman conquest of Greek territories after the conclusion of the third Macedonian war in 167 B.C. ended the island's prosperity as a commercial center. Rhodes was stripped of her territories in Asia Minor and saw her banking and shipping revenues drop by ninety percent. With Rhodes no longer able to support a navy, the pirates and slave traders of Cilicia and Crete preyed on Mediterranean trade until Pompey rid the area of pirates in the 60s B.C. Rhodes was pillaged by Cassius in 43 B.C., but the island returned to a modicum of prosperity under Roman rule. Paul passed Rhodes on his sea journey from Ephesus to Tyre (Acts 21:1). P.P.

Riblah (rib´luh), a city in the Lebanese Beqaa Valley that guarded the important international thoroughfare connecting Egypt with northern Syria and Mesopotamia. Situated about seven miles south of Kedesh on the Orontes at a crossing place of the river, Riblah functioned as a strategic military base during the seventh and sixth centuries B.C. Here Pharaoh Neco II established the Egyptian headquarters following his defeat of Josiah at Megiddo and the capture of Kedesh in 609 B.C. In the same year Neco summoned Jehoahaz to Riblah, deposed him, put

him in chains, and appointed Jehoiakim as Judah's king in his stead (2 Kings 23:31–35). Two decades later, after the Babylonian conquest of Jerusalem, Nebuchadnezzar brought King Zedekiah to Riblah, killed his sons before his eyes, then blinded him and carried him off in chains to Babylon (2 Kings 25:5–7; Jer. 52:9–11). Many of Judah's leading officials were also brought to Riblah and executed at that time (2 Kings 25:19–21). The ruins of the ancient site are near the modern village of Ribleh.

According to Num. 34:11, a town named Riblah was a border city on the northeast corner of the promised land (cf. KJV: "Diblath," RSV: "Riblah," Ezek. 6:14); but it is uncertain whether this is the same city as Riblah on the Orontes.

D.A.D.

riddle, in the Bible, a saying whose meaning is not immediately clear or is purposely veiled. It requires careful thought or interpretation to be understood. This encompasses a variety of sayings. The clearest example of a riddle is Samson's riddle of the lion and the honey whose answer was to be guessed by his groomsmen (Judg. 14:12–19). The queen of Sheba questioned Solomon with "hard questions" (1 Kings 10:1; 1 Chron. 9:1), and the mark of a wise person was the ability to understand riddles (Prov. 1:6; cf. Dan. 5:11–12). However, a riddle could refer more broadly to an allegory in which the meaning was deliberately veiled behind symbolic objects (Ezek. 17:2–24; cf. 24:1–15) and could also include "dark speech" that required interpretation (Num. 12:8; cf. John 10:6; 16:25, 29). A perplexing moral problem could be termed a riddle (Ps. 49:4), and the numerical sayings of Proverbs 30 (vv. 15–31) illustrate a riddle form in which is described things "too wonderful" to be easily understood (vv. 18–20). The element of "hiddenness" implied in the riddle allowed the term to be used in a negative sense to describe the shrewdness and deceit of the insolent king in Daniel's vision (Dan. 8:23–25). ***See also*** Proverb; Wisdom. D.R.B.

righteousness, the state of being in the right, or being vindicated. "Righteousness" renders an important Hebrew root, *ṣdq,* that appears over five hundred times in the OT and a Greek root, *dikaio-,* that appears over two hundred and twenty-five times in the NT. The KJV and RSV employ "righteousness" terms about three times as often as "justification" words, but both must be considered in grasping what is a single biblical concept. English has two possible translations: "right, righteous, righteousness, be or declare (or make) righteous," from an Anglo-Saxon root *rightwise;* and "just, justice, justification, justify," from the Latin *justitia.* The interrelatedness of the two concepts is seen in Rom. 3:21–24: "the righteousness of God has been manifested . . . for all who believe. . . . they are justified by his grace."

In the OT: In the OT, righteousness is used of God (Pss. 119:137–38, 144; Isa. 24:16), the king (Pss. 45:4, 7; 72:1–7), the people (Pss. 32:11; 92:11), and individuals (Ezek. 18:5–9) like Noah (Gen. 6:9; cf. 2 Pet. 2:5). Some interpreters stress righteousness as conforming to a norm, the law, or "what is right" (Deut. 16:20). Others see it as relational, fitting the situation (Gen. 38:26; 1 Sam. 24:17). Often a law-court setting is involved: the guilty are condemned, the innocent acquitted (Deut. 25:1; Isa. 5:23; Deut. 16:18). This forensic (i.e., legal) use extends to God's judgment too (Pss. 7:7–11; Jer. 2:4–13; 12:1; Mic. 6:1–8). God's loyalty to (covenant) promises is likewise part of God's righteousness (Neh. 9:7–8, 33; Dan. 9:14–16). There is a strong ethical component of "upright conduct" throughout the OT (Pss. 1:6; 23:3; Prov. 8:20; 13:6; 16:13; 21:3; Lev. 19:36).

Most surprising is the way righteousness also refers to God's saving actions: in the RSV "vindication" (Isa. 61:1–2). This "salvation" side apears especially in Second Isaiah, as "deliverance" (46:12–13; 51:5, 6, 8) or "victory" (41:2). In Judg. 5:11 the plural is rendered as "triumphs of the Lord." "The Lord our righteousness" means God as savior (Jer. 23:6). God is "justified" (Ps. 51:4) in judging and as "righteous . . . Savior" (Isa. 45:21). Hence "the righteous" become those who trust in God's vindication (Ps. 37:12–13; Jer. 20:12). In the Dead Sea Scrolls and its "teacher of righteousness," God's righteousness offers hope for redemption from sin.

In the NT: Jesus sought "sinners," not "the righteous" of the day (Mark 2:17). Not the Pharisee but the tax collector went home "vindicated" (Luke 18:14). Jesus called for righteousness (Matt. 5:20) but also spoke of it, like the Kingdom, as God's gift (Matt. 5:6; 6:33).

After Easter, OT "righteousness" language was employed to express the meaning of Jesus' death. Jesus is "the Righteous One" (Acts 3:14; 7:52) whose suffering and resurrection bring the unrighteous to God (1 Pet. 3:18; Rom. 4:25). This saving righteousness means forgiveness (Rom. 3:24–26); justification, sanctification, "washing" from sins (1 Cor. 6:11; cf. 1 Cor. 1:30 ["Christ . . . our righteousness"]; 2 Cor. 5:21).

Paul develops the forensic (1 Cor. 4:4) and ethical aspects (1 Thess. 2:10) in a salvation context (2 Cor. 3:9). How one attains righteousness comes to new prominence in Paul's Letter to the Galatians, written against the Judaizers (2:12–21). Righteousness comes by faith, not "works of the law" (3:5). Paul appeals to the OT (Hab. 2:4) and Abraham (Gen. 15:6); God's promise, fulfilled in Christ, is received by faith (Gal. 3:6–18). These two ways to righteousness—one's own based on the law, and from God through faith in Christ—are contrasted in Phil. 3:9–11 and Rom. 10:3–13. The saving righteousness of God becomes the theme of Romans (1:16–17), a righteousness received through Christ's cross (3:21–31) and exempli-

fied by Abraham (chap. 4). Its meaning is freedom (cf. Gal. 5:1, 13) and life in the Spirit (Rom. 5–8, esp. 5:16–21). While reading Israel's history in terms of (un)righteousness (Rom. 9–11, esp. 9:30–31), yet with hope (10:1; 11:26), Paul presents the ethical demand for Christians as well as the gift character of righteousness (Rom. 14:17; Gal. 5:5; Phil. 1:11; 2 Cor. 9:10).

Ephesians speaks of grace and faith but uses the verb "save" instead of the OT "declare righteous" (2:4–10; cf. Titus 3:3–7; 2 Tim. 1:9–10). Hebrews cites Hab. 2:4 (in 10:36–39; cf. also 1:9; 7:2) in its "word of righteousness" (5:13). It stresses faith in chap. 11 and righteousness (11:4, 7; cf. 33) and speaks of "the just made perfect" (12:23) through Christ's sacrifice (cf. 9:26–28; 10:19–20). 1 Peter teaches that God judges justly (2:23) and that the righteous Christ died for our sins (3:18) so that we might "live to righteousness" (2:24). Matthew emphasizes righteousness as a gift (5:6; 6:33) within salvation history (3:15; 21:32) and as a disciple's response (5:10, 20; 6:1, RSV: "piety"). Acts has a vivid passage about being "freed" (Gk. *dikaioō*) from what the law could not free one from (13:38–39). John 16:8–11 sees the Paraclete's role as setting the world straight about righteousness, and 1 John insists that Jesus Christ the righteous (2:1) cleanses from unrighteousness (1:9) so that believers can "do right[eousness]" (3:7, 10).

James 2:14–26 cites Gen. 15:6 to show, against those who took faith as mere acknowledgment about God (2:18–19), that faith must include works (of love; 2:22). The passage attempts thus to defend the view of righteousness by faith (alone, 2:24) but with a strong ethical side. James 1:20, along with Matt. 6:33 and 2 Pet. 1:1, uses the expression found in Paul, "the righteousness *of God*." Perhaps deriving from Deut. 33:21 (RSV: "just decrees") and apocalyptic (cf. Dan. 9:7), the phrase has been taken to refer to an attribute or quality of God (Rom. 3:5, RSV: "justice") expressed as power (Rom. 1:16–17). It is thus understood to be the righteousness that comes from God as a gift (Phil. 3:9), or the righteousness valid before God at the judgment (Rom. 10:3). ***See also*** Justice; Justification.

Righteous One, the, a term applied to Jesus by Stephen in Acts 7:52 (KJV: "the Just One"). ***See also*** Stephen.

Rimmon (rim´uhn; Akkadian, "thunderer"; Heb., "pomegranate"). **1** A title borne by the Syrian storm god Hadad, who was worshiped in his temple in Damascus by Naaman, the Syrian army commander (2 Kings 5:18). After Naaman was cured of leprosy by the God of Israel, he asked the prophet Elisha for "two mules' burden of earth" from Israel to take back to Syria; he intended to set up an altar to the God of Israel on the earth in the temple of Rimmon. This temple is thought to have been on the site of the later Roman temple to Zeus and the present Umayyad mosque. **2** A Benjaminite from Beeroth, father of Baanah and Rechab, the men who killed Ishbosheth and brought his head to David (2 Sam. 4:2, 5, 9). **3** En-rimmon, a town in the south of Judah given to the tribe of Simeon (Josh. 19:7); in Josh 15:32 and 1 Chron. 4:32 the name appears as "Ain, and Rimmon." It was occupied by Jews returning from the Exile (Neh. 11:29). According to Zechariah (14:10), Rimmon was south of Jerusalem. Its exact location is uncertain. Often associated with Khirbet Umm er-Ramamin, about nine miles north of Beersheba, Rimmon has recently been connected with the site of Tell Halif (Arabic, *Tell Khuweilifeh*) a few miles to the northwest. **4** A rock to which six hundred Benjaminites fled to escape from the Israelites (Judg. 20:45–47; 21:13); it is identified with a limestone hill about three miles east of Bethel, on which is the modern village of Ramun. **5** A town in Zebulun, given to the Levites (Josh. 19:13; KJV: "Remmon-methoar"). Written Rimmono in 1 Chron. 6:77 and Dimnah in Josh. 21:35, it is identified with modern Rummaneh, about six miles north-northeast of Nazareth. J.M.W.

A pomegranate-shaped ceramic bowl found at Tell Halif suggests the site may be biblical Rimmon (Heb. *rimmon* means "pomegranate").

rings. 1 Circular rings attached to various furnishings of the tabernacle through which staves were placed in order to carry them during the wilderness journey: the Ark (Exod. 25:12–15; 37:3–4); the table (Exod. 25:26–28; 37:13–15); the altar of burnt offerings (Exod. 27:4–7; 38:5–7); and the altar of incense (Exod. 30:4; 37:27). Such rings were also used to secure the frames of the tabernacle (Exod. 26:24–30; 36:29–34). **2** Circular rings attached to the breastplate of the high priest which secured the ephod, a decorative linen garment (Exod. 28:23–28). **3** Rings as jewelry either for adornment and worn on the fingers (Job 42:11; James 2:2), ears (Gen. 35:4; Exod. 32:2, 3), or nose (Gen. 24:47; Isa. 3:21; Prov. 11:22) or as a symbol of authority, i.e., as a signet ring of a king

(Gen. 41:42; Esther 3:10; Jer. 22:24; cf. Luke 15:22). Such rings were frequently used as official seals (Esther 8:8, 10). ***See also*** Breastpiece; Ephod; Jewelry; Tabernacle. R.H.S.

rivers, watercourses on which virtually all major cities in the ancient world were located, because they made transportation and commerce possible and provided irrigation for farming. Metaphorically, rivers or streams of flowing (living) water symbolize salvation or the Spirit of God (Ezek. 47:1–12; Zech. 14:8; Rev. 22:1; John 7:38). ***See also*** entries under the names of individual rivers.

Rizpah (riz′puh), the daughter of Aiah and concubine of Saul (2 Sam. 3:7). After Saul's death Abner took her as a claim to the throne (cf. 1 Kings 2:22). An objection from Ishbosheth, Saul's son, offered an excuse for Abner's negotiations with David (2 Sam. 3:6–10). When God sent a famine because Saul had broken the oath with the Gibeonites (2 Sam. 21:1), David agreed to hand over seven sons of Saul for expiation. Two were the sons of Rizpah. Her devotion led to a long vigil over the bodies, keeping off the birds by day and the beasts by night, from the beginning of the barley harvest (April–May) until the rains came (October). Finally David's attention was drawn to the matter (2 Sam. 21:1–11). ***See also*** Abner. N.L.L.

road, a KJV term for the RSV's "raid" (1 Sam. 27:10). For road as a travel route, ***see*** Trade and Transportation.

robbery, stealing the property of others. The precise ambit of the Decalogue prohibition "You shall not steal" (Exod. 20:15) is difficult to determine. The verb used there for "steal" (Heb. *ganav*) is narrower in its usage than the word "rob" (Heb. *gazal*), but it nevertheless can be used with persons as the object to denote kidnapping. This has led some scholars (anticipated by rabbinic interpretation) to see the Decalogue prohibition as directed originally against kidnapping, so as to parallel murder and adultery as part of a series of capital offenses. For those who regard the Decalogue as a moral rather than a legal code, such a restrictive interpretation is unnecessary.

The "Covenant Code" contains rules regarding various forms of theft of domestic animals (Exod. 22:1–4), imposing penalties of multiple restitution in kind. Both the evidence required and the nature of the sanctions suggest the setting of an agricultural community that sought to avoid getting tied up in court proceedings. This is reflected also in the provision for self-defense: if the owner kills a thief who intrudes by night, he is exempt; if he kills a daytime intruder, he is liable. The rabbis later reinterpreted the test in terms of the owner's knowledge of the intruder's intentions.

In the law codes of the Babylonian king Hammurabi (eighteenth century B.C.), we find a more complex set of rules regarding theft (§§6–10, 14, 253–56, 259–60, 265), with more widespread use of the death penalty. The Bible reserves the latter for cases of brigandage (dealt with under the law of war), kidnapping, and deliberate sacrilege. But the capital cases in the code of Hammurabi are also all special in some respect or other, so that attempts to generalize the differences in terms of the underlying values of the cultures should be treated with some caution.

The predominant image of the thief is one who comes suddenly, by night (Job 24:14, 16), making his entry by tunneling through the walls of a sheepfold or a house. But neither secrecy nor nocturnal activity was legally significant. Nor is the modern distinction between theft and robbery (the latter being a form of theft aggravated by violence) evidenced in the Bible. Highway robbery was a quite different phenomenon, representing a form of political opposition that stretched from the period of Abimelech (twelfth century B.C.; Judg. 9:25) to the *sicarii* (Lat. "assassins") and Zealots of the NT period (first century A.D.). The threat from such organized bands was to the central authority's control of the communications network rather than to property; hence, brigandage was treated by military rather than judicial means. But the term for such robbery (Heb. *gazal*) came to be used by the prophets for a wide range of economic exploitation (robbing the fatherless, Isa. 10:2; Ezek. 39:10; robbing the poor, Isa. 3:14–15; Prov. 22:22; the context is often that of excessive credit terms and execution of debt, Ezek. 18:7–9; 33:15); this too represented the offense of the powerful against the powerless, implying here a rejection of the moral authority of God (Lev. 19:11–13). The priestly legislation deals with such matters in the context of its own concerns: the property offense compounded by a false oath requires restoration, a fine, and a guilt offering (Lev. 6:1–7); the same applies in the case of inadvertent use of sacred property (Lev. 5:14–16).

Where the offender was known, theft might be followed by immediate pursuit with a view to repossession (Gen. 31:23; Judg. 18:22). Early rabbinic sources urge that any such repossession be performed openly, under claim of right, rather than furtively, but ultimately the practice was discouraged (*M. B. Qam.* 10:38). In the absence of a strong police force, this was both easier and more satisfactory than securing the attendance of the suspect in court. Similarly, the Mishnah's authorization of lynching in cases of deliberate sacrilege (*m. Sanh.* 9:6) was disapproved by later rabbinic sources (*y. Sanh.* 9:7).

Rabbinic sources continue the prophetic tradition of moral condemnation of "robbery" (*Eccles. Rab.* 1:13; *Deut. Rab.* 2:25*b*; *Sanh.* 108a), and its prohibition is included in the laws given by God to the descendants of Noah (i.e., all humankind; *b. Sanh.* 57a).

The NT continues the condemnation of robbery (1 Cor. 6:10; cf. 1 Pet. 4:15), yet Jesus used the sudden and unexpected intrusion of the robber as a metaphor for the sudden inbreaking of God's kingdom and the consequent need to stay alert (Luke 12:39–40; cf. 1 Thess. 5:2; 2 Pet. 3:10; Rev. 16:15). ***See also*** Law. B.S.J.

robe. *See* Dress.

Robinson's Arch, part of a spring or support for a descending staircase of the complex of buildings built on the Temple Mount in Jerusalem by Herod. The remnants of this arch can still be seen today near the southwestern corner of the Temple Mount in the Old City of Jerusalem. During the Herodian period (late first century B.C. to early first century A.D.) a stairway descended from the top of the temple complex to the ground, allowing access to this high point of the city for persons who approached from the south. When it was discovered in 1838, this arch and its associated stairway were thought to extend across the Tyropoeon Valley to the western hill of the city. Subsequent excavations have shown this assumption to be false and that the stairway turned southward. The arch is named after E. Robinson, an American clergyman, who surmised its ancient function during his investigations of Jerusalem in 1838. J.A.D.

rock, a large chunk of stone. In lands such as those of the Mediterranean basin, rocks are plentiful. They are a danger to ships when storms drive them near shore (Acts 27:29), but on land they can be used as places of refuge for both animals (Prov. 30:26) and human beings, either to hide from other human beings (1 Sam. 24:2) or from God himself (Isa. 2:19, 21). Yet even rocks could not withstand God's power (1 Kings 19:11). Moses used the cleft in a rock to protect himself from seeing God's face, which would have cost him his life (Exod. 33:20–23). Israelite faith spoke figuratively of God as a rock, signifying the permanence and stability of divine protection (Deut. 32:4; 2 Sam. 22:2; Pss. 18:2; 71:3).

It was by striking a rock at God's bidding that Moses provided water for the Israelites in the desert (Exod. 17:6). Paul later identified that rock with Christ to show that the Israelites had also been favored with participation in the sacraments (1 Cor. 10:4). Jesus spoke of rocks that hindered agriculture (Mark 4:5–6) and of a rock whose firmness resembled the foundation upon which those people built who accepted what he said (Matt. 7:24–25). He resisted Satan's temptation to turn rocks into bread to satisfy his own hunger (Matt. 4:2–3) and identified Peter (Gk. *Petros,* "rocklike") as the rock upon which his church would be built (Matt. 16:18). J.A.D.

rod, a term representing several different words in Hebrew and Greek and referring to several functions in antiquity. The beloved Twenty-third Psalm contains the famous reference to "thy [God's] rod and thy staff, they comfort me" (v. 4). The imagery is that of a shepherd caring for a flock. The rod refers in this particular instance to a type of club with which to defend the flock, and the staff is a longer rod or pole upon which the shepherd could lean or with which he could guide the flock.

The following references give some idea of the range of meanings associated with the term in the Bible: **1** A staff for travelers (Gen. 32:10; Mark 6:8). **2** An instrument for punishment; it was used by a father to punish his son (Prov. 13:24; 22:15) or an officer to beat a prisoner (Matt. 27:26; see 2 Cor. 11:25). **3** A symbol of authority (Judg. 5:14; Gen. 49:10). Moses' rod was a symbol of his office and evidence of the divine authority for his actions. With this rod Moses performed wonders in Egypt and even instructed Aaron to use his for similar purposes (Exod. 4:1–5; 7:8–24; 14:16). By striking the rock at Horeb with his rod Moses provided water for the Israelites in the wilderness (Exod. 17:1–7). When there was a dispute over the authority to lead the people, Moses took Aaron's rod and placed it in the tabernacle along with others representing the leading families of the nation. Aaron's rod budded and produced almonds, signifying the authority vested in his line (and that of Moses) by God. **4** Something used to measure distances (Ezek. 40:3, KJV; RSV: "reed"). J.A.D.

Rodanim (roh´duh-nim), probably the people of Rhodes (i.e., Rhodians). The Masoretic Text (MT) of 1 Chron. 1:7 lists the Rodanim among the descendants of Javan, but the MT of Gen. 10:4 uses the name Dodanim for the same people. The Septuagint reads *Rodioi* in both passages. Since Javan's other descendants lived in the Aegean region, the connection between the Rodanim and the island of Rhodes is acceptable. In Ezek. 27:15, the name Rodan is also preferred over Dedan. ***See also*** Dedan; Dodanim; Javan; Rhodes.

roe, roebuck, the roe deer *Capreolus capreolus;* it was considered clean by the Hebrews and therefore edible (Deut. 14:5 [KJV: "fallow deer"]). It was a delicacy suitable for the royal table of Solomon (1 Kings 4:23).

roll, a word used as both noun and verb in the Bible. Aside from its common verbal use, biblical texts employ it as a noun meaning a list (Ps. 40:7), a record of performance (Heb. 10:7), and

ROMAN EMPIRE

simply as the rolled form (scroll) of a book (Isa. 34:4).

Roman (roh´muhn) **Empire,** the lands around the Mediterranean Sea and in Europe ruled by Rome. While events recorded in the books of the OT took place prior to the emergence of Rome as the sole power in the Mediterranean basin, Rome's influence was already strong at the time of the Maccabean revolt (begun 167 B.C.), and from that point until Rome assumed control over Palestine in 63 B.C. its power influenced events throughout the eastern Mediterranean world. The spread of that influence had begun much earlier, however.

The Expansion of Rome: From the mid-third century B.C. through the early second century A.D. the Romans expanded their power over an enormous variety of peoples outside Italy. The granaries of Sicily came under Roman control in 241 B.C., Sardinia in 231 B.C. Large areas of Spain were added after the second Punic war (ca. 201 B.C.), though the Roman conquest of Spain would take another two centuries to complete. Macedonia (northern Greece) finally fell to the Romans in 148 B.C. and Achaia (southern Greece) in 146 B.C., at which time Corinth was entirely destroyed. The Corinth of the NT was a city built by Julius Caesar. In the same year (146 B.C.) the destruction of Carthage gave Rome the province of Africa, another grain-growing region. In 133 B.C. the last ruler of the Attalid dynasty of Pergamum, which had broken away from the Seleucids (rulers of Syria), bequeathed the heavily populated province of Asia Minor to the Romans. It provided growing cities with textile and other industries as well as agricultural resources. Pergamum, the former royal capital, was a free city under Roman control.

Pompey's campaigns in the east in the 60s B.C. abolished the Seleucid monarchy. Judea was annexed to heavily populated Syria, which was to serve as a buffer against the Parthians across the Euphrates. As a result all the lands in this part of Asia looked toward Rome and not Parthia for leadership.

Augustus: In the 50s Julius Caesar was given command of an army to subdue Illyricum (modern Yugoslavia) and Gaul (modern France and Belgium) on both sides of the Alps. Caesar conquered tribes in France and Belgium and invaded Britain as well. The new territories of north and central France to the Rhine border became a new province, *Gallia Comata,* "long-haired Gaul." It had a vigorous provincial culture and resources in agriculture, stock breeding, mining, pottery, and glass making. Following these successes, Caesar invaded Italy, where he assumed dictatorial powers. The civil wars that followed his death ended when Augustus defeated Antony and Cleopatra (31 B.C.) and established himself as sole ruler of the empire. In Augustus's time the population of the empire is estimated to have been between seventy and ninety million, with thirty to fifty million in Europe, slightly fewer in Asia Minor, and somewhat less than twenty million in Africa.

The official transfer of command to Augustus in 27 B.C. was an implicit acknowledgment that the Republican system was not able to deal with the problems of such a vast rule without Augustus and his personal and material resources. Augustus, in turn, was constrained by the limited number of persons he could call upon to administer the empire. Consequently, as much as possible was left in the hands of the Senate. In addition, Rome was reluctant to intervene in the governing structures of the provinces at the local level. However, Augustus did evolve a separate financial system that made the procurators of the provinces responsible directly to the emperor for collecting taxes and other revenues.

The Romans saw themselves as the legitimate rulers of the civilized world. This vast empire had been gained, Cicero wrote, only through just wars: "Our people by defensive wars in support of its allies has taken possession of the whole world" (*De Re Publica* 3.35). After the aristocratic misrule in the provinces and the bloody civil wars at home, the imperial order seemed to usher in a new age of peace. It provided permanent military security and high standards of administrative, judicial, and fiscal efficiency. The new era of peace was widely proclaimed in Augustan literature. Augustus's return from campaigns in Gaul and Spain was celebrated by dedication of the *Ara Pacis Augustae* (altar of the peace of Augustus), in January, 9 B.C. Augustus had had the doors of the temple of Janus closed in 29 B.C., signifying the end of warfare. Imperial coinage also celebrated the new age of peace. Even for many of the subject peoples the new Roman order presented an effective and stable rule that stood above local and regional disputes.

The Birth of Christianity: It was in the time of Augustus that Jesus was born (Luke 2:1), and that the events recorded in the NT began. Rome was thus the dominant political and military force of the world of the NT. According to the Gospel records, Jesus was born in Bethlehem as the result of a Roman census

ROMAN EMPERORS
IN THE FIRST CENTURY A.D.

	Years of Rule
Augustus	27 B.C.–A.D. 14
Tiberius	A.D. 14–37
Caligula	37–41
Claudius	41–54
Nero	54–68
Galba; Otho; Vitellius	68–69
Vespasian	69–79
Titus	79–81
Domitian	81–96
Nerva	96–98
Trajan	98–117

The *Ara Pacis Augustae* (altar of the peace of Augustus), dedicated by the emperor Augustus in 9 B.C. to proclaim a new era of peace in the Roman Empire.

(Luke 2:1–4), drew illustrations in his teaching from the ever present occupying forces (Matt. 5:41, a service a Roman soldier could demand of a civilian), lived his life in a land under Roman domination, and was put to death by a Roman governor on a Roman means of execution, the cross.

Paul carried out his entire mission within the bounds of the eastern portion of the Roman Empire, wrote his most carefully reasoned letter to Christians who lived in its capital, took advantage of his Roman citizenship (Acts 16:37–38), was arrested by Romans in Jerusalem (Acts 21:31–33), escorted by them (23:24) to the Roman governor's residence in Caesarea (23:33), and when he exercised the citizen's right to appeal to Caesar (25:11) they took him to Rome itself (Acts 27–28).

The apostle Peter is remembered to have written a letter sent to Christians in the Roman provinces in Asia Minor (1 Pet. 1:1), and tradition has it that he was martyred in Rome, the capital city of the empire. In trying times, the author of the Revelation of John denounced bitter persecutions of Christians (Rev. 17), persecutions that came to an official end only when the emperor Constantine in A.D. 313 issued his edict of toleration and subsequently gave his official favor to Christianity as his own religion. Thus the entire career of the early church, as well as the events recorded in the NT and the writing of the NT books themselves, took place in a world dominated by the Roman Empire. ***See also*** Provinces.

Romans (roh´muhnz), **the Letter of Paul to the,** the longest and generally regarded as the most important of Paul's extant Letters.

The Original Letter: There is manuscript evidence for three versions of Paul's Letter to the Romans: a long, a short, and a middle-sized version. Most scholars agree that an abbreviated edition (chaps. 1–14 plus the benediction, 16:25–27) was not the original letter. Those who argue that it is unlikely that our present, long version (chaps. 1–16) went to Rome usually cite the following four reasons: First, Paul probably did not know twenty-six believers in Rome whom he could greet by name (16:3–15). Second, Paul elsewhere greets no addressee by name in the letter closing. Third, since Paul had not yet been to Rome, the greetings presume that twenty-six of Paul's co-workers and Christian friends recently with him in the east have migrated to Rome, and such a mass movement to Rome in that time seems improbable. Finally, the erroneous doctrine and false teachers Paul attacks in 16:17–19 sound more like those in the eastern churches (e.g., 2 Cor. 11:13; Phil. 3:18–19) than those mentioned in Romans; nowhere else in this Letter does Paul so rigorously attack his opponents. Thus, it is argued, the middle-sized version (chaps. 1–15 plus the benediction) remains as Paul's most likely letter to Rome. On that basis, chap. 16 was an appendix to the original (perhaps originally intended for Ephesus) and tells us nothing about the situation in Rome. On the other hand, no ancient manuscript copy of Romans exists without chap. 16; hence its exclusion from Paul's original letter to Rome remains speculation.

The Founding of the Roman Church: The founder of the Roman church is unknown. Gal. 2:7 appears to rule out Peter, and Paul had neither established nor visited the church, al-

though when he wrote he hoped to visit it soon. While the precise date of the founding of the Roman church is also uncertain, a congregation apparently existed in Rome before A.D. 49 when the Emperor Claudius banned Jews, including Jewish Christians, from Rome for internal squabbling (see Acts 18:2).

Date: The presence of Jewish Christians in the Roman church (7:1) suggests that Paul wrote the Letter after 54 when Nero lifted Claudius's ban. Paul's prolonged exchange with the Corinthian church probably began in 51 when Gallio was proconsul (Acts 18:12), but when he wrote Romans he had left Corinth for the last time. In the intervening period came (according to Acts) an eighteen-month stay in Corinth and a prolonged period in Ephesus, from which Paul wrote four letters to Corinth and made two additional visits. The time required for this prolonged exchange suggests a date between 55 and 58 for the writing of Romans.

Purpose: Scholars disagree over why Paul wrote Romans. Did Paul, realizing he was near the end of his career, write Romans as a summary of his mature thought? With his mission in the east complete (15:19), did he write seeking support for his projected Spanish mission (15:24, 28)? Uncertain of his reception in Rome and still smarting from charges brought to Corinth and Galatia, did he write to defend himself and his gospel? With the lifting of the ban of Claudius and the return of Jewish Christians to Rome, had tensions arisen between Jewish and Gentile Christians requiring Paul's mediation (14:1–15:13)? Each of these positions has its advocates. Paul probably wrote for many reasons, however. Although the controversies in Galatia and Corinth did influence Romans, this Letter is no systematic summary of Paul's theology given elsewhere. Romans is clearly distinct from Paul's other Letters: it has the structure of a letter, conveys the warmth of personal correspondence, addresses real concerns of the Roman church, and deals with uncertainties about the apostle's imminent visit.

Content: Into the unusually short, stereotyped greeting (1:1–7), Paul crams the tradition undergirding his gospel and supporting his apostleship. Appealing to tradition, the apostle authenticates his apostleship and legitimates his gospel, thus countering the charge of being a dangerous innovator.

The thanksgiving (1:8–15) underscores the importance of Paul's commission to Gentiles. He intends to visit the Roman church to reap some harvest there as among "the rest of the Gentiles" (1:13). He announces his obligation to "Greeks and barbarians" (1:14). The summary of his gospel (1:16–17) speaks of God's power to "everyone," Jew and now Greek.

From 1:18 forward, Paul explains his Gentile gospel and defends it against challengers. He argues that Jews and Gentiles have historically failed to honor the Creator or do his will and thus need God's grace (3:23). Nevertheless, Paul's gospel of grace appears to some as a pernicious provocation. If it erases every distinction between Jews and Gentiles, why be a Jew (3:1)? If human sin elicits divine favor, why not sin with abandon to multiply God's grace (3:8)? Before dealing with these objections (6:1–11:36), Paul treats related concerns. Recalling how God counted Abraham righteous on account of his faith (Gen. 15:6) rather than by circumcision (Gen. 17:10), Paul argues that Gentiles may now become children of Abraham by faith. Through faith in Christ they are counted righteous (chap. 4) and receive access to and reconciliation with God (5:1–11).

For those who question how Jesus' act of obedience can benefit others, Paul recalls a familiar example (5:12–19). Because of his disobedience, Adam was exiled from Eden to a life marked by toil and want, fratricide and fear, pain and death. Ever since, through repeated acts of disobedience (not by biological inheritance!), humankind has shared in Adam's frustration and futility. The first Adam and the last (i.e., Jesus) correspond in the way the action of each influences the destiny of all. They differ in the result they effect. Through the first Adam, "many were made sinners" (5:19); through the last Adam came "acquittal" for all. Paul contends that those understanding humankind's solidarity with the first Adam should comprehend how Christ can unite all peoples.

In 6:1–7:6, Paul answers the charges (see 3:8) that his gospel of grace encourages sinning. The behavior of believers in Corinth, where some took salvation to mean all things were lawful (1 Cor. 10:23; see Rom. 14:14), gave the charge substance. Drawing on three examples (baptism, slavery, and marriage), Paul refutes the charge. In baptism, the believer symbolically dies to sin and becomes alive to God. How, Paul wonders, can one making this transition continue living in sin's bondage (6:1–14)? In 6:15–23, Paul asks how those redeemed from slavery to sin for service in Christ can still behave like slaves of the old master. In 7:1–6, he notes how the death of a husband frees his wife to remarry. Similarly, believers who have died to the law belong to Christ. How, therefore, can they act as if they were still in the prior marriage? Through these examples, Paul means to correct the mistaken impression that his gospel encourages libertinism.

While Paul's last example solved one problem, it raised another. Any pious Jew would bristle at Paul's suggestion that the law, God's gift to Israel, inflicted bondage. If the law is evil, then questions arise: is God so sinister as to give malevolent gifts? Is the law indeed evil? Paul immediately retorts, "Absolutely not!" (7:7, author's translation). Later, Paul adds, "The law is holy, and the commandment is holy and just and good" (7:12). The defect is not in the law but in the human heart. Corrupted by sin, the

heart twists the law, a good thing, into an ugly distortion. While the law forbids one to "covet" (7:7), all persons crave most what is explicitly forbidden. The flaw is not in the law or its Giver but in the person. (Note: Sin, not flesh is the offender. When Paul says, "nothing good dwells . . . in my flesh," 7:18, he does not mean that flesh as such is evil, but flesh taken over by sin. Flesh can be corrupted by sin, but it is not itself inherently corrupting.)

Paul's "I" language in 7:7–25 is autobiographical only in a general sense. Paul speaks here not as a guilt-ridden Pharisee, anxious over his failure to keep the law. Instead, he tells the universal story of the corruption of the good law by the power of sin.

In chap. 8, the new age breaks into view. The law of the Spirit, Paul affirms, sets believers free from "the principle [law] of sin and death" (8:2, author's translation). Paul knows God's words to Jeremiah, "I will put my law within them, and I will write it upon their hearts" (Jer. 31:33). Through Christ, the law of the Spirit has been inscribed on the heart, eliminating resistance to

OUTLINE OF CONTENTS

The Letter of Paul to the Romans

- I. Introduction (1:1–17)
  - A. Salutation (1:1–7)
  - B. Thanksgiving (1:8–15)
  - C. Summary of Paul's gospel (1:16–17)
- II. Wrath now revealed on all (1:18–3:20)
  - A. Gentiles under the power of sin (1:18–32)
  - B. Jews under the power of sin (2:1–29)
  - C. Objection (3:1–8)
  - D. Judgment on both Jews and Greeks (3:9–20)
- III. Righteousness now revealed to all (3:21–4:25)
  - A. Righteousness by faith to all, Jews and Gentiles (3:21–31)
  - B. Scripture proof: Abraham made righteous by faith (4:1–25)
- IV. The life of righteousness by faith (5:1–8:39)
  - A. God's righteousness through Jesus Christ (5:1–11)
  - B. The way Jesus mediates God's righteousness (5:12–21)
    - 1. Sin and death through first Adam (5:12–14)
    - 2. Acquittal, life, and grace through Christ (5:15–21)
  - C. Replies to objections that grace fosters immorality (6:1–8:39)
    - 1. If grace overcomes sin, why not sin more to receive more grace? (6:1–7:6)
      - a. Response: can the baptized behave in the ways of the old life? (6:1–14)
      - b. Response: can a freed slave still serve an old master? (6:15–23)
      - c. Response: can a widow who remarries return to her deceased husband? (7:1–6)
    - 2. Objection: if a believer is liberated from the law, is the law therefore sinful? (7:7) Response: a heart corrupted by sin, not the law, is sinful (7:7–25)
    - 3. The believer is not lawless but walks by the Spirit in love (8:1–39)
- V. Objection: why be a Jew? and Paul's answer (9:1–11:36)
  - A. To Israel belong special privileges (9:1–5)
  - B. Israel's rejection, even if final, is not a failure on God's part (9:6–13)
  - C. God's selection of Gentiles, even if arbitrary, is not unjust (9:14–29)
  - D. God's selection is not arbitrary: everyone, Jew or Gentile, who turns to God will be saved (9:30–10:21)
  - E. The Jewish rejection is not final (11:1–32)
    - 1. A remnant has accepted the gospel (11:1–6)
    - 2. God uses the rejection of Jews (11:7–24)
    - 3. All Israel will be saved (11:25–32)
  - F. Doxology of praise to God (11:33–36)
- VI. God's righteousness in the daily life of the believer (12:1–15:13)
  - A. Introduction (12:1–2)
  - B. Response to insiders (12:3–13)
  - C. Response to outsiders (12:14–13:17)
    - 1. Persecutors (12:14–21)
    - 2. Governing authorities and state (13:1–7)
  - D. Response to all: love (13:8–10)
  - E. Urgency imposed by the approaching end (13:11–14)
  - F. Weak and strong in Rome (14:1–15:13)
- VII. Paul's travel plans (15:14–29)
- VIII. Conclusion (15:30–33)
- IX. Appendix: recommendation, greetings, warning against false teachers (16:1–23)
- X. Letter closing (16:25–27)

God. Thus, Paul argues, the charge that his gospel repudiates the law is false. In the light of God's final Day, Paul does not reject the law but revalues it.

Chaps. 9–11 answer urgent questions raised by Jewish objections to Paul's Gentile mission: God promised to be Israel's God and to make Israel his people. In offering the gospel to the Gentiles, has God rescinded this promise? Paul's reply—that God has always chosen to bless some over others (e.g., Jacob over Esau) and is, therefore, free to turn away from Israel to the Gentiles—raises another objection: is God fair to choose the rejected (Gentiles) and reject the chosen (Jews; 9:14)? If God chooses Gentiles, how can Jews be condemned for rejecting the gospel (9:19)? If Gentiles who did not pursue righteousness now achieve it by faith, and Jews who did seek righteousness are denied salvation, can God be just? Paul's reply is that God is free to turn to Gentiles but has not forsaken Israel. In the future, God will join Jews with Gentiles in one community (11:25–32). Fearing Gentile arrogance over their salvation, Paul warns, "if God did not spare the natural branches [Jews], neither will he spare you [Gentiles]" (11:21; cf. 11:13–24).

Sensitive to the charge that his gospel encourages immorality, Paul earlier argued that moral license and Christian freedom are incompatible (6:1–7:6). Chaps. 12–15 give instances of the work of the gospel in everyday life. First, concerning insiders, Paul exhorts all with charismatic gifts—prophecy, teaching, administration, and benevolence—to use the charisms for the church's nurture (12:3–13). Toward outsiders, Paul encourages love: bless the persecutors, care for the lowly, eschew revenge, and feed the hungry (12:14–21). Christian love also dictates respect for "governing authorities" and payment of Roman taxes (13:1–7). The state serves God, Paul argues, when it preserves order (13:3–4) and provides an arena for witness until the end (13:12). Moreover, God's care for and claim on the world allow no Christian to abandon it. While Paul offers no advice for occasions when loyalty to God conflicts with loyalty to the state, it is nevertheless mistaken to base a blind allegiance to the state on Romans 13. Paul's opening argument against idolatry (1:21–22) would preclude such deification of the state.

In 14:1–15:13, Paul encourages church factions to "welcome one another . . . as Christ has welcomed you" (15:7). The identity of the quarreling weak and strong is disputed. Yet in view of the return of Jewish Christians to Rome in A.D. 54, the reference to Jewish and Gentile Christians in 15:8–9, to purity laws in 14:14, 20, and to both Jewish and Gentile Christians elsewhere in the Letter, the bickering may have been between conscientious Jewish Christians and "liberated" Gentile believers. Yet there were no Jewish regulations that forbade all meat (14:2) or the consumption of wine (14:21). Whatever the issue in dispute may have been, however, Paul gently pushes both factions toward reconciliation.

In the Letter closing, Paul shares his travel plans. His eastern mission complete (15:19, 23), he intends to deliver the offering to Jerusalem (15:25–28), then travel via Rome to Spain. Questions flood his mind: will the Roman church endorse his gospel? Will it support his mission to Spain as did the Macedonian church his work in Greece (2 Cor. 11:9)? Will the "unbelievers in Judea" frustrate his plans (15:31)? Will his offering "be acceptable to the saints" (15:31)? The Acts of the Apostles (21:17–28:31) gives substance to Paul's premonition of failure. While Paul tells us nothing more, Acts reports that once in Jerusalem, Paul was arrested and charged with speaking against the Temple, the law, and Judaism. His appeal to Caesar eventually took him to Rome, and there, tradition holds, he died a martyr's death. ***See also*** Acts of the Apostles, The; Baptism; Contribution for the Saints; Election; Expiation; Faith; Fall, The; Flesh and Spirit; Gentile; Grace; Justification; Law; Paul; Predestination; Promise; Reconciliation; Redemption; Rome; Sin; Spain; Spiritual Gifts.

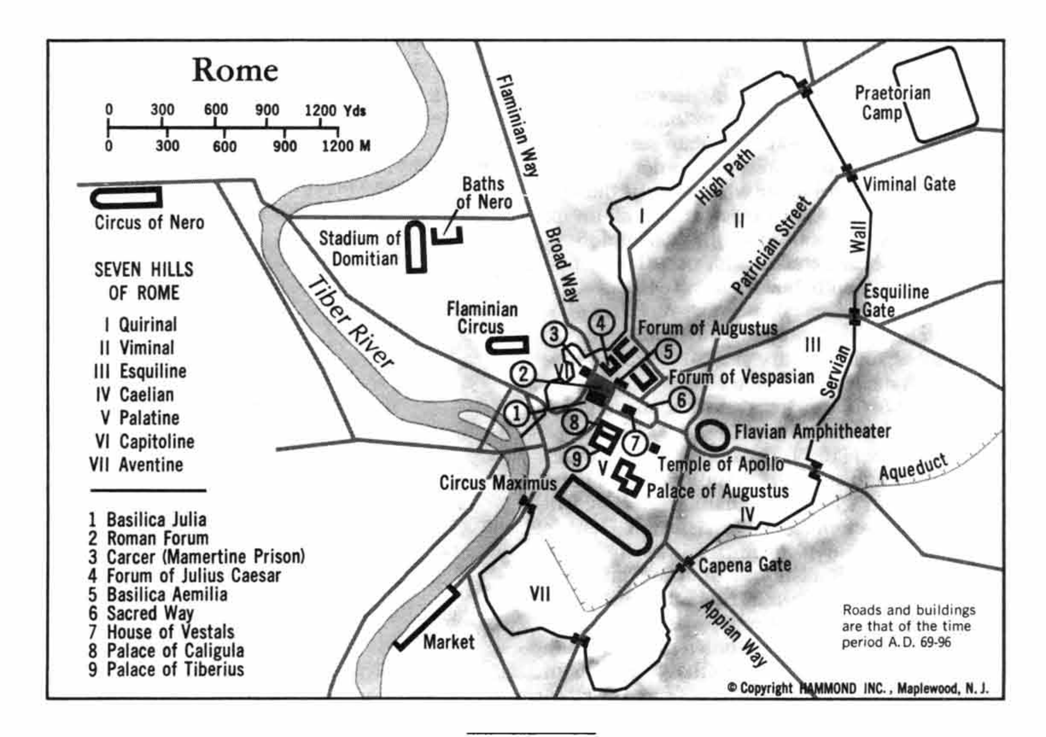
Head of the emperor Augustus (ruled 27 B.C.–A.D. 14) on a bronze sestertius minted toward the end of his reign, ca. A.D. 10–14.

Rome (rohm), the capital and by far the largest city of the Roman Empire.



The Early City: Several hills of Rome were settled as early as the tenth and ninth centuries B.C. In these pre-Etruscan times, Latins lived on the Palatine and Sabines on the Quirinal hills. The depressions between the hills were swampy. Under Etruscan rule, probably around 650 B.C., the city was founded and named after the Etruscan family *Rumlna*. The traditional date for the founding of the city, 753 B.C., is based only on legend. Latins and Sabines populated the city. The *pomerium*, the city limit, established in Etruscan times, remained more or less unchanged until the time of the Emperor Claudius (A.D. 41–54). The later fortification walls and urbanized area did not necessarily coincide with the perimeter of the *pomerium*, which was marked by boundary stones. Military commands and certain foreign cults were prohibited within its confines.

During the Etruscan period until around 500 B.C., kings ruled the city. They built the Jupiter Temple on the Capitoline hill and the *Via Sacra*, which ran across the Forum, and started the *Cloaca Maxima* (sewer), which then was a canalized stream draining the marshy forum area and flowing into the Tiber River south of Tiber Island. Early buildings included the Vesta Temple and the *Regia*. The *Regia* was the king's residence; it became the office of the Pontifex Maximus in Republican times. The kings also originated the tradition of Roman games and triumphs.

Republican Times: In the Republic, from the fifth century until 31 B.C., the Senate, the patrician magistrates (consul, praetors, etc.), and the tribunes (representatives of the nonpatrician citizens) steered the city's public life.

Most dwelling quarters were tangled webs of narrow, winding streets. At the Roman Forum, the city's center of judicial and public business, tradespeople worked in their shops. Nearby, cattle and vegetable markets attracted customers. During the first two Republican centuries, at least eight new temples were erected, among them also one on Tiber Island for the Greek god of medicine, Aesculapius (291 B.C.). After the Gallic invasion in 387 B.C., the so-called Servian Wall was constructed. This included the Aventine hill, although this hill remained outside the *pomerium*. Despite the traumatic experience of 387 B.C., the Roman Republic gradually expanded its influence until it dominated first Italy from Tuscany to the south (272 B.C.) and finally the Mediterranean Sea (146 B.C., the fall of Carthage). In the following time, almost all Mediterranean territories became Roman provinces: Asia (129 B.C.), Gallia Narbonensis (121 B.C.), Cilicia (102 B.C.), Cyrene (74 B.C.), Bithynia, Pontus, and Syria (64 B.C.), Cyprus (58 B.C.), Gallia (56 B.C.), Africa Nova (46 B.C.), and Egypt (30 B.C.).

This expansion was accompanied by various social and political crises within the city, but also by a building boom. From 312 B.C. on, the first aqueduct supplied running water, and the Appian Way, a road covered with pebbles, led

toward southern Italy. Other aqueducts followed (in late Imperial times there were eleven, feeding more than a thousand fountains, the public baths, and even private homes). Additional roads led to various Italian cities. On the Campus Martius, a stadium called Circus Flaminius originated in 221 B.C. Bridges, previously wooden, began to be made with stone piers in 179 B.C. (in late Imperial times, Rome had nine bridges). The second century B.C. saw the first paved streets. A complex of large boathouses at the Campus Martius was extended. Southwest of the Aventine hill, commercial ships were unloaded and their goods placed in large storehouses. The sewer, the *Cloaca Maxima,* was repaired (later, in Imperial times, its whole conduit was subterranean). A triumphal arch, porticos, and the novelties of marble statues and basilicas gave second-century Rome a monumental appearance. The basilicas at the Roman Forum served as market halls. Foreign cults entered Rome: cults for Hercules and the Muses and, already in 191 B.C., for the Great Mother (*Magna Mater,* or Cybele), an Anatolian fertility goddess.

In the first century B.C., many suburbs developed beyond the *pomerium.* More temples were built. On the Campus Martius, Pompey erected the first stone theater in 55 B.C. It became the model of all Roman theaters. Under Julius Caesar (murdered in 44 B.C.), many shops in the Roman Forum were replaced by the construction of the *Basilica Julia.* The adjacent *Forum Julium* was also built. Between the Palatine and the Aventine hills, Caesar built anew the Circus Maximus, which had been there since pre-Republican times. Under Augustus (ruled alone 31 B.C.–A.D. 14), fifty-five to sixty thousand spectators could watch chariot races there, or, according to Ovid, watch for attractive members of the opposite sex. To counterbalance the city's many high tenement houses and narrow streets, Caesar and other rich contemporaries (Lucullus, Sallust, and Maecenas) had parks built in and near the city. In Imperial times, the number of parks rose to almost thirty. The first public library was founded in 39 B.C.

Imperial Times: Augustus reorganized the city by dividing it into fourteen regions. From this time on, marble and travertine were used for temple buildings. The architectural style followed Greek models. Augustus restored some eighty-two temples that had been damaged or had decayed during the civil wars of the late Republic, and he had new ones built. At the Roman Forum, he completed Caesar's *Basilica Julia* and constructed the *Basilica Aemilia.* Following Caesar's example, he erected his own Forum of Augustus in the vicinity of the Roman Forum (later emperors—Vespasian, Domitian, and Trajan—continued this tradition by building their own fora). Augustus opened public libraries at the Apollo Temple on the Palatine hill and on the Campus Martius. His successors followed his example until Rome had twenty-eight public libraries in the fourth century. On the Campus Martius, Augustus had his own mausoleum built and the monumental *Ara Pacis,* an altar of the Augustan peace; here, an obelisk imported from Egypt was raised as the pointer of a monumental sundial. Also on the Campus Martius, a precursory building of the Pantheon (built under Hadrian) was finished in 25 B.C. by Agrippa, a friend of Augustus and later of Herod, king of the Jews. In the same year, the construction of the adjacent Agrippian public baths was begun. This was the oldest of the huge and architecturally impressive public baths with which emperors such as Nero (A.D. 54–68), Titus (A.D. 79–81), and Trajan (A.D. 98–117) proudly decorated Rome. The public baths were centers of social life where one also enjoyed massages, conversation, playing ball, and other sports. Even libraries were connected with them, and in their neighborhoods restaurants and bordellos blossomed. The largest bath remains are those of Caracalla (A.D. 211–217) and Diocletian (A.D. 284–305). In addition to the public ones, Rome had hundreds of private bathhouses. In the second century A.D., the Christian theologian and philosopher Justin Martyr lived in a rented apartment above the "bath of Myrtinus."

Tiberius (A.D. 14–37) established the Praetorian Camp. Caligula (A.D. 37–41) and Claudius installed two new aqueducts. Caligula added a third stadium (*circus*) to the city in the Vatican gardens. Claudius incorporated the Aventine hill and parts of the Campus Martius into the *pomerium.* Nero completed Caligula's stadium, dedicated a new temple to his deified predecessor Claudius, and opened another large grocery market, the *Marcellum Magnum,* in the east of the city. His new palace, the "Golden House," stretched from the Palatine to the Esquiline slopes. In A.D. 64, a great fire severely damaged ten of the city's fourteen regions. Nero unjustly accused the Christians of arson, crucifying and burning many of them as torches in the Vatican gardens. In the depression between the Palatine and Esquiline hills, where Nero's "Golden House" complex had contained a pond, Vespasian (A.D. 69–79) built the "Colosseum." This impressive amphitheater provided room for up to 50,000 spectators watching gladiator fights. At the beginning of his reign, Domitian (A.D. 81–96) erected the Arch of Titus, commemorating the fall of Jerusalem (A.D. 70) and Titus's and Vespasian's triumph over the Jews, which they had celebrated in Rome in June 71. On the Palatine hill, Domitian enjoyed new luxurious palace buildings. His stadium on the Campus Martius can still be seen today (the Piazza Navona coincides with its outline). Domitian's *Forum Transitorium* was completed by Nerva (A.D. 96–98). Trajan's huge Forum with its famous column connected the Roman Forum with the Campus Martius. The column shows

scenes of Trajan's campaigns against the Dacians. Hadrian (A.D. 117–138) built the Pantheon we know today. His mausoleum near the Vatican and remains of his temple for Roma and Venus in the Roman Forum can still be seen. Seven years after his death, a temple for him, the *Hadrianeum* on the Campus Martius, was inaugurated by Antoninus Pius (A.D. 138–161). This emperor also dedicated a temple to his wife, Faustina, in the Roman Forum in the year of her death (A.D. 141). In A.D. 147, Rome celebrated its nine-hundredth birthday. The impressive Aurelian city wall that the visitor sees today was not begun, however, before A.D. 271.

In Imperial times, Rome contained around one million people from all over the empire with different languages, customs, and deities. The wealthier inhabitants lived in villas (*domus*), which were atrium-style houses with a peristyle section and a garden area in the background, around which were the dining room and bedrooms. Heaters created warm air under the floors. Pipes connected the homes to the water systems and the sewer. Most people, however, were crowded into the brick and wooden tenement houses (*insulae*). Rising five to six stories, these buildings were firetraps. Most of them had no water supply or latrines. The ground floors contained shops, workshops, and storerooms. As one went higher in the building, the units became smaller and darker. The *insulae* were crowded and noisy. Even at night, it was difficult to sleep because of the carts that rumbled under the windows (Julius Caesar had banned vehicular traffic from the congested city streets during daytime). In the fourth century A.D., more than 44,000 *insulae* were counted in Rome, along with 1,791 villas.

Jews and Christians: Pompey, who conquered Judea in 63 B.C., deported large numbers of Jews to Rome as slaves. Soon, at the latest under Augustus, they were freed. At their manumission, most of them gained Roman citizenship. Thus, when Tiberius expelled many Jews from the city in A.D. 19, the freed persons and their offspring could not be forced to leave without individual trials because they enjoyed citizenship. Tiberius, therefore, drafted four thousand of Rome's Jewish freedmen into armed service to fight Sardinia's bandits. In the first century A.D., we know of three synagogues of Jewish freed persons in Rome (the synagogues of the *Augustenses,* who were imperial freed persons, and of the *Aggrippenses* and the *Volumnenses*). Altogether, the inscriptions mention around fourteen Roman synagogues in Imperial times. The Jewish congregations in Rome were only loosely connected with one another.

Three areas can still be identified where Jews resided in the first century A.D. Many lived in Trastevere, a crowded quarter west of the Tiber River across Tiber Island. Others of poor economic means settled on the Appian Way outside the Capena Gate. A synagogue was also founded in the vicinity of the Viminal Gate. All three locations were outside the Republican wall and the *pomerium* (see Acts 16:13 for a similar situation in Philippi). The Egyptian cults, with which Judaism was often associated by the Romans, were also banned from the *pomerium.*

It appears that the Christian faith entered the city in the 40s A.D. through Jewish Christians who joined one or several Jewish synagogues in town. By preaching about Christ, they stirred up turmoil within the synagogues so that the attention of Roman officials was attracted. The key persons in this inner-Jewish argument were apparently expelled by Claudius's administration in A.D. 49. Among them were Aquila and Prisca/Priscilla (Acts 18:2). Following this disruption, the Christians appear to have assembled on their own. At the latest, Christianity in Rome was separated from the Jewish synagogues at the time of Paul's Letter to the Romans in the second half of the 50s A.D. The majority of Roman Christians now were gentile, although many of these Gentiles may, before their baptism, have been loosely connected with Jewish synagogues as sympathizers with Jewish monotheism. In A.D. 64, even Nero could distinguish the Christians from the Jews in the city.

Like the Jews, the early Christians lived at the periphery of the *pomerium:* in Trastevere and in the valley of the Appian Way outside the Capena Gate. Both areas were permeated with immigrants from the provinces who swept into the city on the Appian Way and the Tiber River. People of lower social strata populated these quarters. Other Christians dwelt between these two areas on the Aventine hill, still others on the Campus Martius. Although the lower classes predominated in Roman Christianity, all social strata were soon represented, even the senatorial. In A.D. 96, a relative of the Emperor Domitian, Flavia Domitilla, was banned to an island because of her faith (probably Christian but possibly Jewish) that did not allow her to acknowledge Domitian as a god.

Early Christianity in Rome consisted of various house-churches (see Rom. 16). These groups met in private homes. There was no local center for Roman Christianity. This factionalism, similar to that of the Jews in the city, facilitated a theological pluralism. Thus, second-century Rome saw Christian groups following Marcionite, Valentinian, Carpocratian, Theodotian, Modalistic, Montanist, and Quartodecimanian teachings; Cerdo-followers; house-churches of (what was only later called) "orthodox" faith; a Jewish-Christian circle that still observed the Torah; groups with a *logos*-theology that was too complicated for less-educated Christians; and circles that believed in the millennium and others that did not.

Panorama of the Roman forum.

The house-churches, scattered over the city, were only loosely connected. Some sent portions of their Eucharists to other Christian groups in the city to express unity with them. Written materials were also shared among the Christian groups in the city. Communication with persons or congregations *outside* of Rome was often coordinated among the groups. As a result, outsiders could perceive the various Roman house-churches as "the Roman church." A monarchical bishop, however, who oversaw at least the "orthodox" house-churches in the city, did not come into existence before the second half of the second century. Earlier, the various house-churches were led solely by their own presbyters.

On the whole, the various Christian groups in the city tolerated each other. With few exceptions, no Christian group labeled another as heretical before the last decade of the second century. It was not until Bishop Victor (A.D. 189–199) that house-churches regarding themselves as "orthodox" began to excommunicate other groups on a large scale. Victor cut the ties to four Christian groups in the city.

In the middle of the second century A.D. at the latest, Christians identified a simple grave in the Vatican necropolis as Peter's burial place. Around A.D. 160, they decorated it with a modest monument, an *aedicula*. At the end of the second century at the latest, the grave of Paul was also shown on the Ostian Way. Already a century earlier, one generation after Paul and Peter had died, *1 Clement* (see also Ign. *Rom.* 4) claimed that both apostles had suffered martyrdom in Rome—perhaps in connection with Nero's massacre in A.D. 64. ***See also*** Appian Way; Aquila; Augustus; Caesar, Gaius Julius; Claudius; Emperor, Emperor Cult; Latin; Nero; Paul; Peter; Prisca, Priscilla; Romans, The Letter of Paul to the; Roman Empire; Tiberius; Triumphal Arch.

P.P./P.L.

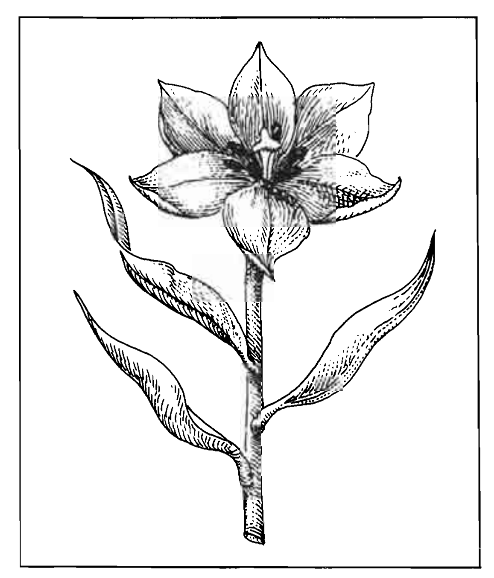
roofs, the usually horizontal but sometimes angled constructions covering rooms or buildings. Roofs appear in literal and figurative senses in biblical texts. As the covering of a building, a roof served primarily to give shade, to keep out rain or other foul weather, and to support a variety of activities carried out on rooftops, from sleeping to storage to sounding alarms.

The roof of the ark (Gen. 6:16) was primarily for weather protection, but a roof stood for the protection of the host for his guests as well (Gen. 19:8). In the common model of a flat house roof lay the hazard of falling from it, subject of the law to provide a parapet around such a hazard (Deut. 22:8). Roofs provided storage as well as hiding space (Josh. 2:6–8), resting room usable as latrine or murder site (Judg. 3:20–25), or, in a public building, as an observation platform (Judg. 16:27). From his roof David saw Bathsheba's bath (2 Sam. 11:2) and a roof was used for a guest room for Elisha (2 Kings 4:10). The palace roof was suitable for various shrines to foreign gods (2 Kings 23:12), and a house roof could serve as a platform from which to lower a sick man's bed to a room inside (Mark 2:4; Luke 5:19). Roofs

needed regular restoration (Eccles. 10:18). On the battlefield, shields formed as a roof could protect against arrows (Ezek. 26:8).

Symbolically, a tongue stuck to the roof of the mouth meant silence (Job 29:10) or the condemnation of the unfaithful (Ps. 137:6). Extreme thirst made the tongue stick to the roof of the mouth (Lam. 4:4), and God could silence a prophet in the same way (Ezek. 3:26).

Simple roof construction usually comprised a horizontal bed of branches or beams, sometimes supported by columns, on which layers of earth or limestone plaster were laid. They weathered into decay in rainy season conditions and needed to be restored in dry season weather to endure. Large public buildings had roofs suspended from the side walls or supported by columns or a combination of both, especially where balconies were part of an interior structure. R.S.B.



room, a space bounded by three or more walls. Biblical references include dwelling spaces (the "upper room" of Mark 14:15), guest rooms (Mark 14:14; Philem. 1:22), Temple rooms (Ezek. 40:10; 1 Kings 6:29–30), and royal chambers (Jer. 35:4).

rope, a twisted or braided line. Rope could be made of cloth, string, leather, vine, or any other strong material. It could be used as a belt (Isa. 3:24), as a means of escape (Josh. 2:15), as a device to trap someone or something (Job 18:10), to lead a beast (Job 41:2), to tie a prisoner (Judg. 15:13), to destroy a city (2 Sam. 17:13), to symbolize submission (1 Kings 20:31–32), to guide a domestic animal (Job 39:10), to pull a vehicle (Isa. 5:18), to lower someone into a pit or cistern (Jer. 38:6, 11) or raise him up (Jer. 38:12–13), and as marine rigging (Acts 27:32, 40).

The archaeological evidence for rope tends to be sparse because of its vulnerability to decay. String-cut bases on small jars are common in several periods, and the potters used a "rope" molding for decorative purposes, frequently incising or marking it with fingers. Lug handles were intended to be carried by cord or rope suspension. R.S.B.

rose, a general term for a colorful flower, the specific identification of which is often dependent on context. The Phoenician rose (*Rosa phoenicia*) is one of the true roses growing wild in the Holy Land. A thorny bush bearing many blossoms, it grows well at higher altitudes and therefore is probably the rose of the mountains in 2 Esd. 2:19.

The rose by the brook (Ecclus. 39:13) and the rose plants of Jericho (Ecclus. 24:14) most likely refer to the oleander bush (*Nerium oleander*), a plant with shiny, leathery evergreen leaves and large deep pink or white flowers. Growing along *wadis* (dry riverbeds) and other watercourses, the oleander is an outstanding feature of the otherwise arid countryside all over the Holy Land. It is also widely cultivated today in city parks and gardens.

Rose of Sharon.

The rose of Sharon (Song of Sol. 2:1) is probably not a true rose either, but rather a bright red tulip-like flower (*Tulipa montana*), which is today prolific all over the hills of Sharon. It displays a dramatic deep red mat of color in the grass with the beginning of spring, after the winter rains. Another plant of the lily family, *Narcissus tazetta,* grows wild in the more arid regions of the Holy Land and therefore may be the rose (KJV; RSV: "crocus") of Isa. 35:1, "and the desert shall rejoice, and blossom as the rose." P.L.C.

Rosetta (roh-zet´tuh) **Stone,** a granite block bearing an inscription in Egyptian and Greek found by Napoleon's soldiers digging near Rashid (Rosetta) in Egypt in 1799. The stone was ceded to the British in 1801. This stone played a critical role in the deciphering of ancient Egyptian hieroglyphics, since it provided a bilingual inscription issued in Memphis by Pharaoh Ptolemy V (ca. 203–180 B.C.). The top version, with some lines and the beginning and end of each line missing, is in old hieroglyphics. The middle version in demotic script is also Egyptian and the bottom version is in Greek. By matching Greek and demotic words and discovering that the royal name, Ptolemy, occurred within a cartouche, it was possible to attach phonetic values to some of the hieroglyphic signs. Further work on other examples of royal names by the linguist Champollion demonstrated the phonetic nature of the hieroglyphic script in both Hellenistic and earlier Pharaonic times. P.P.

The Rosetta Stone, written on in both hieroglyphic and demotic Egyptian and Greek; ca. 203–180 B.C.

Rosh (rosh; Heb., "head"). A son of Benjamin, he is listed as one of those who descended to the Egyptian delta with the Jacob tribes (Gen. 46:21).

Rosh Hashannah (rosh´huh-shah´nuh). ***See*** New Year Festival.

royal cities. ***See*** Cities.

RSV, abbreviation for the Revised Standard Version of the Bible. ***See*** English Bible, The; Revised Standard Version.

ruby, a precious stone of a deep red color. The KJV translates as "ruby" a Hebrew term (*peninim*) now thought to designate pearls (Job 28:18; Prov. 3:15 ["jewels"]; 8:11; 20:15; 31:10) or coral (Lam. 4:7). The true ruby, a transparent red variety of corundum, is not found in ancient Near Eastern sites before the third century B.C. The RSV uses "ruby" in the Apocrypha to translate two Greek terms (*smaragados,* Tob. 13:17; *anthrakos,* Ecclus. 32:5). ***See also*** Pearl.

rue (roo), an herb, *Ruta graveolens,* used as condiment, medicinal ingredient, and charm component. It is specified in Luke 11:42 as subject to tithing by Pharisees.

Rufus (*roo*´fuhs; Lat., "red"), a common name in the Greco-Roman world of the first century. **1** The brother of Alexander and son of Simon of Cyrene who was compelled to carry Jesus' cross (Mark 15:21; neither Rufus nor Alexander appears in parallels, Matt. 27:32; Luke 23:26). **2** A recipient, with his mother, of Paul's greeting in Rom. 16:13. The probability of 1 and 2 being the same person depends upon a Roman origin for the Gospel of Mark and the original inclusion of chapter 16 in Paul's letter to the Romans. If those two places where a "Rufus" is mentioned do not have a point of connection in Rome, it is unlikely that the two references designate the same person. ***See also*** Alexander; Mark, The Gospel According to; Romans, The Letter of Paul to the; Simon.

Rule, Golden. ***See*** Golden Rule.

ruler, a word used to translate several terms in Hebrew and Greek that represent various kinds of leadership positions in society. "Ruler" is used, without much precision, to designate the leader or chieftain of some segment of the social structure, be it family, clan, or tribal unit (Exod. 18:25; Judg. 11:8, in which cases "ruler" translates the Heb. *ro'sh,* "head"). In the NT the leader or president of a synagogue is called the "ruler (Gk. *archon*) of the synagogue" (Matt. 9:18; Mark 5:22–43; Luke 13:10–17).

Similarly there are rulers who were apparently the chief overseers of livestock (Gen. 47:6), of David's public works projects (1 Chron. 29:6), of Persian satrapies ("rulers of the provinces," Esther 8:9), and of cities under Hezekiah (2 Chron. 29:20). In all of these instances, the Hebrew term *sar,* which is sometimes translated "prince," is used.

In the NT, there are also "rulers of the city" where the reference is to the local Greek magistrates, rather than to the Roman authorities (Acts 16:19, *archon;* 17:6, *politarch*).

David is called the "ruler over all Israel" (1 Sam. 25:30) and Solomon is termed the "ruler over Israel and Judah" (1 Kings 1:35). In both cases, the term translated is *nagid,* which is sometimes used as a title of some of the kings of Israel and Judah and appears to point to God or a prophet of God as the designator of the *nagid.* ***See also*** David; Satrap; Solomon. F.S.F.

Ruler of the Synagogue (Mark 5:35–38), the title of an office known from inscriptions and from analogy with Greco-Roman religion. The head or ruler of the synagogue was usually a wealthy and prominent member of the congregation who was charged especially with providing for the material needs of the congregation. ***See also*** Synagogue.

run, runners, words that are used with different shades of meaning in the OT and the NT. The usual meaning of "run" is, of course, moving quickly from one place to another (cf. 2 Sam. 2:18–23; John 20:2, 4), but it is also used figuratively to denote the struggle of the person of faith to stay the course against evil and remain committed to God in this world (cf. 1 Cor. 9:24–26; Gal. 2:2; 5:7; Heb. 12:1).

The meaning of the term "runners" is more varied. These persons could be messengers who relayed news (cf. Jer. 51:31; 2 Chron. 30:6, 10; Esther 3:13; Job 9:25); a group of persons around a king assigned to run errands and do his bidding (cf. 1 Sam. 8:11; 2 Sam. 15:1); or a group that served as a bodyguard for the king (cf. 1 Sam. 22:17; 2 Kings 10:25; 11:4) and ran in front of the king's chariot (cf. 2 Sam. 15:1; 1 Kings 1:5). Runners were foot soldiers, as contrasted with cavalry and chariot warriors. ***See also*** Arms, Armor; Army; Battle; Chariots; Defense; Guard, Bodyguard; Race, Racing; Soldier; War; Weapons. J.M.E.

rush (or bulrush), a grasslike member of the sedge family with a pithy or hollow stem that grows in marshy or wet areas (Job 8:11). Various species of rushes and reeds are common along

Rush.

the rivers of the Middle East, including the Nile and the Jordan, and the Huleh Basin of northern Israel. Since there are several species of this type of plant it is not immediately clear which is referred to in the Bible; however, scholars generally agree that papyrus was ordinarily meant. The "bulrushes" of which the infant Moses' basket was woven were probably papyrus (Exod. 2:3) since Isaiah (18:2) mentions "papyrus vessels" used by the Ethiopians. The plants were used as fuel (Job 41:20) and woven into ropes (Job 41:2). Because of their fragile stems and their requirement for a specific environment they became a symbol of weakness and vulnerability (Job 8:11–14; Isa. 19:6–7; cf. 2 Kings 18:21; Matt. 11:7) or represented the lowly and insignificant (Isa. 9:14; 19:15; cf. 58:5). But in the same manner the flourishing of rushes could also be used as a symbol of abundance and blessing (Isa. 35:7). Various English versions often interchange the translation of "rushes" (or "bulrushes") and "reeds" from several Hebrew and Greek words. ***See also*** Flags; Papyrus; Reed. D.R.B.

Ruth (r*oo*th; Heb., probably "satiation"), a Moabite who married Mahlon of the Judahite family of Elimelech. Widowed and childless, she abandoned her family, country, and faith to accompany her mother-in-law Naomi to Bethlehem. Her radical actions continued as she secured food for herself and Naomi and summoned the relative Boaz to be their redeemer. Boaz married her. She bore a son who became the grandfather of David. The women of Bethlehem exalted Ruth as the loving daughter-in-law who meant more to Naomi than seven sons, the ideal number (Ruth 4:15). Her name appears later in the Matthean genealogy of Jesus (1:5). P.T.

Ruth, the Book of, the eighth book of the OT. It is a beautifully crafted historical short story about how the lovingly loyal behavior of Ruth, a Moabite widow in a Jewish family from Bethlehem, brought back fullness of life to her widowed mother-in-law, Naomi, aided by Naomi's worthy relative Boaz. The result was security for Ruth as well, through the birth of her child, Obed, David's grandfather. The story thus offers a bridge from the time of the judges (Ruth 1:1) to the monarchy. It resembles in style and content stories in Genesis 22, 24, and 38; the Joseph cycle; the frame of Job (1; 42:7–17); and episodes in 2 Samuel 9–20. Most of these pertain to David and his antecedents; all share with Ruth dramatic tension in confronting human predicaments and problems of injustice. Scholars now tend to date the composition

OUTLINE OF CONTENTS

The Book of Ruth

I. Ruth and Naomi (1:1–22)
   A. Ruth is married and widowed (1:1–5)
   B. Ruth returns with Naomi to Bethlehem (1:6–22)
II. Ruth and Boaz (2:1–4:22)
   A. Ruth gleans in Boaz's fields (2:1–23)
   B. Ruth and Boaz at the threshing floor (3:1–18)
   C. Boaz marries Ruth when her next of kin refuses to marry her (4:1–12)
   D. A son is born to Ruth and Boaz who will become grandfather of David (4:13–22)

of Ruth early (tenth–eighth centuries B.C.), rather than around 400 B.C. as previously maintained (thought to be composed as a protest against the dissolution of mixed marriages in Nehemiah 13 and Ezra 10). The story represents the stream of openness to the world, a stream running deep and wide in the OT.

E.F.C./P.J.A.

rye (KJV; RSV: "spelt"), a food grain (Isa. 28:25; Exod. 9:32). ***See also*** Spelt.

Opposite: Sarah, fragment of Genesis 16 from the late fourth-century *Cotton Genesis.*

S

sabachthani (suh-bak'thuh-nee), Aramaic word, part of Jesus' cry from the cross in Matt. 27:46 and Mark 15:34. ***See also*** Eli, Eli, Lema Sabachthani.

Sabaoth (sab'ay-oth), **Lord of.** ***See*** Lord of Hosts.

Sabbaias (suh-bay'uhs; KJV; RSV: "Sabbeus"; 1 Esd. 9:32), a man who married a foreign woman; he is the same as Shemaiah in Ezra 10:31.

Sabbath (sab'uhth; from Heb. *shabbat,* "to cease, desist"), the weekly day of rest and abstention from work enjoined upon the Israelites.

Origin: An etiological origin for the Sabbath is supplied in Gen. 2:1–3, which speaks of God ceasing from the work of creation on the seventh day, blessing the day, and declaring it holy. Scholarly explanations of the Sabbath's origins have focused on certain days in the Babylonian monthly calendar on which normal activities of the king and certain professions were restricted. These days, known as "evil days," were determined by the lunar cycle, corresponding with the quarters of the moon. While the postulating of a dependence on the Babylonian calendar is tempting, it cannot be objectively sustained. The biblical Sabbath was ordained as a weekly institution with no relation whatsoever to the lunar cycle. Moreover, the somber nature of the Babylonian "evil days" stands in stark contrast to the joyous nature of the Sabbath.

Of uncertain relation to the lunar "evil days" was the day of the full moon on the fifteenth of the month, known as *shapattu,* a term possibly related to *sabbath.* This day was described as a "day of pacifying the heart [of the god]" by certain ceremonies. No significant similarities between this day and the Sabbath are known, however. The closest analogy between the biblical Sabbath and Babylonian culture is the shared literary motif of the god(s) resting after having created humans (see *Enuma elish* 7.8, 34). Even here, the parallel is distant: the biblical God rests at the conclusion of his creative efforts, while the Babylonian gods are freed from the labors required to feed themselves since humans were created to relieve them of that task.

Observance: The Sabbath was a cornerstone of Israelite religious practice from earliest times. This can be seen from the consistent mention of the Sabbath throughout all the strata of Pentateuchal and extra-Pentateuchal sources, with the exception of wisdom literature. In the Pentateuch, Sabbath observance is legislated repeatedly in general terms (Exod. 20:8–11; 23:12; 31:12–17; Lev. 23:3; Deut. 5:12–15), though the types of work prohibited are relatively limited; those mentioned include gathering food, plowing and reaping, kindling a fire, and chopping wood (Exod. 16:29–30; 34:21; 35:3; Num. 15:32–36). The positive specifications of Sabbath observance include giving rest to one's servants and animals (Exod. 20:10; 23:12; Deut. 5:14).

Outside the Pentateuch, evidence relating to the practical observance of the Sabbath is not overabundant, but it is more extensive than that found for most laws. During the monarchical period (ca. 1050–586 B.C.), the Sabbath (as well as the New Moon) was marked by visits to prophet and Temple (2 Kings 4:23; Isa. 1:13). Business activity came to a halt (Amos 8:5). The Sabbath was a joyous day, much like the festivals (Hos. 2:13; Lam. 2:6). Its desecration was severely attacked by Jeremiah, who lashed out against those who carried burdens from their houses or through the gates of Jerusalem (Jer. 17:19–27). During the period of the restoration, Nehemiah enforced observance of the Sabbath by locking the city gates of Jerusalem in order to prevent traders from selling their wares (Neh. 13:15–22). Contemporary documents from a Jewish colony in Elephantine, Egypt, likewise mention the Sabbath, attesting to its recognition by Diaspora (i.e., non-Palestinian) Jews in the fifth century B.C.

In addition to these features of popular observance of the Sabbath, one can also piece together a picture of Sabbath observance in the Temple. The Pentateuchal prescriptions of additional sacrifices and changing of the showbread on the Sabbath (Lev. 24:8; Num. 28:9–10) apparently reflect accepted practice (cf. Ezek. 45:17; 46:4–5; 1 Chron. 9:32; 23:31; 2 Chron. 2:3; 8:13; 31:3). The sacrificial service may have been accompanied by a special psalm (Ps. 92:1). There is also a somewhat cryptic reference to the changing of the royal guards at the Temple on the Sabbath (2 Kings 11:4–12).

Purpose: Two major rationales for Sabbath observance are presented in the Pentateuch. The concept of the Sabbath as a memorial of God's resting from the work of creation is expressed in Gen. 2:1–3 and repeated in Exod. 20:11 and 31:17. The latter passage broadens the concept in defining the Sabbath as "a sign forever between me and the people of Israel." Although God had already sanctified the seventh day at the time of creation, he did not reveal its special status to humankind at large, but only to his people Israel. Thus, Israel's observance of the Sabbath underscored its special relationship with God. This rationale was emphasized by Priestly writers.

Along with the theological rationale, a distinctly humanistic approach is to be found in Exod. 23:12 and Deut. 5:14–15, both of which ground the observance of the Sabbath on the need to give servants, strangers, and work animals an opportunity to rest. The added reminder in Deut. 5:15 of Israel's experience in Egypt most likely intends to bolster the owner's feeling of compassion for the weak and destitute (cf. Deut. 15:15; 16:12).

Sabbath observance took on an added significance with the prophets active shortly before and during the exilic period. Jeremiah attaches the very fate of Jerusalem to the observance of the Sabbath, thereby expressing a radical new conception (Jer. 17:19–27; cf. Neh. 13:17–18). Ezekiel subscribes to the same line of thought in equating the Sabbath with all the other commandments (Ezek. 20:11–24). The prophecies in Isaiah 56:2–7 and 58:13–14 likewise single out the Sabbath as the primary commandment, observance of which will bring personal as well as national salvation. The mention of the Sabbath in the Elephantine papyri and the appearance of the personal name Shabbetai, meaning "born on the Sabbath" (Ezra 10:15), likewise attest to its importance in this period.

This unique prophetic idea may stem from the ever-growing need for Israel to preserve its own identity in the face of a hostile pagan world. To this end, Ezekiel significantly draws from the Priestly formulation in describing the Sabbath as a "sign" between God and Israel (Ezek. 20:12), though his stress on the national consequences of Sabbath desecration represents a new application of the Priestly concept. Another explanation for the prominence of the Sabbath in the exilic literature is the fact that observance of the Sabbath was not dependent on the Temple cult. Although some of the old Sabbath practices, such as the additional sacrifices, became impossible with the destruction of the Temple, the continued observance of the Sabbath on the lay level would ensure Israel steadfastness to its faith.

In addition to the weekly seventh day of rest, the term "Sabbath" and its related form *Shabbaton* occur elsewhere in the Pentateuch referring to some of the festival days and to the seventh "Sabbatical" Year, on which the land was to lie fallow (Lev. 16:31; 23:24, 32, 39; 25:2–6; 26:34, 35, 43). Each of these occasions shares the chief characteristic of the weekly Sabbath, namely, the restricting of work. It has been suggested that the Sabbath day and the Sabbatical Year express the belief that Israel's time and land belong ultimately to God.

In the earliest Christian community, observance of Sabbath regulations fell into disuse among Christians of Jewish descent, principally because Jesus himself had been lax in his obedience to them (e.g., Matt. 12:1–8; Mark 3:1–5; Luke 13:10–17; John 5:1–10) even though he continued to take part in synagogue services held on the Sabbath (e.g., Luke 4:16). Jesus' claim to lordship over the Sabbath (Mark 2:28) was an important element in the hostility he aroused in those who felt that Sabbath traditions were incumbent on all Jews (e.g., Mark 3:6; John 5:18). Jesus' attitude toward the Sabbath, coupled with the tradition that his resurrection occurred on the first day of the week (Sunday; cf. Matt. 28:1), meant that Sunday rather than the Sabbath (Saturday) became the chief liturgical day for Christians.

Sabbath day's journey, the distance one is allowed to walk on the Sabbath. Exod. 16:29 legislates: "Let no man go out of his place on the seventh day." Num. 35:5 defines the Levitical pasture lands as extending 2,000 cubits in each direction from the city center. Tannaitic law defined the Sabbath day's journey as 2,000 cubits. Acts 1:12 mentions that Jerusalem is a Sabbath day's journey from the Mt. of Olives. The Zadokite Fragments (Damascus Document) also counted 2,000 cubits from the city as a Sabbath limit for walking after one's animals. Boundary stones marking the Sabbath limits (Heb. *tekhum shabbat*) of the city were found in the excavation of Gezer. ***See also*** Sabbath. L.H.S.

Sabbatical (suh-bat´i-kuhl), **Year,** the biblical prescription that every seventh year the land must lie uncultivated, based on the assumption that the land does not actually belong to any one person to dispose of at will, but to God himself. Fruit that grows on its own in the Sabbatical Year was to be left for the poor and the wild animals (Exod. 23:10–11; Lev. 25:1–7). In addition, "every creditor shall release what he has lent to his neighbor" (Deut. 15:2). This remission of debts is designed to provide the means to correct social inequities. It was an Old Babylonian custom for kings to declare a remission of debts and obligations.

The observance of the Sabbatical Year in Second Temple times (late fifth century B.C.–A.D. 70) is attested in Neh. 10:32 and 1 Macc. 6:49, 53, and Julius Caesar confirmed the Jews' exemption from taxes in the Sabbatical Year (Josephus *Antiquities* 14.202). Hillel instituted the *prozbul* (a decree of exemption or exception) to allow debts to carry through the Sabbatical Year. After the Jewish revolt (A.D. 66–74) and the Bar-Kochba war (A.D. 132–135), the tax exemption was cancelled and rabbinic legislation became more lenient. Rabbinic law still requires the observance of the Sabbatical Year in modern Israel. ***See also*** Jubilee. L.H.S.

Sabbeus (sa-bee´uhs). ***See*** Sabbaias.

Sabeans. ***See*** Seba, Sabeans.

Sabta (sab´tuh; also Sabtah), a son of Cush (1 Chron. 1:9; Gen. 10:7) and a tribe in southwestern Arabia of uncertain location.

Sabtecha (sab´tuh-kuh; KJV: "Sabteca"), a son of Cush (Gen. 10:7; 1 Chron. 1:9) and a tribal locality in Arabia still unidentified.

Sachar (say´kahr; KJV: "Sacar"). **1** One of David's elite guards, a Hararite (1 Chron. 11:35). **2** A levitical gatekeeper (1 Chron. 26:4) of Korahite descent.

sackbut (sak´buht, KJV; RSV: trigon), a small three-cornered, four-stringed musical instrument (e.g., Dan. 3:5), not to be confused with a later medieval wind instrument of the same name. ***See also*** Trigon.

sackcloth, a dark-colored material of goat or camel hair used for making grain bags and garments. English "sack" is derived from the Hebrew *saq,* via Latin *saccus* and Greek *sakkos.* Joseph's brothers carried their money and their grain in sacks (Gen. 42:25), and the men of Gibeon met Joshua with worn-out sacks upon their sack animals (Josh. 9:4). A garment of sackcloth was uncomfortable and was therefore worn by those in mourning. Jacob "put sackcloth upon his loins" when mourning for Joseph (Gen. 37:34). When national calamity threatened the destruction of the Jewish people in the book of Esther, the Jews lay in sackcloth and ashes, fasting, weeping, and lamenting (Esther 4:3). This material must have been inexpensive or of poor quality for "no one might enter the king's gate clothed with sackcloth" (Esther 4:1–3). The use of sackcloth continued for a very long time as it is still mentioned in 1 Macc. 2:14, 3:47 and in the NT (Matt. 11:21) as a sign of distress and repentance. ***See also*** Mourning Rites. L.H.S.

sacraments, religious rites that confer special graces. Before the word "sacrament" came to have religious connotations, it was used in a secular sense in the Roman world to refer to money deposited in a lawsuit by both parties. The party who lost the suit forfeited the money to sacred purposes. It was also used in a military context to describe the oath of allegiance taken by a new recruit into the army. The early church father Tertullian referred to conversion to Christianity as a sacrament, the admitting of the new recruit into the warfare of the living God (*Ad Martyras* 3). The term "sacrament" was associated with Christian worship services by the time of Pliny (ca. A.D. 112), because when he reported on Christian worship services, he explained the sacramental nature of the services by deducing that Christians bound themselves by an oath (*sacramentum*) not to commit some kind of crime (*Epistles 10.96*). Pliny misunderstood the significance of sacraments for Christian worship, but he was aware of the fact that sacraments were part of their religious activity, and he understood sacraments to mean "oaths," as in Roman military usage.

Jesus and the disciples at the Last Supper, which is regarded by Christians as the basis for the sacrament of the Eucharist; embroidered gold wire on purple silk, fourteenth century.

In the Latin Vulgate, Jerome translated the Greek word *mysterion* by the Latin *sacramentum.* Christian practices such as baptism and the Eucharist were called mysteries in the early church, and they continue to be called mysteries in the Greek Orthodox church to this day. Because of Jerome's translation, however, it was natural for the Latin church to refer to these ceremonies as "sacraments."

Over a period of time, baptism and the Eucharist acquired in the popular mind a quasi-magical significance, partly from the influence of pagan mystery cults, and partly from Jewish influences related to ritualistic and initiatory ablutions, as well as from the Passover. While it is anachronistic to speak of "sacraments" in the OT, since the development of the notion of sacrament occurred in the post-NT church, sacramental thought did appropriate terminology from various OT religious observances to show the continuity between Israel and the church. Thus baptism was related to the act of circumcision, the sign that indicated the child's membership in the chosen people, and the Passover terminology employed in the Gospel accounts of the Last Supper was used to help explain the significance of the Eucharist.

Varied in Number: Although baptism and the Eucharist were considered the primary sacraments, the term "sacrament" was used in the early church to describe many kinds of religious ceremonies and practices. By the twelfth century Hugo of St. Victor listed some thirty sacraments. This was probably the result of Augustine's definition of sacraments as signs pertaining to things divine, or visible forms of an

invisible grace. Since there is no limit to the number of ways God's grace can be expressed, the number of sacraments increased with Christian sensitivity and imagination, but this made administrative control difficult. Therefore the Council of Trent (A.D. 1545) decreed that not all signs of sacred things had sacramental value. Visible signs become sacraments only if they represent an invisible grace and become its channels.

At a later council, the Roman Catholic church limited the number of sacraments to seven: baptism, confirmation, the Eucharist, penance, extreme unction, orders, and matrimony. Part of the need for exact definition came during the sixteenth century in response to the Reformation. The Reformers, in turn, responded to the conclusions of the Roman Catholic church as it was redefined at the Council of Trent.

The Reformers held that the number seven was chosen arbitrarily, so they defined "sacrament" still more sharply, claiming that "sacrament" should apply not to all visible means of an invisible grace but only to those means which Jesus himself commanded to be practiced. This limited the number to two—baptism and the Eucharist. At the Last Supper, Jesus ordered the disciples to partake of the bread and wine in remembrance of him (1 Cor. 11:23–25), and after the resurrection he commanded his following to make disciples of all the nations, baptizing them (Matt 28:19). Luther, who had been an Augustinian monk, may also have been influenced by Augustine's belief that baptism and the Eucharist constituted sacraments "in an eminent sense."

Varied Significance: The significance of sacraments varies among denominations and believers today. Some believe the sacraments are the only means of salvation and that they have a special force that guarantees forgiveness of sins. Others think they represent God's grace, which can be received in many ways; they are traditionally practiced but not required for salvation.

For the Roman Catholic church validity of the sacraments depends on a qualified priest and willing recipients, except for infants, mentally incompetent people, and extraordinary cases. In an emergency any Christian may baptize someone before death, and the mentally incompetent may receive extreme unction without conscious consent. Most Protestants limit the performance of sacraments to ordained clergy leaders and think sacramental effectiveness depends upon the faith of the recipient. ***See also*** Baptism; Lord's Supper, The. G.W.B.

sacrifice. ***See*** Worship.

Sadducees (sad′*joo*-seez), a group in Judaism from the second century B.C. to the first century A.D. Their name in Hebrew (*tsaddiqim*) means the "righteous ones" and may be descriptive, or it may be derived from the name of Zadok, the high priest under David (1 Kings 1:26). The Sadducees are mentioned in the writings of the Jewish historian Josephus, the NT and rabbinic literature, but no consistent picture emerges. None of their own literature has survived.

According to Josephus: In Josephus they, along with the Pharisees and Essenes, are enumerated as the oldest Jewish philosophies or ways of life. In contrast to the other two groups the Sadducees are said to reject the immortality of the soul, to attribute all human activity to free will and none to fate (or providence), and to reject other traditions, especially those of the Pharisees. Josephus also says that the Sadducees were influential with only a few wealthy families and not with the people, who followed the Pharisees' interpretation of the law. Josephus also says that the Sadducees were boorish in their social interaction, that they encouraged conflict with rather than respect for their teachers, were more stern than the Pharisees in recommending punishments for crimes, and that they aroused Herod's suspicions because they supported the Hasmoneans against him. From this data many commentators have surmised that the Sadducees were mostly priests and wealthy, powerful community leaders who sat in the Sanhedrin, were greatly hellenized (i.e., influenced by Greek culture), and cultivated good relationships with the Romans. But Josephus gives varying attributes to the Sadducees in different passages of his writings and presents neither their full program nor the nature of their group.

In the NT: The NT mentions the Sadducees occasionally, often in conjunction with the Pharisees, but does not present a coherent picture. The Sadducees, in contrast to the Pharisees, do not believe in life after death (Mark 12:18 and parallels; Acts 23:8) or in angels and spirits (Acts 23:8). But the Sadducees are lumped with the Pharisees as opponents of Jesus (Matt. 3:7; 16:6). In Acts (4:1; 5:17; 23:6) Sadducees are active in the Temple, associated with the priests and members of the Sanhedrin. The NT assumes the presence of the Sadducees but does not describe them fully nor differentiate them fully from the Pharisees.

In Rabbinic Literature: In rabbinic literature the Sadducees are treated as opponents of the Pharisees and their heirs, the rabbis. The items on which they disagree in the Mishnah and Tosefta are purity laws, civil law, Temple ritual and Sabbath observance, all matters of great interest for the rabbis. The Babylonian Talmud also mentions their denial of resurrection. Some texts treat the Sadducees as heretics; in other texts in the Babylonian Talmud "Sadducees" has been substituted for "heretics" under the influence of later Christian censors. A few passages suggest that the Sadducees totally rejected rabbinic interpretations of the law. In all cases the Sadducees are set against

the rabbinic interpretation of the tradition and used as foils.

A coherent picture of the beliefs and practices of the Sadducees cannot be fully recovered from the sources at our disposal. They had a group of characteristic beliefs and interpretations of Judaism but were not in conflict with the leadership. Consequently, they are not a sect but resemble an ancient school of thought. According to Josephus they competed with the Pharisees and other political and social groups for power and influence, so they appear to have been a faction or interest group within Judaism. Since some priests are identified as Pharisees in Josephus and many priests are associated with neither the Sadducees nor Pharisees, the Sadducees cannot be identified as exclusively priestly nor can the chief priests be assumed in all cases to be Sadducees. ***See also*** Essenes; Josephus; Pharisees; Zadok. Sadoc (say′dok). ***See*** Zadok.

saffron (*Crocus sativus*), the dried styles and stigmas of the crocus used as a flavoring and as a yellow coloring in foods and textiles (Song of Sol. 4:14). Highly valued, it was originally imported from the Far East.

Saffron.

saints, persons distinct because of their relationship to God. In the OT, two different Hebrew terms are commonly rendered by this English expression. One, derived from the word meaning "covenant faithfulness," suggests that those who are so designated are bound closely to their God in love (e.g., Pss. 31:23; 148:14). The other, derived from the word for "holy," identifies those so described as set apart and dedicated to the service of God (e.g., Dan. 7:27). In both cases, the faithful of Israel are in view, and their "sainthood" consists in the relationship they bear to the God who has destined them for righteousness and salvation (Pss. 16:3; 132:9, 16).

The same associations are present in the NT, where "saints" always translates the Greek term for "[the] holy ones" and where it refers to Christians in distinction from nonbelievers (e.g., 1 Cor. 6:2). Thus, in Rom. 1:6–7, the phrases "called to belong to Jesus Christ," "God's beloved," and "called to be saints" are virtually synonymous. In Acts and the Pauline Letters, the term most often refers to Christians resident in particular places, such as Jerusalem (e.g., Acts 9:13; Rom. 15:25, 26, 31), Lydda (Acts 9:32), and Corinth (e.g., 1 Cor. 1:2); occasionally, however, Paul gives it a broader reference (e.g., Rom. 16:2), the normal usage of later writers (e.g., Heb. 6:10; Jude 3). In Revelation, it is a frequent term for the Christian martyrs (e.g., 17:6). ***See also*** Holiness; Love; Mercy; Sanctification. V.P.F.

Salamis (sal′uh-mis), a city on the eastern coast of Cyprus, which, according to Greek mythology, was founded at the end of the Trojan War. Named after the island of Salamis, it eventually developed around the excellent natural harbor, becoming the main port of Cyprus and a commercial center for the Roman Empire. After leaving Antioch and sailing from the port of Seleucia, Saul, Barnabas, and John Mark stopped in Salamis (Acts 13:1–5). ***See also*** Cyprus.

Salecah (sal′uh-kuh; KJV: "Salchah"), a city of Og in Bashan (Deut. 3:10) captured by Israel and assigned to Gad (Josh. 12:5–6; 13:11; 1 Chron. 5:11). Modern Salkhad in the Jebel Druze in Syria is a likely identification.

Salem (say′luhm; Heb. "peace"), the locality over which Melchizedek was king (Gen. 14:18) and that was frequently identified with Jerusalem. This identification is specifically made in Ps. 76:2, where Salem is used in parallelism with Zion as the dwelling place of God. Later writers, including Josephus, also connected Salem with Jerusalem, but other ancient writers identified it with alternative sites. In the Letter to the Hebrews, the author recalls that the root meaning of Salem is "peace" (7:2); thus, Melchizedek is identified as "king of peace." ***See also*** Jerusalem; Melchizedek; Peace; Zion.

Salim (say′lim), a place near Aenon, possibly in the Beth-shean Valley near the northern end of the Jordan River, where John was baptizing (John 3:23). ***See also*** Aenon.

Sallai (sal′*i*). **1** A postexilic Benjaminite resident in Jerusalem (Neh. 11:8). **2** A priest in Jerusalem

under the high priest Joiakim, possibly of the family Sallu (Neh. 12:20; see 12:7).

Sallu (sal´*oo*). **1** A postexilic Benjaminite resident of Jerusalem (1 Chron. 9:7; Neh. 11:7). **2** A postexilic levitical family in Jerusalem (Neh. 12:7).

Salma (sal´muh). **1** A descendant of Judah and father of Boaz; an ancestor of King David and in the ancestry of Jesus through Joseph (1 Chron. 2:11; Matt. 1:4). He is also called Salmon (Ruth 4:20–21; Matt. 1:4–5) and Sala (Luke 3:32). **2** A descendant of Judah and the father of Bethlehem (1 Chron. 2:51, 54). However, this passage represents more geographical and historical relationships than actual family genealogies (note v. 54). ***See also*** Salmon.

Salmon (sal´muhn), the son of Nahshon and the father of Boaz (Ruth 4:20–21), and therefore ancestor of David and Jesus (Ruth 4:22; Matt. 1:4–5; Luke 3:32).

Salmone (sal-moh´nee), modern Cape Sidero at Ermoupolis (ancient Itanos) on the northeast extremity of Crete, site of a temple to Athena Salmonia. Paul sailed past here en route to Rome (Acts 27:7).

Salome (suh-loh´mee). **1** Daughter of Herod (not Philip as in Matt. 14:3; Mark 6:17), son of Herod the Great, and of Herodias. Matt. 14:3–11 and Mark 6:17–28 tell the story of her dance before her uncle and now step-father, Herod Antipas, and her request, at the instigation of her mother, for the head of John the Baptist. Josephus, who does not recount this incident, gives the location of John's imprisonment and death as the grim Herodian fortress of Machaerus; he also gives Salome's name (in the Gospels she is identified only as the daughter of Herodias). Salome later married her uncle Herod Philip the tetrarch. ***See also*** Herod; Herodias; John the Baptist.

2 According to Mark 15:40 and 16:1, one of the Galilean women at Jesus' crucifixion and later at the empty tomb, perhaps the wife of Zebedee and thus the mother of James and John (cf. Matt. 27:56). F.O.G.

Salome dancing before Herod, twelfth-century illuminated manuscript.

salt, the most commonly used seasoning in antiquity: "Can that which is tasteless be eaten without salt?" (Job 6:6). Its preservative powers made it an absolute necessity of life and a virtual synonym for essential life-giving forces and, not surprisingly, endowed it with religious significance. In the Sermon on the Mount, Jesus calls the people who listen to him the "salt of the earth" (Matt. 5:13). In Israelite worship, salt was used to season incense (Exod. 30:35) and all offerings had to be seasoned with salt (Lev. 2:13; Ezek. 43:24). A related usage finds salt symbolizing the making of a covenant (Num. 18:19; 2 Chron. 13:5).

Numerous references to "the Salt Sea" (Josh. 15:5; Deut. 3:17) and the Valley of Salt (2 Kings 14:7; 2 Chron. 25:11) clearly identify the Dead Sea area as the place where supplies of salt were procured. Salt could either be mined in the rock formations along the Dead Sea (Lot's wife was turned into a "pillar" of salt, Gen. 19:26), or be obtained by letting water evaporate from pans. Once the salt was removed from sediment, it was rinsed, purified, and crushed until fine.

Ironically, salt also became associated with the destruction of life, a land gone to waste (Deut. 29:23; Job. 39:6; Ps. 107:34; Jer. 17:6; Zeph. 2:9). In a common practice of conquest, Abimelech "razed the city and sowed it with salt" (Judg. 9:45). S.L.R.

Salt, City of, a town assigned to the tribe of Judah (Josh. 15:62) in the wilderness and in association with En-gedi, along the Dead Sea. It is now identified as Khirbet Qumran, the location of the community that produced the Dead Sea Scrolls.

Salt, Hill of, a place to which tradition has attached the locus of Lot's wife's turning to salt (Gen. 19:26). One suggestion for its location is modern Jebel Usdum ("mountain of Sodom") at the southwest end of the Dead Sea.

Salt Sea, the. ***See*** Dead Sea.

Salt Valley, the valley where David defeated the Edomites (2 Sam. 8:13; Abishai in 1 Chron. 18:12) and, later, Amaziah defeated the same enemy and took Sela (2 Kings 14:7; parallel in 2

Chron. 25:11). Wadi el-Milk (Arabic, "salt") in southern Judah carries its name today, but most scholars would place it in Edom near the southern end of the Dead Sea.

saltwort, a plant of the genus *Salsola.* In biblical terminology it was formerly translated as "mallow" (for instance, in Job 30:4). It represents poor food sought in desperation.

salutations, oral expressions of good wishes. Salutations have long been important in the Near East. Social status determined the form of the greeting: subjects prostrated themselves before their oriental kings and invoked eternal life for them (cf. Neh. 2:3; Dan. 2:4); clients or inferiors acknowledged their patrons or superiors by similar means.

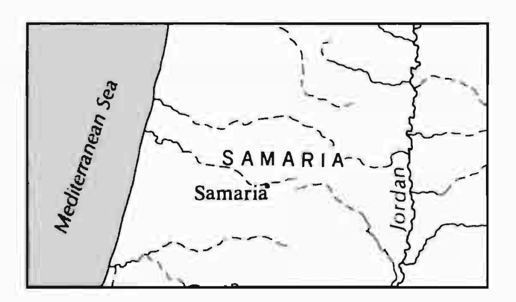
Hebrew and Aramaic greetings invoked peace, well-being, or blessing (cf. 1 Sam. 17:22; 2 Kings 4:29). The same sentiments were expressed as the initial greetings of letters. The Greek equivalent was the spoken "Hail!" or "Greetings!" (*chaire*), which was also used in letters as the writer's initial greeting to the recipient (cf. Acts 15:23). Greetings to or from a third party were conveyed in the letter closing with the Greek word *aspazomai* ("I greet"). Paul and other NT writers used this Greek formula in the Letter closing (e.g., 1 Cor. 16:19–20; Heb. 13:24; 1 Pet. 5:13) but preferred the fuller, oriental form of the peace wish in the initial greetings (e.g., Gal. 1:3–4; 1 Pet. 1:2; 2 John 1:3). ***See also*** Gestures; Letter. J.L.W.

salvation, a term that has lost much of its original meaning in current English usage. In part, this may be due to overuse in former times, compounded by popular but imprecise application among various religious groups. Because of this, it is important to exercise care in exploring its range of meaning for the biblical writers. It is an extremely important term in the Bible; thus, further neglect can only lead to considerable theological loss.

The term for salvation in the OT can connote, in keeping with its root meaning of "broadening" or "enlarging," the creation of space in the community for life and conduct. More often than not, this is created with divine help, particularly in circumstances where God's people face an adversary (e.g., Exod. 14:13–14, 30; 15:2; 1 Sam. 7:8; 2 Sam. 22:28; 1 Chron. 16:35; Neh. 9:27; Pss. 7:1; 17:7; 18:1–3; 54:1; 59:1–2; 106:43–48; 116:1–6; 118:5–14). God rescues and delivers from the situation of opposition and peril to one of recovered spaciousness, prosperity, and well-being. This meaning of the term is expanded to include deliverance from other forms of conflict, particularly in matters of the people's relationship to God. Such a field of reference draws on other terms such as "redemption," "atonement," "reconciliation," "pardon," "expiation" (cf. also "peace" and "righteousness"). The goal of such deliverance is the establishment of God's reign among his people and the other nations of the world (e.g., Isa. 49:25–26; 52:6–10; 55:1–5; Jer. 31:31–34; Ezek. 36:22–32; 37:23–28). Particularly the apocalyptic writings anticipate the arrival of this reign (e.g., Isa. 24–27).

The NT writers, apparently following the lead of Jesus himself, appropriate this specialized usage of salvation to designate the establishment of God's end-time Reign. In doing so, they identify God's intent to "save"/"rescue" (the meaning of the Greek root) with the person and ministry of Jesus of Nazareth (e.g., Luke 19:10; also 14:16–24; 15:3–10; 18:10–14; Matt. 10:6–8; 15:22–28; 18:12–14; 21:28–32). Jesus' name comes from the Hebrew root meaning "salvation," and thus God the Savior and Jesus the Savior become (as in other ways) inextricably linked (e.g., Matt. 1:21; Luke 2:11; also John 4:42; Acts 5:31; 13:23; Phil. 3:20; 2 Tim. 1:10; Titus 1:4; 2:13; 3:6; 2 Pet. 1:1, 11; 2:20; 3:2, 18; 1 John 4:14).

The meaning of the term "gospel" ("good tidings") is the essence of salvation (Rom. 1:16–17; 10:9–10). The traditions about Jesus record various accounts of Jesus' acts of delivering people from forms of physical, spiritual/psychic, and demonic/cosmic bondage to a condition of restored wholeness and soundness (e.g., Mark 1:40–45; 2:1–12; 5:1–20, 34; 10:52; Luke 7:50; 17:19; John 9; 12:3–7). "Saved" life is thereby seen in the context of a life that is "redeemed" in relation to God, oneself, and others in community.



For these NT writers, the death and resurrection of Jesus is the ultimate focal moment for the dawn of salvation (e.g., 1 Cor. 15). Drawing on the sacrificial images and institutions of ancient Israel, early Christians associate Jesus' death with that of the Passover lamb as "atonement" (John 1:29, 36; 6:51; 1 Cor. 5:7; Heb. 9:24–26). The "on our behalf" formula appropriates the efficacious significance of Jesus' death for those who receive it by faith as a gift of grace (e.g., Mark 10:45; 1 Tim. 2:6; Titus 2:14; Mark 14:24 and parallels; 1 Cor. 15:3–7; Eph. 2:5, 8). It means "reconciliation" (Rom. 5:1–11; 2 Cor. 5:18–20). It brings "regeneration" and a new conscience/consciousness. It encompasses the whole cosmos (Rom. 8:19–23; Eph. 1:10; Col. 1:19–20). The resurrection points, moreover, not only to present significance (Rom. 13:11–14; 1 Cor. 15:1–2) but also to future deliverance from impending judgment and wrath (1 Thess. 1:9–10; also Mark 13 and parallels; Rom. 1:18–2:11; 5:9–11; Phil. 3:20; Titus 2:13).

The apocalyptic vision mentioned above (e.g., Isa. 24–27) is appropriated with certain qualifications to underscore the deliverance motif and that of life and well-being in the future Kingdom of God (e.g., Luke 13:28–30; 22:29–30; 23:43; 1 Cor. 2:9–10; 11:26; 1 Thess. 4:16–17; Rev. 21:1–22:5). Other traditions

stress more the language of inheritance and the certainty of sharing the eternal life of Jesus' resurrection (e.g., Rom. 8:12–17; 1 Thess. 5:9; Heb. 1:14; 5:9; 9:28; 1 Pet. 1:5, 9; also John 4:14; 7:37–38; 10:10). The emphasis remains throughout the NT on the exclusive nature of the connection between Jesus' destiny and the promise of salvation (e.g., Acts 4:11–12; 5:31; Heb. 2:3). The consummation of salvation exceeds human ability to grasp it (1 Cor. 2:9–10); in the present, the gift of the Spirit is a foretaste of what is promised and hoped for (Rom. 8:23; 2 Cor. 1:22; 5:5; Eph. 1:14). ***See also*** Apocalyptic Literature; Atonement; Conscience; Conversion; Eschatology; Eternal Life; Expiation; Forgiveness; Grace; Holy Spirit, The; Justification; Kingdom of God; Liberty; Pardon; Peace; Reconciliation; Redemption; Regeneration; Righteousness; Sin. J.E.A.

Samaria (suh-mair´ee-uh), **city of,** the capital of the northern kingdom of Israel for the greater part of the history of that independent state. Omri built the city in the early ninth century B.C. and moved his administrative center there from Tirzah (1 Kings 16:24). It remained the capital until the demise of the kingdom in 721 B.C., when the city was taken by the Assyrians after a long seige (1 Kings 17:1–6, which credits Shalmaneser V with taking the city; compare the Assyrian annals, in which credit is claimed by Shalmaneser's successor, Sargon II). According to the folk etymology preserved in 1 Kings 16:24, the place name (Heb. *Shomron*) was derived from Shemer, from whom Omri is said to have purchased the hill on which the city was built. The name was also used for the administrative district of which Samaria was the capital and the gentilic form (Samaritan) was used for the residents of the area. Both usages came into vogue only after the Assyrian conquest, following the Assyrian practice of naming a province after its capital city.

The city was well situated defensively on a hill rising about 300 feet above the valleys on the north, west, and south, with a long, sloping ridge to the east. Strategically located beside major roadways, the city gave access to Jerusalem on the south, Megiddo and the

A bronze figurine of a calf, found at a cult center in Samaria from ca. 1200 B.C.

Jezreel Valley on the north, the sea and coastal plain on the west, and Shechem and the Jordan Valley on the east. The city did lack, however, an adequate water supply. Thus, in addition to practical considerations, the building of the new capital was clearly a symbolic statement for Omri, expressing the dominance and power of his developing state.

In the OT: Samaria is mentioned frequently in the OT, as would be expected of the seat of political power and, from the perspective of biblical historians and the prophets, the source of corruption. In addition to the mere chronicling of events that took place there, such as the tenure record of the kings who ruled the city, we are told that Ahab built an altar and temple for Baal in Samaria (1 Kings 16:32), a shrine later destroyed by Jehu in the Yahwistic reform that accompanied his coup d'état (ca. 834 B.C.). The royal city of the north, Bethel, did not become a cultic pilgrimage center after the model of Jerusalem in the south. Bethel remained "the king's sanctuary" (Amos. 7:13). The reference to "your calf, O Samaria"/"the calf of Samaria" in Hos. 8:4–6 is to the calf (or calves) of Bethel, venerated by the kings of Samaria, as is clear from the parallel oracle in Hos. 10:3–6 (Beth-aven in v. 5 [Heb., "house of falsehood"] being a term of contempt for Bethel). That Bethel was the site of pilgrimage and worship by the nobles of Samaria is seen also in the juxtaposition of oracles against Samaria and Bethel in Amos 4:1–3 and 4–5. But Samaria was not exempt from prophetic criticism of its idolatry (Amos 8:14), being compared in this respect to both pagan cities and Jerusalem (Isa. 10:10–11; Ezek. 16:46–55; 23:1–49). Elsewhere in the prophetic oracles, the people of Samaria are condemned for their pride (Isa. 9:8–17), wickedness (Hos. 7:1–7), rebellion (Hos. 13:16), oppression and exploitation of the poor

(Amos 3:9–12; 4:1–3), and for the indolence and spiritual insensitivity engendered by their wealth (Amos 6:1–7).

Archaeological Evidence: The affluence of the people of Samaria so graphically portrayed by Amos (6:4–6: "those who lie upon beds of ivory . . .") is revealed also in the material remains excavated at the site, including over five hundred ivory fragments used, mostly, as inlays for wooden paneling, furniture, boxes, and toilet articles. The site has been extensively excavated by numerous institutions and by some of the foremost Palestinian archaeologists: by Harvard University early in the century (G. A. Reisner and C. S. Fisher), by Harvard, the Palestine Exploration Fund, the British Academy, the British School of Archaeology, and the Hebrew University in the 1930s (J. W. and G. M. Crowfoot, E. L. Sukenik, K. Kenyon, N. Avigad, J. Pinkerfeld), by the Department of Antiquities of Jordan in 1965, and by the British School of Archaeology in 1968 (J. B. Hennessy). The excavations revealed that the city was built in the ninth century B.C., although pottery remains from the Early Bronze period (3000–2000 B.C.) indicated earlier, informal settlements. Six periods from the ninth century to the Assyrian conquest were distinguished and ascribed to the otherwise known activities of Omri, Ahab, Jehu, Jeroboam II, and the Assyrian conquerors. However, the various excavators and the subsequent interpreters of their publications have not agreed on the ascription of particular periods to specific kings. The interpretation of the excavations has been hampered by the fact that the city was destroyed several times and rebuilders deepened previous cuts in the bedrock for the foundations of their stone structures or cut new foundations rather than superimposing them on the other ones.

During the Assyrian and Persian periods Samaria was the capital of the province of the same name. Following conquest by the Macedonians (332 B.C.) the city was rebuilt as a Greek *polis* (city). It was destroyed by John Hyrcanus in 108 B.C. and rebuilt magnificently by Herod the Great (ca. 30 B.C.), who renamed it Sebaste in honor of Augustus (Gk. *Sebastos*). The Greek name is still preserved in the name of the modern Arab village, Sebastiyeh.

The Gospel of John records a journey of Jesus through Samaria, his conversation with a woman there, and the many who believed in him "from that city," which may refer to Samaria (4:4–42). ***See also*** Samaria, District of; Samaritans.

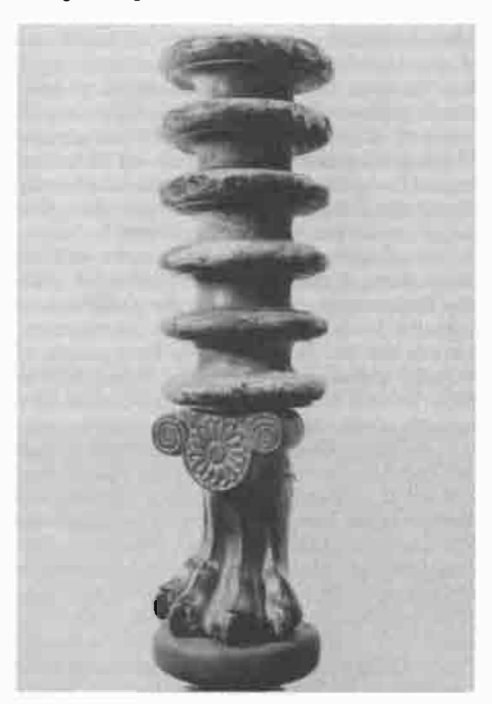
Samaria, district of, the central hill country of Palestine, the natural borders of which were defined by the sea on the west, the Valley of Jezreel or Plain of Esdraelon on the north (with Mt. Carmel to the west and Mt. Gilboa to the east), the Jordan River on the east, and the Valley of Aijalon on the south. This was the region settled by the Joseph tribes, with the half-tribe of Manasseh settled in the northern half of the area and the tribe of Ephraim in the southern half or to the north and south of the twin mountains Gerizim and Ebal, respectively. The geographical centrality of these peaks (on the north-south axis) assured a prominent role for the city of Shechem, nestled on the lower slope of Mt. Gerizim. But the influence of Shechem came to be usurped by Samaria, after which the region was named. Other important cities of the region were Dothan, Megiddo, Taanach, Beth-shean, Bethel, and Tirzah. The area was comparatively more fertile than the southern portion of Canaan in which the tribe of Judah and its clans settled. Soil and rainfall were conducive to viticulture, the cultivation of fruit and olive trees, vegetable gardening, and wheat farming. It would appear that the use of the name "Samaria" for the region dates from the time of the Assyrian conquest (post-722 B.C.), following the Assyrian practice of naming a province after its capital city, rather than to the earlier period of the Israelite monarchy (924–722 B.C.).

In the Bible: References to Samaria in biblical literature predating the Assyrian conquest of the Israelite capital are to the city and not the political district (e.g., Amos 3:9, 12; 4:1; 6:1; 8:14; Hos. 8:6; 10:5–7; 13:16; Isa. 7:9; 8:4; 10:9–11; Mic. 1:5–6). But the later oracle of Jer. 31:5–6 is clearly a reference to the region ("the mountains of Samaria"/"the hill country of Ephraim"). The use of the term "Ephraim" for the region and its people was popular with the prophets both before and after the Assyrian conquest of Samaria—especially with the earlier prophets Hosea (ca. thirty-six times) and Isaiah (ca. twelve times), where the term is often synonymous with the kingdom of Israel, of which this region was the political and cultural heart. That the region was not known as Samaria during the time of the northern Israelite monarchy is further indicated by the formulaic expression in 1 and 2 Kings, "*X* reigned (or began to reign) over Israel *in* Samaria" (e.g., 1 Kings 16:29; 22:51; 2 Kings 3:1; 10:36; 13:1, 10; 14:23; 15:8, 23, 27; 17:1). The Deuteronomic historians were themselves active after the time when the region came to be known as Samaria, and this is reflected in their use of the term "cities of Samaria" in the account of the settlement of Mesopotamian colonists in the regions by the



Assyrians (2 Kings 17:24–28). But they did not generally refer to the region or to the kingdom of Israel as Samaria, except for two anachronistic slips: one in 1 Kings 21:1, where Ahab is called king of Samaria, the other in 1 Kings 13:32, where "cities of Samaria" is truly an anachronism, inasmuch as the city of Samaria itself had not yet been built at that point in the narrative.

In addition to Samaria (Assyrian *Sa-me-ri-na*), Assyrian texts also refer to the region as the land of the House of Omri (Assyrian *Bit Hu-um-ri-a*), a term used not only after the fall of that dynasty but also after the fall of that kingdom (722 B.C.)

History: Following the Assyrian conquest, the character of the local population of Samaria was altered due to the loss of some native Israelites by deportation (2 Kings 17:6; Assyrian records indicate ca. twenty-seven thousand) and evacuation (many of the evacuees settled in Jerusalem, expanding that city to about four times its previous size) and by the concurrent settlement of foreign colonists in the region (2 Kings 17:24–41). This is said to have resulted in the paganization of the area, of which the judgment in 2 Kings 17:34–41 appears to be an overstatement (cf. Jer. 41:5).

During the time of Josiah (late seventh century B.C.) attempts were made by Judah to bring Samaria under political and cultural domination, but this was short-lived. Following the destruction of Jerusalem (586 B.C.), the Babylonians incorporated that city and the northern part of Judah into the province of Samaria. But the Persians later separated Jerusalem from Samaria and restored the Judean province, accounting for the hostility of Sanballat, governor of Samaria, who with his allies, Tobiah of Ammon and Geshem of Arabia, harassed the rebuilders of the Jewish state (Neh. 2:9–20; 4:1–9; 6:1–14). Antipathy between Judah and Samaria was also abetted by the refusal of the leaders of the Jewish community to allow the Yahwists of Samaria to assist in the reconstruction of the Jerusalem Temple (Ezra 4:8–24; 1 Esd. 5:64–73).

Fragment of an Achaemenid throne found at Samaria, probably from the Persian period (fourth century B.C.). The throne may have belonged to a governor of Samaria.

At the beginning of the Hellenistic period (325–63 B.C.), a revolt against Macedonian rule broke out in Samaria and the local population was forced to flee. Samaria was rebuilt as a Hellenistic city and the ancient city of Shechem was rebuilt by the disenfranchised Samaritans. It was this segment of the Samaritan people who built a Temple to the Hebrew God on Mt. Gerizim and whose descendants are encountered in the NT and the writings of the first-century historian Josephus as "the Samaritans." During the Hasmonean period (ca. 166–63 B.C.), both Samaria and Shechem were destroyed by John Hyrcanus and the territory passed to Judaean control. But in 63 B.C. Pompey assigned the area to the province of Syria. It was later granted to Herod the Great (30 B.C.) and subsequently to Herod's son Archelaus (4 B.C.–A.D. 6). The Romans understood the cultural relationship between Judah and Samaria and did not divide the two into separate governances. Both were ruled by Roman procurators (and by Herod Agrippa, from A.D. 41–44) after Archelaus was deposed. In the NT, Samaria is mentioned as the region of members of the Samaritan religious community (Matt. 10:5; Luke 9:52; John 4:1–42), as a territory of early evangelization (Acts 1:8; 8:4–25), as the home of the arch heretic Simon Magus (Acts 8:9–24), and as an area whose churches were supportive of the theological position of Paul (Acts 15:1–3). ***See also*** Samaria, City of; Samaritans. Samaritans (suh-mair´uh-tuhnz), in the OT an ethnic term for the residents of the district of Samaria. The term appears only once (2 Kings 17:29) in the account of the settlement of Mesopotamian colonists in the region by the Assyrians, in the comment that these foreign people made gods of their own which they placed "in the shrines of the high places which the Samaritans had made." In the NT, however, the term is used exclusively for the members of a particular ethno-religious community based

Ruins of a Roman basilica constructed at the hilltop site of the ancient city of Samaria.

in the area, living for the most part around Mt. Gerizim (John 4:1–42) but residing also in their own villages throughout the region (Matt. 10:5; Luke 9:52), who might be encountered in villages neighboring on Samaria (Luke 17:11–19) or even on the roadway between Jerusalem and Jericho (Luke 10:29–37).

From these texts one learns that the Jews and Samaritans shared a common heritage ("our father Jacob," John 4:12) but differed from one another radically in regard to the relative sanctity of Jerusalem/Zion and Mt. Gerizim ("Our fathers worshiped on this mountain; and you say that in Jerusalem is the place where men ought to worship," John 4:20). They also had different legal traditions regarding the cleanliness of vessels and, in general, they avoided contact with one another (John 4:7–10). The negative attitude of the Jews toward the Samaritans is reflected in Jesus' statement in Matt. 10:5, in which Samaritans are linked with Gentiles in contrast to "the house of Israel" (cf. Acts 1:8, in which Samaria occupies a median position between Jerusalem/Judea and the gentile world) and in John 8:48, in which the adversaries of Jesus refer to him contemptuously as "a Samaritan"—and demon-possessed as well. The itinerary of Jesus in Mark (10:1; it is followed in Matt. 19:1 but altered somewhat in Luke) seems to reflect a standard Jewish practice of avoiding Samaria in pilgrimages to Jerusalem.

Basically, the Jews regarded the Samaritans as a people foreign to themselves, in spite of an obviously shared heritage: the term "foreigner" used by Jesus of the thankful Samaritan leper in Luke 17:18 (Gk. *allogenēs*) is the term used in the Jerusalem Temple inscription excluding non-Jews from the court of Israel. (The historian Josephus relates that the Samaritans were excluded from the Jerusalem Temple by formal edict, not because of nationality but due to acts of mischief they allegedly perpetrated there.) It was the alien nature of the Samaritans, as commonly perceived, that gave the ironic sting to the story of the grateful leper and to the parable of the good Samaritan: only one out of ten returned to express thanks, and "he was a Samaritan"; the Samaritan stranger was the good neighbor, not the priest or the Levite!

From the few references to Samaria and the Samaritans in the NT, one might be left with the impression that all of the residents of Samaria were members of this community. This is not so. There were, in fact, people of various cultural backgrounds living in the area. Nonetheless, the Samaritan community (i.e., the particular group with which this article is concerned) was quite large and had throughout the Roman and Byzantine periods (63 B.C. to fifteenth century A.D.) a diaspora of considerable size. There were communities scattered along the Mediterranean coast (notably at Gaza and Caesarea), in Lebanon, in Egypt and Syria, and as far away as Byzantium, Thessalonica, Rome, and Babylon. Today the community numbers only about five hundred but is characterized by vitality after centuries of decline. The main part of the community

still resides in the shadow of Mt. Gerizim, in present-day Nablus. It is now, as in antiquity, a community led by priests. Unlike the situation in Judaism, the Samaritan priests remained active and in control of religious affairs after the destruction of their temple. There was, however, during the Roman and Byzantium periods, an active lay-led synagogue party, with which the Samaritan sect of the Dositheans had some connection.

Religious Heritage: As a religious sect, the Samaritans are a strict, Torah-observing party with a resolute pride in their religious heritage. They maintain that they and not the Jews are the bearers of the true faith of ancient Israel as expounded by Moses and as practiced at Mt. Gerizim in ancient times. The name by which they call themselves is *Shamerim*, "observers [of the Torah]." They understand themselves to be the descendants of the Joseph tribes of ancient Israel, as Jews are descendants of the tribe of Judah. Judaism as a heresy is traced to the priest Eli, who is said to have established a rival sanctuary at Shiloh. Thus, for them, the history of the Israelite faith as traced in the second and third divisions of the Jewish Bible is not of sacred but of apostate history. The Samaritans have for Scripture only the Pentateuch, and that in their own distinctive redaction. The chief error of the Jews, according to the Samaritans, is in having edited the Torah to minimize the importance of Gerizim and in having erected a Temple in Jerusalem. In addition to Eli and Solomon, Samaritans cite also Ezra and Hillel for having led the Jews astray: Ezra for having corrupted the text of the Pentateuch and Hillel for having introduced deviant legal and calendrical interpretations. As a priestly dominated community at odds with Pharisaic interpretations, the Samaritans invite comparison with the Sadducees of NT times and with the Karaites of later times. Comparisons have also been made with the Essenes and with the type of early Christianity represented in the Gospel of John. Indeed, recent studies of early Samaritan traditions reveal early Samaritanism as but one of a greater complex of disparate religious movements and ideologies within Judaism (broadly defined) prior to the destruction of the Jerusalem Temple in A.D. 70.

Origin: As for the origin of the sect, most scholars have rejected the Samaritan claim of being the remnant of the Israelite people who have always worshiped the Hebrew God at Shechem and have turned instead to the claims of their detractors, notably Josephus, whose personal animus against the Samaritans was intense. Josephus claimed that the Samaritans were descendants of the foreign colonists from Cutha mentioned in 2 Kings 17:24, an opinion shared by some rabbinic authorities who called the Samaritans *Kutim*. They came to have an independent cultic life, he said, as the result of a schism that occurred in the time of Sanballat (i.e., Sanballat II, not the contemporary of Nehemiah) and Alexander the Great (late fourth century B.C.), when a temple was built on Mt. Gerizim and staffed with renegade and disenfranchised priests from Jerusalem. This cultus was corrupted by hellenization in the time of Antiochus IV (ca. 175 B.C.) (a datum with which 2 Macc. 6:1 agrees) and later destroyed by John Hyrcanus in 128 B.C. Although there seems little doubt that the Samaritan sect of NT times (and of today) was derived from the Gerizim cultic establishment of the Hellenic period and developed subsequently through Samaritan Torah teachers who produced their own redaction of the sacred text, the account of Josephus presents difficulties in the reconstruction of early Samaritan history (or prehistory). Because it is highly biased and denegrating in its intent, one must view with suspicion his claim that the Samaritan priestly caste derived its sacerdotal authority from the Zadokite line of the Jerusalem Temple. Moreover, the story Josephus gives to explain the reason for the exodus of the priests from Jerusalem to Shechem—expulsion due to intermarriage with the family of Sanballat—is problematical (although not impossible). The story is remarkably similar to an earlier incident mentioned in the memoirs of Nehemiah (Neh. 13:28–29). This has prompted some scholars

Inscription from a fourth-century A.D. Samaritan synagogue at Shaalbim reads, "The Lord shall reign for ever and ever" (Exod. 15:18 preserved in the Samaritan version).

Archaeological remains on Mount Gerizim, where the Samaritan ethno-religious community was centered.

to postulate a Samaritan schism as early as the Persian period (sixth century B.C.), even though the Bible makes no reference to such and Josephus himself dated the alleged "schism" to the early Greek period (first century B.C.). It seems most appropriate to regard the Samaritans as a religious community that developed independently of the spiritual leadership of Jerusalem among a people who were, for cultural and historical reasons, alienated from the Jews and who, in time, found it impossible to maintain fraternal relations. ***See also*** Samaria, City of; Samaria, District of.

samech (sah′mek), the fifteenth letter of the Hebrew alphabet; its numerical value is sixty. No proto-Canaanite form is attested. By the early tenth century B.C. the form was three horizontal strokes crossed by a vertical one. The Aramaic cursive script transformed the letter considerably in the direction of the classical Hebrew square script form, which is similar in form to an oval. ***See also*** Writing.

ס

Samgarnebo (sam′gahr-nee′boh), a Babylonian mentioned among Nebuchadnezzar II's officials who took their seats in the Middle Gate of Jerusalem during the siege of 587 B.C. (Jer. 39:3). The name Samgarnebo (Bab. *Sîn-māgir*) is a Babylonian title that can also connote a district; it can be used as a personal name as well.

Samlah (sam′luh), a pre-Israelite king of Edom (Gen. 36:36; 1 Chron. 1:47).

Samos (say′mos), a mountainous island twenty-eight miles long and twelve and one-half miles wide, located about one and one-half miles from the western coast of Asia Minor, opposite Trogyllium. Greek settlers arrived on Samos ca. 1000 B.C. The Samian fleet was famous throughout the various periods of history. In the third century B.C., the Ptolemies of Egypt used the island as a naval base. During the Maccabean period, there were apparently Jews living on the island (1 Macc. 15:23). In 129 B.C., Samos became part of the Roman province of Asia. Paul and his companions stopped at Samos prior to sailing for the city of Miletus during their final trip to Jerusalem (Acts 20:15). M.K.M.

Samothrace (sam′uh-thrays), a mountainous island, elliptical in shape, in the northeastern extremity of the Aegean Sea, about twenty miles south of the mainland of Thrace. The rugged coastline leaves the island without a harbor. Before arriving at Neapolis on the second journey, Paul's ship dropped anchor off Samothrace (Acts 16:11).

Samson (sam′suhn), an early Israelite hero. The traditions about Samson depict him as a judge who assisted his tribe, the Danites, in their struggle against the Philistines, although most of his heroic exploits were personally motivated and resemble a private vendetta. The stories present him as a Nazirite from birth, but his passion for foreign women compromised the Nazirite vow, which required him to refrain from cutting his hair and to avoid wine and any unclean food. The tales also attribute his extraordinary power to momentary seizure by the divine spirit, and they thereby point beyond the human hero to the true source of superhuman strength.

A religious spirit colors the stories from first to last, despite their racy theme and legendary character. This exalted tone is greatest in the birth announcement and its sequel, an account of the marvelous disappearance of the revealing angel in the fire of an altar (Judg. 13:1–25). Although the name of Samson's father is given (Manoah), no comparable information is supplied about his mother. Nevertheless, she stands out in the story as the real heroine, and Manoah receives instruction from her.

Mighty Exploits: Samson's mighty exploits were occasioned by his erotic involvement with three women. The first object of his affection was an unnamed woman from Timnah, a few miles southeast of Beth-shemesh (located between Jerusalem and Ashdod). At their wedding festivities a riddle contest had grave consequences. Furious that her countrymen had secured the answer to his riddle by threatening his bride, Samson took revenge on local Askelonites from whom he stole gar-

Page from a 1310 Pentateuch portrays Samson grappling with the lion (Judg. 14).

ments to cover his wager. Since Samson then returned alone to his home in Zorah, his bride was given to the best man. This act in turn precipitated further revenge on Samson's part, the destroying of grain fields by catching three hundred foxes and setting fire to their tails, then releasing them in the fields. Angry Philistines retaliated by burning Samson's bride and her father, whereupon Samson smote a large number of them. Naturally, the Philistines sought revenge, and by threatening the local tribe of Judah, obtained its assistance in locating a hiding Samson. Bound by his countrymen, he was turned over to the enemy; but the spirit came upon him and he slew a thousand Philistines with the jawbone of an ass. Samson then composed a victory song and prayed for water to quench his thirst. Appropriate names are given for the sites of battle and prayer: Hill of the Jawbone and Partridge Spring (14:1–15:20).

The second woman with whom Samson became entangled was a harlot in the Philistine city of Gaza (located near the Mediterranean seacoast). The local residents learned of his presence and surrounded her house, anticipating victory over an exhausted Samson. But he arose early and walked off with the doors of the city gate on his shoulders, depositing them some distance away on a hill opposite Hebron (16:1–3).

Samson's downfall came when he fell in love with Delilah, presumably a Philistine. Their innocent flirtation quickly became a serious matter, and she toyed with Samson until he finally divulged the secret of his strength. Delilah's motivation is said to have been greed, and she summoned the Philistine lords to come for a shorn Samson. They put out his eyes and set him to work grinding at a mill in Gaza. In due time they celebrated their good fortune with a victory song and made sport of Samson during a sacrifice to their god, Dagon. Resolving to get revenge once more, Samson asked to be situated by the two pillars holding up the house and prayed for renewed strength just once more. God granted his wish, and Samson died with the multitude of Philistines (16:4–31).

Traditions and Stories: The traditions about Samson have been brought together with great skill; they probably circulated orally for some time before achieving written form. Various motifs combine to enhance their popularity: the barren wife, a helpless hero in the arms of a woman, the quest for a deity's hidden name, a hero's death wish, loss of charisma, and terror accompanying a theophany (i.e., the appearance of the divine). The stories also make use of many different literary forms, for example, three prayers, three riddles, two aetiologies, two victory songs, and five heroic deeds, a birth story, and a recognition scene. The stories reflect the period described in Judges, a period when tribal jealousies divided Israelites and when rivalry existed between the Philistine population and Israelite clans.

The figure of Samson presented a problem to many later interpreters, who found it difficult to condone his behavior. Nevertheless, comparisons with Jesus and Heracles became common, and Samson was viewed as a type of Christ. The English poet John Milton's *Samson Agonistes* (1671) transforms Samson into a tragic hero and gives a psychological analysis of suffering. The exploits of this biblical strong man have thus entertained and inspired others throughout the ages, despite Samson's weakness where women were concerned.

Samuel (sam'yoo-uhl), a prophet who ruled Israel at the end of the period of the judges and anointed the first two kings. He is the dominant figure at the beginning of the first of the two books of the Bible that bear his name.

Samuel's father, Elkanah, was an Ephraimite from the village of Ramathaim-zophim. Samuel's mother, Hannah, who was barren before his birth, had prayed for a child during a visit to the temple at Shiloh, promising to devote him to the service of Yahweh (1 Sam. 1). The young Samuel, therefore, grew up in Shiloh under the tutelage of Eli, the chief priest. The first oracle he uttered (1 Sam. 3:11–14) was a renunciation of the house of Eli, whose sons had corrupted the cult of Yahweh (cf. 1 Sam. 2:12–17). This marked the beginning of Samuel's career as a prophet (cf. 1 Sam. 3:19–4:1).

Samuel assumed national leadership after a disastrous battle in which the Israelites were routed by the Philistines (1 Sam. 4). Having driven out the enemy and pacified the entire land (1 Sam. 7:13–14), he began periodic visits to a circuit of cities where he passed judgment on cases brought before him (1 Sam. 7:15–17). This pattern continued for most of Samuel's life, but in his old age the men of Israel approached him to request a king (1 Sam. 8). Though angered, he acted on God's instructions and, after warning the people of the burdens a king would impose on them (1 Sam. 8:11–18), he acceded to the request.

Samuel anointed Saul king during a private audience in Samuel's home town (1 Sam. 9:1–10:16). Subsequently, however, he presided over a public ceremony in which Saul was chosen king by casting lots (1 Sam. 10:17–27). After Saul's victorious campaign against the Ammonites (1 Sam. 11) the kingship was ratified in yet another ceremony conducted by Samuel (1 Sam. 11:15). Then in a final public appearance (1 Sam. 12) the prophet admonished the people and their new king to obey the commands of God and promised to continue to act on their behalf.

Samuel was also the agent of Saul's rejection as king. Because he did not carry out God's instructions as conveyed by Samuel, Saul's kingship was condemned. Samuel prophesied that he would be removed from office in favor of a new king (1 Sam. 13:7–14; 15:10–29). Then God sent Samuel to Bethlehem, where he anointed David (1 Sam. 16:1–13).

The men of Israel approach Samuel to request a king (cf. 1 Sam. 8); thirteenth-century French miniature.

Although Samuel's death is reported in 1 Sam. 25:1, he makes one further appearance in the story. In 1 Samuel 28 we are told that Saul invoked Samuel's ghost before his final battle with the Philistines, hoping for a favorable oracle. The ghost, however, reminded Saul of the divine rejection of his kingship and predicted a Philistine victory in the battle.

The biblical narrative presents Samuel as the last of the heroes of the premonarchical age and the first of the prophets who stand alongside the kings. It is tempting to think of him as having played such a transitional role historically—the last judge and the first prophet. He appears in the story, however, as a typical figure rather than as a historically accessible personality. The account of the rise of kingship in 1 Samuel 1–15 is told from a point of view that is suspicious of the institution of monarchy, to which the direct rule of Israel by God acting through a prophet is preferred. In 1 Samuel 7, Samuel is presented as the ideal prophetic leader, in whom all types of authority—military, judicial, and sacerdotal—are combined. In subsequent chapters, after the reality of kingship has been acknowledged, the portrayal of Samuel amounts to a paradigm for the prophetic office under the monarchy: the prophet will anoint and reject kings, intercede with God on Israel's behalf, and guide the conscience of the people (cf. 1 Sam. 12:23). ***See also*** David; Eli; Hannah; King; Prophet; Saul; Shiloh. P.K.M.

Samuel, the First and Second Books of, the eighth and ninth books of the Hebrew Bible, ninth and tenth in most English Bibles. Originally Samuel was one book, deriving its name from the great prophet who dominates the early chapters, but when it was translated into Greek, the book was divided into two with the curious result that Samuel does not appear in the second book that bears his name. Together 1 and 2 Samuel describe the rise of kingship in Israel and give an account of the life of David.

Text: The Hebrew text of Samuel that has come down to us is filled with small defects, the result of copyists' errors over the centuries. Scholars attempt to repair these by study of other witnesses to the original text, especially the ancient translations of Samuel into Greek and other languages. Of particular importance for this process are three fragmentary copies of Samuel found among the Dead Sea Scrolls at Qumran.

The Deuteronomistic History: 1 and 2 Samuel are part of the so-called Deuteronomistic History, which extends from Deuteronomy through 2 Kings. This long narrative, the final

1 AND 2 SAMUEL

form of which derives from the sixth century B.C., contains a variety of ancient materials brought together and evaluated by editors whose criteria for judgment are drawn from the laws of Deuteronomy. Although Deuteronomistic revision and expansion seem to be less extensive in Samuel than in Judges or Kings, the stories told here have special importance for the larger history because they introduce David, the ideal against whom subsequent kings will be judged, and Jerusalem, the city where God chooses to be worshiped (cf. Deut. 12). Key passages include the oracle against the house of Eli in 1 Sam. 2:27–36, which justifies the subordination of priests from outlying districts to the descendants of Zadok of Jerusalem; the historical review in Samuel's farewell address in 1 Sam. 12:6–25, which belongs to a series of such speeches uttered by major figures in the Deuteronomistic History; and especially the oracle of Nathan in 2 Samuel 7, which asserts the divine election of the Davidic dynasty and warrants the erection of Solomon's Temple.

Prophetic Influence: Much of the material in Samuel seems to have been shaped by editors who stressed the importance of the role of the prophets in Israel, often at the expense of the kings. This prophetic revision is responsible for the primary shape of many sections of 1 and 2 Samuel, especially where the leadership of Israel is at issue, such as the story of Samuel's birth and childhood (1 Sam. 1–3), the accounts of the anointing and rejection of Saul (1 Sam. 9:1–10:16; 1 Sam. 15) and the anointing of David (1 Sam. 16), and the report of Nathan's condemnation of David (2 Sam. 12). These passages seem to derive from a pre-exilic prophetic history, portions of which can also be detected in Kings; but they express certain ideas reminiscent of aspects of Deuteronomistic thought, and some scholars think they are the result of a prophetic revision that took place after the composition of the primary edition of the Deuteronomistic History.

In any case, there is a group of related passages that are shown to derive from the early exilic period because of their extreme hostility to the institution of kingship and their identification of Mizpah as the meeting place of all Israel, a role played by that city only during a brief period following the fall of Jerusalem in 586 B.C. These passages include the description of Samuel's ideal rule of Israel in 1 Sam. 7:2–17; the story of the people's unwarranted demand for a king in 1 Sam. 8:1–22; the account of the lottery at Mizpah in which Saul is chosen king in 1 Sam. 10:17–27a; and Samuel's farewell speech in 1 Sam. 12:1–25.

Original Narrative Sources: Certain early narratives upon which the prophetic and Deuteronomistic editors of Samuel drew can be identified. These include the Ark narrative, the Saul cycle, the story of David's rise, and the succession narrative.

The Ark narrative, an account of the capture and return of God's Ark, is found in 1 Sam. 4:1–7:1 and is sometimes thought to include parts of 2 Samuel 6. The story shows that the Ark was lost to the Philistines in battle because the corruption of the cult at Shiloh (cf. 1 Sam. 2:12–17, 22–25) had provoked God, who used the occasion to afflict the Philistines with plague.

The Saul cycle, a loose collection of materials about Saul's early career, is most visible now in the tale of the lost asses of Kish (1 Sam. 9–10) and the stories about Saul's wars with the Ammonites (1 Sam. 11) and Philistines (1 Sam. 13–14).

The story of David's rise, an extended account of David's career from court musician to king (1 Sam. 16:14–2 Sam. 5:10), places special

OUTLINE OF CONTENTS

The First and Second Books of Samuel

- I. The story of Samuel (1 Sam. 1:1–7:17)
  - A. Samuel's birth and childhood (1 Sam. 1:1–3:21)
  - B. The Ark narrative (1 Sam. 4:1–7:1)
  - C. Samuel judges Israel (1 Sam. 7:2–17)
- II. The advent of kingship in Israel (1 Sam. 8:1–15:35)
  - A. The demand for a king (1 Sam. 8:1–22)
  - B. The election of Saul (1 Sam. 9:1–11:15)
  - C. The farewell of Samuel (1 Sam. 12:1–25)
  - D. The rejection of Saul (1 Sam. 13:1–15:35)
- III. The rise of David (1 Sam. 16:1–2 Sam. 5:10)
  - A. The anointing of David (1 Sam. 16:1–13)
  - B. David at the court of Saul (1 Sam. 16:14–21:1)
  - C. David in the wilderness of Judah (1 Sam. 21:2–26:25)
  - D. David in the service of the king of Gath (1 Sam. 27:1–30:31)
  - E. The death of Saul (1 Sam. 31:1–13)
  - F. David becomes king (1 Sam. 31:1–2 Sam. 5:10)
- IV. The reign of David (2 Sam. 5:11–12:31)
  - A. David's achievements (2 Sam. 5:11–9:13)
  - B. David's crimes (2 Sam. 10:1–12:31)
- V. Absalom's revolt (2 Sam. 13:1–20:22)
  - A. Strife in the house of David (2 Sam. 13:1–14:33)
  - B. The civil war (2 Sam. 15:1–20:22)
- VI. Miscellaneous materials (2 Sam. 20:23–24:25)

emphasis on David's innocence of wrongdoing in the suspicious circumstances of his alienation from Saul, his career as an outlaw and Philistine mercenary, and his acquisition of power after the violent deaths of those who stood in his way. It may have been composed during the reign of David as a court apology, defending David and his throne against the charges of his enemies, though some scholars think of the apologetic material as secondary, part of a late redaction favorable to David.

The succession narrative, a long narrative explaining Solomon's acquisition of his father's throne after the demise of his older brothers, is found in 2 Samuel 9–1 Kings 2. Until recently scholars regarded this material as a unified history composed by an eyewitness who impartially reported events both favorable and unfavorable to the royal family. The current tendency, however, is to question both the unity and objectivity of the succession narrative. The story of David's crimes involving Bathsheba and Uriah in 2 Samuel 11 and his subsequent condemnation by Nathan in chap. 12 are reminiscent of the prophetic stories about Saul and Samuel in 1 Samuel. 1 Kings 1–2, which is concerned with the justification of the bloodbath that accompanied Solomon's accession, cannot have been written before David's death. Yet the portions of the succession narrative contained in 2 Samuel, where Solomon appears only as an infant, seem to address issues that were current in the time of David. These include the account of Absalom's revolt in chaps. 13–20 and the story of the execution of the family of Saul in 21:1–14 and 9:1–13, which may have originated as independent narratives, composed during David's lifetime. ***See also*** David; Samuel; Saul.

Sanballat (san-bal'at), governor of Samaria in the latter half of the fifth century B.C. and one of the chief opponents of Nehemiah's plan to rebuild Jerusalem. Sanballat conspired with Tobiah, governor of Ammon, and Geshem, king of Kedar, to intimidate the Jews and interrupt the work (Neh. 2:10, 19). As the walls neared completion, they authorized raids on the city (Neh. 4:1–2) and, accusing Nehemiah of planning a rebellion against Persian rule, repeatedly summoned him to account for his actions (Neh. 6:1–7).

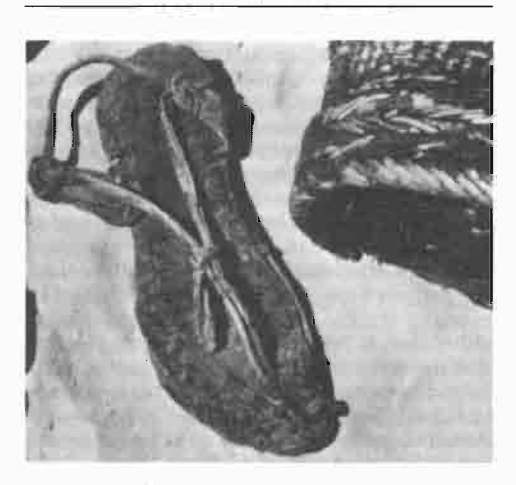
Sanballat's name was Babylonian (Sinuballit), but the names of his sons, Delaiah and Shelemiah, mentioned in the Elephantine papyri, show that he was a worshiper of Yahweh. In Neh. 2:10 he is called "the Horonite," i.e., a native of Beth-horon. The founder of a dynasty was sometimes referred to this way, and there is evidence that five of Sanballat's descendants governed Samaria, including Sanballat II early in the fourth century and Sanballat III at the time of Alexander the Great. ***See also*** Nehemiah, The Book of; Samaria, District of. P.K.M.

sanctification, "making holy" or "consecrating" a place, thing, or person to God. Since holiness is primarily the attribute of God, what is "sanctified" is removed from "profane" or "secular" use and reserved to the Lord. However, created beings never attain the unique holiness that distinguishes God. In the OT, rites such as sprinkling with blood sanctify places, objects, and persons. The people must consecrate themselves before they can approach the Lord (Exod. 19:22–24).

Religious purification may also be accomplished by sprinkling with water (Num. 19:9–22). As a "holy" day, the Sabbath is not to be profaned (Ezek. 20:12–24). Since the holiness or sanctity of God is to be reflected in the life of the people, obedience to the Torah is said to keep God's name "holy." Through the Torah, God "sanctifies" the people (Lev. 22:31–32). They are called to be "holy" just as God is "holy" (Lev. 19:2; 20:26; cf. also 1 Pet. 1:15–16, and the related call to manifest divine "perfection" in Matt. 5:48).

In postexilic times, the persistent sinfulness of the people led to the image of an eschatological purification of the people (Dan. 7:18–22; Ps. 34:10). God would "sanctify" them and in so doing "sanctify" his own "name," which had been profaned among the nations by Israel's sinfulness. Ezek. 36:22–27 describes this process in three steps: first, the people are purified from their old sinfulness and idolatry by being sprinkled with clear water; second, the Lord gives them a "new heart" (cf. Ezek. 11:19; Jer. 31:31–34); and, third, the Spirit of the Lord is put in the human heart. The result of this divine sanctification is a person freed from the "evil inclination" of the human heart and obedient to the will of God.

NT writers can speak of the eschatological sanctification as in the future (Matt. 6:9; "hallow" and "sanctify" are translations of the same Greek word) or as being accomplished for the Christian by the salvation received in Christ (2 Thess. 2:13). Christians, or their communities, are "sanctified" as temples of the Lord (1 Cor. 6:11, 20; Eph. 2:21; 1 Pet. 2:9). They have been "made holy" by anointing (1 Cor. 1:30; Eph. 5:26; 1 John 2:20). They benefit from the "once for all" sacrifice of Christ, which is able to affect the inner reality of the person and not just the



externals (Heb. 9:11–14). Therefore, Jesus' sacrifice was said to "sanctify" the Christian (Heb. 10:10; John 17:19). A person might be "consecrated" to a particular mission or service as a prophet (Jer. 1:5; Eccles. 49:7). The Father "consecrated" the Son, sending him to the world (John 10:36). Similarly, the Son "consecrates" the disciples who are to take up that mission in the world (John 17:17–18). However, "sanctification" is not merely a "passive gift." Christians must live out their lives in a holiness that reflects what they have received (Rom. 6:19; 1 Thess. 4:3, 4:7; 1 Tim. 2:15; Heb. 12:14). ***See also*** Holiness. P.P.

sanctuary, the holy place where Hebrews believed the Lord was present. In the wilderness, this was the tent of meeting; in the time of Solomon, this was at the Temple at Jerusalem. In both places, the Lord's presence was made visible by the fire, which could be seen as a pillar of smoke during the daytime and a pillar of fire at night. The Lord's presence is still indicated in the sanctuary of some churches by a burning candle or lamp over the altar.

There were degrees of holiness in the Temple. A few steps up from the court was the holy place, which was separated from the court by a hanging curtain. Only priests were allowed in the holy place. A few more steps and a curtain separated the holy place from the Holy of Holies, where only the high priest was allowed. Sometimes the entire Temple was called the sanctuary; at other times the sanctuary meant only the Holy of Holies. G.W.B.

sand, a collection of fine particles of stone, particularly siliceous stone. As is common throughout ancient Near Eastern literature, biblical writings include many references to the natural world, for which there was a deep appreciation. The vast deserts of sand as well as the long stretch of sandy coastal land along the Mediterranean Sea became the source of powerful metaphors. Most often the numerical quality of sand was alluded to: "make your descendants as the sand of the sea, which cannot be numbered for multitude" (Gen. 32:12); "Joseph stored up grain in great abundance like the sand of the sea" (Gen. 41:49); "I shall multiply my days as the sand" (Job 29:18). Sand is also known to be heavy (Prov. 27:3) and it served as a hiding place for the Egyptian killed by Moses (Exod. 2:12), as well as for buried treasure (Deut. 33:19). NT writers also used the metaphor of sand to symbolize great quantities (Rom. 9:27; Heb. 11:12). The shifting, unstable qualities of sand provided the image of one of the most memorable parables, "a house built upon the sand" (Matt. 7:26). S.L.R.

sandal, a shoe fastened to the foot with thongs or straps. ***See also*** Shoes.

Sanhedrin (san-hee´druhn; Gk. *synedrion*), a council of leaders. The term is used in Greek literature in connection with councils of political and military leaders, federated states, and various trade and private associations. It is usually distinct from the town council of a Greek city (Gk. *boulē*) or the senate of elders (Gk. *gerousia*). The Gospels, Acts, and the first-century historian Josephus mention various Jewish bodies identified as sanhedrins, and rabbinic literature has a series of rules in the Mishnaic and Talmudic tractates *Sanhedrin* that describe the Sanhedrin's composition and function. In rabbinic literature the Sanhedrin functions as a court to decide major cases and to interpret disputed points of law, but the word "sanhedrin" is used seldom because this body is usually referred to by its Hebrew name, which means court (*bet din*). The NT occasionally uses "sanhedrin" for local councils of leaders and elders (Matt. 5:22; 10:17; Mark 13:9; Acts 22:5) and most often for the supreme court of chief priests and elders in Jerusalem which, according to the Passion narratives in the Gospels, judged Jesus (Matt. 26:59 and parallels), and according to the account in Acts, examined and punished the teaching and activity of Jesus' early followers (Acts 4–6; 23–24). Joseph of Arimathea was said to be a councilor (Mark 15:43; literally, a member of the *boulē;* it is unclear whether the Sanhedrin is meant). In Josephus both Jewish and Roman sanhedrins abound as ruling councils (*Antiquities* 14.5.4; *War* 1.8.5) and as courts (*Antiquities* 14.9.4–5; 15.6.2), often with a king presiding.

The Sanhedrin in Jerusalem: A variety of theories have developed concerning the Sanhedrin of Jewish leaders in Jerusalem. The three most prevalent are that the Sanhedrin was composed

of political leaders, including some priests and aristocrats; that the Sanhedrin was composed of religious leaders knowledgeable in the law, including priests, Pharisees, and scribes; and that there were two Sanhedrins, one political and the other religious. All these theories try to reconcile and harmonize a diverse body of data into a coherent description of Jewish institutional leadership from the second century B.C. to the second century A.D. In addition, the first and third theories address a major issue of anti-Semitism by attributing the trial of Jesus to political leaders rather than to Jewish religious leaders. It seems that the attempt to produce a coherent account from diverse and incomplete sources is doomed to failure. The word "sanhedrin" refers to a series of councils and courts spread over several centuries, composed of whoever was powerful and influential at the time and entrusted with variable powers. Because religion and politics were so intertwined in the community structure, two separate sanhedrins, religious and political, seem unlikely and no direct evidence exists for a dual installation.

In the Gospels: The Gospels attest that some Jewish leaders were opposed to Jesus (e.g., Mark 3:6; John 7:32) but they do not give accurate first-hand information and vary in their usage and characterization of scribes, Pharisees, elders, and chief priests. They refer to the Sanhedrin without giving its precise composition and powers. In Mark the high priest, chief priests, elders, and scribes (14:54–55; 15:1) are explicitly associated with the Sanhedrin in Jesus' trial. In John the chief priests and Pharisees gathered to discuss Jesus (11:47). In Acts the Sanhedrin sat in judgment on the preaching of Peter and John (chap. 4) and was composed of the high priest, the high-priestly family, rulers, elders, and scribes. Gamaliel, a Pharisee and "teacher of the law held in honor by all the people" was a member of the Sanhedrin (5:34). According to Acts 23 both Pharisees and Sadducees sat on the Sanhedrin. In evaluating and disciplining Jesus, Peter, John, and Paul the Sanhedrin sat as a judicial court interpreting and guarding Jewish life, custom, and law.

In Rabbinic Writings: Rabbinic writings, especially the Mishnah *Sanhedrin,* speak of a great Sanhedrin of seventy-one that met in the Temple and was headed by the high priest, of three courts of twenty-three, and of other courts of three. These courts were assigned specific powers over crimes and legal decisions and were composed of scholars. The Mishnah's portrait of the Sanhedrin is set in the Second Temple period (ca. fifth–fourth centuries B.C.), but it is most probably an intellectual construct of the second century A.D. whose historical underpinnings are virtually impossible to determine because of the thorough editing of the Mishnah and Talmudic sources. The Qumran community had its council (Heb. *'eṣah*) and it is likely that Jewish factions, schools and movements, such as the Pharisees, had their own councils of leaders. The rabbinic accounts of the Pharisees before A.D. 70 and of the rabbis after 70 speak of various courts of scholars with legislative and judicial powers. While the rabbinic accounts of the Pharisees are heavily influenced by later ideas, the existence of a council at the head of an organization was very common in the Roman Empire, and a Sanhedrin, whatever its membership and responsibilities, must have existed in NT times. ***See also*** Council; Gamaliel; Senate of Israel, The.

Sansannah (san-san'uh), a town in the Negeb belonging to the tribe of Judah listed in Josh. 15:31. It has been identified by scholars as Khirbet esh-Shamsaniyat, about three miles northwest of Beersheba, in southern Judea.

Saph (saf), one of the four Philistines identified as "descendants of the giants" slain by David's soldiers (2 Sam. 21:18). In 1 Chron. 20:4 he is identified as "Sippai."

Sapphira (suh-fi'ruh), wife of Ananias who, like him, died after misrepresenting a gift to the apostles (Acts 5:1–11). ***See also*** Ananias.

sapphire, a gem composed of corundum, blue in color. The references in Exod. 24:10; Ezek. 1:26; and 10:1 may be to lapis lazuli. ***See also*** Breastpiece; Jewelry.

Sarah (sair'uh). **1** Abraham's wife, who shared his journey to the Promised Land and his sojournings there. God promised to Abraham numerous descendants, to whom the land of Canaan would belong. For this promise to be fulfilled, the patriarch's wife had a necessary and crucial role. But no sooner was the divine promise given than Abraham jeopardized everything by going to Egypt, where he passed Sarah off as his sister and she was taken into the harem of Pharaoh (Gen. 12). A variant of this story appears in Genesis 20, where Sarah, here Abraham's half-sister, was taken by Abimelech, king of Gerar (cf. also Gen. 26). In both versions, Abraham practiced this deception for fear of being killed on Sarah's account (Genesis 12 stresses her great beauty, though if the placement of these chapters is taken into account, Sarah should be quite old).

Another obstacle to the fulfillment of the promise of numerous progeny was Sarah's barrenness (Gen. 11:30; 16:1). Sarah's solution to the problem was to give her Egyptian maid Hagar to Abraham, a custom according to which Hagar's child would be considered Sarah's (Gen. 16). But the plan backfired when Hagar

became pregnant and regarded Sarah with contempt. Asserting her superior status, Sarah dealt harshly with Hagar. Hagar fled to the desert, but the Lord instructed her to return and submit to Sarah.

When Abraham and Sarah were too old for childbearing, God reiterated the promise, changing Sarai's name to Sarah. Sarah is a variant of Sarai, both forms having the same meaning, "princess," but as with Abraham (Gen. 17:5), the name change is symbolic, representing a special destiny: "I will bless her, . . . and she shall be a mother of nations; kings of peoples shall come from her" (Gen. 17:16). Not surprisingly, Abraham's reaction to this news was laughter (Gen. 17:17). Sarah also laughed to herself when she overheard their mysterious visitor(s) inform Abraham that she would bear a son (Gen. 18:1–15). She denied laughing, however, when confronted by the Lord. Finally (Gen. 21) the long-awaited heir was born to Sarah and Abraham and, appropriately, was named Isaac, meaning "laughter." Sarah protected Isaac's inheritance by having Hagar and her son Ishmael sent away. Though Abraham was displeased, God supported Sarah's decision, instructing Abraham, "Whatever Sarah says to you, do as she tells you, for through Isaac shall your descendants be named" (Gen. 21:12).

Sarah died at the age of 127, and Abraham purchased the cave of Machpelah from the Hittites for her burial place. Later Abraham (25:9–10), Isaac (35:27–29), Rebekah (49:31), Jacob (50:13), and Leah (49:31) were also buried there. After Sarah's death, Abraham took another wife, Keturah (Gen. 25:1). Isaac was comforted after his mother's death when he married Rebekah (24:67).

Sarah is mentioned in the NT in Rom. 4:19; 9:9; Heb. 11:11; 1 Pet. 3:6; and the allegory of Gal. 4:21–31.

2 Daughter of Raguel who, after many difficulties, became the wife of Tobias in the book of Tobit. ***See also*** Abimelech; Abraham; Hagar; Isaac; Ishmael. J.C.E.

Sarai (sair'*i*), a variant spelling of Sarah, the name of Abraham's wife (Gen. 11:29–31; 12:5, 11, 17; 16:1–3, 5–6, 8; 17:15). Her name was changed by God to "Sarah" (Gen. 17:15) at the time she received a divine blessing; at the same time Abram's name was changed to "Abraham" by God (Gen. 17:5) when he also received a divine blessing. ***See also*** Sarah.

sarcophagus. ***See*** Burial.

Sardis (sahr'dis), the regional capital of Lydia in the province of Asia Minor and one of the seven churches addressed in Revelation (Rev. 1:11; 3:1, 4). The city was founded in Seleucid times (third century B.C.) and Greek was as widely used as the native dialect. The Lydian kings revered the Greek gods, were benefactors of Hellenic sanctuaries, and consulted the oracle at Delphi.

In the sixth century B.C. the Lydians controlled most of the coast of Asia Minor and the islands offshore. Its wealth, especially that of Croesus, was legendary. The influence of Lydian dress, turbans and soft leather boots, and musical innovations based on the seven-stringed lyre could be seen in Athens at the end of the sixth century. However, Croesus challenged the might of the Persian Empire and was defeated. Sardis was made the center of the regional satrapy.

In Roman times Sardis was the center of the imperial cult in the region. The cult was administered by a provincial council. ***See also*** Revelation to John, the. P.P.

sardius (sahr'dee-uhs), a deep orange-red chalcedony considered by some to be a variety of carnelian. It was used as decoration on the high priest's breastplate (Exod. 28:17; 39:10). It appears in the KJV in Ezek. 28:13 where the RSV has "carnelian"; it represents Tyre's lost perfection. In Rev. 21:20 the same terms reflect the incomparable glory of the new Jerusalem.

Sarepta (suh-rep'tuh; Heb., "smelting place"; KJV: "Zarephath"), a Phoenician city midway between Tyre and Sidon, where Elijah lodged with a widow during a famine and restored her son to life (1 Kings 17:8–24; cf. Luke 4:26). It is probably present-day Sarfend (Surafend). ***See also*** Zarephath.

Sargon (sahr'gon) **II,** king of Assyria, 722–705 B.C. Sargon succeeded Shalmaneser V, apparently his brother, whose sudden death may have been due to court intrigue. (Some have seen the very name of Sargon, meaning in the original Akkadian, "The king is legitimate," as a hint that he was a usurper.) The death provoked massive disruptions in the empire, which took Sargon two years to quell. His first year (721) focused on appeasing various groups at home, particularly those in the city of Assur. In his second (720), he attacked the two main rebellious clients: the Chaldean Marduk-apla-iddina II (biblical name: Merodach-baladan) and a Syro-Palestinian coalition led by the city of Hamath with Egyptian support (2 Kings 17:4). The battle against Merodach-baladan and his Elamite ally ended at the Mesopotamian city of Der, leaving Merodach-baladan as Babylonian king for the next decade. The battle against Syro-Palestine, however, crushed all resistance (Isa. 10:9–11), even pushing the Egyptians back to their Sinai frontier at Raphia, which was destroyed. In the process, Israelite Samaria was retaken—it had joined the rebellion after an apparently earlier conquest by Shalmaneser V in 722 (2 Kings 17:3–6)—and this time it suffered conversion to a province and large-scale deportation and replacement of its population. This

Cuneiform inscription on a fragment of a stele erected by Sargon II at Ashdod after his conquest in 712 B.C.

action by Sargon effectively marked the end of Israel as the Northern Kingdom (2 Kings 17). By contrast, Judah, the Southern Kingdom, was spared, having remained loyal to Assyria throughout.

These wars of 720, far from providing a permanent peace, set a pattern for the rest of Sargon's reign of almost continuous fighting to maintain the empire. Thus, in Syro-Palestine,

Sargon II (left) and his vizier on a bas-relief at his Khorsabad palace, eighth century B.C.

several further, and successful, campaigns were undertaken: in 717, to conquer Carchemish (Isa. 10:9); in 716, to force Egypt and the Arabs to yield control of the trade routes south of Palestine (Isa. 19:23); and in 713–711, to deal twice with Palestinian rebellions led by the Philistine city of Ashdod. Judah, however, was again spared, because it refused to join Ashdod against Assyrian rule (Isa. 20).

In the same period, Sargon was also active in the north, against Urartu and its allies, and between 716 and 711 he seriously weakened this old enemy of Assyria, even as he strengthened the Assyrian presence in southeastern Turkey, building on the base established by his earlier capture of Carchemish. With the north and Syro-Palestine thus relatively stable, Sargon returned, finally, in 710 to Babylonia, intent on removing Merodach-baladan from power and making himself king of Babylonia, like his predecessors Tiglath-pileser III and Shalmaneser V. By 709, these goals were achieved, and by 707, Merodach-baladan's capital was destroyed, although the Chaldean himself remained safe with his ally, the Elamites.

Sargon's Babylonian triumph, nonetheless, was real, acknowledged by kings far and wide and nearly coinciding with his completion, in 706, of a lavish new capital in the Assyrian heartland, where all his triumphs could be celebrated. The new city, Dur-Sharrukin (modern Khorsabad), was under Sargon's rule for barely a year, for in 705 he lost his life against Tabal in southeastern Turkey, where trouble had stirred again. In the wake of Sargon's shocking death (cf. perhaps Isa. 14:4b–21), his successors abandoned Dur-Sharrukin as a royal residence, though they retained it as a headquarters for a provincial governor. ***See also*** Ashdod; Assyria, Empire of; Babylon; Samaria, District of.

P.B.M.

Sarid (sair´id), a town on the south border of Zebulun (Josh. 19:10, 12), most likely modern Tell Shadud in the Esdraelon Plain about six miles north and slightly east of Megiddo.

Sarsechim (sahr´suh-kim), the name (title?) of one of the Babylonian princes who took Jerusalem (Jer. 39:3). If it is a title it means "chief of slaves."

Satan (say´tuhn), the English transliteration of a Hebrew word whose literal meaning is "adversary." This is the basic idea associated with Satan in the OT. The figure of Satan is found in only three places in the OT, and all of these are postexilic in date (i.e., after 538 B.C.): Job 1–2; Zech. 3:1–2; and 1 Chron. 21:1.

In the first two instances (Job 1–2; Zech. 3:1–2), Satan is depicted as a member of God's court whose basic duty it was to "accuse" human beings before God. He is clearly not at this point an enemy of God and the leader of the

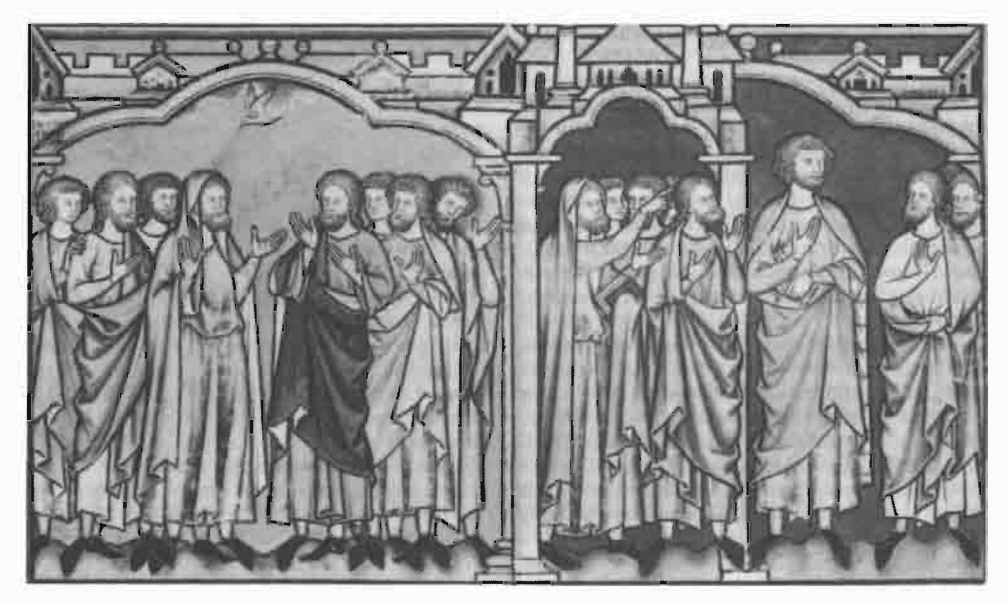
demonic forces of evil, as he becomes later. There is some question as to whether, in 1 Chron. 21:1, a specific personality is being described as in Job and Zechariah, or whether the "adversary" is to be understood here as a general tendency toward evil. In the Hebrew text, there is no definite article with the noun "Satan," and the word is probably best translated simply as "an adversary." In either case, the figure in 1 Chronicles is not yet *the* embodiment of evil. It should be noted that "the serpent" of Genesis 3 is never in the OT identified as Satan.

It is during the late postexilic period (after ca. 200 B.C.) and in the intertestamental literature that one first finds the development of the idea of Satan that is assumed in the NT writings. Probably under the influence of Persian ideology, there developed in Hebrew thought the idea of a dualism rampant in the created order—a dualism of good versus evil. There existed already the idea that God had a heavenly host, a group of messengers to carry out his work and orders. The Persians also believed in a ruler over the powers of evil, who had many servants in this realm known as demons. The Hebrews could easily understand and assimilate such thinking into their already existing ideas, but they had not yet developed any idea of a major being as a leader of the forces of evil. Thus, in the development of the religious thinking of the Jewish people, several different names were used to designate the leader of those forces hostile to God: the devil, Belial (also Beliar), Mastemah, Apollyon (meaning the "Destroyer"), Sammael, Asmodeus, or Beelzebub. Satan, however, came to be the most usual designation (in Greek, Satan was translated as "the devil"). Another interesting development took place during this period: the figure of the devil or Satan came to be identified with "the serpent" of Genesis 3.

Satan and his cohorts then came to represent the powers of evil in the universe and were even known in Jesus' time as the Kingdom of Satan, against which Jesus had come to fight and to establish the Kingdom of God (e.g., Mark 3:23–26). The demons were considered to be the cause of sickness, both physical and mental, and of many calamities of nature (e.g., storms, earthquakes); in general, they were the forces responsible for much of human sin (and therefore misery), and they were always opposed to God's purposes and God's people.

In the NT writings, Satan appears frequently, especially in the Gospels. The figure is also known by numerous other designations, among which are the devil (e.g., Matt. 4:1), the tempter (e.g., Matt. 4:3), the accuser (e.g., Rev. 12:10), the prince of demons (e.g., Luke 11:15), the ruler of this world (e.g., John 12:31), as well as certain of the proper names listed above. One of the most interesting designations is "the evil one." In fact, it is quite possible that, in the Lord's Prayer, the original meaning of the petition, "deliver us from evil," may have been, "deliver us from the evil one" (Matt. 6:13b).

In both Jewish and Christian apocalyptic writings, it is clearly affirmed that, no matter how powerful Satan may appear to be, his final overthrow by the power of God is certain (e.g., Rev. 20:1–10, where "the dragon, that ancient serpent, who is the Devil and Satan" is to be "thrown into the lake of fire and brimstone . . . and tormented day and night for ever and ever").



Much modern thought about the figure of Satan, particularly at the popular level, owes its origin to John Milton's *Paradise Lost* (1667), not to the biblical writings (e.g., the application of Isa. 14:12–15 to Satan and his "fall" from heaven). While the figure of Satan is powerful and even heroic in Milton's work, it should be remembered that Milton's Satan and the biblical figure are not always the same. ***See also*** Adversary; Angel; Apocalyptic Literature; Baal-zebub; Belial; Demon; Devil; Eschatology; Evil; Fall, The; Lucifer; Serpent; Sin. J.M.E.

satrap (say'trap), a provincial governor among the Achaemenid Persians. The word, originally Persian and taken over by the Hebrews and Greeks, occurs in the Bible only in the plural (Esther 3:12; Dan. 3:2). According to Dan. 6:1 (RSV), "It pleased Darius to set over the kingdom a hundred and twenty satraps," whereas the Greek historian Herodotus speaks of only twenty (3.89).

satyr, an imprecise translation of the Hebrew *sa'ir,* which generally means "he-goat" but sometimes has the connotation of "goat-demon" (Lev. 17:7; 2 Chron. 11:15, both in a pejorative sense; see also Isa. 13:21; 34:14).

Saul (sawl), a Benjaminite from the mountain village of Gibeah who became Israel's first king. According to biblical tradition Saul was divinely appointed in response to a popular demand for a king, but he was not long in favor with God, who rejected him for disobedience. He spent much of his reign in conflict with David, whom God had chosen as his successor.

The chief reason that Saul became king was probably his prowess as a military leader (cf. 1 Sam. 14:47–48). He seems first to have achieved regional prominence by leading a successful march against Nahash, an Ammonite king who had laid siege to the fortress of Jabesh-gilead (1 Sam. 11). This victory won Saul a base of power extending beyond Benjamin and across the Jordan into Gilead. The summary of his wars in 1 Sam. 14:47–48 also mentions campaigns against Moab, Edom, the Aramean state of Zobah, and Amalek (cf. 1 Sam. 15). Israel's primary enemy at this time, however, was Philistia. Although Saul never achieved any permanent advantage over the Philistines (cf. 1 Sam. 14:52), he did enjoy some success against

Saul being presented by Samuel to the people, who proclaim him king (1 Sam. 10: 17–24); detail from a thirteenth-century French illuminated manuscript.

them, and his kingdom offered the Israelites an alternative to Philistine sovereignty. His son Jonathan attacked the Philistine garrison in Gibeah, provoking an open revolt (1 Sam. 13:3–4). The result was a decisive Israelite victory at Michmash (1 Sam. 14), and the Philistines were temporarily excluded from the central hill-country. It is difficult to determine how much territory Saul actually controlled, but it is unlikely that his kingdom extended beyond the central hills and parts of Gilead. The incorporation of Judah and the outlying territories into Israel was probably the achievement of David.

The designation of Israel's first king is the subject of an old folktale underlying 1 Samuel 9–10, where Saul is introduced as the handsome and unusually tall son of a prominent Benjaminite named Kish. One day, while searching for some asses that belonged to his father, he entered a village in the Ephraimite hills to seek the assistance of the local seer. The man turned out to be the prophet Samuel, who anointed his surprised guest as prince, or king-designate, over Israel (1 Sam. 10:1). After this private ceremony Saul was selected in a public lottery and acclaimed king by the people (1 Sam. 10:17–27). His kingship was renewed or confirmed after his victory over the Ammonites (1 Sam. 11:14–15).

The biblical account of the origin of monarchy in Israel reflects a point of view that is suspicious of kingship. The office of king is shown to be subordinate to the divine will as mediated through the office of prophet. Thus we are told that Samuel supervised all the events that brought Saul to the throne. Moreover, when Saul failed to carry out instructions given him by Samuel, he was rejected by God (1 Sam. 13:7–14; 15:10–29), who sent Samuel to Bethlehem to anoint a new king (1 Sam. 16:1–13).

The biblical account of the latter years of Saul's reign (1 Sam. 16:14–31:13) derives for the most part from an old story of David's rise to power. Saul serves as a foil, the divinely rejected king in contrast to whom the chosen successor is eulogized. Thus we are told that when David came to the court in Gibeah, he soon surpassed the king in military prowess (cf. 1 Sam. 18:6–7) and won the loyalty of all Israel, including Saul's eldest son, Jonathan (1 Sam. 18:1–4), and his daughter Michal, who became David's wife (1 Sam. 18:20–27). Saul, now tormented by "an evil spirit from the Lord" (1 Sam. 16:14), became increasingly obsessed with jealousy and suspicion. He persecuted David relentlessly, drove him into hiding in the desert, and even pursued him there. The conflict was not resolved until Saul, defeated in a battle with the Philistines on Mount Gilboa, killed himself by falling on his own sword (1 Sam. 31:4), thus leaving the way open for David to come to the throne. ***See also*** Benjamin; David; Jonathan; King; Samuel. P.K.M.

savior, one who delivers from present and/or future danger or distress. The primary usage of the word "savior" in the OT is in reference to judges and other leaders raised up by God to bring deliverance to Israel in time of national crisis (e.g., Neh. 9:27). It was also used of God, who employed these human saviors as his agents. In Second Isaiah it became a recognized title for God (e.g., Isa. 43:3) in connection with

the deliverance of Israel during the return from the Exile. This usage represents a turning point in the history of the word, since from then on salvation by God acquired more than political and military significance and prepared the way for its NT use in reference to the end-time salvation brought by Christ.

Surprisingly, the word is rarely found in the earlier NT writings (Phil. 3:20; Luke 1:47; 2:11; Acts 5:31; 13:23), where it is used in the sense of end-time deliverer. The other instances all occur in later NT writings: once in the Deutero-Paulines (Eph. 5:23), six times in Jude and 2 Peter (Jude 25; 2 Pet. 1:1, 11; 2:20; 3:2, 18), and twice in the Johannine writings (John 4:42; 1 John 4:14) in the unique phrase "savior of the world." The term also occurs ten times in the Pastorals (1 Tim. 1:1; 2:3; 4:10; 2 Tim. 1:10; Titus 1:3, 4; 2:10, 13; 3:4, 6).

In the Greco-Roman world the title "savior" was frequently used of gods, not in the biblical sense of historical or end-time deliverer, but as the source of present, material benefits such as health, peace, and prosperity. The combined title "god and savior," or "god-savior," was very common.

"Savior" also had political connotations. Ptolemy I was called "savior" in the same sense as that of another title, "benefactor" (cf. Luke 22:25). With the adoption of the imperial cultus in the Eastern Roman Empire, the emperors assumed the title "god and savior." This imperial usage may explain why the NT was initially reluctant to use the title "savior" and why it became common only in the second century. The true savior is not Caesar but Christ (four times in the Pastorals). Here it is no longer used in the sense of end-time deliverer but of Christ as the bringer of present, personal benefits such as cleansing from sin. R.H.F.

savory, pleasing to the taste. Isaac asked his son, Esau, to make for him "savory food" from game so that he could give him a blessing (Gen. 27:3–4). Jacob, however, urged by his mother, Rebekah, went to his father disguised as Esau, offered him a substitute savory dish made of goat meat and received the blessing (27:8–14, 17, 25). This meal should not be understood as a meal that confirms a covenant (cf. 31:54), but simply as a family meal deriving from Isaac's taste for game (25:28).

savour (KJV), in the OT, a pleasing odor. Offerings burned on the altar are often described as being a "pleasing odor to the Lord." This terminology occurs specifically with the burnt offering (which was entirely burned on the altar; cf. Lev. 1:9, 13, 17), the cereal offering (2:2, 9, 12), the fat parts of the well-being offering (3:5, 16), and the fat parts of the consecration offering and accompanying bread which was burned on the altar (Exod. 29:25). It is used once of the fat parts of the purification offering (Lev. 4:31). Num. 15:24, however, when describing a burnt offering and purification offering does not apply the term to the fat parts. This indicates that calling the burning of fat pieces of the purification offering a "pleasing odor" was not originally part of the way that sacrifice was understood. In a few cases "a pleasing odor" is used of the burnt offering plus the cereal offering and libation that accompany it (cf. Num. 15:7; 28:8).

Ezekiel uses the phrase "a pleasing odor" regarding illicit offerings the Israelites make to idols (6:13; 16:19; 20:28). Once he uses it of God's accepting the people as "a pleasing odor," perhaps meaning accepting them when they make proper offerings to him (20:41). ***See also*** Savory; Worship. D.P.W.

scall, a term in the KJV where the RSV has "itch," in Lev. 12:30 and numerous verses that follow.

scapegoat. ***See*** Atonement, Day of; Azazel.

scarlet, bright red color extracted from an insect, the *Caccus ilicis,* and used for dyeing fabric and leather. The Hebrew for scarlet was *senî* or *tola'ath,* used separately or in combination; the latter's basic meaning is "worm," referring to the insect producing the color. In Isa. 1:11 the two Hebrew words are used in parallelism, "scarlet" and "crimson," in this case referring to the blood-red guilt of the sinner as opposed to whiteness of innocence.

Symbolic of honor and riches, scarlet was used extensively for the tabernacle furnishings (Num. 4:8), often in combination with blue and purple (Exod. 26:1). To be clothed in scarlet was prized (2 Sam. 1:24; Prov. 31:21), and, mockingly, Jesus was clothed in scarlet at his trial (Matt. 27:28). The scarlet thread (Gen. 38:28) and the cord (Josh. 2:18) drew particular attention to the firstborn of Tamar and the home of the harlot. N.L.L.

scepter, a king's elaborate ceremonial staff (Ps. 45:6). Originally a club that could also be used for digging (Num. 21:18), the scepter appeared frequently in ancient art and scripture as royal regalia with an established role in protocol (Amos 1:5, 8; Isa. 14:5; Esther 4:11; 5:2; 8:4). Israel in the wilderness period was the scepter (i.e., constituted the sovereignty) of God (Num. 24:17). Judah acquired similar status (Gen. 49:10; Ps. 60:7; Ezek. 19:11), as the origin of the Davidic king, the mighty scepter God sends forth from Zion. By metonymy, "scepter" might stand for any national sovereignty: e.g., Moab (Jer. 48:17) or Egypt (Zech. 10:11). The single NT reference to scepter (Heb. 1:8) is a variation of Ps. 45:6. R.B.

Sceva (see'vuh), a Jewish high priest and the father of seven Jewish exorcists who attempted to imitate Paul's use of the name of Jesus in

their exorcising of evil spirits, according to Acts 19:11–20. This unauthorized use of the name had unanticipated negative consequences when, rather than exorcising a spirit, the exorcists themselves were overcome by the spirit-possessed man. The name Sceva does not appear in known lists of the Jewish high priests of the era. The story must be seen in the context of first-century beliefs in demon possession and as an indication of the triumph of the Christian gospel (see Acts 19:17–20). ***See also*** Magic and Divination. A.J.M.

schism (from the Gk. for "tear" or "rip"), a formal division within a religious body. The word occurs once in the NT (1 Cor. 12:25) where Paul is speaking of the body of Christ and says that God has given greater honor to the inferior part "that there may be no discord [lit. 'schism'] in the body." The word is first used in its technical sense of a separation from the unity of the church in the writings of the second-century church father Irenaeus. In current theology Roman Catholics use schism for groups out of communion with the pope, in contrast to heresy which involves doctrinal differences. Protestants and Anglicans tend to use it of all divisions among Christian groups. ***See also*** Heresy. A.J.S.

school, an institution outside the home in which teachers instruct students. In antiquity many wealthy families provided tutors at home for their children and all families passed on occupational skills, cultural information, and values to their children, but these wider educational processes must be distinguished from school. In antiquity school also referred to the groups who had a way of thought and life derived from a philosopher or religious leader and who promoted their way of life by gathering and training disciples.

Schooling in the OT: The OT gives little direct information about schools, but the existence of schools may be deduced from the activities of the monarchy and priests and from Near Eastern parallels. The priests had to preside over a complex ritual, teach Israel's traditions, and instruct the people who came to the Temple, so it is highly likely that priests were trained at the Temple. Even at an early date (twelfth century B.C.), Samuel goes to Eli for an apprenticeship at Shiloh (1 Sam 1:24–28). In a later period Jehoshaphat is pictured as sending the Levites and priests to teach the book of the Law of the Lord in the cities (2 Chron. 17:7–9). The kings, nobles, and high officials of the complex state under the monarchy (1025–587 B.C.) also needed training. When Solomon's son Rehoboam became king he consulted with the young men who had grown up with him (1 Kings 12:8–10) and one of Solomon's enemies, Hadad, married an Egyptian and had his son Genubath raised in Pharaoh's house among the sons of Pharaoh (1 Kings 11:20). The seventy sons of Ahab were raised by elders who were their guardians (2 Kings 10:6). Chronicles attributes to Jonathan, David's uncle, and to Jehiel the care of the king's sons. Though none of these texts speaks directly of an institutional school, they demonstrate the need for organized training of the leaders of Israel.

Lintel from a third-century school at El-Al, near Golan, with the inscription, "This is the school of Eliezer Ha-Rapad."

Israel's position as an active participant in diplomacy and trade in the first millennium B.C. demanded that the leaders and numerous officials and bureaucrats be educated to read, write, and carry on business according to law and accepted form. Israel's calendar, taxes, and economics demanded a knowledge of mathematics and the numerous traditions that were handed on demanded written records, even in a society that still had a strong oral base. In addition, the OT often refers to writing, to the chronicles that lie behind the books of Kings, to the duty of reading the Law yearly (Deut. 31:12–13), and to the duty to write the law on doorposts of the house (Deut. 6:9). At least some people were assumed to be able to read and write, from Moses on Sinai to an anonymous boy from Succoth (Judg. 8:14) to the king's Scribe, a high official during the monarchy (2 Kings 22:3). Prophets (Elisha, Isaiah, Jeremiah) also had disciples who preserved their traditions orally and in writing; these schools of prophets may have been more like schools of thought and ways of life than institutional schools, but at some point literary training and activity took place. Finally, the OT itself bears witness to intense literary activity and reflection on previous written traditions from the Exile (586 B.C.) on.

Possible Methods of Instruction: The OT reveals almost nothing about the content of instruction in school. Isaiah 28:10 and 13 have a pattern that may match the memorization that went on in school ("precept upon precept . . . line upon line . . . here a little . . . ") and some claim that the book of Proverbs is a school text. Archaeological discoveries in Palestine and the rest of the Near East reveal that students learning how to write copied exercises. (A calendar found at Gezer with the agricultural seasons on it may be

a student's exercise.) More advanced students copied classics and documents such as letters and contracts. Students being trained for high office learned diplomacy, economics, and government because the scribal class in the OT and the Near East was the bureaucracy of government. On the local level scribes wrote documents and kept records; on the higher level they were responsible officials of the government, working for the king. Such officials had to be recruited and trained in schools. It is a reasonable hypothesis that fortified cities and regional capitals had either scribes or priests able to teach the young. We know nothing specific about such schools, but following the Canaanite example, they were probably simple rooms in a building. Proverbs speaks of wisdom calling out to students in the city gate (Prov. 8:3), but this is not a clear reference to a school. Most probably the king's palace and the Temple saw to the education of the top officials and chief priests.

Ezra the scribe (fifth century B.C.) was a high official of the Persian government charged to see that the law of God was known and observed. Though the law was read and explained to the people in Nehemiah 8, we have no evidence for schools. The book of Ecclesiasticus (early second century B.C.) has praise for the scribe (38:24–39:11) who knows God's law and is an advisor to rulers. It mentions a school in the concluding hymn (51:23), though it is unclear whether the speaker is Wisdom referring to her school metaphorically, or Ben Sira, the author, referring to his school in Jerusalem. Ecclesiasticus also mentions paying for instruction (51:28). The Ptolemaic and Syriac empires, of which Israel was a part from 332 B.C., and the Roman Empire, which succeeded it in 63 B.C., were highly literate and had well-developed institutions for instruction of youth. It is very probable that Jews of this period were influenced by this cultural milieu and had comparable educational institutions. The Essene community at Qumran, which had a strong priestly component and which produced the Dead Sea Scrolls, was highly literate, and Josephus, who was a first-century priest, describes his education, but not the schools he had contact with.

The rabbis who emerged as the leaders of Judaism after A.D. 70 and who valued oral tradition were nevertheless highly literate because they read and studied the text of the Bible and eventually produced a massive corpus of written traditions in the Talmuds and midrashim (i.e., commentaries). A late tradition in the Babylonian Talmud (*b. B. Bat.* 21a) ascribes the founding of schools throughout Israel to Joshua ben Gamala, a first-century figure known also from Josephus. The Palestinian Talmud claims that there were 480 synagogues in Jerusalem, each with a school attached to it. *Abot* 5:21, a tractate in the Mishnah, gives a schematized and ideal curriculum of study with the ages at which students should progress from reading and writing through studying Scripture, Mishnah, and Talmud. None of these texts provides historical data for OT or NT times, but they show where Jewish instruction arrived in later centuries. The study of the Torah became the center not only of education, but of Jewish piety.

`IT Evidence: The NT tells us nothing directly about schools. In Luke Jesus is portrayed as reading from Scripture in the synagogue (4:16–20) but it is not certain that Luke gives a historically reliable portrait. We have no evidence that Jesus wrote anything as part of his teaching. He is portrayed as the oral teacher par excellence. John 8:6 says that Jesus wrote on the ground as part of his interaction with the crowd that wished him to condemn an adulteress, but it does not say that he wrote letters or words. Paul wrote greetings in his own hand in his letters to his churches (e.g., Gal. 6:11–18; cf. Col. 4:18) and had been educated in Jerusalem with Gamaliel but he does not describe the nature of his schooling. The early Christian community quickly set its traditions in writing in a variety of works inside and outside the NT. Sociological studies of the Christian community show that Christians were drawn from all classes of society, including the higher classes of the Roman Empire who received an excellent education in a variety of literary and philosophical schools. The majority of people in ancient society, including the majority of Christians, were illiterate, but schools existed for those who had opportunity to attend and the effect of the literate class on society at large as well as Judaism and Christianity was significant. ***See also*** Education; Mishnah; Scribe; Talmud; Teaching.

A.J.S.

science, an organized body of knowledge. The word is found in the KJV to denote "knowledge," though not in the modern sense of "science" (Dan. 1:4; 1 Tim. 6:20).

scorpion, any arachnid of the order Scorpionida of which a dozen species are known in Palestine, most of which are the yellow variety *Buthus quinquestriatus.* They are mainly nocturnal and carry a stinger at the end of the tail by which they paralyze food and defend themselves. They are symbols of desolate danger (Deut. 8:15), of extremely severe treatment (1 Kings 12:11, 14; 2 Chron. 10:11, 14), of the most hazardous surroundings (Ezek. 2:6), and of excessive pain and torture (Rev. 9:3, 5, 10). They symbolize the powers of evil (Luke 10:19) and Jesus uses them as a symbol of the paternal mistreatment no caring father would do to his child (Luke 11:12). R.S.B.

scourge, whip or lash made of leather thongs attached to a handle (John 2:15). As a metaphor, it refers to any punishment (at the hands of enemies or natural disaster) visited on the people

by God (Josh. 23:13; Isa. 10:26; 28:15, 18; Job 9:23).

The word often refers to the use of scourging to punish criminals. Legally, a "milder" form of flogging was used by magistrates as a warning to those responsible for disorder. Josephus (*War* 2.13.7) reports that authorities in Caesarea quelled rioting between Jews and Greeks by catching those responsible and punishing them "with stripes and bonds." Paul faced such punishment on several occasions at the hands of both Jewish and Roman authorities (2 Cor. 11:24–25; Acts 16:22–25; 21:24).

A more severe beating was administered in connection with other punishments. It could sometimes lead to the death of the condemned person. Livy reports that such lashing preceded crucifixion (*History* 22.13.9; 28.37.3). In Luke 23:14–22 Pilate suggests that Jesus be given the lighter beating as a warning. Mark 15:15 and Matt. 27:26 report that Jesus received the severe beating as one who had been condemned to death. ***See also*** Cross; Trial of Jesus, The. P.P.

scribe, one capable of reading and writing, usually with competence in some area such as law, economics, or the like. The word derives from the Latin root for "write" and translates Hebrew and Greek words with similar etymologies. In the ancient Near East the designation "scribe" covered a variety of offices from that of the local scribe who copied documents and contracts for the people to government officials invested with serious responsibilities. Like the modern secretary, the scribe was generally concerned with written records, bureaucracy, and administration. Scribes were common to Egypt, Mesopotamia, Israel, and other countries of the Near East. The book of Proverbs contains international wisdom traditions that were developed by the scribal class in many countries; literature from other countries shows that the scribal class engaged in a vigorous and complex educational effort to continue its functions.

Egyptian royal scribes, New Kingdom period.

In the OT the scribe first appears as a muster officer (Judg. 5:14). In the monarchical period (eleventh to tenth centuries B.C.) the scribe was a high cabinet officer concerned with finance, policy, and administration (2 Kings 22; Jer. 36:10). Jeremiah's associate, Baruch, who recorded his words, was also a scribe (Jer. 36:32). In postexilic times (sixth century B.C.) Ezra the scribe was sent by the Persian king to instruct and guide the inhabitants of Judea. He was both an official of the Persian Empire and learned in the laws and customs of Israel (Ezra 7). In the early second century B.C. Ben Sira praises the scribe for his learning and also his involvement in affairs of government (Ecclus. 38:24–39:11). In the Maccabean period (167–63 B.C.) the learned Hasideans who sued Alcimus and Bacchides for peace (1 Macc. 7:12–13) and Eleazar, the prominent leader who was martyred (2 Macc. 6:18), are all called scribes, with the probable implication that they were learned in the Mosaic law. The term does not seem to denote a group with particular beliefs or a set political program, but rather learned men of whatever party or persuasion.

In the NT the scribes appear alone occasionally and along with other Jewish groups often. In almost all cases they are opponents of Jesus (but see Mark 12:28–34). In Mark the scribes most often appear in association with the high priests and elders (11:27) and the bulk of their appearances are in conjunction with the death of Jesus. Similarly, in the early chapters of Acts the scribes and elders are opponents of Christianity (4:5; 6:12). In Matthew and Luke the scribes are also paired with the Pharisees in questioning Jesus. Thus the scribes are seen both as part of the leadership and also as a learned class. Two passages (Mark 2:16; Acts 23:9) speak of scribes of the Pharisees, indicating that scribes could belong to other groups within Judaism.

Scribal traditions continued on into rabbinic Judaism, where the emphasis on study, knowledge of the law, and learned argument probably derived from the earlier learned class. Our sources tell us little about scribal training, but literacy and knowledge of the law demanded education, active teaching, the ability to interpret Scripture, and experience in judging individual cases. The scope of scribal authority at different periods and locations remains unclear, but they were probably influential in the Temple and at many levels of government. ***See also*** Education; School; Teaching; Town Clerk. A.J.S.

scrip. ***See*** Bag.

scripts. ***See*** Writing.

scripture (from the Lat., "writing"), a document or collection of documents containing material that is highly esteemed in the religious community accepting the document(s). Such documents do not stand by themselves but are

preserved and interpreted within ongoing religious communities that also have living traditions about worship, belief, and behavior. In late antiquity, Jews and Christians were not alone in esteeming written records of their religion. Greeks, Romans, Persians, and Egyptians all preserved and valued written documents such as hymns, oracles, myths, and revelations. In Judaism and Christianity, the term "Scripture" eventually came to be restricted to those writings listed in an approved canon. It is not always clear whether references in the NT speak of "Scripture" in the technical sense or simply of "writings" (see, e.g., Matt. 21:42; John 2:22; 19:24; Acts 8:32; Rom. 1:2; 1 Cor. 15:3–4; Gal. 4:30; 2 Tim. 3:16; James 2:23; 1 Pet. 2:6; 2 Pet. 3:16). ***See also*** Bible; Canon; Inspiration; New Testament; Old Testament; Revelation. L.W.C.

scroll (Heb. *megillah*), a roll of papyrus or specially prepared leather used for writing on in antiquity (see Jer. 36). Papyrus scrolls were imported from Egypt, where they had been manufactured since at least 3000 B.C. To make a papyrus scroll even strips cut from the pith of the papyrus plant were laid side by side in horizontal and vertical rows, forming the front and back side of the sheet, respectively. Water and pressure were applied to make the strips adhere. After drying, the sheets were rubbed smooth with shells or stones. Leather scrolls were made of sheep, goat, or calf skin that had been dehaired, scraped, washed, stretched on a frame, and dried. The hair side, on which the writing was done, was scraped smooth and rubbed with a pumice stone. Rectangles of prepared leather were stitched together to make a scroll. Vertical and horizontal guide lines were traced with a dry point and a straight edge. Black ink was made from carbon soot mixed with water and gum, red ink from red ocher or iron oxide. While writing could be erased from papyrus with water (Num. 5:23), errors on leather had to be marked out or scraped off. Scribes wrote with pens made from rushes, frayed at the end, and from the Hellenistic period on (after 63 B.C.), with pointed reed pens split at the end. Equipment was carried in a case tied to the scribe's waist (Ezek. 9:2). Whether papyrus or leather scrolls were customarily used for writing biblical books in the pre-exilic period (prior to 586 B.C.) is disputed, but at least by the Hellenistic period leather was the preferred material (e.g., the Dead Sea Scrolls), and was required by rabbinic tradition (*Sop.* 1:1–4). References to scrolls and writing in the Bible include Deut. 28:58; Josh. 1:8; Ps. 45:1; Isa. 8:1; Jer. 8:8; 25:13; Ezek. 2:9–10; Rev. 5:1. ***See also*** Scrolls, The Dead Sea; Writing

C.A.N.

The Dead Sea Scrolls

IN A BROAD SENSE, the Dead Sea Scrolls (DSS) are scrolls and fragments discovered roughly between 1947 and 1956 at seven sites along the northwest shore of the Dead Sea (eleven caves near Wadi Qumran, three caves of Wadi Murabba'at, at caves of Naḥal Ḥever, Naḥal Ṣe'elim, and Naḥal Mihras, and at Khirbet Mird and Masada); related to the DSS in this wide sense are medieval copies of Qumran texts found in 1896 in a genizah of a synagogue in Old Cairo, Egypt. In a narrow sense, however, DSS are restricted to the Qumran scrolls and fragments, the most important of the finds.

Major discoveries are the following: *Qumran Cave One:* 7 major scrolls (2 copies of Isaiah, one complete and one fragmentary [1QIsa[a,b]]; *Manual of Discipline* [1QS]; *War Scroll* [1QM]; *Thanksgiving Hymns* [1QH]; *Genesis Apocryphon* [1QapGen]; *Pesher* [Heb., "commentary "] *on Habakkuk* [1QpHab]) and fragments of 72 other texts (15 biblical and 57 nonbiblical). *Qumran Cave Two:* 33 fragmentary texts (18 biblical and 15 nonbiblical). *Qumran Cave Three:* 14 fragmentary texts (3 biblical and 11 nonbiblical) and the Copper Plaque [3Q15], a record of buried treasure). *Qumran Cave Four:* the most important cave with no complete scroll but only fragments (close to 40,000), which have constituted a giant jigsaw puzzle for scholars; to date, 575 texts have been identified (157 biblical texts, 13 *pesharim* ["commentaries"] on quoted parts of the OT, and 405 nonbiblical documents including some sectarian texts, some Semitic originals of previously known Jewish intertestamental literature, and many previously unknown Hebrew and Aramaic literary texts). *Qumran Cave Five:* 25 fragmentary texts (8 biblical and 17 nonbiblical). *Qumran Cave Six:* 31 fragmentary texts (7 biblical and 24 nonbiblical). *Qumran Cave Seven:* 19 fragmentary texts, all written in Greek (2 are identified: Exod. 28:4–7 and Bar. 6:43–44; the others are tiny and not identified with certainty; on the basis of new photographs made by the Division of Identification and Forensic Science of the Israel National Police, 7Q5 is said by some Spanish, German, and British investigators to be a fragment of Mark 6:52–53). *Qumran Cave Eight:* 5 fragmentary texts (4 biblical and 1 nonbiblical). *Qumran Cave Nine:* a lone papyrus fragment. *Qumran Cave Ten:* an inscribed potsherd. *Qumran Cave Eleven:* 25 texts, all fragmentary but a few of considerable size (10 biblical, 8 sectarian, 2 apocryphal, and 5 unidentified; the most important: *Psalms*[a], *Temple Scroll*[a,b] [11QTemple], *Targum of Job* [11QtgJob]). The texts from Caves One through Three and Five through Ten have been fully published, as have the majority from Cave Eleven, but approximately fifty percent of those from Cave Four, of varying size and importance, still await publication (since 1952!).

The Qumran texts are dated roughly between the end of the third century B.C. and A.D. 68 (year of the destruction of the community center at Qumran). These dates are palaeographic estimates (with a mar-

gin of error of plus or minus fifty years), but a representative sampling of them has been confirmed by radiocarbon dating tests carried out in Zurich in 1991. The Hebrew and Aramaic documents were written in four basic scripts: Archaic Script (last quarter of the third century to 150 B.C.); Hasmonean (150–50 B.C.); Herodian (50 B.C.–A.D. 40); and Ornamental (mid-first century A.D. on), a form also used in the Murabba'at texts. The majority of the Qumran texts have been copied in the Hasmonean and Herodian scripts, as have those of Masada. The Hebrew, Aramaic, and Greek texts of Murabba'at date roughly from between the two Jewish revolts against Rome (A.D. 66–70 and 132–35). According to preliminary reports, the texts from Ḥever, Ṣe'elim, and Mihras come from the same period; only some of them have been published. Khirbet Mird texts (from a Christian monastery) are of a later date (fifth–eighth centuries A.D.); Arabic texts and a few Christian Palestinian Aramaic fragments found there have been published. The texts from this site are really unrelated to the others.

The Qumran texts, "the greatest manuscript discovery in modern times" (W. F. Albright), are important for the light they shed on four areas: languages of Palestine in the first centuries B.C. and A.D.; Palestinian Judaism before and at the beginning of the Christian era; the transmission of the OT text in the same period; and the Palestinian Jewish background of NT writings.

Languages of Palestine in the First Centuries B.C. and A.D.: Nineteen Greek texts were found in Cave Seven, and a few come from Cave Four (Greek OT texts). Apart from these, the remainder of the Qumran texts were composed in Hebrew (the majority) or Aramaic. This newly recovered Qumran Hebrew is related to the late form of postexilic biblical Hebrew; it is not yet the same as Mishnaic Hebrew, but in

The first page of the *Thanksgiving Hymns* scroll, which is a copy of the Essene community's prayer book; Qumran Cave One.

Fragment of a scroll found at Qumran (1 *Q Dan.*[a]); it preserves portions of Daniel 1 and 2.

transition to the latter. Qumran Hebrew is used for the vast majority of the sectarian literature (rule books, prayer books, doctrinal writings) and seemingly represents an attempt on the part of the sect to restore to active use the holy language of old. Before the discovery of the Qumran scrolls, Aramaic, which was probably the language commonly used in Palestine at that time, was poorly documented, being preserved only in a few inscriptions on ossuaries and tombs. Now it is richly attested and revealed to be a good example of Middle Aramaic, in transition between Official and Biblical Aramaic of the fifth to third centuries B.C. and that of the Targums and rabbinic writings of the third to sixth centuries A.D. In such Aramaic texts, we have now good examples of the kind of Aramaic that Jesus of Nazareth and his followers in Palestine would have spoken.

Palestinian Judaism: The Jewish historian Josephus mentions three kinds or "sects" of Palestinian Jews in his day: Pharisees, Sadducees, and Essenes (sometimes adding even a fourth, Zealots). He devotes his longest description to the Essenes, a group that he admired and whose life he personally attempted to live but eventually renounced. Essenes are also known to us from the Roman writer Pliny the Elder, the Jewish philosopher Philo of Alexandria (who relates them to the Therapeutae in Egypt), the Greek orator Dio Chrysostom of Prusa, and the Christians Hegesippus and Hippolytus of Rome. Even though what is learned from the DSS about the Qumran community does not agree in every detail with such ancient descriptions, especially that of Josephus, most modern scholars (beginning with E. L. Sukenik and A. Dupont-Sommer) have identified the Qumran community with the Essenes. The Qumran scrolls would represent, then, the literature either composed by this Jewish sect or used by it, members of which lived in Jerusalem near the "Gate of the Essenes," in towns and villages throughout Palestine, and especially in a desert retreat at what is now Khirbet Qumran, the only place that corresponds to Pliny's location of them on the northwest shore of the Dead Sea. Among the sectarian writings of Qumran there is an almost complete copy of a rule book (1QS) and ten fragmentary copies of it from Cave Four. It bears witness to a mode of communal life that the Essenes and their candidates or

novices were to lead. This rule differs from another, previously known rule book, the *Damascus Document* (CD), found in the Cairo genizah in 1896, extensive fragments of which came to light in Qumran Caves Four, Five, and Six. How to relate these two rule books of the sect is a major problem of interpretation today. The latter rule (CD) may describe the mode of life of Essenes who dwelled elsewhere than at Qumran, in "camps" of which it makes frequent mention, and possibly even reflects an earlier state of the sect's development. It contains enigmatic references to the history and prehistory of the sect, which are not easy to interpret. From Cave One have also come a copy of the community's prayer book (1QH) and a text describing preparations for an eschatological war (1QM), which reveals the sect's belief that God and his angels would join the "sons of light" (the sect) to wipe out "the sons of darkness" (its opponents) and all their evil ways. Fragmentary copies of both texts were also found in Cave Four but are only partially published. From Cave Eleven have come the community's psalter (or possibly another prayer book), containing biblical psalms in a different order mixed with nonbiblical writings (some clearly sectarian), and the lengthy *Temple Scroll* (11QTemple). The latter recasts much of pentateuchal legislation in a new form, putting it on the lips of God who speaks in the first-person singular; it clearly was intended to be a Second Torah. It may, however, stem from a pre-Essene Jewish setting and reflect a stage of thinking among Jews who eventually became part of the Essene movement. The Scroll also describes in detail how the Jerusalem Temple should be rebuilt. Lastly, this sect's mode of interpreting Scripture is seen not only in its *pesharim* (verse-by-verse "commentaries" on passages from the Prophets and Psalms) but also in isolated citations of the OT in its own sectarian writings. This mode is quite different from anything in the later writings of the rabbis (in the third to fifth centuries A.D.). We also learn from the Qumran texts of the messianic expectations of this sect: their awaiting of three figures, a prophet like Moses (cf. Deut. 18:15–18), a Messiah of Israel (Davidic), and a Messiah of Aaron (priestly). Recently published is 4QMMT (*Miqsat ma ase hattorah*, "Collection of works of the law"), a halakhic letter written by members of the Qumran sect to opponents who did not agree with them, seemingly Pharisees. This text clearly marks off the Qumran group as a special group of Jews. Because the collection of the "works of the law," on which the letter insists, allegedly reflects a dispute in rabbinic writings between Pharisees and *Seduqim* (or *Sedoqim*), some scholars have tried to identify the Qumran sect with Sadducees. But that attempt has convinced only a few, especially since the sectarians speak of themselves in the Qumran texts as *bene Sadoq*, "sons of Zadok." The Qumran sect was founded by members of the priestly line of Zadok; hence their name, and the rabbinic use of *Seduqim* could well refer to these Essene sons of Zadok. So the identification of the Qumran sect with the Essenes remains still the best hypothetical explanation. It is important to realize, however, that not all of the Qumran texts are sectarian, i.e., composed by members of the sect and reflecting tenets and practices of the community of Jews who lived at Khirbet Qumran. Many belong to a common Jewish literary heritage often called "intertestamental" literature and were read and used by members of the Qumran community. Attempts have been

made at times to deny that an Essene community ever lived at Khirbet Qumran, to maintain that the site was rather a Herodian and later a Roman fort, and to explain that the texts discovered in the caves were really brought from Jerusalem libraries prior to the destruction of the city (A.D. 70) and deposited there for safekeeping, as the Copper Plaque (3Q15) might attest. But such attempts misinterpret the archaeological data, the character of the Qumran cemetery, and the unmistakable "Qumran system" of copying texts that characterizes many of the sectarian documents. The Jerusalem origin of the Qumran texts fails to explain the relation of the caves to the common center and the pronounced sectarian character of many of the scrolls. If some scrolls did come from Jerusalem, then they were brought there by sectarian confreres who may have dwelled in Jerusalem near the Gate of the Essenes, but that is no reason to deny the existence of an Essene community at Qumran.

Transmission of the OT Text: Prior to the discovery of the DSS, the oldest copy of an extended portion of the Hebrew Bible was dated A.D. 895 (a codex of the Former and Latter Prophets, from the Cairo genizah). In Cave One, however, a full text of Isaiah was found, dated palaeographically and by radiocarbon to 100 B.C. The differences between the Qumran text and the medieval Hebrew Masoretic Text (MT), separated in date by a thousand years, amounted to little more than a dozen variants and a host of insignificant spelling differences, which have proved to be a gold mine for the study of first-century B.C. Palestinian Hebrew. This illustrates, in general, the care with which the Isaiah text had been transmitted over the centuries. When Cave Four was discovered, however, a different picture appeared. For certain books of the OT, especially Samuel, Jeremiah, and Exodus, there were copies of the Hebrew text from pre-Christian times in a form differing from the medieval Hebrew MT. In some cases, these Qumran biblical texts were closer to the Greek Septuagint (LXX); in others, closer to the Samaritan Pentateuch. Hence, these differing ancient text forms deserve far greater attention than they have received in the past. The LXX, for example, is now seen not just as a poor, tendentious translation of the Hebrew but rather as a

Hebrew copper plaques rolled up as scrolls found at Qumran Cave Three.

witness to a different pre-Christian Hebrew text form. Moreover, some scholars hold that there were three local text types in pre-Christian times: a "Proto-Masoretic" form of the Pentateuch known in Babylonia, close to the MT; a form known in Palestine, close to the Samaritan Pentateuch; and a form of OT books known in Egypt, related to the LXX. Eventually (probably between A.D. 70 and 132) in Palestine, a process of standardization set in, which preferred one form of the text, a set spelling, and even a definite shape of writing, which developed into the medieval copies of the MT.

Palestinian Jewish Background of the NT: So far, in the nonbiblical DSS, which are thoroughly Jewish writings from the last century and a half B.C. and from the early part of the first century A.D., there is no mention of John the Baptist, Jesus, or early Christians. At times, attempts have been made to interpret persons or details in Qumran texts as early Jewish-Christian or as covert references to John or Jesus. But they are tendentious claims that disregard archaeological data and the palaeographic and radiocarbon datings. Many of the tenets and practices of the Essene community, however, as now known from Qumran texts, shed interesting light on NT writings and provide firsthand evidence of the Palestinian Jewish matrix of early Christianity. This matrix was often neglected in the past by interpreters who, realizing that the books of the NT were written in Greek and composed in areas of the eastern Mediterranean Greco-Roman world far from Palestine, exaggerated their Hellenistic context and background. Now the Qumran texts, both sectarian and intertestamental, illumine that Palestinian Jewish world in which the early Christian movement was born and from which its Scriptures, the NT, are ultimately derived. As an example of the new light shed on NT writings from the DSS, the mode of quoting the OT to illustrate something in the NT closely resembles the mode of quotation in many of the isolated citations of the OT in Qumran sectarian texts. Moreover, the formulas introducing such quotations in the NT are far closer to Qumran introductory formulas than to those in the Mishnah (the earliest part of rabbinic writings). Again, "sons of light," a designation for Christians (Luke 16:8; John 12:36; 1 Thess. 5:5), has no OT background and is not found in later Jewish rabbinic writings, but the same phrase occurs, with its counterpart "sons of darkness," in the *Manual of Discipline* (1QS 1:9) and the *War Scroll* (1QM 1:1). Furthermore, light has been shed on several titles used of Jesus in the NT ("Son of God," "Son of man," "Lord," "Prophet," and "Messiah"). Hence, such titles were not the product of the hellenization of the Christian gospel as it was carried by early missionaries from Palestine into the Greco-Roman world, as some had tried to maintain. Indeed, one instance is remarkably close to Luke 1:32, 35: it reads, "[X, an unknown person] shall also be great upon the earth, [and all peoples sh]all make [peace with him]; and they shall all serve [him, (for)] he shall be called [son of] the [gr]eat [God], and by his name shall he be named. He shall be hailed (as) son of God, and they shall call him son of the Most High" (4Q246 1:7–2:1). Other significant parallels have been found to many items and expressions in the Gospels of Matthew and John, the Pauline corpus, and the Letter to the Hebrews. Though there are many beatitudes in the OT and some of them are even paired, there is nothing like the collection of beatitudes that Matt. 5:3–11 and

Luke 6:20–22 put on the lips of Jesus. Such a literary form, a collection of beatitudes, has now turned up in 4Q525, which records five (perhaps more, since the text is fragmentary) macarisms ("blesseds") uttered over the one who pursues wisdom. Moreover, the Essene teaching on justification by God's mercy (1QS 11:2–3, 12–15) is now seen as a transitional mode between OT teaching about righteousness and Paul's doctrine of justification by grace through faith. In particular, the Pauline slogan "the works of the law" (Gal. 2:16; Rom. 3:28), a phrase never found in the OT or in later rabbinic writings, is well attested in Qumran texts (4QFlor 1–2 i 7; the title of 4QMMT). Again, the function of *episkopos* (Gk., "bishop," literally, "overseer") in the Christian community (Titus 1:7) may owe some dependence to the superior of the Qumran community, called *mebaqqer*, "overseer" (1QS 6:12, 20). Further, the description of Melchizedek and his relation to Jesus the heavenly high priest in Heb. 7:1–3 find an enlightening background in the *Melchizedek* text (11QMelch). Lastly, whereas the origins of Christian monasticism were formerly traced to the Christian fathers of the Egyptian desert, the DSS, in agreement with Josephus's description of the Essenes, reveal this Jewish sect as an ascetic community, at least partially celibate, living a strict common life of poverty and obedience. In effect, this provides a far more intelligible matrix for early Christian monasticism than the later Egyptian fathers.

sculpture, the art of carving or modeling in relief or in the round. The second commandment's prohibition of graven (carved) images (Exod. 20:4) is thought to have inhibited development of this art among the Hebrews. The sculpture known to us from OT Scriptures and from archaeology attests dependence on foreign (especially Phoenician) models and artisans, e.g., the carved cedar beams and panels of Solomon's Temple, with their motifs of palms, pomegranates, and cherubim, and the carved ivory inlays discovered in Samaria (cf. Amos 6:4). While most standing images were understood as idols representing foreign gods (including Aaron's golden calf [Exod. 32] and Jeroboam's calves [1 Kings 12:28–30]), the cherubim in the inner sanctuary of the Temple (1 Kings 6:23–28) were a notable exception. The "sculptured stones" near Gilgal (Judg. 3:19, 26) may represent memorial stones or carved images in an open-air sanctuary (cf. Josh. 2:20). ***See also*** Cherub; Idol; Ivory; Temple, The.

P.A.B.

Scythians (sith´ee-uhnz), a nomadic people from the Caucasus who threatened the Assyrian Empire and later the Persian Empire from the north. In the OT they are called Ashkenaz (Gen. 10:3; 1 Chron. 1:6; Jer. 51:27). The fifth-century B.C. Greek historian Herodotus describes an unsuccessful campaign by the Scythians against Egypt in the course of which they looted a temple of Aphrodite in Ashkelon; on the basis of this account the Scythians have been identified as the unnamed enemy from the north in Jer. 1:14 (cf. Zeph. 1:10), but this seems unlikely. The Scythians' cruelty was proverbial in later antiquity (see 2 Macc. 4:47; 3 Macc. 7:5; 4 Macc. 10:7; and also perhaps Col. 3:11). ***See also*** Ashkenaz. M.D.C.

Scythopolis (sith-op´uh-lis). ***See*** Beth-shan.

sea (Heb. *yam*, a common Semitic root), a term denoting any large body of water, salt or fresh; "the sea" can designate the Mediterranean Sea and also the direction west (directions being reckoned from the standpoint of a person facing east). The bronze sea, sometimes simply "the sea," was a great basin in the forecourt of the Temple (2 Kings 25:13; Jer. 27:19). In the Ugaritic texts from Ras-shamra, Sea is the enemy of Baal Haddu, the storm god. The storm god uses his weapons of wind, lightning, and thunder to beat back Sea; their battles apparently interpret the alternation of fertile seasons in the world. Vestiges of the battle between Sea and Baal can be seen in the Bible, where God often is depicted with traits of the storm god (Isa. 27:1; 51:10; Job 7:12; 26:12; Pss. 74:16–20; 89:9–10; 93:3–4; 114, among other places). The personification of Sea, however, is much weaker in the Bible than in the Ugaritic texts. ***See also*** Creation. R.J.C.

seah (see´uh), a unit of dry volume measure of uncertain size, probably about one-third of a bushel. It is translated simply as "measure" in both OT (Gen. 18:6) and NT (Matt. 13:33) texts. ***See also*** Weights and Measures.

seal, a device by means of which ownership of objects or origin of documents could be designated. The term is used in two primary senses in the Bible, with secondary meanings developing from them through the use of metaphor. The primary references are to an object, usually a small, semiprecious stone with writing cut into its surface, that makes an impression on clay or wax; and the second primary sense refers to the impression itself made by the seal.

Use and Manufacture: Seals were widely used throughout the ancient Near East from the fourth millennium B.C. through the Roman period because they provided both identification and prestige to the owner. The majority of seals from the OT period identify the owner and often these have a title and an emblem or engraved scene as well. Those persons who possessed seals were usually members of the upper classes and often associated with the workings of government (see below). Their seals performed important functions in their professional activities.

Cylinder seals were popular in antiquity though less so among Israelites and early Christians. Such seals could be rolled by hand across wet clay in order to produce an intricate scene once the cylinder had made a complete revolution. Scenes of religious activities and depictions of deities or royalty could be executed easily in this fashion and then made public through the distribution of impressions.

The question of a seal's manufacture is an intriguing one, especially because so many of them are quite small (oval in shape, with some less than an inch long) yet possessed of exquisite design. Apparently copper and iron were used for drilling, sometimes with an abrasive glued to the implement. That diamonds were occasionally used is a recent conjecture, but the evidence is not conclusive. Water and olive oil were probable lubricants. The lapidary must have possessed keen hand and eye coordination, artistic talent, and the ability to write in reverse so that the

Seal from the reign of Nebuchadnezzar II (605–562 B.C.) portrays a man, a woman, and a snake beneath the tree of life.

impression made by the seal could be read correctly. Some seals are bored through at one end so that they might be fastened to a cord and worn around the neck (see Gen. 38:18). Others were set in a frame and used for rings or necklaces.

There are approximately sixty references to seals and sealing in the Bible. Representative examples of the use of seals are to render something secure against tampering (Jer. 32:10; Matt. 27:66), to demonstrate authority (1 Kings 21:8; John 6:27), to seal a letter (1 Kings 21:81; 1 Cor. 9:2), to seal a covenant (Neh. 9:38), to delegate authority (Esther 8:8; John 6:27), and to seal documents (Isa. 8:16; Jer. 32:10; Rev. 5:1). Archaeological research suggests some additional uses for seals among the Israelites known also among other peoples: as amulets, heirlooms, gifts, deposits in a temple, burial deposits, and as tools used to imprint pottery vessels.

As Archaeological Evidence: Seals can be of great benefit to the reconstruction of past history and cultures, as the following illustrations make clear. On numerous occasions Egyptian scarab seals (so named because they resemble the sacred beetle) or cartouches (name-rings used to produce seals) have been found in excavations in Palestine. Not only does this illustrate the cultural influence of Egypt on Palestine during the third and second millennia B.C., but when a seal is found by an archaeologist in a stratified deposit it can be very helpful in dating the stratum. Excavations at Tel Lachish, for example, have uncovered a seal on one of the ancient gate systems bearing the name of Ramses III (ca. 1183–1152 B.C.). The gate is part of a stratum destroyed by fire. The destruction, therefore, is most probably dated to the reign of Ramses III and is taken by some scholars to be evidence of early Israelite incursion as they settled in the promised land (Josh. 10:31–32.).

Recently discovered clay *bullae* (hardened seal impressions) from the postexilic era (i.e., after late sixth century B.C.) in Palestine have shed additional light on an obscure period in biblical history. They have provided names with the title "governor" that supplement the meager evidence of the Bible for reconstructing the succession of leaders for the community. Furthermore, various impressions bear the stamp *yehud,* "Judah," supporting the conclusion that Judah was administered as a separate province in the Persian Empire.

Over a thousand seal impressions on jars have been discovered dating to the late eighth and early seventh centuries B.C. These impressions have in common the inscription "to" or "belonging to the king" (Heb. *lmlk*); a scarab figure with either two or four wings; and the name of one of four towns in Judah: Hebron, Ziph, Socoh, or an unknown location (Heb. *mmsht*). Recent investigation has dated these impressions to the reign of Hezekiah (ca. 715–687 B.C.) and perhaps to his preparations for war with Assyria. The stamped jars were containers for commodities that may have come from taxation and/or royal landholdings.

Personal Seals: A number of personal seals have been discovered that may shed light on the structure of Israelite society in the pre-exilic period. They range in date from the ninth to the sixth centuries B.C., with the vast majority coming from the eighth and seventh centuries. Among the titles following the personal name are:

"Who is over the house," probably a title synonymous with major-domo or royal steward. The office is known from several references in the OT.

"Scribe." A recently discovered impression reads: "Barakiah son of Neriah the Scribe." This name and title should be compared with that of Jeremiah's faithful friend of the same name and title in Jer. 36:32 ("Baruch" and "Barakiah" are the shorter and longer forms respectively of the same name).

"Servant of the King." A number of seals have been found with this title.

"Son" or "Daughter of the King." Several examples have been discovered belonging to men. Recently one example was found that belonged to a woman; it read: "daughter of the King" (Heb. *Mah adanah*). A beautiful lyre was engraved on the seal.

While the NT uses the terms "seal" and "sealing" in their primary senses (e.g., Rev. 5:1), metaphorical use is made of the terms as well. Paul refers to the circumcision of Abraham as a "seal of the righteousness which he had by faith" (Rom. 4:11). Christians are "sealed with the promised Holy Spirit" (Eph. 1:13). Perhaps most striking of all is the reference in Heb. 1:3 to Christ as the "stamp" of God's nature, where the single Greek word (*charaktar*) refers to the impression made by a seal.

Seal of Solomon, the, a late medieval and modern form of reference to the five-pointed star or pentagram. It is first found in ancient Palestine on Judean seals. It occurs in a pagan Hellenistic tomb from Marissa and appears in ancient Jewish synagogue art, frequently together with the six-pointed hexagram later known as the "Star of David." Its origins are in pagan art.

sea monster (Heb. *tannin*), a term that can mean simply "serpent" (Exod. 7:9–12; Deut. 32:33; Ps. 91:13) but more commonly a monster of the deep (Gen. 1:21; Ps. 148:7) or even a dangerous sea dragon, one of the foes of God (Jer. 51:34; Isa. 27:1; 51:9; Ps. 74:13; Job 7:12). "Sea monster" can also stand for Egypt, the great foe of God's people (Ezek. 29:3; 32:2).

Sea Peoples, the name given to a group of peoples, apparently from the Greek island of Crete, who began to invade the eastern coastlands of the Mediterranean Sea sometime around the thirteenth century B.C. Their attempt to invade Egypt was repulsed by Ramesses III (ca. 1190 B.C.), a victory he commemorated on a monumental frieze. There the Sea Peoples, called in Egyptian the Perasata (probably the source of the biblical term "Philistines," which designates these people), are depicted as slender warriors wearing tasseled kilts and magnificent helmets. Their subsequent invasion of the plains of Canaan sometime later was more successful, and, since their invasion from the west coincided with the invasion of Canaan by the Israelites from the east, a collision between them was inevitable. That collision, which lasted for many years, is reflected in the conflicts between the Israelites and the Philistines recorded in the books of Judges and 1 and 2 Samuel. ***See also*** Amarna, Tell el-; Ashdod; Caphtor; Crete; Gaza; Philistines. K.H.R.

season, a period of the year marked off by prevalent climatic conditions. There are only two seasons in Palestine, the dry (April–September) and the wet (October–March). The amount and duration of rainfall and the temperatures vary from year to year and place to place. Generally as one goes south or east rainfall is lighter and the temperatures are warmer. In Hebrew or Greek no particular word designates season, but several words are used for a specific period of time described by such things as weather: the time of rain (Deut. 11:14), heat of summer (Ps. 32:4); features of the agricultural year: threshing and sowing (Lev. 26:5), blossoming of the fig tree (Matt. 24:32); or annual festivals: the Feast of Unleavened Bread or Passover (Exod. 23:15; Luke 2:41; 22:1).

In the Gezer Calendar, a schoolboy's ditty written during the period of the early Israelite monarchy (tenth century B.C.) on a potsherd, the months of the year are described by agricultural activity: "His two months are olive harvest, His two months are planting grain . . . " ***See also*** Weather. N.L.L.

seat, judgment. ***See*** Judgment Seat.

Seba, Sabeans (see'buh, suh-bee'uhnz; KJV: "Saba," "Sabeans"), a place mentioned four times and a people mentioned three times in the biblical text. Job 1:15 identifies the destroyers of his family as Sabeans. Isaiah sees the Sabeans as one of several nations God gave as a ransom for Israel (43:3). They were also a source of wealth (45:14), together with Egypt and Ethiopia. In Joel 3:8 they are described as a "nation far off" in Joel's threat that they will buy Phoenician and Philistine slaves from Judah. Gen. 10:7 catalogs Seba as a son of Cush, together with Havilah, Sabtah, Raamah, and Sabteca, as does 1 Chron. 1:9. Kings from Seba were mentioned together with those of Sheba and Tarshish as bringing tribute and gifts (Ps. 72:10) to Israel's king. Their definition as a distant wealthy source of riches seems clear. The precise location is not evident from biblical sources.

From the evidence of archaeological work begun in 1762 and continuing to this day, with studies not only of sites, but of inscriptions coming to light in increasing numbers, it is clear that the Sabeans occupied the portion of southwest Arabia that is today the land of Yemen. It was comparatively well watered and fertile but the resources were augmented by extensive irrigation facilities (as at Marib). The Sabeans' location was also fortunate for trade development. They could capitalize on traffic in myrrh and frankincense through the land caravan route running north up the Hijaz, the coastal plain that lies at the eastern shore of the Red Sea. Their extensive trade in gold and precious stones was known to the biblical writers (see also Isa. 60:6; Jer. 6:20; Ezek. 27:22–23, where Sheba occurs as the Hebrew spelling of the South Arabic name Saba). Their territorial controls fluctuated, but included at times the port of Aden where contacts with shipments of goods from India as well as Africa were made. Sabean ships ranged to Africa and India, contributing both to the variety of trade goods and to the wealth of the exchanges flowing into Sabean resources.

While Sabean history is only sketchily known, its Semitic inhabitants successfully developed caravan trade by the tenth century B.C. as evidenced by the visit of the queen of Sheba to Solomon (1 Kings 10:1–13; 2 Chron. 9:1–12). Sabean colonization apparently included parts of the adjacent Ethiopian coast. From the ninth to fifth centuries, Sabean kings numbered over twenty, from which archaeological evidence survives in the form of temples, dams, and sluices for irrigation, bronze statues, and inscriptions. Saba weakened thereafter, but its successful defense against Rome's initial efforts to subdue it led to importation of Hellenistic art and pottery soon locally imitated. Abyssinian occupation in the fourth century A.D. was accompanied by conversion of the leaders to Christianity, and subsequent Jewish leadership dominated the territory until the Persian conquest about 575 and its later capture by Islamic forces in 628. ***See also*** Sheba; Sheba, Queen of. R.S.B.

Sebat (see'bat). ***See*** Shebat.

Secacah (si-kay'kuh; Heb., "thicket, cover"), a city of Judah (Josh. 15:61), probably modern Khirbet es-Samrah, located three and a third miles southwest of Khirbet Qumran in the Valley of Achor.

Second Coming of Christ, the. ***See*** Eschatology; Millennium; Parousia.

second death, the death of the soul or spirit, the death of the resurrected person, or eternal damnation. In Matt. 10:28 a saying attributed to Jesus alludes to God as one who has the power to destroy both soul and body. A Jewish text written in the second century B.C. describes a chaotic wilderness in which fire blazes brightly. In this place the spirits of the wicked will be killed during the last days *(1 Enoch* 108:3–4). According to the book of Revelation, all the dead will rise on the day of judgment. Then the wicked will be cast into the lake of fire to suffer their second death (Rev. 20:11–15; 21:8). ***See also*** Abyss; Hades; Hell; Punishment, Everlasting. A.Y.C.

Second Quarter, a part of the city of Jerusalem (2 Kings 22:14). ***See also*** College.

sect, a sociological category usually referring to a religious group protesting against a parent body. Some characteristics common in sects are voluntary association, exclusiveness toward outsiders, equality of members, a low degree of internal organization and differentiation, total commitment, appropriation of the parent body's ideology and status, and rejection of the parent body as corrupt. Sectarian analysis was developed by the modern German historian Troeltsch in connection with Christian church history. If the category is applied to first-century Judaism with appropriate caution, the Qumran and early Jewish Christian communities may be understood as sects. Pharisees, Sadducees, and Zealots cannot be identified as sects in any proper sense of the term; they were rather "parties" within Judaism. ***See also*** Essenes; Pharisees; Sadducees; Zealot. A.J.S.

Secundus (si-koon´duhs), a Christian from Thessalonica who accompanied Paul from Macedonia on Paul's last trip to Jerusalem (Acts 20:4–5). He probably helped Paul gather money for his contribution from the Gentile churches to the poor in Jerusalem (see 2 Cor. 8:23). ***See also*** Contribution for the Saints.

security, a term found in the biblical writings primarily in contexts where the people are said to be able to dwell in their land "in peace and security." In such instances, security has the connotation of safety, protection from harm or enemies, often with the added idea that God is providing this protection (cf. Judg. 18:7; 2 Kings 20:19; Ps. 37:3; Jer. 33:6; 1 Thess. 5:3). In two instances, however, security appears to carry different connotations: that of collateral for a loan (Lev. 6:2) or bail for the release of someone from prison (Acts 17:9).

seed. 1 The productive unit of a plant in contrast to trees, i.e., grain (Gen. 1:11, 12, 29; Deut. 11:10; 14:22). **2** Human semen (Lev. 15:16–18; 22:4; Heb. 11:11). **3** Human offspring or descendants in general (Gen. 9:9; Lev. 22:4; Mark 12:19–22). **4** The physical (Gen. 12:7; 17:7) and spiritual (Gal. 3:29; Rom. 4:11–12, 16) descendants of Abraham. **5** Jesus Christ as the seed of Abraham (Gal. 3:15–18) and David (2 Tim. 2:8). **6** The divine nature implanted in the believer (1 John 3:9).

Jesus used seeds as examples in four of his parables: the seed and weeds (Matt. 13:24–30); the sower, seed, and soils (Matt. 13:3–9); the seed growing secretly (Mark 4:26–29); and the mustard seed (Mark 4:30–32). R.H.S.

seer (Heb. *ḥozeh,* "visionary"; *ro'eh,* "seer"), a person who received divine messages in visions or dreams. Visionaries existed in Israel throughout the history of the nation and were found particularly in Judah, where they may have been connected with the royal court (2 Sam. 24:11; Amos 7:12; Mic. 3:7; Isa. 29:10; 30:10; 1 Chron. 21:9; 25:5; 29:29; 2 Chron. 9:29; 12:15; 19:2; 29:25, 30). The title "seer" is given primarily to Samuel (1 Sam. 9:5–21). ***See also*** Prophet.

Segub (see´guhb). **1** The youngest son of a Bethelite named Hiel. He died (possibly as a human sacrifice) when his father rebuilt the Jericho gates (1 Kings 16:34), fulfilling the word of Joshua (Josh. 6:26). **2** The son of Hezron and a daughter of Machir (1 Chron. 2:21, 22).

Seir (see´uhr; Heb. "hairy"). **1** The mountainous region southeast of the land of Canaan inhabited by the Edomites. Also called "Mt. Seir," the region may have encompassed not only the mountains east of the Arabah (the Rift Valley), but those on the west side as well. This is suggested by such passages as Num. 20:16, where Kadesh-barnea (modern Ain el Qudeirat) is said to be a town on the edge of Edom's territory (cf. Num. 20:23; Deut. 1:44; 33:2; Judg. 5:4). The eastern highlands, built mainly of red Nubian sandstone, rise up to over 5000 feet above sea level and receive enough rainfall for some cultivation and animal husbandry. Perhaps the most important physical advantage of Seir in ancient times was its location, positioned to control the trade routes from Arabia and the Red Sea. The two centers of power in the land were Bozrah and Teman, both of which guarded important caravan routes.

According to Deut. 2:22, the Horites (Hurrians) had inhabited Seir before they were driven out by the Edomites; these Horite clans are enumerated in Gen. 36:20–29. The Edomites, descendants of Jacob's brother Esau, eventually established a kingdom in the region (Gen. 36:9–19, 31–43; Josh. 24:4). On Israel's journey from Kadesh-barnea to the Plains of Moab it was denied passage through Seir by the Edomites (Num. 20:14–21; Deut. 2:1–8). Subsequently the region continued to play a significant role in Israel's history (cf. 2 Sam. 8:13–14; 2 Kings 14:7, 22).

2 A hill on the northern border of the tribe of Judah, located west of Jerusalem on the western slopes of the Judean highlands, between Kiriath-jearim (modern Deir el Azar) and Chesalon (modern Kesla; Josh. 15:10). Its exact identification is uncertain. ***See also*** Edom. D.A.D.

Seirah (see´uh-ruh; KJV: "Seirath"), the haven to which Ehud fled (Judg. 3:26). The location is unknown, as is the nature of the place, that is, whether it was a town, region, cave, or some other feature.

Sela (see´luh; Heb., "crag"). **1** The fortress city of Edom (2 Kings 14:7) stormed and renamed Sela by King Amaziah of Judah. This Sela is modern Umm el-Bayyarah just above Petra in south Transjordan and excavated by C.-M. Bennett. **2** An Amorite border town (Judg. 1:36) whose location is unknown. An unidentified location mentioned in Isa. 16:1.

selah (see´luh), a word of uncertain derivation and unknown origin and meaning found in certain psalms in the OT (e.g., Pss. 3, 4, 52, 88, 143). It appears additionally in Hab. 3:3, 9, 13, verses that are part of a psalm preserved in that prophetic book. There has been much speculation about its meaning—a musical notation, a pause in singing for narration, instructions on dynamics to the choir or to instrumental accompaniment—but there is no agreement among scholars about its function or significance. Absent new evidence, any attempt to define it must remain speculative.

Seleucia (si-*loo*´shuh), the ancient port city of Antioch in Syria (modern Samandag, Turkey), founded by Seleucus I Nicator in 301 B.C., apparently on an older site called Pieria. In the mid-third century B.C., Ptolemy III Euergetes of Egypt took the city ("fortress" in Dan. 11:7), but it was regained by Antiochus III in 219. According to 1 Macc. 11:8, Ptolemy VI Philometor again captured Seleucia for Egypt in his coastal campaign of 146, but the city reverted to Seleucid control in 138. Granted the status of a free city by Pompey in 63 B.C., Seleucia remained such throughout NT times.

According to Acts 13:4, Barnabas and Saul (Paul), accompanied by John Mark, sailed from Seleucia to Cyprus at the beginning of their first missionary journey (ca. A.D. 49). Other references to voyages to and from Antioch probably imply embarkation and landing at Seleucia (Acts 14:26; 15:39).

Other cities also named Seleucia were in Cilicia, Mesopotamia, and Bashan. ***See also*** Antioch; Paul; Ptolemy; Seleucids, The. C.H.M.

Seleucids (si-*loo*´sidz), **the,** a dynasty of Hellenistic kings that ruled an area including, at various times, Bactria, Persia, Babylonia, Syria, and southern Asia Minor after the death of Alexander the Great and until the Roman takeover of the region in the first century B.C. The name originates from Seleucus I Nicator, son of Antiochus, one of the generals of Alexander. In the struggle for power following Alexander's death in 323 B.C., Seleucus was eventually successful in carrying out a series of moves that made him one of the most powerful of the successor kings (Diadochi). The rule of the Seleucid dynasty dates from 312 B.C., when Seleucus and Ptolemy I of Egypt joined to defeat Antigonus of Phrygia at the battle of Gaza, thus regaining for Seleucus the satrapy of Babylonia, earlier lost to Antigonus. At the battle of Ipsus in 301 B.C., Seleucus gained much of Asia Minor and Syria, but Coele-Syria and Palestine, which Seleucus regarded as rightfully his, were appropriated by Ptolemy, his former ally. The struggle for Coele-Syria and Palestine was finally settled in 198 B.C., when Antiochus III ("the Great") defeated the Egyptian general Scopus at the battle of Paneas, and Seleucid rule of Palestine began.

Of all the Seleucid rulers, Antiochus IV Epiphanes is most important as far as the biblical literature is concerned. His eleven-year reign was marked by an aggressive attempt to hellenize the Jews, an attempt that led to the Maccabean war and eventually to Jewish independence from Syria. The two books of Maccabees reflect this struggle, detailing the offensive actions of Antiochus, who meddled in the appointment of high priests, forced Greek customs upon the Jews, looted the Temple, defiled the altar, and cruelly persecuted the pious Jews who wished to observe their religious laws and customs (see 1 Macc. 1:10–62; 2 Macc. 4:7–7:42). The book of Daniel also reflects the impact of Antiochus Epiphanes upon the Jews. In chaps. 7–12, Antiochus plays a major role (he is the "little horn" of 7:8, 20–27; 8:9–14, 23–25 and the oppressor of the "saints of the Most High"; the "abomination that makes desolate" of 11:31 is almost certainly a reference to an

THE SELEUCID DYNASTY

Ruler	Dates
Seleucus I Nicator	312–281 B.C.
Antiochus I Soter	281–261
Antiochus II Theos	261–246
Seleucus II Callinicus	246–226
Seleucus III Soter (Ceraunus)	226–223
Antiochus III ("The Great")	223–187
Seleucus IV Philopator	187–175
Antiochus IV Epiphanes	175–164
Antiochus V Eupator	164–162
Demetrius I Soter	162–150
Alexander Balas	150–145
Demetrius II Nicator	145–139
(Antiochus VI Epiphanes Dionysus	145–142)
Antiochus VII Sidetes	138–129
(Hereafter, much internal strife and frequently rival claimants.)	

altar to Zeus that Antiochus caused to be erected on the altar of the Jerusalem Temple).

The latter years of the dynasty saw much internal strife among princes of the Seleucid house and a conquest of their weakened kingdom by Tigranes of Armenia (83–69 B.C.). Eventually, the Romans put an end to the Seleucid reign when Pompey made Syria a Roman province in 64 B.C.

The Seleucids founded Antioch in Syria as their capital, as well as many other cities that were to become centers for the spread of Hellenism (e.g., Antioch of Pisidia, Apamea, Laodicea, Edessa, Beroea, Seleucia, and Dura-Europos). Hellenized Jews lived in these cities, in large part because of the Seleucid practice of rewarding veterans with land in newly colonized areas (Jewish soldiers had fought in the army of Seleucus I, just as other Jews had fought with Ptolemy). Hellenism influenced Judaism in many ways, and this influence can be seen in some of the later OT writings, in the intertestamental literature, and in the NT. The Seleucid dynasty played an important role in developing this influence. ***See also*** Alexander; Antiochus; Daniel, The Book of; Maccabees; Maccabees, The First Book of the; Maccabees, The Second Book of the; Ptolemy; Seleucia. F.O.G.

self-control, the English translation of a Greek term common in the Greek, especially the later Stoic, philosophical tradition but seldom appearing in the Greek OT (LXX) or the NT, probably because biblical faith sees human beings not as autonomous but as responsible to and directed by the will of God. Felix was alarmed when Paul "argued about justice and self-control and future judgment" (Acts 24:25). Paul knew that it was difficult for Corinthian Christians to exercise self-control in sexual matters (1 Cor. 7:9). He compared himself with an athlete who "exercises self-control in all things" for the Gospel's sake (1 Cor. 9:25). For Paul, self-control was not really a human achievement but was linked with love, joy, peace, etc., as "the fruit of the spirit" (Gal. 5:22–23). 2 Pet. 1:6 links self-control with such characteristics as faith, knowledge, and steadfastness. Again, "God did not give us a spirit of timidity but a spirit of power and love and self-control" (2 Tim. 1:7). A bishop must not be arrogant or quick-tempered or a drunkard but "a lover of goodness, master of himself, upright, holy, and self-controlled" (Titus 1:7–8). J.F.J.

Semites (sem´*i*ts), a term used to describe various peoples of the Fertile Crescent in antiquity (i.e., Arabs, Arameans, Assyrians, Babylonians, Canaanites, Hebrews and Phoenicians). It originated in the eighteenth century A.D. among Western scholars to describe observable tendencies in language and culture within the peoples of the region from Persia in the east to Africa in the west. The term itself reflects the name Shem, one of Noah's three sons born after the Flood. In Gen. 10:21–31 there is a description of Shem's descendants according to the names of nations known to the biblical writer(s). The whole of Genesis 10 has been called by scholars the "table of nations," because it presents the then-known world of nations in three categories, each one tracing its lineage back to one of Noah's three sons, Shem, Ham, and Japheth (Gen. 10:1).

It must be stressed that this is not an ethnic term and that unanswered questions remain regarding the origins of the Semitic peoples. Older historians somewhat romantically portrayed the Arabian, Sinai, and Syrian deserts as the original homes of the Semites and suggested that repeated waves of these nomads moved from the desert to the more fertile areas. This view is largely rejected today by scholars who find instead a very complex but often supportive relationship between the "nomadic" and the more settled, agrarian societies. Several elements of the oldest civilizations known to have left records of commerce and a spoken language in the Middle East show Semitic influence, and perhaps that is all that can justifiably be said about their origins.

Linguists and philologists do use the term "Semitic" with regard to groups of languages. There is some disagreement among them concerning the interrelationships among the various Semitic languages, but there is general agreement among scholars on the following classifications: *East Semitic* includes various dialects of Assyrian and Babylonian. The term "Akkadian" is sometimes used as a reference to these languages. They are written in cuneiform, a type of writing impressed on wet clay with a wedge-shaped pen. *Northwest Semitic* includes the various Aramaic and Canaanite dialects. Classical Hebrew, Moabite, and perhaps Ugaritic are some examples of the latter. *South Semitic* includes Arabic and Ethiopic.

The advance of archaeological work in the last two centuries has made available to scholars for the first time a number of texts written in these languages. This situation has allowed the student of comparative Semitics to place the study of classical Hebrew on firmer historical ground as far as its relationship to other ancient Semitic languages is concerned.

The development of an alphabetic language and script among ancient Semites was transmitted by the Phoenicians to the Greek Isles, ultimately to influence many of the world's most widely used languages including English. While many details of this transmission remain obscure, the contribution of the alphabet is one of the enduring legacies of Semitic culture.

Religion appears in great variety among the Semites as evidenced by surviving texts. Some scholars point to the early narratives in the

book of Genesis concerning Israel's ancestors as one illustration. Yet another example can be found in the texts discovered in Syria at the site called Ras-Shamra (ancient Ugarit). Sacrifice and polytheism are characteristic of Semitic religions; however, such a milieu produced the three great monotheistic religions of the modern era: Judaism, Christianity, and Islam. Interestingly, the scriptures of each of these religions was written in a Semitic language. While the NT of Christianity was written in ancient Greek, its OT was written in Semitic languages (Hebrew and Aramaic).

The term "anti-Semitic" is often used to describe those views prejudicial against Jews or Judaism. While such prejudice is to be deplored, the use of the term anti-Semitic to describe this bigotry is unfortunate because there is nothing about the definition of Semitic that should limit it to Judaism. J.A.D.

Senaah (suh-nay´uh), a city whose people are listed among those returning from exile in Babylon (Ezra 2:35; Neh. 7:38). It may be modern Khirbet 'Auja el-Foqa about three miles north of Jericho. Its location parallels its identification with Magdalsenna (Heb., "Tower of Sena'a"), a fortress that guarded the road from the Jordan valley to Baal-hazor in earlier times.

Senate of Israel, the, a body called together by the high priest, along with the Sanhedrin, to assess and judge the apostles in Acts 5:21. "Senate," Greek *gerousia,* means literally a council of elders and was often the ruling council of a Greek city. In the Greek of Exod. 12:21 it translates the Hebrew "elders of Israel." It is likely that Senate and Sanhedrin are used interchangeably in this verse in Acts.

Seneh (see´nuh), the name of one of two rocky crags flanking the pass at Michmash which Jonathan used in approaching the Philistines (1 Sam. 14:4). Identity of the crags remains uncertain, but they are probably to be located in the Wadi es-Suweinit about seven miles northeast of Jerusalem.

Senir (see´nuhr), the Amorite name for Mount Hermon, according to an editorial note in Deut. 3:9. In Ezek. 27:5, Senir supplied fir planking and Lebanon a cedar mast for the metaphorical ship, Tyre—here Senir probably designates the entire Anti-Lebanon mountain range. Hermon and Senir appear together, as separate parts of a whole, in Song of Sol. 4:8 and 1 Chron. 5:23. ***See also*** Hermon; Lebanon; Tyre.

Sennacherib (suh-nak´uh-rib), king of Assyria (705–681 B.C). He assumed the throne of the vast Assyrian Empire convulsed by uprisings on both its southern and western flanks following the death of his father Sargon II. Babylon and its sometime ally Elam were perceived as the most immediate threat to his rule, so that Sennacherib undertook a two-year campaign (704–702) to restore Assyrian suzerainty over the south.

In 701, he turned to the troubled west. Details of this military undertaking are known from two major sources: an Assyrian royal inscription of Sennacherib's "third campaign" and 2 Kings 18:7–8, 13–16; 18:17–19:37, a patchwork of chronistic and prophetic material arranged and edited by the author of the book of Kings. These sources complement each other and are in agreement as to the main outline of the rebellion and its suppression by the superior Assyrian forces. Only the biblical source reports the miraculous salvation of Jerusalem. The following outline is based on a critical reading of both sources and on the assumption that Sennacherib campaigned only once in the west, in 701.

King Hezekiah of Judah spearheaded an anti-Assyrian coalition of Phoenician, Philistine, and south Syrian states. Though there were several years to prepare for the inevitable Assyrian response—note the drilling of the Siloam tunnel in Jerusalem to supply water to the city in case of siege (2 Kings 20:20; 2 Chron. 32:3–4)—the coalition was no match for Sennacherib. The coastal cities succumbed quickly, so that the full brunt of reprisal was soon directed against Judah. An Egyptian relief force under the command of Tirhakah engaged Sennacherib at Eltekeh in the Judean Shephelah (cf. 2 Kings 18:21; 19:9); but it suffered heavy losses and withdrew.

During the attack upon Judah's border fortresses, Sennacherib sent a negotiating team, led by top Assyrian officers—their titles are recorded in 2 Kings 18:17 (Tartan, Rabsaris, Rabshakeh)—to solicit Hezekiah's surrender. The counsel of the prophet Isaiah not to surrender strengthened Hezekiah's determination to hold out (2 Kings 19:5–7; 2–34). But "when all the fortified cities of Judah" had fallen to

Sennacherib seated on his throne, receiving booty from Lachish, which he conquered in 701 B.C.; Nineveh reliefs.

Sennacherib, Hezekiah capitulated. He agreed to pay a heavy indemnity of "three hundred talents of silver and thirty talents of gold" (2 Kings 18:14–16), which together with other valuables he sent to Nineveh. Thus, the siege of Jerusalem was lifted and the city spared destruction. The other territories of the kingdom of Judah were ceded to loyal Assyrian subjects, namely, the rulers of Ashdod, Ekron, Gaza, and Ashkelon. Thus Hezekiah resumed his former status as Assyrian vassal. Sennacherib commemorated his victories in Judah with a wall relief in his palace at Nineveh depicting the attack and capture of Lachish.

Assyrian historical inscriptions indicate that for most of the next twelve years Babylonian affairs engaged Sennacherib's attention. Other areas of the empire remained pacified; the fear of Assyrian military might sustained a *pax Assyria.* But at least three campaigns to Babylon were undertaken (700, 694–693, and 691–689). Apparently it was this seemingly intractable situation that led to the unprecedented decision to destroy Babylon and put an end to the problem once and for all.

Sennacherib designated his son Esarhaddon as his heir, though he was not in the direct line of succession. Two of his other sons, Adrammelech and Sarezer, murdered their father and led an unsuccessful rebellion against Esarhaddon (2 Kings 19:37). ***See also*** Assyria, Empire of; Hezekiah. M.C.

Sephar (see′fuhr), one of the limits of the territory inhabited by the family of Joktan (Gen. 10:30). It may be either a region, a boundary, or a town. The identity remains uncertain, although most suggestions place it somewhere in southern Arabia.

Sepharad (sef′uh-rad), the residence of some exiles from Jerusalem mentioned in Obadiah 20. It is identified with Sardis (modern Sart) in east central Turkey, the capital city of the ancient Lydian Empire. Its standing as a major commercial center is reflected in the archaeological materials uncovered at the site, including a large Jewish synagogue from the later stages of settlement.

Sepharvaim (sef′uhr-vay′im), a city from which the Assyrian government drew settlers to place on Israelite territory after Israel's fall to Assyria in 721 B.C. (2 Kings 17:24, 31). Later references to the city of the same name (2 Kings 18:34; 19:33), whose kings and gods are impotent, may refer to the identical location, but that remains uncertain. Isa. 36:19 and 37:13 contain the same name but do not clarify the identification.

Sepphoris (sef′uh-ris), a Jewish town in Lower Galilee, about three miles northwest of Nazareth. During the Hasmonean period (152–37 B.C.), the town probably became the administrative center for the Galilee area. Sepphoris submitted to Herod the Great, but, after his death in 4 B.C., it was sacked by Varus. While tetrarch of Galilee and Perea, Herod Antipas rebuilt the city and resided there prior to making the city of Tiberias his capital. After the destruction of Jerusalem in A.D. 70, Sepphoris was the seat of the Sanhedrin until it moved to Tiberias. There is no reference to Sepphoris in the Bible, but the inhabitants of nearby Nazareth most certainly would have been acquainted with it. It was probably during the second century A.D., under Hadrian's reign, that the city's name was changed to Diocaesarea, meaning "City of Zeus and the Emperor"; it was still referred to by this name in the fourth century. M.K.M.

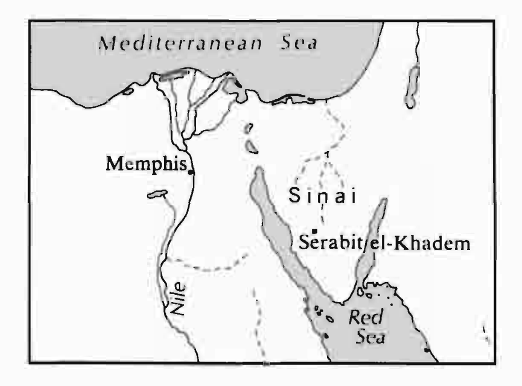
Septuagint (sep′*too*-uh-jint), the Greek translation of the Hebrew OT that began in the third century B.C. in Alexandria, Egypt. The name Septuagint comes from the Greek word for "seventy" (hence the symbol LXX, 70 in Roman numerals) and refers to the seventy-two Jewish translators brought to Egypt by Ptolemy II Philadelphus (285–246 B.C.) to translate the Pentateuch, according to the legendary account in the *Letter of Aristeas.* The translations of the books of the OT differ in style, accuracy, and substance, indicating that there was no single original translation into Greek. Manuscripts found at Qumran among the Dead Sea Scrolls and other early manuscripts and quotations from the Septuagint in ancient writings all indicate that revisions were constantly being made to the Septuagint. In addition, Hebrew manuscripts found at Qumran differ from the standard Hebrew text (the Masoretic Text) but agree with some of the Greek renderings in the Septuagint. Thus the Septuagint often witnesses to a Hebrew manuscript tradition different from and earlier than the Masoretic Text and so is valuable in solving textual difficulties. The Septuagint sometimes has a different order within books and a shorter or longer version of a book. For example, Jeremiah is one-eighth shorter in Greek and may derive from a Hebrew version earlier than the one presently in the Hebrew Bible; the order of the materials in Psalms and Proverbs differs from the Hebrew texts; and Joshua has many additions, omissions, and changes. Finally, several later Greek translations were made (Aquila, Theodotion, Lucian) and parts of these have found their way into the Septuagint. ***See also*** Masorah; Scrolls, The Dead Sea. A.J.S.

Sepulchre, Church of the Holy, church located in Jerusalem dating from Byzantine times (after sixth century A.D.) and thought to contain the location of Jesus' tomb. The present edifice is based on the church built by the Crusaders (A.D. 1149). It is controlled by six groups, Latin Catholics, Greek Orthodox, Armenians,

View toward the apse in the Church of the Holy Sepulchre, Jerusalem.

Syrians, Copts, and Ethiopians, and contains twenty-two chapels.

In the first century A.D. this location lay outside the walls of Jerusalem in an unused quarry. Tombs of the first century have been found elsewhere in the area cut into the vertical surfaces left by the quarrying operations. Thus, the site fits the description of the place of crucifixion as "place of the skull" with nearby graves (John 19:17).



Some scholars think that until A.D. 66, the outbreak of the revolt against Rome, the Jewish Christian community in Jerusalem assembled at the tomb for prayer. The Roman emperor Hadrian later filled in the area and constructed a temple to Aphrodite (A.D. 135).

Some tradition may have led Constantine to choose this site for a church of the Holy Sepulchre (dedicated in A.D. 335). The caliph Hakim systematically destroyed the Byzantine structure in A.D. 1009. The present tomb monument only dates from the nineteenth century. A small section of the base of the original fourth-century tomb can be seen in the base of the Coptic shrine. Through a hole in the wall of the Syrian chapel one can see remains of a Jewish tomb, burial shafts, and ossuary pits from the first century. Part of this formation had been cut away by Constantine's builders. The fourth-century church was bigger than the present structure. Parts of it are hidden in and under neighboring buildings. ***See also*** Cross; Via Dolorosa. P.P.

Serabit el-Khadem (suh-rab'it al-kah'duhm; Arabic, meaning uncertain), a sandstone plateau about 2,600 feet above sea level in the mountainous region of southwest Sinai. The Egyptians came to Serabit el-Khadem and the nearby Wadi Magharah to mine turquoise. This blue or greenish-blue semiprecious stone, called *mefkat* in Egyptian, occurs in a single stratum of rock running through the region and was easily mined by cutting shafts and galleries down from the top of the plateau or along the sides of the surrounding wadis (dry stream beds that flow only during the rainy season). Turquoise was frequently used by the ancient Egyptians for jewelry, amulets, and inlays.

The mining expeditions sent to Serabit el-Khadem left many inscriptions, which allow scholars to trace the history of Egyptian activity in this area. Some texts were carved on stelae and other objects, some were incised in the mine faces, and still others were carved in the rock on the hillsides. The earliest inscriptions are in the Wadi Magharah and belong to several kings of the third dynasty (ca. 2686–2613 B.C.). Egyptian expeditions worked in this wadi until the early part of the eighteenth dynasty (ca. 1490 B.C.). Beginning in the late twentieth century B.C., Egyptian expeditions also started mining at Serabit el-Khadem, and activity continued here until the reign of Rameses VI (1141–1134 B.C.) in the late twentieth dynasty, when the Egyptians ceased operations at the turquoise mines.

The Egyptians built a temple at Serabit el-Khadem to the goddess Hathor, "Mistress of Turquoise." Many of the Egyptian inscriptions were found in and around this sanctuary. A number of short inscriptions written in a Semitic language known as "Proto-Sinaitic" were found in the temple area and some of the nearby mines. These texts may date to the sixteenth and fifteenth centuries B.C. They are important because they were written in a linear alphabetic

Egyptian temple of the goddess Hathor at Serabit el-Khadem, fourteenth century B.C.

script containing about thirty different signs. This is the earliest alphabet ever found. It provides a crucial link between the Egyptian pictorial script and the Phoenician alphabet, from which the Greek and ultimately our own alphabet are derived. ***See also*** Writing. J.M.W.

Serah (sihr´uh), a daughter (or perhaps a family or clan) of the Hebrew tribe of Asher (Gen. 46:17) who reportedly moved to Egypt. She is subsequently included in the census (Num. 26:46 [KJV: "Sarah"]; 1 Chron. 7:30) of settlers in Palestine. This prominence spawned heroine status in later nonbiblical stories.

Seraiah (si-ray´yuh; Heb., probably "Yah [weh] persists"), the name of as many as twelve men in the OT. **1** David's scribe (2 Sam. 8:17). The attestation is, however, unreliable, for the same man's name is given in 20:25 as Sheva, in 1 Chron. 18:16 as Shavsha, and in 1 Kings 4:3 as Shisha. **2** The chief priest who had the misfortune of witnessing the burning of the first Temple in Jerusalem in 587 B.C. before he was personally executed by Nebuchadnezzar (2 Kings 25:18–21; Jer. 52:24–27). **3** The son of Tankhumeth who survived the same crisis, however, and brought his militia to swear allegiance to Gedaliah, the Judean governor installed by the Babylonians (2 Kings 25:23; Jer. 40:8). **4** The "quartermaster" who accompanied the defeated Judean king Zedekiah to Babylon, bearing with him the prophet Jeremiah's written curse against that enemy kingdom (Jer. 51:59–64). **5** The son of Azriel, whom King Jehoiakim had earlier sent to arrest Jeremiah and his scribe, Baruch (Jer. 36:26). Without giving us biographical details, the postexilic historian simply mentions another seven men by the same name (namely, 1 Chron. 4:13–14; 4:35; 6:14 [possibly to be identified with Seraiah no. 2]; Ezra 2:2; 7:1; Neh. 10:2; and Neh. 11:11; 12:1, 12). W.S.T.

seraphim (ser´uh-fim), fiery beings of supernatural origin. Seraphim appear in Isaiah's vision of God where they are attendants or guardians before the divine throne, analogous to the cherubim (Isa. 6:1–7). They praise God, calling "Holy, holy, holy is the Lord of Hosts," and one touches Isaiah's lips with a hot coal from the altar, cleansing him from sin. Seraphim have six wings. Two cover their faces, two cover their feet (a euphemism for genitals), and they fly with the remaining two. The etymology of the Hebrew word *seraphim* (singular: *saraph*) suggests a translation of "fiery ones" and probably stems from the fiery imagery often associated with the Presence of God (cf. Ezek. 1:27). "Flying saraphs" (RSV: "serpent") appear in Isa. 14:29 and 30:6 together with "adders" and "vipers." These examples call to mind the use of *saraph* to describe the "fiery serpents" that afflicted Israel in the wilderness (Num. 21:6–9; Deut. 8:15). This suggests a serpentine form for the seraphim. If this association is correct, seraphim serve not only as guardians of the divine throne, but also as emissaries of divine judgment. ***See also*** Cherub. M.A.S.

Serapis (si-rah´pis), the deity of a cult established by Ptolemy I (d. 383/2 B.C.) to serve as a focal point for the Greek population in Egypt. The god was derived from Osor-Hapi, the deified Apis bull, and Osiris, the god of the underworld and consort of the goddess Isis. The cult mixed Egyptian and Greek features and was centered in Alexandria. The temple, called a Serapeum, contained a great cult statue with a gold head and jeweled eyes. Artistic representations of Serapis often present him with a head like Zeus. He is represented as ruler of the fertile earth and was thought, like Isis, to overrule fate. He was also a healing god known for curing blindness. As one of the many deities worshiped in the Roman Empire, Serapis would have stood under the ban of "idolatry" which Paul denounced (Rom. 1:22–23; 1 Cor. 8, 10). P.P.

sergeants. ***See*** Police.

Sergius Paulus (suhr´jee-uhs paw´luhs), proconsul of Cyprus. He is mentioned in Acts 13:7. ***See also*** Paulus, Sergius.

Sermon on the Mount, the, the first of five discourses of Jesus which are found only in Matthew's Gospel (chaps. 5–7, 10, 13, 18, 24–25). It is a compilation of sayings of Jesus, drawn, according to the Two-Source Hypothesis, mainly from Q but also from a source pecu-

liar to Matthew (M). It has as its counterpart in Luke the Sermon on the Plain (Luke 6:20–49). The Sermon on the Mount may be outlined as follows:

5:1–2	The setting
5:3–12	The Beatitudes
5:13–16	The new community
5:17–20	The abiding validity of the law
5:21–48	On practicing righteousness toward others in matters of:
	Murder (5:21–26)
	Adultery (5:27–30)
	Divorce (5:31–32)
	Oaths (5:33–37)
	Retribution (5:38–42)
	Love of enemy (5:43–48)
6:1–7:12	On practicing righteousness toward God:
	Almsgiving (6:1–4)
	Prayer (6:5–15)
	Fasting (6:16–18)
	On not laying up false treasure (6:19–24)
	On not being anxious (6:25–34)
	On not judging (7:1–5)
	On not squandering what is precious (7:6)
	On resting assured that God hears prayer (7:7–12)
7:13–27	Concluding warnings and exhortations

Jesus delivers this discourse as the Son of God (3:16–17) whose authority is greater than that of the scribes (7:28–29) or even Moses (5:21–48). It is the example par excellence of his teaching (4:23; 5:2; 7:28–29; 9:35; 11:1). The setting is an unnamed mountain in Galilee, and the audience is the crowds and the disciples (5:1–2; 7:28–29).

The Beatitudes ("blessings"; 5:3–12) describe the reversal of conditions that will take place in the future when the end-time Rule of God becomes a consummated reality. Because God's end-time Rule is already a present, though hidden, reality in Jesus, the Beatitudes are pronouncements that bespeak the inestimable joy that attends the certainty that the events prophesied are in the process of coming to pass.

The persons whom the Beatitudes envisage form the new community of Jesus' disciples, which is the "salt of the earth" and the "light of the world" (5:13–16). Through the lives they lead, disciples summon others to glorify God, that is, to live in the sphere of his end-time Rule by becoming disciples of Jesus.

Jesus teaches that the law has abiding validity and that what distinguishes the lives of the disciples is the greater righteousness (5:17–20). The greater righteousness, in turn, has a double focus: it involves behavior toward others (5:21–48) and toward God (6:1–7:12). The essential mark of all such behavior is love (5:44–45; 7:12). In fact, for disciples to love as God loves is for them to be perfect (5:48), that is, to be wholehearted in doing God's will as interpreted by Jesus (7:21). Wise disciples are those who both hear and do what Jesus has taught (7:24–27). ***See also*** Beatitudes; Kingdom of God; Law; Love; M; Matthew, The Gospel According to; Q; Torah. J.D.K.

serpent, a reptile, in the Bible another term for snake. In the ancient world, there was general respect for, revulsion at, and fear of serpents, most being assumed to be poisonous and therefore dangerous. The serpent thus came to be understood symbolically with both positive and negative connotations. In some ancient cultures, the serpent was associated with deity and was depicted in statues and paintings with various gods and goddesses. Serpents also played various roles in ancient mythological stories (e.g., the Babylonian *Gilgamesh Epic*). Some even linked the serpent with the process of healing, as in the case of the Greek god Asclepius. In Canaanite religion, which the early Hebrew people encountered upon their arrival in the area, the serpent was associated with the fertility worship of Baal, his consort Astarte (also known as Anath or Asherah) being depicted with a serpent.

Against this general background, one is not surprised to find many references to serpents in the biblical writings. In the OT literature, serpents usually have a negative connotation. The older story of creation (Gen. 2:4–3:24), which explains the sinfulness of the human race, has as its villain the serpent (note, however, that not

Aaron turning his staff into a serpent in an attempt to persuade Pharaoh to let the Israelites go (cf. Exod. 7:10); from the Alba Bible.

until much later is the serpent in this story identified with Satan or the devil). In ancient mythology, particularly in Mesopotamia, the great sea serpent was another symbol for evil and chaos, the great enemy of order and the gods. In the OT, references to Leviathan and Rahab (e.g., Isa. 27:1; 51:9b–10a; Pss. 74:14; 104:26; Job 26:12) are vestiges of this idea, and these creatures were understood to be the enemy of God and God's people.

In the NT writings, the same negative attitude toward serpents is evident. The religious leaders were called "a brood of vipers" by John the Baptizer (Matt. 3:7) and by Jesus (Matt. 23:33). In Luke 3:7, even the people in general are so labeled by John.

In a few instances in the Bible, there are references to positive qualities associated with serpents, however. The attribute seen as most desirable was that of "cunning" (Gen. 3:1; Matt. 10:16). There is also the story of the bronze serpent that Moses made in the wilderness and that was believed to have healing properties (Num. 21:4–9; cf. John 3:14–15; note, however, that Moses made the serpent only after an attack upon the people by deadly serpents). A story regarding Paul's harmless encounter with a poisonous serpent is reported in Acts 28:1–6.

There are several passages in the Bible where the ultimate victory of God and God's people over the evil of this age is depicted using serpent imagery (e.g., Luke 10:19; Rev. 20:2–10). One must remember, however, that such materials are symbolic and metaphorical, and not to be taken literally as some have done. ***See also*** Asp; Dragon; Leviathan; Nehushtan; Rahab; Viper.

J.M.E.

Serpent's Stone (KJV: "Zoheleth"), the place where Adonijah celebrated his self-established coronation in David's old age (1 Kings 1:9). It was reportedly near En-rogel, a spring south of the Old City (Ophel) of Jerusalem.

Serug (sihr´uhg), the son of Reu; he was a descendant of Shem and ancestor of Abraham (Gen. 11:20–23) and he is in the ancestry of Jesus through Joseph (Luke 3:35).

servant, a term in the English Bible often meaning slave as well as a hired attendant, since the English translates several Greek and Hebrew words that range in meaning from a hired servant to a slave bought or taken in war. In the OT "servant" is a frequent translation of the Hebrew *ebed,* the literal meaning of which is "slave." In the NT it translates the Greek *doulos,* which also has the literal meaning "slave." The English reader, therefore, must bear in mind that the notion of slave often lies behind the translation "servant."

In the OT: The chief characteristic of the servant, understood as slave, is that the servant belongs to another and so has no legal rights. Nonetheless, the servant-slave does share in Israel's cultic life in terms of circumcision (Gen. 17:12), the Sabbath (Exod. 20:10), sacrifice (Deut. 12:18), and the Passover (Exod. 12:44). In this way Israel recalled her own history of bondage (Exod. 20:2). "Servant" is also used as a term of humble self-designation (2 Kings 8:13) and as a way of expressing political submission (Josh. 9:11). Even the soldiers of the king's army referred to themselves as his servants (2 Sam. 11:24).

It was against this background that a religious sense of the term developed that was applied to several categories of people. The OT calls the righteous person (Ps. 119) and the patriarchs Abraham, Isaac, and Jacob (Exod. 32:13) servants of the Lord. Likewise it applies the term to other important figures such as Moses (Deut. 34:5), Joshua (Judg. 2:8), Samuel (1 Sam. 3:9), David (2 Sam. 7:5), Solomon (1 Kings 3:7), and Job (Job 1:8). In addition, the term becomes a way of identifying the prophets Abijah (1 Kings 14:18), Elijah (2 Kings 9:36) and Jonah ben Amittai (2 Kings 14:25), so that the phrase "my [thy, his] servants the prophets" becomes a frequent formula (2 Kings 17:13, 23).

The most striking usage, however, occurs in the four servant songs found in the latter half of Isaiah. These are usually identified as Isa. 42:1–4; 49:1–6; 50:4–9; and 52:13–53:12. The last is the longest and the most puzzling of the poems; it speaks of redemption through suffering. While Christians have seen a prophecy of the suffering Messiah in it, many Jewish scholars identify the servant with Israel, especially the ideal Israel whose mission it is to redeem the nations. Others have identified the servant with some historical figure, either a king such as Hezekiah or a prophet such as Isaiah or Jeremiah. Whoever the servant represents, the figure portrayed in these songs brings the religious aspect of servant in the OT to a climax.

In the NT: In the NT servants frequently appear in the Gospels, especially in the parables (Matt. 18:23–35; 21:33–44). For Jesus the concept becomes a way of expressing humankind's relationship to God. God is the Lord to whom the believer owes unreserved service. "No one can serve two masters" (Matt. 6:24). Nor is a servant above the master (Matt. 10:24). Rather, the faithful servant does the master's will (Matt. 24:45–46) and realizes that in the presence of God even the best disciple is only an unprofitable servant (Luke 17:10).

Jesus presents himself as a servant when he washes his disciples' feet at the Last Supper (John 13:1–20). He tells his disciples that he came "not to be served but to serve" (Mark 10:45), and Matthew (12:18–21) quotes from the first servant song (Isa. 42:1–4) to describe Jesus. Likewise, Paul, quoting from an early Christian hymn, says that although Jesus was in the form of God, he "emptied himself, taking the form of a servant" (Phil. 2:7). On the basis of his own ex-

ample, then, Jesus encourages his disciples to be servants to each other (Mark 10:44; John 13:14).

Obedient to this exhortation, Christians refer to themselves as "servants of God" (1 Pet. 2:16) and "servants of Christ" (1 Cor. 7:22; Eph. 6:6). The latter, however, is the most frequent. Paul describes himself as a "servant of Jesus Christ" (Rom. 1:1; Gal. 1:10; Phil. 1:1), as do the authors of James (1:1), 2 Peter (1:1), and Jude (1). Service to God and Jesus Christ, however, implies a change of allegiance from one lord to another. Paul makes this clear when he writes that Christians were once enslaved to other masters such as sin (Rom. 6:16–19) and the elemental spirits of the universe (Gal. 4:3). But with the coming of Christ this servitude is ended (Gal. 4:4–7). A similar idea is expressed in John when Jesus says "everyone who commits sin is a slave to sin" (8:34).

In this regard, the NT is dramatically different from its milieu. For the Greek the highest ideal was self-determination expressed in freedom. Thus the Greek looked upon the slave as an inferior kind of person. It would have been contradictory to the Greek ideal to speak of becoming a servant to another, even to God. Christianity stood this ideal upon its head, but did not challenge the institution of slavery as such. Paul encourages slaves to be obedient (Eph. 6:5; Col. 3:22) and he sends the runaway slave Onesimus back to his master (Philem.). Nonetheless the NT undermines the institution of slavery inasmuch as it proclaims a radical equality in Christ (1 Cor. 7:21–22; Gal. 3:28; Col. 3:11). ***See also*** Isaiah, The Book of; Jesus Christ; Prophet.

service, in the Bible, normally something to be done by a slave, i.e., servile work. Servile work was servile because slave and nonslave belonged to two different species, so to speak, just as humans differ from God. Service referred to tasks performed by lesser persons for those who controlled their existence. Relative to God service looked to Temple worship and its rituals (e.g., Exod. 31:10; 35:19; Esd. 6:18; Luke 1:23), while relative to humans it pertained to forms of bondage (e.g., Gen. 30:26; Exod. 1:14). It is noteworthy that for Paul, the slave service a person owed God in temple worship is now to be displayed in the Christian's service to neighbor, which is service to Christ (Rom. 12:1–2; 14:17–18; Gal. 5:13; see also 1 Cor. 9:19; 2 Cor. 4:5). B.J.M.

Seth (seth), the third son of Adam, according to the Yahwist's genealogy in Gen. 4:25 (the Priestly genealogy of 5:3 makes Seth Adam's firstborn). Seth's birth in 4:25 seems intended to contrast with the debauched and violent line of Cain. When Seth was born, the Hebrew text notes, "then began [the custom of] calling on Yahweh's name" (4:26). ***See also*** Sources of the Pentateuch.

seven, seventy. ***See*** Numbers.

Seveneh (suh-ven´uh), an alternate reading for Syene, a city on the southern border of Egypt, toward Ethiopia (Ezek. 29:10; 30:6). ***See also*** Syene.

seven words from the cross, the seven sentences spoken by Jesus from the cross in the passion stories. Mark 15:34 and Matt. 27:46 have the Hebrew/Aramaic phrase *"Eli, Eli, lema sabachthani,"* alluding to Ps. 22. Lucan themes of forgiveness and repentance appear as Jesus forgives his enemies (Luke 23:34; "Father, forgive them; for they know not what they do") and promises salvation to the repentant criminal (23:43; "Truly, I say to you, today you will be with me in Paradise"). In John 19:26–27 Jesus entrusts his mother to the beloved disciple. John 19:28, "I thirst," fulfills Ps. 69:21. Luke 23:46 ("Father, into thy hands I commit my spirit!") and John 19:30 ("It is finished") indicate the completion of Jesus' mission as he entrusts himself to God. ***See also*** Eli, Eli, Lema Sabachthani; Vinegar.

Shaalbim (shay-al´bim; Heb., "place of foxes"), an Amorite city dominated by Dan (Josh. 19:42 [Shaalabin]; Judg. 1:35) and in the jurisdiction of Ben-deker, one of twelve administrative officers under Solomon's administration (1 Kings 4:9). The site is probably modern Selbit, three miles northwest of Aijalon and about five miles northeast of Gezer.

Shaalim (shay´uh-lim; KJV: "Shalim"), an area scouted by Saul while he hunted the lost asses of his father, Kish (1 Sam. 9:4). The precise location is unknown, but it was likely in Benjaminite territory.

Shaaraim (shay´uh-ray´im; Heb., "double gate"). **1** A town of Judah in the Shephelah (Josh. 15:36 [KJV: "Sharaim"]; it was somewhere near Azekah in or near the Wadi es-Sant (1 Sam. 17:52). **2** The Simeonite city of 1 Chron. 4:31. It may be the Sharuhen (modern Tell Fa'ra) of Josh. 19:6.

Shaashgaz (shay-ash´gaz), the royal eunuch in charge of concubines at the second harem of King Ahasuerus (Esther 2:14).

Shabbethai (shab´uh-th*i*). **1** A Levite opposed to Ezra's reform policy of separating from foreign wives (Ezra 10:15). **2** A Levite who helped explain the law (Neh. 8:7). **3** A Levite who

Shadrach, Meshach, and Abednego in the "burning fiery furnace" of Nebuchadnezzar; third-century A.D. fresco from the catacombs of Saint Priscilla, Rome.

conducted external business in the Temple of Jerusalem (Neh. 11:16). All three definitions may refer to the same person, or 2 and 3 may be identical. The name also appears in 1 Esd. 9:14, 48.

Shaddai (shad′*i*). ***See*** El Shaddai.

Shadrach (shad′rak), the Babylonian name given to Hananiah, one of Daniel's three companions (Dan. 1:7), subsequently thrown into the fiery furnace. The etymology is uncertain. It has been taken as a deliberate pejorative variation of Marduk, god of Babylon. ***See also*** Abednego; Daniel; Meshach.

Shaharaim (shay′-huh-ray′im), a descendant of Benjamin (1 Chron. 8:8). He banished two of his three wives, although the reason for that action is not mentioned.

Shalem (shay′luhm; Heb., "peace"), a town near Shechem (KJV, Gen. 33:18). The RSV on the other hand translates the word not as a place name but as an adverb, to describe Jacob's arrival at Shechem—"safely," in other words, "in peace."

Shalisha (shuh-l*i*′shuh), one of the regions scouted by Saul while searching for his father's lost asses (1 Sam. 9:4). It was probably located in the region of the tribal lands of Ephraim or Benjamin.

Shallum (shal′uhm). **1** The son of Jabesh, who made himself king of Israel by assassinating Zechariah, son of Jeroboam II, and so ending the dynasty of Jehu. He was himself assassinated a month later (2 Kings 15:10–15). **2** The husband of the prophetess Huldah (2 Kings 22:14; 2 Chron. 34:22). **3** Jehoahaz, the fourth son of King Josiah (1 Chron. 3:15). He was proclaimed king of Judah after his father had been killed by Necho of Egypt. Three months later Necho made Eliakim (= Jehoiackim) king, deporting Shallum to Egypt, where he died (2 Kings 23:30–34), as announced in Jer. 22:10–12. **4** The father of Hanameel, a relative from whom Jeremiah bought family land (Jer. 32:6–10). **5** The father of Maaseiah, a Temple official (Jer. 35:4). **6** The chief gatekeeper in the Levites' area of the Temple (1 Chron. 9:17–18), whose descendants were also gatekeepers (Ezra. 2:42; Neh. 7:45; 1 Esd. 5:28). He was one of those who divorced foreigners they had married (Ezra 10:24; 1 Esd. 9:25). He may be the same person as the Korahite official (1 Chron. 9:19), the father of Mattithiah (1 Chron. 9:31). **7** Another who divorced a foreign wife (Ezra 10:42). **8** A levitical priest (1 Chron. 6:1–15), ancestor of Ezra (Ezra 7:1–2; 1 Esd. 8:1; 2 Esd. 1:1). **9** The son of Hallohesh, governor of half of the district of Jerusalem. With his daughters he rebuilt part of the city wall (Neh. 3:12). **10** A Judahite of the Jerahmeel branch (1 Chron. 2:40–41). **11** A Simeonite (1 Chron. 4:25). **12** A son of Naphtali (1 Chron. 7:13). **13** The father of an Ephraimite leader (2 Chron. 28:12). S.B.P.

Shalmai (shal′m*i*), a family of Temple servants resettled in Jerusalem after the Exile (Neh. 7:48). In Ezra 2:46 it is the term used by the KJV for the RSV's "Shamlai," probably designating the same people; see also 1 Esd. 5:30.

Shalman (shal′muhn), perhaps an abbreviation for Assyria's king Shalmaneser (IV or V). It may, on the other hand, refer to the Moabite monarch Shalmanu whose invasion of Gilead (late eighth century B.C.) would have been news close at hand for those whom the prophet Hosea addressed (Hos. 10:14).

Shalmaneser (shal′muh-nee′zuhr), the name of two Assyrian kings important for the history of ancient Israel. **1** Shalmaneser III, the son of Ashurnasirpal II and king of Assyria (858–824 B.C.). Though not mentioned in the Bible, two contacts with kings of Israel are recorded in his royal inscriptions. In 853, Shalmaneser's advance into north Syria was halted at Qarqar on the Orontes River by a coalition of twelve Phoenician and Syrian states, among them "Ahab of Israel," who had sent a contingent of "2,000 chariots and 10,000 foot-soldiers" (although some scholars question the reliability of these figures). In 841, following Shalmaneser's defeat of Hazael of Damascus, King Jehu, who had seized the throne in Samaria in a bloody coup the year before (2 Kings 9–10), acknowledged Assyrian hegemony and rendered tribute. A relief on the Black Obelisk of Shalmaneser memorializes this act of submission. **2** Shalmaneser V, the son of Tiglath-pileser III, king of Assyria (727–722 B.C.). Though no contemporary royal inscriptions are extant, a picture of his short five-year reign is reconstructable on the basis of 2 Kings 17:1–6 and some passages in the writings of the

The Assyrian king Shalmaneser III (left), armed with a bow and arrows and accompanied by an attendant and a soldier, receives Sua, the Gilzanite; from the Black Obelisk of Shalmaneser, ninth century B.C.

first-century historian Josephus *(Antiquities* 9.283–87). Shalmaneser undertook two military campaigns to the Mediterranean coast, the area that had been under his governance while he was crown prince. In 726, Hosea of Israel recognized him as overlord and rendered tribute (2 Kings 17:3). Shortly thereafter, a rebellion against Assyria, with the backing of a Delta chieftain of Egypt, broke out in Phoenicia and Israel; this prompted the second appearance of Shalmaneser in the West. Hosea was imprisoned in 724, in his ninth and last year as king (for this calculation, cf. 2 Kings 17:5; 18:9–10). Shalmaneser laid siege to Samaria, then ruled by army officers and/or city elders; the city held out for two years, until the autumn of 722. Samaria fell to Shalmaneser (2 Kings 17:6a); this event is recorded in the Babylonian Chronicle (col. 1, line 28): "He destroyed the city of Samaria." Because of Shalmaneser's death, the fate of Samaria was left undetermined; the usual punishments meted out to defeated cities were postponed. The "King of Assyria" who exiled Israelites from Samaria (2 Kings 17:6b) was Sargon II, who reconquered the city in 720 B.C. ***See also*** Assyria, Empire of. M.C.

shalom (shah-lohm´), Hebrew spelling of the general Semitic term for "peace, wholeness, well-being." It describes the ideal human state, both individual and communal, the ultimate gift from God. As with Arabic *Salaam*, it has become part of personal salutations both on meeting and departing. ***See also*** Peace.

Shama (shay´muh), the son of Hotham, and one of David's mighty men (1 Chron. 11:44).

shame, a concept that is expressed in the biblical writings by a variety of Hebrew and Greek terms. Most frequently, it denotes the guilt a person feels or should feel for having sinned against God (e.g., Jer. 2:26), but it can also connote the disgrace one finds in failure, either by actively having done something wrong or by having failed to do something right (e.g., Prov. 14:34). While the OT writers did not really have an idea of "conscience," they did believe that there should be a natural sense of disgrace and unworthiness when one sins against God or one's companions. It was considered appalling when people no longer had any sense of shame (cf. Jer. 6:15; also Job 19:3). In the NT, it is possible to be ashamed (or not ashamed) of Christ and his gospel (e.g., Mark 8:38; Rom. 1:16; cf. Heb. 2:11; 11:16). ***See also*** Conscience; Guilt; Repentance; Sin. J.M.E.

Shamed (shay´mid). ***See*** Shemed.

Shamgar (sham´gahr), a mighty warrior in Israel in the premonarchical period. He was famed for killing a total of six hundred Philistines with an oxgoad (Judg. 3:31). Bearing a non-Semitic name he is identified as the "Anathite" (lit. "a son of [the goddess] Anath"). He was probably a mercenary who changed sides in the era of Deborah, collaborating with Jael (Judg. 5:6–7) in disruption of caravan trade, to Israel's great advantage.

Shamir (shay´muhr; Heb., "thorn"). **1** A Levite, the son of Micah (1 Chron. 24:24). **2** The home town of Tola, one of the minor judges (Judg. 10:1–2). **3** A hill country village assigned to the territory of the tribe of Judah (Josh. 15:48), probably modern el-Bireh about twelve miles southwest of Hebron.

Shamma (sham´uh), the name of a family of the tribe of Asher (1 Chron. 7:37).

Shammah (sham'uh), a Hebrew proper noun. **1** The son of Reuel who was born to Esau and Basemath. Along with his brothers Nahath, Zerah, and Mizzah, Shammah was a chief of Reuel in the land of Edom (Gen. 36:13, 17; see also Isaac's genealogy in 1 Chron. 1:37). **2** The third of Jesse's eight sons who passed before Samuel in order to determine who was the Lord's anointed (1 Sam. 16:6–10). He was one of the three eldest sons who followed Saul into battle against the Philistines, and to whom his younger brother David took provisions from Jesse in Bethlehem to the valley of Elah (1 Sam. 17:12–54). **3** The son of Agee the Haraite who is listed as one of three mighty men in the army of David. While others fled from the Philistines at Lehi, Shammah took his stand in a plot of lentils and slew the enemy (2 Sam. 23:11–12). ***See also*** Basemath; Esau; Jesse. F.R.M.

Shammai (sham'*i*). **1** The son of Onam (1 Chron. 2:28, 32). **2** The son of Rekem (1 Chron. 2:44, 45). **3** The son of Mered and the Egyptian woman Bithiah (1 Chron. 4:17). All three were Judeans.

Shammua (sha-my*oo*'uh; Heb., "heard"). **1** The son of Zaccur; he was one of the twelve spies, a representative of the tribe of Reuben, who was sent by Moses into Canaan (Num. 13:4). **2** One of David's sons born in Jerusalem (2 Sam. 5:14; 1 Chron. 14:4); he is also called Shimea (1 Chron. 3:5). **3** A Levite whose son Abda (Obadiah) was a postexilic inhabitant of Jerusalem (Neh. 11:17); he is elsewhere (erroneously?) called Shemaiah (1 Chron. 9:16). **4** The head of the clan of Bilgah during the period of restoration (Neh. 12:18); he is possibly the same as 3 above, although since this person lived in the time of the second high priest after the return from the Exile, it is probably a different person (see v. 12). ***See also*** Shemaiah; Shimea. D.R.B.

Shammuah (sha-my*oo*'uh), KJV spelling of Shammua, the name of four persons mentioned in the Bible. ***See also*** Shammua.

Shaphan (shay'fuhn; Heb., "rock badger, coney"). **1** The head of a family of Judeans serving the court at the time of King Josiah (ca. 639–609 B.C.; 2 Kings 22:3–20; 2 Chron. 34:8–20). He was involved in relaying the "book" found in the Temple to the king, on the basis of which the Josianic reforms were presumably shaped. He was sent to consult the prophetess Huldah as part of a royal embassy. His sons and grandsons continued to play roles in the life of the court at the time of the prophet Jeremiah, saving Jeremiah from the court's desire for his death (Jer. 26:24), relaying Jeremiah's letter to the exiles in Babylon (29:3), and providing the house in which Baruch could read Jeremiah's dictated scroll (36:10–12). **2** The grandfather of the Gedaliah in whose custody Jeremiah was placed after the fall of Jerusalem to Babylonian forces (39:14; 40:5), to assure that Jeremiah was cared for properly. Some scholars think that this Shaphan may be the same person described in 1 above, however. **3** The father of Jaazaniah (Ezek. 8:11) whose apostasy is reviewed in Ezekiel's vision. R.S.B.

Shaphat (shay'fat; Heb., "judged"). **1** A Simeonite member of the group sent by Moses to spy out the land of Canaan (Num. 13:5). **2** The father of the prophet Elisha (1 Kings 19:16, 19; 2 Kings 3:11; 6:31). **3** A Davidic descendant and a grandson of Zerubbabel (1 Chron. 3:22). **4** A Gadite chief living in Bashan (1 Chron. 5:12). **5** A herdsman of David, and a son of Adlai (1 Chron. 27:29).

Sharai (shair'*i*), one of the returned Judean exiles who had married foreign women (Ezra 10:40).

Sharezer (shuh-ree'zuhr). **1** A son of the Assyrian monarch Sennacherib who reportedly helped murder his father (2 Kings 19:37; Isa. 37:38). **2** In Zech. 7:2 a name that appears in a very confused text, possibly as part of the name of a god, possibly the name of an emissary from Bethel.

Sharon (shair'uhn), **the Plain of,** the area where the coastal plain widens south of the slopes of Mt. Carmel and the crocodile marshes (the modern Nahr Zerqa), extending about thirty miles south to the Yarkon River north of Joppa. It varies from about eight to twelve miles in width. The streams from the well-watered hills to the east must avoid a central mass of Mousterian Red Sand. They move sluggishly south and north of the mass, spreading into broad areas of swamps and flooding in wet seasons.

In Israelite times the dunes supported an impenetrable oak forest (compared to the thick forests of Lebanon and Carmel in Isa. 35:2) rather than the citrus groves seen today. Pastureland would have been on the fringe of the forest (1 Chron. 27:29). The rose of Sharon is a kind of crocus growing as a "lily among brambles" (Song of Sol. 2:1–2). "Sharon is like a desert" (Isa. 33:9) and "Sharon shall become a pasture for flocks" as the barren slopes above Jericho will become a place for cattle to feed (Isa. 65:10). Thus the biblical picture of Sharon is a forbidding jungle of oaks and swampy marshes rather than a fertile or productive plain.

The sand dunes and marshes meant the main land route, "The Way of the Sea" (Lat. *Via Maris*), hugged the drier foothills of the highland on the east. Along this road were the more permanent settlements, Socoh (1 Sam. 17:1) lying above the Iskanderun River (modern Wadi

Zeimar) and Aphek (Josh. 13:4) (modern Ras el-Ain) at the source of the Yarkon.

The coast was without good natural harbors. It was the Romans under Herod the Great who developed the imposing city of Caesarea with its artificial harbor, its aqueducts bringing fresh water from Mt. Carmel, and a network of roads to the interior. ***See also*** Plains. N.L.L.

Sharuhen (shuh-*roo*ʹhuhn), an important Hyksos stronghold in southwest Palestine in the seventeenth and early sixteenth centuries B.C., captured by the Egyptian king Ahmose (ca. 1560 B.C.) after a siege lasting three years. Sharuhen was held by an Egyptian garrison at the time of Thutmose III's great victory at Megiddo in 1482 B.C. In Josh. 19:6 it appears in a list of cities allotted to the tribe of Simeon at the time of the Israelite conquest; parallel lists give its name as Shilhim (Josh. 15:32) and Shaaraim (1 Chron. 4:31).

Sharuhen is probably to be identified with Tell el-'Ajjul, the largest mound in southern Palestine, which is located about four miles southwest of modern Gaza near the principal ancient highway leading up from Egypt. This site was excavated by the British Egyptologist W. M. Flinders Petrie in 1930–34 and by members of his staff in 1938. Excavations indicate that the mound was initially used as a cemetery at the end of the third and beginning of the second millennium B.C. It became a rich and powerful city in the latter part of the Middle Bronze Age (ca. 1750–1550 B.C.), when it was protected on three sides by an enormous ditch set in front of a steep slope (glacis). Within this enclosure, Petrie found several stratified city levels belonging to the Middle Bronze Age and beginning of the Late Bronze Age (ca. 1550–1200 B.C.), as well as evidence for a major destruction (probably due to Ahmose). He also discovered a series of five superimposed "palaces": two belonged to the Middle Bronze Age, while the final three were evidently Egyptian fortresses dating to the Late Bronze Age. The great wealth of the Hyksos city is attested by the fact that more gold objects were found at Tell el-'Ajjul than at any other Bronze Age site in Palestine. The end of the Egyptian Empire in the twelfth century B.C. resulted in the abandonment of the garrison at Sharuhen. There is little evidence of later occupation other than some burials on the mound that belong to the tenth century B.C. ***See also*** Hyksos. J.M.W.

Shaul (shawl; Heb., "dedicated" or "asked for"). **1** An Edomite king from Rehoboth (Gen. 36:37–38). **2** The Israelite head of the Shaulite clan (Gen. 46:10; Exod. 6:15; 1 Chron. 4:24; Num. 26:13). **3** A son of the Levite Kohath (1 Chron. 6:24).

Shaveh (shayʹvuh), **Valley of,** the valley where the king of Sodom and Melchizedek, king of Jerusalem, met Abraham as he returned from his battle with the kings of the north (Gen. 14:17). This valley, also called the King's Valley, was presumably the same as that in which Absalom erected his monument (2 Sam. 18:18). Suggestions as to its identity include the Kidron, the western Hinnom, and the Wadi Joz, all valleys in the Jerusalem area.

Shaveh-kiriathaim (shayʹvuh-kihr-ee-uh-thayʹim; Heb., "plain of Kiriathaim"), the plain where the Elamite king Chedorlaomer fought and subdued the Emim (Gen. 14:5). On the basis of the location in Kiriathaim the plain should be somewhere near el-Qereiyat, northwest of Dibon in what is now Jordan.

shaving, the act of removing facial hair, in the Bible particularly the beard. As a sign of mourning and as part of several purification rituals, shaving had religious significance in Israelite society.

As Assyrian reliefs show, Israelite men of the pre-exilic period wore full beards and shoulder-length hair. (The short hair that Paul commended to men as natural [1 Cor. 11:14] was a later Greek or Roman fashion.) The beards were trimmed (2 Sam. 19:24), but under normal circumstances men were ashamed to appear in public without them (2 Sam. 10:4–5). When in mourning, however, they shaved their heads and beards (Job 1:20; Jer. 41:5; 48:37). Priests were prohibited from this practice (Lev. 21:5), and Deut. 14:1 extends the prohibition to all Israelites, but this law seems little known prior to the Exile (Isa. 22:12).

The men or women who consecrated themselves to God as Nazirites could not cut their hair until they fulfilled their vow; then they shaved their heads and offered the hair on the altar for their purification (Num. 6:5–19). The most famous Nazirite was Samson (Judg. 13–16), and Samuel may have been one, though priests were later prohibited from such vows (Ezek. 44:20). Acts reports that even as a Christian Paul continued to observe such vows (Acts 18:18; 21:24).

Shaving also played an important role in other purification rituals, whether for the patient who had recovered from serious skin disease (Lev. 13:33; 14:8–9), or for the female prisoner of war whom an Israelite desired to marry (Deut. 21:12). ***See also*** Nazirites. J.J.M.R.

Shavsha (shavʹshuh), a scribe in David's court (1 Chron. 18:16). Other forms of the name may include "Seraiah" (2 Sam. 8:17), "Sheva" (2 Sam. 20:25), or even "Shisha" (1 Kings 4:3). Because of its non-Hebrew origin, the name may indicate use of foreign scholars at the royal court.

Sheal (sheeʹuhl; KJV: "Jasael"), a returning exile who had married a foreign woman (Ezra 10:29; see also 1 Esdras 9:30).

Shealtiel (shee´al´tee-uhl; Heb., "God is a shield" or "God is victor"), a son of the Judean King Jeconiah (Jehoiachin; 1 Chron. 3:17; Matt. 1:12, not Neri as in Luke 3:27). He was the father of Zerubbabel, the leader of postexilic returnees (but 1 Chron. 3:17–19 calls him Zerubbabel's uncle). Shealtiel thus connected the royal family of King Jeconiah with postexilic Judean developments under Zerubbabel.

Sheariah (shee´uh-r*i*´uh), one of the Benjaminite sons of Azel (1 Chron. 8:38; 9:44), and a descendant of Saul.

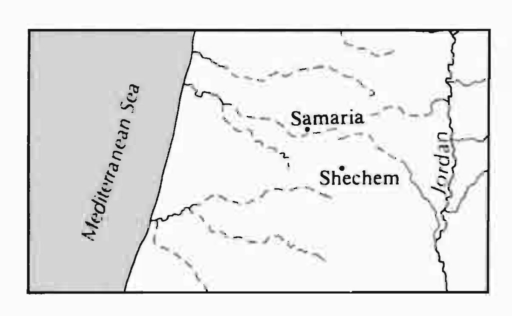
Shearjashub (shee´uhr-jay´shuhb); Heb., "a remnant will return"), the eldest of Isaiah's sons (Isa. 7:3). By giving his child this unusual name, Isaiah made Shearjashub a living symbol of the prophet's early message concerning the Northern Kingdom of Israel (Isa. 10:21–22). Only a remnant of it would survive.

Sheba (shee´buh). **1** A town included in Simeon's inheritance, along with Beer-sheba and Moladah (Josh. 19:2). **2** A Benjaminite, the son of Bichri, who led a revolt against David after Absalom's rebellion was put down. Hoping to seize northern Israel, he was pursued by Joab and his army and was decapitated at the instigation of a "wise woman" of the town of Abel-beth-maacah (2 Sam. 20). **3** A man of the tribe of Gad (1 Chron. 5:13). **4** The Hebrew spelling of the South Arabic name Saba, an area of great wealth (Isa. 60:6; Jer. 6:20; Ezek. 27:22–25). ***See also*** Seba, Sabeans.

Sheba, Queen of, a ruler of the Sabeans contemporary with King Solomon (tenth century B.C.) whom she visited to test his wisdom. Impressed with his wealth as well as his wisdom, she blessed both Solomon and the God of Israel for such splendor. She gave Solomon 120 talents of gold in addition to other precious items, and Solomon in his turn bestowed rich presents upon her, prior to her return to her own land. Her appearance in the narrative of 1 Kings is intended to glorify the figure of Solomon rather than give information about this wealthy queen, who is otherwise unknown in the OT (1 Kings 10:1–10, 13; cf. 2 Chron. 9:1–9, 12). ***See also*** Seba, Sabeans.

Shebah (shee´buh). ***See*** Shibah.

Shebaniah (sheb´uh-n*i*´uh; Heb., "Yahweh has restored"?). **1** A trumpeter in the Temple (1 Chron. 15:24). **2** A Levite from Jerusalem who joined in exclamations exalting God in Ezra's time (Neh. 9:4). **3** A priest who sealed the covenant between Israel and God at Jerusalem after the Exile (Neh. 10:4; 12:14); "Shechaniah," Neh. 12:3). **4** A Levite, possibly Shechaniah (Neh. 10:10).



Shebat (shee´bat), the eleventh month of the Hebrew year, corresponding to January–February (Zech. 1:7; 1 Macc. 16:14).

Shebnah (sheb´nuh), the state secretary of King Hezekiah at the time of Sennacherib's campaign against Judah (2 Kings 18:18–19:2; Isa. 36:3–37:2). Apparently he had been demoted to this position from the higher office of royal steward following a bitter critique of Isaiah (Isa. 22:15–25).

Shebuel (shi-byoo´uhl). **1** A Levite son of Gershom, hence a descendant of Moses (1 Chron. 23:14–16; 26:24). His duties (assisting the priests in Temple services, managing the treasuries, and dividing Temple duties) reflect late rather than early Temple practice, however. **2** A Levite musician (1 Chron. 25:4) also called Shubael (25:20).

Shecaniah (shek´uh-n*i*´uh; Heb., "God has taken up abode"), a frequent name in Chronicles, Ezra, and Nehemiah. **1** A descendant of David and Zerubbabel (1 Chron. 3:21–22) and head of a family that returned with Ezra from Babylon (Ezra 8:3). **2** The chief of the tenth division of priests in the Davidic order (1 Chron. 24:11). **3** One of the priests in Hezekiah's time who distributed the Temple offering to the priests in outlying cities (2 Chron. 31:15). **4** One who returned with Ezra (Ezra 8:5). **5** A man who had married a foreigner and repented, and who then proposed a covenant to put away foreign wives and children (Ezra 10:2–4). **6** The father of one who helped repair the wall of Jerusalem (Neh. 3:29). **7** The father-in-law of Tobiah the Ammonite (Neh. 6:18). **8** A priest who returned with Zerubbabel (Neh. 12:3). P.A.B.

Shechem (shek´uhm), a city located forty-one miles north of Jerusalem in the pass between Mount Ebal and Mount Gerizim. It dominated an important trade route and controlled a fertile valley to the east where Jacob's sons pastured their flocks (Gen. 37:12, 13, 14). Shechem was a Korathite levitical city of refuge in the territory of Manasseh (Josh. 17:2, 7), although it is also described as being "in the hill country of Ephraim" (Josh. 20:7). The city was excavated

Silver coin depicting a temple and altar at the top of a stairway leading up Mount Gerizim, ca. A.D. 198–217.

by a German expedition under the direction of E. Sellin between 1913 and 1934. More recently the Joint Expedition, directed by G. E. Wright, worked at the site for eight seasons between 1956 and 1969.

The Patriarchal Period: Shechem was the first city visited by Abraham in his migration from Haran (Gen. 12:6), but it figures most prominently in the traditions associated with Jacob. It was the scene of the rape of Dinah by Shechem, the son of Hamor, king of Shechem (Gen. 34). In the narrative the prince and the city have the same name. The father's name, Hamor, means "ass" in Hebrew. During excavation in the east gate, the decapitated skeleton of a donkey was found, with what appeared to be the bones of an animal sacrifice nearby. The ass was probably the sacred animal of the city, and the names of father and son may symbolize the city itself. The city was "Shechem, the son of the ass [its sacred animal]." When the Hebrews returned to Canaan from Egyptian slavery, they brought Joseph's mummified body with them and buried it in a tomb near the city (Josh. 24:32).

Egyptian texts of the nineteenth century B.C. indicate that Shechem was an important urban center during the patriarchal period. Archaeological evidence shows that during the nineteenth and eighteenth centuries B.C. the city was surrounded by a massive embankment of earth, topped by walls of mudbrick on stone foundations. The highest ground within the walls was occupied by a multiroom palace-temple complex, set off from the rest of the city by a stone wall. In the seventeenth century B.C. the embankment was replaced by a wall composed of huge stones and entered by impressive gates on the north and east sides. The royal palace was moved to a position directly against the inner face of the new wall, and the palace-temple complex was replaced by a rectangular "fortress temple" with walls 17 feet thick.

While the Israelites were in slavery in Egypt, Shechem continued to flourish. Its king, Lab'ayu, is described in the Amarna Letters (fourteenth century B.C.) as the most important ruler in central Palestine, controlling a small empire and making inroads on the territory of his neighbors. During this period the fortress-temple was rebuilt and continued in use into the Israelite period. It is the temple of the Lord of the Covenant mentioned in Judges 9.

The Israelite Period: When the Israelites entered Canaan (thirteenth century B.C.) Shechem passed peacefully into their hands and became the earliest religious center of the tribes. At Shechem Joshua renewed the Sinai covenant with Israel's tribal leaders, probably at the temple of the Lord of the Covenant (Josh. 24). Abimelech, a son of Gideon by a concubine who lived at Shechem, roused the Shechemites to his support and had himself declared king

Remains of a high place at the site of ancient Shechem.

(Judg. 9:1–6), against the spirit and traditions of the old tribal confederacy, which held that the Lord was the only king in Israel (Judg. 8:22–23). Shechem soon revolted against Abimelech's rule and in reprisal he destroyed the city (Judg. 9:45).

After a time when the site was occupied only by crude huts and grain storage pits, the city was rebuilt. The old Canaanite royal tradition, which had long been associated with Shechem, continued to be attached to the rebuilt city. Rehoboam went there to be crowned king (924 B.C.) in the northern part of his kingdom (1 Kings 12:1). After the revolt of the northern tribes Jeroboam I rebuilt the city (1 Kings 12:25). Traces of his work survive at the tower of the east gate. For a time Shechem served as Jeroboam's capital, but its population had too many local loyalties and he moved his capital to Tirzah. Shechem then settled down to a fairly prosperous existence as a provincial center. Typical Israelite four-room houses were built on a series of terraces rising from the east gate to the former sacred area, which was now transformed into a granary, probably for the collection of taxes. The fortifications of the Israelite city followed the plan of its Canaanite predecessor. Israelite Shechem was destroyed by the Assyrian armies in 722 B.C. The walls of the houses were covered by over 4 feet of destruction debris.

Shechem was rebuilt about 350 B.C. as the religious center of the Samaritans. Their temple stood on Mount Gerizim, and at the foot of the mountain they constructed a city designed to rival Jerusalem. A strong defensive wall enclosed solidly constructed houses and at least one luxurious villa near the old sacred area. The city was destroyed, probably by John Hyrcanus during his conquest of Samaria, in 107 B.C. It was razed to the ground. Its walls were buried beneath deep layers of fill and it was never rebuilt. ***See also*** Abimelech; Amarna, Tell el-; Dinah; Rehoboam; Samaritans.

Shedeur (shed´ee-uhr; Heb., "Shaddai is light" or "Shaddai is fire"), the father of the Reubenite Elizur who was chosen to help Moses as tribal head (Num. 1:5; 2:10; 7:30, 35; 10:18).

sheep, a ruminant mammal related to the goat. Sheep are mentioned in the Bible more than five hundred times and a large variety of terms are employed to describe the different breeds, age, and sex types. While most of the references in the OT are literal, practically all references in the NT are metaphors comparing the relationship of Christ and his followers to that of the shepherd and his flock.

The earliest evidence for the domestication of the sheep comes from Zawi Chemi Shanidar in northern Iraq and dates back to about 9000 B.C. Until recently it was believed that the sheep was imported to Palestine as an already domesticated animal, but recent finds from southern Jordan suggest that wild sheep were once living in the area and might have given rise to independent domestication. Sheep were originally domesticated to provide a steady supply of meat. Wild sheep do not have real wool, just a woolly undercoat, and it was probably not until 4000 B.C. that the animal's potential in this respect was discovered and they were bred especially for wool production. Another domestic trait is the fat tail, which is common to most breeds in the Near East, including the Awassi sheep, which is raised today in Israel. The fat tail is considered a deli-

Shepherds driving their flock into a fortified sheepfold erected to protect the animals from marauders. Extended walls shield the narrow entrance; a Safaite rock drawing found in the desert east of Amman, Jordan.

cacy and was sometimes required as a sacrifice (Exod. 29:22–25).

In contrast to the goat, the sheep prefers flat or gently rolling grazing grounds and eats plants down to the root, thriving on the stubble left over from the barley and wheat harvest. The Bible provides several references to the skill of the shepherd, who knows each of his animals by name, whose voice is recognized by his sheep (John 10:3–4), and who takes care of them in illness (Ezek. 34:15–16). The constant search for greener pastures is a regular task for those who tend sheep (1 Chron. 4:39–40). The importance of finding adequate shelter for the night is often alluded to (Luke 2:8; Num. 32:24). Sometimes natural caves were used for this purpose (1 Sam. 24:3), a practice that continues to the present day. A very moving picture of the relationship between a lamb and its owner is painted in 2 Sam. 12 (cf. Ps. 23:2, 5).

Like goats, sheep provided most necessities of life: milk (Deut. 32:14; Isa. 7:21, 22), meat (1 Sam. 14:32), hides (Exod. 25:5; Heb. 11:37), and wool (Lev. 13:47–48; Job 31:20). Even their horns were used as containers for oil (1 Sam. 16:1) or as musical instruments (Josh. 6:4). The skins were usually made into clothing and the inner covering of the tabernacle was made from skins that had been dyed red (Exod. 26:14).

Wool especially was a precious good and trade object. The Moabite king Mesha had to pay to the king of Israel an annual tribute of the wool of a hundred thousand rams (2 Kings 3:4). The shearing always was a special occasion and Jacob used it to escape from his uncle Laban, whose attention was on the shearing (Gen. 31:19).

Jacob can be considered the first systematic animal breeder in the Bible. Genesis 30 tells how he tried to manipulate the quality of his flock by selecting the strong individuals for reproduction (vv. 41–42). He also attempted to induce his ewes to produce offspring of a certain color by placing a similar color in front of them (vv. 37–39).

Throughout the NT the sheep is used in a figurative sense for human beings. Jesus compared Israel to sheep lost (Matt. 10:6; cf. Isa. 53:6) and without a shepherd (Matt. 9:36). Sheep also play a role in several parables of Jesus (Matt. 12:11; 18:12; 25:33), and the Gospel of John pictures Jesus as a protecting shepherd, willing to give his life for his sheep (10:7–9; cf. Ezek. 37:24; Ps. 23:1; Heb. 13:20). The people whom Jesus fed he compared to sheep without a shepherd (Mark 6:34) and he is himself compared to a sheep led to slaughter (Acts 8:32; cf. Isa. 53:7).

I.U.K.

Sheep Gate, the, a gate probably located in the north city wall of Jerusalem, on the north side of the Temple area. This gate was built after the return from Exile by Eliashib and his brothers (Neh. 3:1) as part of Nehemiah's reconstruction of the Jerusalem walls (Neh. 12:39). Because of its proximity to the Temple area and pool of Bethzatha (Bethesda) (John 5:2), it has been surmised that sheep to be sacrificed were brought into the city through this gate.

Sheerah (shee'uh-ruh; KJV: "Sherah"), the daughter of Ephraim (1 Chron. 7:24) who was credited with building up both Upper and Lower Beth-horon.

Shehariah (shee'huh-ri'uh), a Benjaminite chief, and the son of Jehoram (1 Chron. 8:26).

shekel (shek'uhl), in OT times a standard unit of weight, approximately 14.5 grams of silver; in intertestamental and NT times, a common silver coin of the same weight, struck by Jewish authorities. In Matt. 17:27, the RSV translates Gk. *statēr* as "shekel." ***See also*** Money; Weights and Measures.

Shekinah (shuh-ki'nuh), a Hebrew word from the root "to dwell" that is translated as the "Presence" of God. God's *Shekinah* is not a being or reality separate from God (despite the positions of Philo [late first century B.C. to first century A.D.] and Maimonides [A.D. 1135–1204]) but a title for and designation of God in post-OT writings, especially in his presence among humans and in the world. The Targums (Aramaic translation of the Hebrew OT) often avoid anthropomorphisms and substitute *Shekinah* for "God." Rabbinic literature refers to God's *Shekinah* in a variety of contexts. God's presence was seen in the cloud that led the Israelites in the desert and in the tent of meeting in the desert. The Priestly writer's word for the tent of meeting, the *mishkan* or "tabernacle," comes from the same root as *Shekinah*. The glory of God, which filled the Temple, was his *Shekinah* and when the Temple was destroyed, God's *Shekinah* left the Temple. In one tradition the *Shekinah* returns to heaven, but in another it remains in the Western (or Wailing) Wall of the Temple Mount. Rabbinic traditions conceive of God's *Shekinah* as omnipresent, but as especially present in Israel, and in the post-Temple period, in synagogues and houses of study. ***See also*** Tabernacle.

A.J.S.

Shelah (shee'luh; Heb., "javelin"). **1** A Shemite son of Arpachshad (Gen. 10:24) who was the father of Eber (1 Chron. 1:18, 24; Gen. 11:12–15; but see Luke 3:35–36 where he is identified as a son of Cainan). **2** The third son of Judah who is a Shelanite ancestor (Gen. 38:5, 11, 14, 26; 46:12; 1 Chron. 2:3; see also Num. 26:20; 1 Chron. 4:21).

Shelemiah (shel'uh-mi'uh; Heb., "God has recompensed," or "restored"). **1** The father of Nethaniah (Jer. 36:14). **2** One of Jehoiakim's men sent to seize Baruch (Jer. 36:26). **3** The father of Jehucal (Jer. 37:3; 38:1). **4** The father of

Irijah (Jer. 37:13). **5** Two men who had married foreign women (Ezra 10:39, 41). **6** The father of Hananiah who helped repair the Jerusalem wall (Neh. 3:30). **7** A priest in charge of the storehouses (Neh. 13:13). **8** A gatekeeper (1 Chron. 26:14); this Shelemiah appears to be the same person called Meshelemiah in v. 1 and Shallum in 1 Chron. 9:17, 19, and 31. ***See also*** Shallum.

P.A.B.

Sheleph (shee´lif), a son of Joktan (Gen. 10:26; 1 Chron. 1:20). The names of Joktan's other sons indicate that Sheleph designated not an individual but more likely an Arabian tribe. The association with Hazarmaweth (i.e., the Hadramaut region in southwest Arabia) suggests a location in modern Yemen.

Shelesh (shee´lish; Heb., "third" or "triplet'), a man who headed an Asherite tribe (1 Chron. 7:35).

Shelomi (shi-loh´m*i*; Heb., "peace"?), the son of an Asherite chief, Ahihud (Num. 34:27).

Shelomith (shi-loh´mith), a name that occurs both as a woman's and a man's; it is sometimes confused with Shelomoth. **1** The Danite mother of a sojourner in the Israelite camp who blasphemed the name of God (Lev. 24:11). **2** A daughter of Zerubbabel (1 Chron. 3:19). **3** A son (daughter?) of Rehoboam by Maacah, daughter of Absalom (2 Chron. 11:20). **4** A Levite, the chief son of Izhar (1 Chron. 23:18), called Shelomoth in 1 Chron. 24:22. **5** A Gershonite Levite who was a son of Shimei, according to the traditional reading of 1 Chron. 23:9 (written Shelomoth). **6** The head of a family group that returned with Ezra from Babylon (Ezra 8:10).

P.A.B.

Shelomoth (shi-loh´moth). ***See*** Shelomith.

Shelumiel (shi-l*oo*´mee-uhl; Heb., "God is peace"?), the Simeonite son of Zurishaddai (Num. 1:6; 2:12; 7:36–41; 10:19) who assisted Moses with the census. Judith's ancestry is traced to Salamiel, son of Sarasadai (Judg. 8:1), who is probably the same person as Shelumiel.

Shem (shem; Heb., "name," "renown"), one of the three sons of Noah. Shem occupies a special place among the sons of Noah because he was the eldest (Gen. 5:32; 9:18), the recipient of special blessing (Gen. 9:26, RSV), and the ancestor of a group of peoples that included the Hebrews (Eber, Gen. 10:21, 24). The term "Semite" ("Shemite") has been applied in modern times to peoples speaking the Semitic languages. It has also been used as a racial designation. However, the list of Shem's descendants in Gen. 10:21–30 includes non-Semitic peoples (e.g., the Elamites, v. 22), showing that the basis for the grouping was geographical or political rather than linguistic or racial. In Gen. 9:20–27, Shem is the ancestor of Israel and is located in Palestine together with his two brothers, Ham (father of Canaan, representing the original inhabitants of the land) and Japheth (ancestor of the Philistines and other "Sea Peoples"). Canaan is cursed for dishonoring his father in the latter's drunken stupor and is made the slave of his brothers, who "covered their father's nakedness." Shem is rewarded by a special relationship with God (Gen. 9:26, RSV) and Japheth with an enlarged dwelling place "in the tents of Shem" (i.e., in the territory of Israel).

P.A.B.

Shema (shee´muh), an OT town (Josh. 15:26) that may be named after the clan of Shimei (1 Chron 4:26–27). It is associated with the Hebron area and the four Calebite clans (1 Chron. 2:43; as often in the OT, names of persons and places are used interchangeably).

Shema (shuh-mah´; Heb., "Hear you . . ."), the name of and first Hebrew word of the classical Jewish declaration of faith found in Deut. 6:4, which reads (literally), "Hear you, Israel, Yahweh our God, Yahweh is one"—although some have translated the last clause "Yahweh alone." The last letters of the first and last words of this verse are written in Hebrew Bibles in oversized script, thereby forming the Hebrew word "witness" to indicate that by this verse Jews testify to the oneness and uniqueness of their God—a difference in both quantity and quality from polytheism.

By the second century A.D. the *Shema* prayer consisted of Deut. 6:4–9; 11:13–21; and Num. 15:37–41 together with special benedictions to be recited every morning and evening (based upon Deut. 6:7). In traditional Jewish practice, the *Shema* is written in the phylacteries and mezuzah. As a watchword of faith and faithfulness the *Shema* constitutes the climax of the saying recited before death. This declaration was also recited during martyrdom. Jesus identified the *Shema* as the first commandment in the law (Mark 12:29).

J.U.

Shemaah (shi-may´uh), the father of the Benjaminite bowmen Ahiezer and Joash, both of whom joined David to assist him in his battles (1 Chron. 12:1–3).

Shemaiah (shi-may´yuh; Heb., "Yahweh has heard"), a popular biblical name; the popularity of the name is also confirmed by extrabiblical sources (it appears in several of the ostraca found in the excavations at Arad in the northern Negeb [nos. 27, 31, 39]). **1** A late tenth-century B.C. prophet who warned Rehoboam against fighting Israel (1 Kings 12:22; 2 Chron. 11:2) and called Rehoboam and his princes to repent before Pharaoh Shishak invaded Judah from Egypt (2 Chron. 12:5, 7). His prophecies were one of the sources for the Chronicler's

history of Rehoboam's times (2 Chron. 12:15). **2** A false prophet in the days of Jeremiah who wrote from Babylonia denouncing Jeremiah and who in turn was denounced by God (Jer. 29:24–32). **3** A common name among the Levites (e.g., 1 Chron. 9:14; 15:8; 2 Chron. 17:8; 29:14; Neh. 11:15). **4** Several of those who served with Ezra and Nehemiah in the return from Exile (Neh. 3:29; 10:8; 12:6; Ezra 8:13). **5** A descendant of David (1 Chron. 3:22). **6** A descendant of Simeon (1 Chron. 4:37). **7** A descendant of Reuben (1 Chron. 5:4). **8** The father, from Kiriath-jearim, of Uriah, a prophet whom King Jehoiakim put to death for his prophecies (Jer. 26:20–23). **9** The father of one of the princes of the court of Jehoiakim who listened to the scroll Baruch read to them (Jer. 26:12–15). N.L.L.

Shemariah (shem´uh-r*i*´uh; Heb., "God has kept"). **1** One of the Benjaminite men who joined David at Ziklag (1 Chron. 12:5). **2** A son of Judah's King Rehoboam (2 Chron. 11:19). **3** A son of Pahath-moab who had married a foreign woman (Ezra 10:32). **4** A son of Binnui, one among the returnees from exile who had also married a foreign woman (Ezra 10:41).

Shemeber (shem-ee´buhr), a king of Zeboiim (Gen. 14:2) who was defeated by an alliance of eastern kings.

Shemed (shee´mid; KJV: "Shamed"), a Benjaminite who, with Eber and Misham, built (founded) the cities of Ono and Lod (1 Chron. 8:12).

Shemer (shee´muhr; Heb., "watch"?; also Shomer [1 Chron. 7:32] and Shamer [KJV, 1 Chron. 6:46; 7:34]). **1** The owner (or owning clan) of the hill Omri bought and used for his capital city Samaria (1 Kings 16:24). **2** The father of Bani in the lineage of Temple musicians (1 Chron. 6:46). **3** An Asherite descendant (1 Chron. 7:32, 34).

Shemida (shi-m*i*´duh; Heb., "Eshmun [the Phoenician God] has known"?), the Gileadite who headed the family of Shemidaite descendants of Manasseh (Num. 26:32; Josh. 17:2; 1 Chron. 7:19). The name appears on an ostracon from Samaria from the eighth century B.C.

Sheminith (shem´uh-nith), a term used by musical groups (with lyres in 1 Chron. 15:21). It designates the eighth mode (in titles of Pss. 6, 12), one of several melodic patterns.

Shemiramoth (shi-mihr´uh-moth; Heb., "name of heights"?). **1** A Levite harpist in the group David commanded to accompany the Ark and continue the worship (1 Chron. 15:18, 20; 16:5). **2** A Levite, a commissioned teacher in Judah (2 Chron. 17:8) during Jehoshaphat's reign (ca. 874–850 B.C.).

Shemuel (shem´y*oo*-uhl; Heb., "name of God" or "his name is God"). **1** A Simeonite land-divider, the son of Ammihud (Num. 34:20). **2** A clan chief, the son of Tola, who served in David's forces (1 Chron. 7:2). It appears in the KJV for "Samuel" in 1 Chron. 6:33.

Shen (shen), the term in the KJV (following the Hebrew text) for the RSV's "Jeshanah" (following Greek and Syriac texts) in 1 Sam. 7:12. ***See also*** Jeshanah.

Shenazar (shi-naz´uhr), the fourth son of the exiled Judean king Jehoiachin (Jeconiah; 1 Chron. 3:18), possibly the same person known as Sheshbazzar in postexilic days.

Sheol (shee´ohl), a biblical term for the netherworld. In some sources, particularly poetic and prophetic ones (cf. Deut. 32:22; Amos 9:2), the reference is simply to the deep depths of the earth. More commonly, Sheol is the underworld where departed spirits go (Prov. 9:18). Some of the biblical texts preserve a distinct mythological flavor, where Sheol is a power that can destroy the living (cf. Isa. 5:14). The etymology of the word is still in question. As a gloomy netherworld for departed spirits Sheol is the counterpart of Hades and Tartarus. M.A.F.

Shepham (shee´fuhm), a place on the eastern border of Israelite land (Num. 34:10–11) presumably near modern Riblah, but of still unknown location.

Shephatiah (shef´uh-t*i*´uh; Heb., "God has judged"). **1** The fifth son of David, by Abital (2 Sam. 3:4). **2** The father of a Benjaminite who resettled Jerusalem after the Exile (1 Chron. 9:8). **3** One of the Benjaminite warriors who went over to David while he was at Ziklag (1 Chron. 12:5). **4** The chief officer of the Simeonites in David's tribal administration (1 Chron. 27:16). **5** One of Jehoshaphat's sons who were slain by their brother Jehoram when he ascended the throne (2 Chron. 21:2). **6** The head of a lineage whose members returned from Babylon with Zerubbabel (Ezra 2:4) and Ezra (Ezra 8:8). **7** An ancestor of a division of "Solomon's servants" who returned with Ezra (Ezra 2:57). **8** An ancestor of a Judahite living in Jerusalem in Nehemiah's time (Neh. 11:4). **9** One of the princes who sought the death of Jeremiah for his prophecies during the siege of Jerusalem and who cast him into a cistern to die (Jer. 38:1–6). P.A.B.

Shephelah (shi-fee´luh), **the,** a noun that in Hebrew is always used with the definite article. It refers to the low hills in western Palestine separating the coastal plains from the central mountain ridge to the east. The overwhelming number of references are to the Shephelah of Judah. These hills provided a buffer between Judah and Philistia, and both parties sought

control of the Shephelah because of its strategic value (Jer. 17:26).

Shepher (shee´fuhr), one of the camp stops of the Israelites (Num. 33:23–24) during their wanderings after the Exodus from Egypt. It is called "Mount" Shepher (KJV: "Shaphar") but is of unknown location.

shepherd, one who pastures or tends a flock of sheep and/or goats. Since these were the most important domestic animals in Palestine, there are many references to sheep and shepherds throughout the Bible. Many important figures in Hebrew history were pastoralists, including Abraham, Isaac, Jacob, Jacob's sons, Moses, and David. The occupation first appears in Gen. 4:2, when Abel, "a keeper of sheep," comes into conflict with Cain, "a tiller of the ground." While there has always been competition between shepherds and farmers, these two lifestyles actually exist symbiotically. Indeed, in one way or another, nearly everyone in ancient Palestine was involved in pastoral activity, from the lowly herdsman (cf. Amos 7:14–15) to the master breeder (cf. 2 Kings 3:4). The shepherd's humble status can be seen in the contrast drawn between David's pastoral and royal careers (2 Sam. 7:8; cf. Ps. 78:70–71). Nomadic peoples like the Amalekites and Midianites were shepherds, but the economic importance of sheep meant that many villagers and townspeople also tended flocks on a part-time or full-time basis. In addition to being a major sacrificial animal, sheep provided the ancients with meat, milk, fat, wool, skins, and horns.

The economic value of sheep stands in direct proportion to the amount of supervision (i.e., guidance and protection) these beasts require. Sheep become lost easily; once lost, they are defenseless (Ezek. 34:5–6; Matt. 18:12). The unaggressive behavior of sheep is emphasized in Matt. 7:15: "Beware of false prophets, who come to you in sheep's clothing but inwardly are ravenous wolves." Perhaps most famous are the sheep's submissiveness (Isa. 53:7; Jer. 11:19) and its trust in the shepherd (John 10:3–5).

Although the shepherd's work was often boring, it was undoubtedly a livelihood that called for diligence and endurance. The search for pasturage and water sometimes took the herdsman and his flock far from home. This meant that shepherds put up with simple food, harsh weather (cf. Gen. 31:40), and primitive lodging (Song of Sol. 1:8; Isa. 38:12). Such routine hardships were occasionally accompanied by danger from wild animals, e.g., lions, bears, and wolves (1 Sam. 17:34–35; Isa. 31:4; Amos 3:12; Mic. 5:8; John 10:12). Shepherds also had to be on guard against thieves (Gen. 31:39; John 10:1, 8, 10).

Most of the shepherd's work involved a routine of leading the sheep to food and water and returning them to the safety of the fold. Because sheep are highly gregarious, the shepherd had to keep alert for strays and check his effort by counting the sheep as they entered their enclosure for the night (Lev. 27:32; Jer. 33:13; Ezek. 20:37). If animals were missing, the herdsman's duty was to rescue the lost (Ezek. 34:11–12; Matt. 18:11–14). Special attention was given to expectant ewes, newborn lambs, and sick animals (Isa. 40:11; Ezek. 34:16).

In addition to fieldstone or brush sheepfolds, shepherds used simple but functionally sound equipment. Protection from the elements was provided by a heavy cloak (cf. Jer. 43:12). A staff was used to control the movement of the flock, and a rod was used to ward off enemies (Ps. 23:4). Also important were a bag for food and a sling (1 Sam. 14:40). Shepherds played reed flutes to calm the flocks and while away the hours (cf. Judg. 5:16). Reference should also be made to the use of dogs to help manage the movement of the sheep (Job 30:1).

Shepherd Imagery in the Bible: Pastoral language was used in a figurative way throughout the ancient Near East and in the Hellenistic world; it is, therefore, quite natural that the OT and NT should also use shepherd imagery. In numerous passages the customs of shepherds are used to illustrate spiritual principles; e.g.,

The "Good Shepherd" depicted on the ceiling of the crypt of Lucina in Rome, second or third century A.D.

sheep without a shepherd are like those who have strayed from God (Matt. 9:36; Mark 6:34), and shepherds are compared to spiritual overseers (Num. 27:16–17; Eccles. 12:11; John 21:15–17).

Many ancient peoples affirmed the sovereignty of their deities by referring to them as shepherds (cf. Gen. 48:15; 49:24). Descriptions of the shepherd's work are often used to describe Yahweh's activity. The most extended allegories of the shepherd are found in Psalm 23 and Ezekiel 34; both passages portray God as one who protects and cares for a helpless flock. In addition to these two chapters, this analogy appears in Psalms quite frequently (e.g., 28:9; 74:1; 77:20; 78:52–53; 80:1; 95:7; 100:3; 121:3–8), and it is a favorite literary device of the prophets (e.g., Isa. 40:11; 49:9–10; Jer. 23:1–4; 31:10; 49:19–20; 50:17–19; Mic. 4:6–8; 7:14).

While kings and princes were called shepherds in other ancient Near Eastern literature (cf. Nah. 3:18), the OT normally applies this title to political leaders in a negative way. Since God was the true shepherd of Israel, the subordinate herdsmen (i.e., rulers) often fell short of God's standards; as such, they were condemned for their stupidity and mismanagement (e.g., Jer. 10:21; 22:22; 23:1–4; 25:34–38; Ezek. 34:1–10; Zech. 10:3; 11:4–17).

Of course, there are exceptions to this negative use of pastoral imagery. David was a shepherd who ruled his people with an "upright heart" and a "skillful hand" (Ps. 78:70–72), and Cyrus was referred to as God's shepherd (Isa. 44:28). Most important was the promise that God would raise up new shepherds (Jer. 3:15; 23:4), a promise that eventually took on messianic significance (Ezek. 34:23; 37:22, 24). Not only would God's shepherd be from the Davidic lineage, but he would also suffer on behalf of the sheep (Zech. 13:7; cf. 12:10).

The only literal reference to shepherds in the NT is found in Luke 2:8–20; elsewhere they appear in parables and figures of speech, most often in the Gospels. Jesus claimed that his mission was "to the lost sheep of the house of Israel" (Matt. 10:6; 15:24). The parable of the lost sheep was told to exemplify God's love (Matt. 18:12–14; Luke 15:3–7), while the shepherd's separation of sheep and goats was compared to judgment (Matt. 25:32–33). In a well-known allegory, Jesus refers to himself as the "good shepherd" who "lays down his life for the sheep" (John 10:1–29; cf. the quotation of Zech. 13:7 in Matt. 26:31 and Mark 14:27). Jesus is called "the great shepherd of the sheep" (Heb. 13:20), "the Shepherd and Guardian of your souls" (1 Pet. 2:25), and "the chief Shepherd" (1 Pet. 5:4).

While issuing a warning about fierce wolves (i.e., false teachers), Paul admonishes the Ephesian elders to oversee and care for the flock, which he equates with "the church of God" (Acts 20:28–30). This same function is encompassed by the English word "pastor," which is the normal translation given in Eph. 4:11, although the Greek term used there is the same one that is usually rendered "shepherd" (cf. 1 Pet. 5:1–4). ***See also*** Sheep. G.L.M.

Shephi (shee´f*i*), an Edomite, the son of the clan chief Shobal (1 Chron. 1:40). The name also appears as "Shepho" (Gen. 36:23).

Shephupham (shi-fy*oo*´fuhm; KJV: "Shupham"), the name of a Benjaminite clan (Num. 26:39); "Shephuphan" (1 Chron. 8:5) and "Muppim" (Gen. 46:21) may be other names for the same clan.

Sherebiah (sher´uh-b*i*´uh; Heb., "God has sent severe heat"?). **1** The "discreet" Levite among the postexilic Judeans working with Ezra (Ezra 8:18, 24). **2** A Levite teacher of law (Neh. 8:7; 9:4, 5; 10:12). **3** A Levite chief who returned from exile with Zerubbabel (Neh. 12:8, 24).

Sheshach (shee´shak), a cryptogram for Babylon (Heb. *bābel;* Jer. 25:26; 51:41), obtained by using a rabbinical cipher called Athbash in which the last letter of the alphabet is used for the first (tav[t] = aleph[a]), the second from the last is used for the second (shin[sh] = beth[b]), etc. Many versions replace the word with "Babylon."

Sheshai (shee´sh*i*), a descendant of Anak (Num. 13:22; Josh. 15:14; Judg. 1:10), who lived in Canaan when the spying Israelites entered. He was defeated by Joshua's forces, presumably near his residence, Hebron.

Sheshan (shee´shan), the head of a Jerahmeelite family of Judah (1 Chron. 2:31, 34, 35).

Sheshbazzar (shesh-baz´uhr), the "prince of Judah" (Ezra 1:8, 11; 5:14, 16, RSV) to whom Cyrus (538 B.C.) entrusted the "gold and silver vessels" of the Temple to be restored to Jerusalem. The name derives from Babylonian *Šamaš-* or *Sîn-ab-utṣur* and means "O Shamash/Sîn preserve the father" (the versions allow for either). Identifications with Zerubbabel (Ezra 3:2) are circumstantial and thus questionable. Sheshbazzar may be identical with Shenazzar, a son of Jeconiah (1 Chron. 3:18).

Sheth. 1 A form of Seth, the third son of Adam (Gen. 4:25). **2** A word usually taken as a proper noun, a group of people ("sons of Sheth") associated with the Moabites (Num. 24:17). However, it is likely that the word is a (deliberately?) corrupted form of the word "tumult" (Heb. *sha'ōn*) used to describe the warlike nature of the Moabites ("Sons of [battle] tumult"; cf. Jer. 48:45). Since Sheth is a form of Seth (1 above), this may be a wordplay that identifies the

Moabites as distant kinsmen of the Israelites but at the same time condemns their aggression against the Israelites (see Num. 22:1–4). ***See also*** Moab; Seth. D.R.B.

Shetharbozenai (shee'thahr-boz'uh-n*i*), a Persian provincial official who, along with the provincial governor Tattenai, challenged Zerubbabel's right to rebuild the Temple (mid-sixth century B.C.). He sent an official protest to the Persian king Darius. After a search of the archives in Ecbatana, a copy of the decree of Cyrus allowing the Jews to return and rebuild the Temple was found and Darius ordered Shetharbozenai and Tattenai not only to cease harassing the Jews but also to lend financial assistance from the provincial treasury (Ezra 5:3, 6; 6:6, 13). ***See also*** Darius.

Shethar-boznai (shee'thahr-boz'n*i*), KJV spelling of RSV Shetharbozenai, spelled Shetharbozenai in NRSV. ***See also*** Shetharbozenai.

Sheva (shee'vuh). **1** The chief scribe or secretary of King David (2 Sam. 20:25), elsewhere called Shavsha (1 Chron. 18:16) and Seraiah (2 Sam. 8:17). He is probably also the same person called Shisha, the father of two scribes in the time of Solomon (1 Kings 4:3). Some scholars suggest that he was a non-Israelite, probably Egyptian, which would account for the variation of the name. **2** A Judahite descendant of Caleb (1 Chron. 2:49). ***See also*** Seraiah; Shavsha.

shewbread. ***See*** Showbread.

Shibah (sh*i*'buh; Heb., "oath"), the well dug by Isaac's servants during his time with Abimelech of Gerar (Gen. 26:26–33). It is probably the source for the city name "Beer-sheba."

shibboleth (shib'uh-lith; Heb., either "ear of grain" or "flood, torrent"), the password required by Jephthah's Gileadite sentries (Judg. 12:6). Ephraimites retreating across the Jordan could only say "sibboleth," and forty-two units (hardly 42,000) were slain. Apparently three sounds are involved, two of which merged earlier in west Palestine, where the Ephraimites lived, than in Transjordan, where the Gileadites resided. ***See also*** Judges, The Book of.

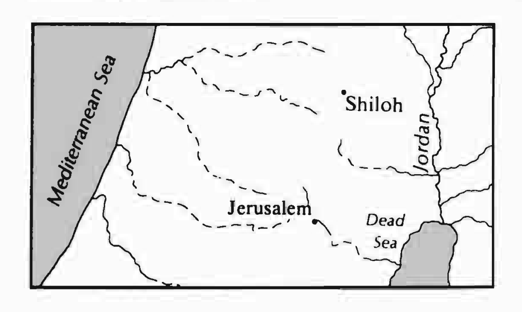
shield. ***See*** Spear.

Shiggaion (shuh-gay'on), a Hebrew word of uncertain meaning that appears in the heading of Psalm 7. Its plural form appears in Hab. 3:1, also in connection with poetic materials.

Shihor (sh*i*'hor), a body of water "east of Egypt" (Josh. 13:3) or near the Nile (Isa. 23:3) that served as a reference for the south edge of Israel (1 Chron. 13:5). The northern parts of the Pelusiac or Bubastite branches of the Nile in the eastern delta are most likely meant.

Shihor-libnath (sh*i*'hor-lib'nath), a boundary of Asher where it adjoined Carmel (Josh. 19:26). It may be modern Wadi Zerqa which drains the western slope south of Dor.

Shiloah (sh*i*-loh'uh). ***See*** Siloam Inscription.



Shiloh (sh*i*'loh), an ancient religious center of Israel. Located about ten miles north of Bethel to the east of the Jerusalem-Nablus road (Judg. 21:19), it is identified with modern Khirbet Seilun. Shiloh was the administrative and religious center for the Israelite tribes during the early settlement period (twelfth century B.C.). There the tabernacle was set up (Josh. 18:1), the distribution of the land by lot took place (Joshua 18, 19), the Levites were assigned their cities (Judg. 21), and the ten tribes gathered to consider the apostasy of the east Jordan tribes (Josh. 22).

Shiloh was the central sanctuary and seat of the priesthood (Eleazar, Josh. 21:1, 2; Eli and his sons, 1 Sam. 1:3, 9; Samuel, 1 Sam. 1:24; 3:21) until the Ark was captured in the battle with the Philistines at Ebenezer (1 Sam. 4). The Ark was not returned to Shiloh and the city never regained its prestige. Shiloh's destruction by the Philistines is not related in the OT, but Jeremiah cites its fate in his prophecies (Jer. 7:12–14; 26:6–9). It did continue as a town to some extent, as is shown by the fact that the wife of Jeroboam sought Ahiah the prophet at Shiloh (1 Kings 14:2–4) and that men of Shiloh came to Mizpah after the murder of Gedaliah (Jeremiah 4, 5).

Shiloh has been the scene of several excavations. The evidence published from the early excavations was insufficient and debatable. The work of the Danes under H. Kjaer in 1926, 1929, and 1932 was cut short by his death, and only preliminary reports were published. Thirty years later, in preparing for the final publication, a short excavation was conducted by S. Holm-Nielson and resulted in different conclusions than the earlier work. From 1981 to 1984 I. Finkelstein conducted four seasons of excavation at the site. Eight strata of occupation are now distinguished.

The first Middle Bronze Age (MB II) settlement was probably a small unfortified village, but it was followed by a town of about four acres surrounded by a massive city wall reinforced by an earthen glacis. The glacis differed in size and construction depending on the need for reinforcement. This city was destroyed in the sixteenthth century B.C.

Pottery and bones from the next period on the summit may indicate an isolated cultic place, but there was a period of abandonment before the site was resettled in the twelfth–eleventh centuries B.C. The latest excavators believe

these were the early Israelite settlers who already had developed construction and architectural techniques. Pillared buildings on the west side yielded storage jars with "collared-rims." The fierce destruction was probably the work of the Philistines in the mid–eleventh century B.C. (as suggested after the early excavations, but denied by the 1963 excavators).

The recent excavators believe the site lay in ruins for some time. Scanty architectural and ceramic finds represent village occupation of Iron Age II and Hellenistic times. Roman and Byzantine remains are much more widespread, with evidence of Roman fortification walls and two Byzantine churches with decorative mosaic floors witnessing to it as a pilgrimage site for early Christians.

N.L.L.

Shilonite (sh*i*ˊluh-n*i*t; KJV: "Shiloni"), someone coming from Shiloh. **1** Ahijah the prophet is so identified five times (1 Kings 11:29; 12:15; 15:29; 2 Chron. 9:29; 10:15), perhaps reflecting his association with the shrine there. **2** The father of Zechariah (Neh. 11:5). **3** Shilonites were among those settling Jerusalem after the Exile (1 Chron. 9:5). Some argue that the instances in 2 and 3 are erroneous and should be designated "Shelonite" as in Num. 26:20.

Shilshah (shilˊshuh), a member of the tribe of Asher and the son of Zophah (1 Chron. 7:37).

Shimea (shimˊee-uh; Heb., "God has heard"). **1** The third son of Jesse (1 Chron. 2:13). **2** One of David's sons born in Jerusalem (1 Chron. 3:5). **3** A Merarite Levite (1 Chron. 6:30). **4** A Gershomite Levite (1 Chron. 6:39).

Shimeath (shimˊee-ath), the mother of one of the murderers of King Joash of Judah (2 Kings 12:21; 2 Chron. 24:26).

Shimeathites (shimˊee-uh-th*i*ts), a scribal family living at Jabez (1 Chron. 2:55). Neither the place nor people can be precisely identified.

Shimei (shimˊee-*i*; Heb., "[God] has heard"), the name of at least eighteen men in the OT, some of which follow. **1** A Benjaminite of Saul's house, who cursed David as David fled Jerusalem during Absalom's revolt. When David returned, Shimei met him at the Jordan with a thousand Benjaminites, confessing his sin and pledging his allegiance. David spared Shimei's life on oath but on his deathbed instructed Solomon to put him to death. Solomon accordingly contrived to execute Shimei for breaking an agreement. **2** A member of David's court (1 Kings 1:8), perhaps the same Shimei who wielded authority over Solomon's Benjaminite district (1 Kings 4:18). **3** A Ramathite overseer of David's vineyards (1 Chron. 27:27). **4** The head of a levitical family (Exod. 6:17; Num. 3:18). **5** Several Levites in various types of Temple service (1 Chron. 6:17; 25:17; 2 Chron. 29:14; 31:13). **6** The brother of Zerubbabel (1 Chron. 3:19). **7** A Benjaminite ancestor of Mordecai (Esther 2:5). **8** Three men who had married foreign women (Ezra 10:23, 33, 38).

P.A.B.

Shimeon (shimˊee-uhn), a son of Harim who had married a foreign woman (Ezra 10:31).

Shimon (sh*i*ˊmuhn), a family or clan of the tribe of Judah (1 Chron. 4:20).

Shimrath (shimˊrath), the son of Shimei, a Benjaminite (1 Chron. 8:21).

Shimri (shimˊr*i*). **1** A Simeonite ancestor of Ziza (1 Chron. 4:37). **2** The father of David's mighty man Jediael (1 Chron. 11:45). **3** A Levite working in the Temple during the reign of King Hezekiah of Judah (2 Chron. 29:13).

Shimrith (shimˊrith; Heb., "God has protected"), a Moabite woman who was the mother of Jehozabad, one of the murderers of King Joash of Judah (2 Chron. 24:26).

Shimron (shimˊron). **1** The fourth son of Issachar and the head of the Shimronites (Gen. 46:13; Num. 26:24; 1 Chron. 7:1). **2** A Canaanite royal town (Josh. 11:1) assigned to the tribe of Zebulun (Josh. 19:15).

Shimshai (shimˊsh*i*; Heb., "sun"), an officer of the Persian court on duty in Palestine (Ezra 4:8, 9, 17 and 23). He endorsed a letter to Artaxerxes, the king of Persia, complaining about Judean postexilic reconstruction work and

received official support for its cessation. The work in Jerusalem was resumed later.

shin (shin), the name of the twenty-first letter of the Hebrew alphabet. It had a numerical value of three hundred and had the phonetic value of *sh.* A variant took the sound *s.* Both were written in a rough equivalent of the English letter "W."

Shinab (shi´nab; Heb., "[the god] Sin is my father"), the king of Admah, one of the five monarchs in a coalition against the eastern alliance of four other kings (Gen. 14:2). Defeated initially, the alliance of five kings was rescued by Abram (Gen. 14:13–16).

Shinar (shi´nahr), **Plain of,** a district of Babylonia in southern Iraq. According to Gen. 10:10, the Plain of Shinar included Babel (Babylon), Erech (Warka), and Accad or Akkade in central Mesopotamia close to Baghdad. The Tower of Babel is said to have been built in "a plain in the land of Shinar" (Gen. 11:2). "Amraphel king of Shinar" was one of the four kings who, according to Genesis 14, invaded the Dead Sea region and were subsequently pursued and defeated by Abraham at "Horbah, north of Damascus" (Gen. 14:1–16). Many scholars, however, believe this tradition to be legendary. In later times "Shinar" was equated with Babylon, from which, among other places, the exiles would one day be rescued (Isa. 11:11). Dan. 1:2 says that Nebuchadnezzar took "Jehoiakim king of Judah . . . with some of the vessels of the house of God" to Shinar. Zech. 5:11 predicts the ephah of wickedness will be taken to a house built for it in Shinar. ***See also*** Babylon; Nebuchadnezzar. D.B.

Shion (shi´uhn), a border post of the lands of Issachar (Josh. 19:19). Its location is uncertain.

Shiphi (shi´fi; Heb., "abundance" or "overflow"), a member of the tribe of Simeon who was the father of Ziza (1 Chron. 4:37).

Shiphrah (shif´ruh), a woman who was one of two midwives approached by Pharaoh to carry out his plan to destroy all Israelite boys when they were born (Exod. 1:15).

Shiphtan (shif´tan; Heb., "the god has judged"?), the father of Kemuel, of the tribe of Ephraim (Num. 34:24). Shiphtan was one of the men assigned to divide the land among the tribes of Israel.

ships. ***See*** Boats.

Shishak (shi´shak; Heb.), a king of Egypt, whose Egyptian name was Shoshenq I (945–924 B.C.). Born in Egypt but descended from a line of Libyan nobles, he was the founder of the twenty-second (Libyan) dynasty (ca. 945–715 B.C.), whose capital was at Tanis (Heb. *Zoan*) in the northeast part of the delta. A contemporary of Solomon, he gave asylum to Jeroboam (1 Kings 11:40) until the latter returned to take over the northern kingdom of Israel after Solomon's death (1 Kings 12:2–3). When the country was divided between Rehoboam and Jeroboam, Shishak, for reasons still unclear, launched a major invasion of Palestine. This campaign, which took place in the fifth year of Rehoboam's reign (probably equivalent to a year late in Shishak's reign), is described in 1 Kings 14:25–26 and 2 Chron. 12:1–9. According to the biblical narrative, Shishak's large army took the fortified cities of Judah and "came up against Jerusalem." A list of cities captured by the king was carved on a wall in the temple of Amun-Re at Karnak. This list, which is in badly damaged condition today, originally contained the names of over 150 Palestinian cities. The absence of Jerusalem from this list is explained by Rehoboam's decision to pay tribute to Shishak, which included the treasures of the Temple and royal palace, to avoid an Egyptian conquest of the city (2 Chron. 12:5–9). ***See also*** Rehoboam; Zoan. J.M.W.

Shitrai (shit´ri). A Sharonite, one of David's servants. He handled the livestock in the Sharon plain (1 Chron. 27:29).

shittah (shit´uh; "acacia" tree or wood), a transliterated Hebrew term *(šiṭṭâ)* that identified the tree or wood *Acacia nilotica* or the more substantial *Acacia tortilis.* In the plural form, *shittim* (Exod. 25, 26, 27, 30, 35, 36, 37, 38), it is designated as the proper wood to be used in constructing the Ark of the Covenant (Exod. 25:10) and the accompanying items like the carrying poles (Exod. 25:28), bars (Exod. 26:26), pillars (Exod. 26:32), tables (Exod. 25:23), and altars (Exod. 37:25; see also Deut. 10:3). In Isa. 41:19 it symbolizes the revival of lush life as part of a growth with other substantial trees. It was highly resistant to insects and other decay and was suitable for cabinet-making, being both hard and durable. R.S.B.

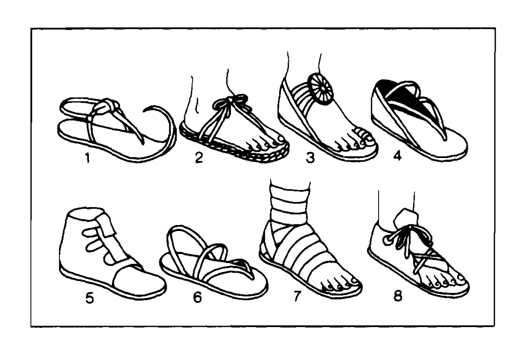
Shittim (shi´tim), a place in the territory of Moab north of Mt. Nebo and Heshbon and across the border from Jericho (Num. 33:48–49). Here, according to the various narratives, the Israelite men sinned with Moabite women (Num. 25) and the Israelites were numbered in a census (Num. 26). At Shittim Joshua was commissioned to succeed Moses (Num. 27:23) and from there men were sent as spies to the promised land (Josh. 2:1). Shittim may be identified with the modern Tell el-Hamman in Jordan.

Shiza (shi´zuh), a member of the tribe of Reuben. He was the father of Adina and a member of David's armies (1 Chron. 11:42).

Shoa (shoh'uh), a people named in association with Babylonians, Assyrians, and probably Aramaeans who would threaten Judah, according to Ezekiel's warning (Ezek. 23:23). The people have not been precisely identified, although they were probably located north of Judah, given the known locations of the associated groups. In this section of Ezekiel, Judah appears as one of two sisters and is named Oholibah. ***See also*** Oholah, Oholibah.

Shobab (shoh'bab). **1** One of David's sons born in Jerusalem (2 Sam. 5:14; 1 Chron. 3:5; 14:4). **2** A son of Caleb and Azuba (1 Chron. 2:18).

Shobach (shoh'bak), commander of the eastern Aramaean forces of Hadadezer, who marshaled troops to assault David. In the subsequent fight at Helam in the Transjordan Shobach's forces were beaten decisively and Shobach himself was mortally wounded. The defeat stymied further Aramaean-Ammonite action against David (2 Sam. 10:15–19; 1 Chron. 19:16–19, where the name is spelled "Shophach").



Shobai (shoh'bi), one of the families of returning exiles who served as gatekeepers in Jerusalem (Ezra 2:42; Neh. 7:45; 1 Esd. 5:28).

Shobal (shoh'buhl; Heb., "basket"). **1** The second son of Seir, a Horite clan chief who lived probably in Edom (Gen. 36:20, 23, 29; 1 Chron. 1:38, 40). **2** An ancestor of a Calebite tribe in Kiriath-jearim (1 Chron. 2:50, 52), which was considered part of Judah (1 Chron. 4:1–2).

Shobek (shoh'bek), one of the men sealing the covenant in Jerusalem under Nehemiah (Neh. 10:24).

Shobi (shoh'bi), the Ammonite prince, son of King Nahash, who supplied David during David's stay at Mahanaim in the Transjordan while he was in conflict with his son Absalom (2 Sam. 17:27–29). Shobi may have served as successor to his brother Hanun following the latter's insolent treatment of David's servants and the subsequent military disaster. Such conduct on Hanun's part was all the more inappropriate because the Ammonites were then strictly a tributary people to David's throne (2 Sam. 10:1–11:1; 12:26–31; 1 Chron. 19:1–20:3).

shoes, coverings for the feet, used for decoration as well as protection. Sandals were the common form of foot covering in biblical times, although laced or strapped boots were worn by Assyrian and Roman soldiers, and Palestinian women in ankle-high shoes are depicted in an Egyptian tomb painting (cf. Ezek. 16:10). Most people, however, appear barefoot in ancient Egyptian and Mesopotamian art, with sandals shown on soldiers, travelers, and persons of

Shoes: 1. Egyptian (1200 B.C.), 2. Egyptian, 3. Babylonian, 4. Assyrian (900 B.C.), 5. Greek *krepis*, 6. Greek *pediba*, 7. Roman *calceus*, 8. Roman *crepeda*

rank. Footwear may have been more common in northern regions. Sandals consisted basically of a leather, wood, or fiber sole attached to the foot by thongs (Gen. 14:23). Assyrian sandals were characterized by a heel cap.

Putting on sandals was a sign of preparation for a journey (Exod. 12:11; Deut. 29:5; Josh. 9:5, 13) or for warfare (Isa. 5:27). Jesus' instructions in sending out the Twelve, that they should go barefoot (Matt. 10:10; Luke 10:4), countered normal practice. Sandals belonged to fine dress (Luke 15:22) and full dress (Acts 12:8). Footwear was removed indoors, in sacred precincts (Exod. 3:5; Josh. 5:15), and during mourning (Ezek. 24:17). Removing or carrying a master's shoes was a slave's task in NT times (cf. Mark 1:7; Matt. 3:11).

Transfer of property was confirmed in Hebrew custom by the symbolic exchange of a sandal (Ruth 4:7, 8; Amos 2:6), arising, probably, from the practice of claiming title to land by walking its boundaries or casting a shoe upon it (Ps. 60:8). The public removal of a man's shoe by the woman he has refused to take in levirate marriage was a humiliating gesture with sexual innuendo (Deut. 25:9–10). ***See also*** Marriage.

P.A.B.

Shoham (shoh'ham), a Merarite Levite, the son of Jaaziah (1 Chron. 24:27).

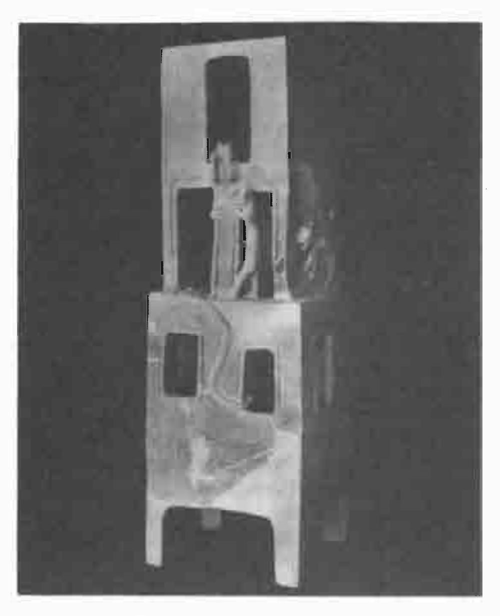
Shomer (shoh'muhr; Heb., "keeper, watcher"). **1** The parent of Jehozabad, one of the murderers of Judah's king Joash (2 Kings 12:21). **2** A son of the Asherite Heber (1 Chron. 7:32; in v. 34 it appears as "Shemer").

shoot. ***See*** Branch.

shophar (shoh'fahr), the horn of an animal formed into a musical instrument. The biblical shophar was a ram's horn (Josh. 6:4–13). Although it was possible to fashion a shophar from the horn of a sheep or goat, later Jewish tradition preferred that it be made from a ram's,

the animal Abraham substituted for the sacrifice of his son Isaac (Gen. 22:1–14). The shophar is mentioned many times in the Bible, beginning with Exod. 19:16, the revelation at Mt. Sinai, where the loud blast of the horn caused the people to tremble in fear. The Israelites were commanded that when they entered the land God would give them, they were to proclaim the Jubilee Year with a blast of the shophar (Lev. 25:9).

In the Bible, the shophar most often signifies an important announcement or a call to arms (Judg. 3:27) and was the means by which Joshua conquered the city of Jericho (Josh. 6:4–5). As an instrument, the shophar was also used as part of a musical ensemble (Ps. 98:6). In the Jerusalem Temple, the ram's horn was an integral part of the rituals.



The book of Numbers describes the first day of the seventh month as the "Day of the blowing of the shophar" (Num. 29:1). Postbiblical Judaism termed this day *Rosh Ha-Shanah* (cf. Ezek. 40:1), and a prescribed sequence of notes are to be blown as a call to repentance with a long blast at the conclusion of the Day of Atonement. Jewish tradition, based on Isa. 27:13, maintains that the shophar will be sounded to usher in the final messianic redemption (cf. Rev. 8–9). The shophar plays a prominent role in the eschatological battle described in the *War Scroll* from Qumran. L.H.S.

Shoshannim (shoh-shan´im; RSV: "lilies"), a term in the KJV that appears in the titles of Psalms 45, 69, and 80. It seems to have been a type of instruction concerning performance, perhaps referring to the melody to be used. ***See also*** Music.

shovel, an implement for clearing away ashes from the tabernacle's outer altar. The altar shovels were made of copper (Exod. 27:3; 38:3). The ashes were scooped up in them and apparently placed in copper pots (see Exod. 27:3), which were then carried outside the camp and emptied at the cultic ash dump (Lev. 6:10–11). Solomon's Temple also had copper shovels for its burnt offering altar (1 Kings 7:40, 45; 2 Chron. 4:11, 16). When Jerusalem fell, the Babylonians took these as spoil (2 Kings 25:14; Jer. 52:18).

showbread (in older English translations, "shewbread"), twelve loaves of unleavened bread that were placed on a specially constructed table in the holy place of the tabernacle and Temple as an offering to God. They were to be baked of fine flour and arranged in two rows of six with frankincense in each row. The bread was to be replaced with freshly baked bread every Sabbath day and the old loaves were to be eaten by the priests (Lev. 24:5–9; Exod. 25:23–30; 1 Sam. 21:5–6; cf. Matt. 12:3–4). The showbread is variously referred to as the Bread of the Presence (Num. 4:7), holy bread (1 Sam. 21:6), or simply the bread (Exod. 40:23). ***See also*** Worship. D.R.B.

shrine, specifically a box or container in which sacred objects are placed. In a general sense a shrine is any place in which sacred objects are housed or at which such objects are placed, or any sacred place at which worship is performed. Thus, the Ark of the Covenant was a shrine since it contained the tablets of the testimony (Exod. 25:16). The most holy place of the tabernacle or Temple in which the Ark was housed can also be termed a shrine (Exod. 26:33; 1 Kings 6:19; 8:6). In the broad sense, the tabernacle and Temple can be called shrines since they were places of worship. Similarly, non-Hebrew cult places that housed idols or other sacred objects (cf. 2 Kings 23:4–20) or at which worship was performed can be called shrines. ***See also*** Ark; Cults; Tabernacle; Temple, The; Temples; Worship. D.P.B.

Reconstructed shrine house with snake and animal decorative motifs; from Beth-shan, 1000–850 B.C.

shroud, the cloth used to wrap a corpse. One such piece of material was used to wrap the body of Jesus after the crucifixion (Matt. 27:59; but see John 20:6–7). That piece of cloth has never been confidently identified, although some claim the shroud kept at Turin, Italy, is the one used for Jesus.

The shroud at Turin, which appears to bear the image of a human body, was first discovered in France in the fourteenth century. It has no

known history before that. It is 14 feet long and 3-1/2 feet wide. It seems to have been used for a corpse that was 5 feet, 11 inches tall and weighed about 170 pounds, but that proves nothing, because no one knows how tall or heavy Jesus was.

Many scientific tests have been applied to the shroud of Turin. These show that the body it contained had been crucified. Marks on the cloth in the area of hands and feet are evidently blood stains, but that does not prove the body was that of Jesus. Thousands of people were crucified in antiquity. Alexander Jannaeus (second century B.C.) crucified eight hundred prominent Jews on one day—all of whom were probably wrapped in shrouds and buried. Some of these were probably the same size as the body held by the shroud of Turin.

Tests have been undertaken to determine the age of the cloth, but the results remain inconclusive. Even if it were proved to have been woven during the first century, that would still only reduce the odds to several thousand possibilities. G.W.B.

Shuah (sh*oo*´uh), a term akin to an Assyrian term for an Aramaean land on the Euphrates. The biblical word identifies three people. **1** A Canaanite father of Judah's wife (RSV: "Shua" in Gen. 38:2, 12; KJV: "Shua" in 1 Chron. 2:3). **2** An Asherite, a child of Heber (1 Chron. 7:32, "Shua"). **3** A son of Abraham and Keturah (Gen. 25:2), possibly a reference to an Arab or Aramaean tribe inhabiting the Upper Euphrates region. This would link with references to Shuhites, a tribe thought to have lived either there or in Edom.

Shual (sh*oo*´uhl; Heb., "fox" or "jackal"?). **1** A territory (one of three) against which Philistine raiders moved in the time of King Saul (eleventh century B.C.; 1 Sam. 13:17). Its association with Ophrah suggests a northerly location for the Philistine camp at Michmash. **2** A portion of the Asherite clan of Zophah (1 Chron. 7:36).

Shuham (sh*oo*´ham), a clan ancestor of a group of people from the Hebrew tribe of Dan (Num. 26:42–43).

Shuhite (sh*oo*´h*i*t), identification according to ancestral location of Job's friend Bildad (Job 2:11; 8:1; 18:1; 25:1; 42:9). Approximate location is possible from the derivation of "Shuah" from Akkadian *Sūu*, a country (later an Assyrian province) on the Euphrates River. ***See also*** Shuah.

Shulamite (sh*oo*´luh-m*i*t). ***See*** Shunem; Shuni.

Shunammite (sh*oo*´nuh-m*i*t), a native of the town of Shunem. **1** Abishag, who nursed David in his old age (1 Kings 1:3). **2** A woman whose dead son was revived by Elisha (2 Kings 4:8–37). ***See also*** Abishag.

Shunem (sh*oo*´nuhm), town on the southern border of Issachar (Josh. 19:18) guarding the pass to the Valley of Jezreel on the north, opposite the town of Jezreel at the foot of Mt. Gilboa. It is identified with modern Solem.

Shunem is mentioned in the fifteenth-century B.C. conquest lists of the Egyptian pharaoh Thutmose III, the fourteenth-century Amarna letters, and the tenth-century inscription of Pharaoh Shishak at Karnak. The Philistines camped at Shunem before defeating the Israelites at Mt. Gilboa (1 Sam. 28:4), and David's nurse in his old age, Abishag, was from Shunem (1 Kings 1:3). Elisha frequently stopped at this town in his travels, and a woman there provided him with quarters; in return Elisha's promise of a son was fulfilled and later Elisha revived him from death (2 Kings 4). ***See also*** Gilboa; Jezreel. N.L.L.

Shuni (sh*oo*´n*i*), the third son of Gad, and the ancestor of the Shunites (Gen. 46:16; Num. 26:15).

Shunite (sh*oo*´n*i*t), the name of the clan descended from Shuni (Num 26:15), among the descendants of Gad. ***See also*** Shuni.

Shupham (sh*oo*´fuhm). ***See*** Shephupham.

Shur (sh*oo*r), **Wilderness of,** a desert region somewhere in the Sinai Peninsula, east of the present Suez Canal. It was inhabited by Ishmaelites (Gen. 25:18) and was for a period the home of Abraham (Gen. 20:1). The Israelites during the Exodus entered it immediately after leaving the Red Sea (Exod. 15:22). "The way to Shur," where the angel met Hagar (Gen. 16:7), is probably the desert track leading southward from Beer-sheba, along which Saul, and later David, pursued the Amalekites "as far as Shur" (1 Sam. 15:7; 27:8). No suggestion for the meaning of the name "Shur" has so far won general acceptance among scholars. ***See also*** Abraham; Amalekites; Beer-sheba; Exodus; Hagar; Ishmaelites. D.B.

Shushan (sh*oo*´shan), the ancient capital of Elam (the southwestern area of modern Iran), which reached its height of importance as the residence and especially the winter capital of the kings of Persia. Called "Susa the capital" in Esther 1:2 (and Neh. 1:1), it provides the setting for the story of Esther and Mordecai. Daniel is also placed in Shushan during the reign of Belshazzar (Dan. 8:2).

Archaeological work has determined the outlines of the history of Shushan from the fourth millennium B.C. until after its capture by Arabian armies in the seventh century A.D.

Excavation has centered on the impressive remains of the royal palace and city as well as the acropolis. Shiite Muslim tradition later located Daniel's tomb there. The city was also the site of a huge marriage ceremony of about ten thousand men from the army of Alexander the Great with Persian women in 324 B.C. ***See also*** Esther; Persia. W.L.H.

Shushan Eduth (sh*oo*´shan ee´duhth; Heb., "Lily of Testimony"), a part of the title of Psalm 60 that referred performers to a melody or song patterns to be used. Such song patterns and melodies have since been lost.

Shuthelah (sh*oo*´thuh-luh), the founder of an Ephraimite clan, the Shuthelahites (Num. 26:35–36). The Ephraimite mentioned in 1 Chron. 7:21–22 may be the same person, although on the other hand different generations may be indicated.

shuttle. ***See*** Spinning and Weaving.

Sia (s*i*´uh), a family of Temple servants who returned from exile in Babylonia who worked at the reconstruction of the city of Jerusalem (Neh. 7:47). They are probably identical to the "Siaha" of Ezra 2:44 (cf. 1 Esd. 5:29).

Sibbecai (sib´uh-k*i*), a Hushamite who killed a giant named Saph (2 Sam. 21:18) in the battles against the Philistines at Gob (Gezer in 1 and 2 Chronicles). Identified as a Zerahite (1 Chron. 27:11), he commanded David's forces in the eighth month and was among the elite of the thirty mighty men (1 Chron. 11:29; the same person may be named "Mebunnai" in 2 Sam. 23:27).

Sibmah (sib´muh), a place in the rich Moabite plateau allocated to the tribe of Reuben (Num. 32:38; "Sebam" in 32:3; Josh. 13:19). In later prophetic oracles it was described as Moabite territory (Isa. 16:6–9; Jer. 48:31–32) known for vineyards. It may be modern Qurn el-Kibsh some five miles southwest of Hesban.

sickle, an instrument with a simple or compound blade set as a small curve and rigged with a handle to allow short horizontal strokes for cutting grass, weeds, or grains. Early models recovered are compound blades of serrated flint segments fastened in a wooden frame with bitumen. Later models include metal blades, but the use of flint continued long into the Bronze and Iron ages. A quick sweeping arc at the stems held by the other hand would be an efficient use of the tool. Biblical references to its use in harvest are numerous (Deut. 16:9; 23:25; Jer. 50:16; Joel 3:13; Mark 4:29) and it appears metaphorically as a tool of the harvest of human life at the Last Judgment (Rev. 14:14–20). R.S.B.

Iron sickle, which represents the type of tools the Philistines manufactured and supplied to the Israelites.

Siddim (sid´im), **Valley of,** depression at the south end of the Dead Sea (Gen. 14:3, 8, 10) that was the scene of a war between four eastern kings and the monarchs of five local cities. The location is most likely the eastern shore of the Lisan projection, from modern Bab edh-Dhra south.

side locks, hair alongside the temples which, like the corner of a beard, was not to be cut in a prohibition of what was apparently a pagan mourning practice (Lev. 19:27; see also 21:5).

Sidon (s*i*´duhn), one of the two leading cities (with Tyre) of ancient Phoenicia. Sidon is located twenty-two miles north of Tyre on the Mediterranean coast of modern Lebanon. Substantial archaeological investigation is not possible because of the modern city on the site, but a Crusader sea castle lies some meters offshore on the north side of Sidon while the ruins of a medieval land castle and an ancient heap of murex shells are on the south side of the town. It possesses a port with an inner and outer harbor on the north side and another on the south. Immediately outside Sidon stone round houses of the Chalcolithic period (4000–3000 B.C.) have been found, and the neighborhood cemeteries of the Babylonian to Late Roman periods (ca. 625 B.C.–A.D. 324) have produced numerous sarcophagi, the most famous of which (now in Istanbul) depicts Alexander the Great in battle and hunting scenes carved in marble.

In the Amarna Age (fourteenth century B.C.) King Zimrida of Sidon wrote two letters to the pharaoh of Egypt. In one he professed his loyalty and requested Egyptian aid in regaining territory that had fallen to *Habiru* rebels. But in other correspondence the kings of Byblos and Tyre portrayed Zimrida as having joined the rebellion and allied himself with Aziru, king of Amurru, against them and Egypt. At the beginning of the Iron Age (ca. 1200 B.C.) Sidonian colonists refounded Tyre, according to classical tradition. The Egyptian *Tale of Wenamun,* dated to the mid-eleventh century B.C., mentions the presence of fifty ships in the port of Sidon. It may have outclassed Tyre during the first centuries (1200–1000 B.C.) of the Iron Age,

but during most of the Phoenician period Tyre led or controlled Sidon despite the fact that from the Greek perspective of the Homeric poems the term Phoenician was synonymous with Sidon. For example, the Assyrian king Sennacherib in 701 B.C. defeated Luli, whom he called king of Sidon but who is almost certainly the same as Elulaeus, king of Tyre. In the seventh century B.C. Sidon was besieged by King Esarhaddon of Assyria who razed the city (677 B.C.) and built in its place an Assyrian residence nearby called Kar-Esarhaddon.

Sidon's fortunes improved during the Persian period (539–332 B.C.), due in part to the decline of Tyre following a thirteen-year siege (586–573 B.C.) by the Babylonian king Nebuchadnezzar and in part to the favor bestowed upon Sidon by Persian monarchs. The mainland settlement of Sidon may have been more tractable than island Tyre, which submitted but remained unconquered. Phoenician refusal to support the Persian king Cambyses' planned attack on North Africa, where Tyre's chief colonies were located, may have been led by Tyre.

Cambyses conquered Egypt in 526 B.C. with the aid of the Phoenicians. King Tabnit of Sidon ruled about this time and it may be no accident that he was buried in an Egyptian general's reused stone sarcophagus upon which Tabnit left his own inscription. His mummified body in it revealed him to be a strong man, 5 feet 5 inches tall, with wavy reddish-brown hair tinted with henna. The sarcophagus of his son, King Eshmunazar II, possessed a Phoenician inscription of twenty-two lines from which we learn that he built several temples for Astarte at Sidon and for Eshmun at a mountain spring and that Sidon was given possession of Dor and Joppa south of Tyre. His father, King Tabnit, was a priest of Astarte and his mother, Amo'ashtart, was priestess of Astarte, and both were offspring of Eshmunazar I, king of Sidon. The sanctuary of Eshmun on a hillside a few miles away at the river Nahr el-Awali has been excavated by M. Dunand and others, revealing important buildings, inscriptions, and statuary of the Babylonian, Persian, and Hellenistic periods dedicated to Eshmun. He was the god of healing and was equated with the Greek deity Asclepius. In the Persian Wars, when Darius and Xerxes attacked Greek city-states, King Tetramnestus and his fleet of three hundred Sidonian triremes (warships with three banks of oars) led the Persian navy.

In 351 B.C., on the enthronement of Artaxerxes III Ochus in Persia, Sidon revolted. King Tennes led Sidon in rebellion, but when the Persians reacted and the cause looked hopeless Tennes treacherously betrayed Sidon in order to save himself. The city was burned and, although rebuilt, did not regain its former position. Sidon quickly submitted to Alexander the Great in 332 B.C. and assisted him in the siege of Tyre. During the Hellenistic and Roman periods Sidon was a prosperous center for commerce and learning.

Sidon is mentioned frequently in the OT prophetic books, often in conjunction with Tyre (e.g., Isa. 23:2, 4, 12; Jer. 25:22; Ezek. 28:21–22; Joel 3:4; Zech. 9:2), and the area was visited by Jesus (Matt. 15:21; Mark 7:24) and Paul (Acts 27:3).

T.L.M.

siege, the military tactic of surrounding a community, cutting off its supplies and rescue aid, and reducing its resistance to the point of surrender or destruction. It can also refer to any prolonged distress or suffering.

Biblical references to siegeworks, siege towers, and siege mounds indicate common experience with the process. Only unfruitful trees were permitted to be cut for preparing siegeworks against an enemy city (Deut. 20:20). Babylon built siegeworks against Jerusalem under Nebuchadnezzar (2 Kings 25:1). Metaphorically, Job speaks of God's treating him that way (Job 19:12), and the helplessness of siegeworks in the face of a wise man is touted by Ecclesiastes (9:14+43–15). Isaiah sees God besieging Jerusalem (Ariel) with towers and siegeworks (29:3), as does Ezekiel (4:2), and Daniel (11:15) sees it used against the king of the south (the Ptolemies). Ezekiel's description is quite graphic and accurate, combining a siege wall (the Romans in a later period built one entirely surrounding Masada, remains of which are still visible from the summit as well as ground level), a mound (the ramp is still visible also at Masada), camps (also visible at Masada), and battering rams (most graphically presented in the bas-reliefs from the palace of Sennacherib at Nineveh showing the Assyrian conquest of Lachish, but known also from Nimrud).

Siege tactics also included sapping under the defender's walls, ramming the gates, storming the gates and walls with ladders or towers, or setting fire to the wooden materials in the defense system. One of the longest sieges in biblical history occurred at Samaria; the city held out for three years against the Assyrians before capitulating in 722 B.C. ***See also*** War; Weapons.

R.S.B.

sieve, a perforated plate or screen used for separating grain from chaff or various sized grains from each other. Earlier models used woven hair, grass, or small reeds set in flat, round rims or held in a concave basin form to allow shaking motions that would agitate the contents and separate them. Biblical usage is mainly metaphorical for the discipline of God (Amos 9:9) or his judgment (Isa. 30:28; Luke 22:31).

sign, a significant event, act, or other manifestation that betokens God's presence or intention. Signs may be miraculous and spectacular, as in the case of those performed by Moses before the people of Israel to demonstrate that God had sent him to them (Exod. 4:1–9, 17, 30) or before Pharaoh for the same purpose (Exod. 7–11). On the other hand, a natural phenomenon such as a rainbow or a sunset may be called a sign (Gen. 9:13; Ps. 65:8), as may an identifying mark such as circumcision (Gen. 17:11) or even a prophet and his children (Isa. 8:18).

In the NT, signs tend to be apocalyptic or miraculous, but the shepherds are told that the infant Jesus "wrapped in swaddling cloths and lying in a manger" (Luke 2:12) will be a sign of God's salvation. When Jesus is asked about a sign indicating the coming destruction of the Temple (Mark 13:4), he responds in terms of natural, if catastrophic, events (Mark 13:5–13). These phenomena are usually described as apocalyptic and merge with more distinctly supernatural events predicted later on in the same discourse (Mark 13:24–27).

In the synoptic Gospels, when Jesus is asked to perform or manifest a sign, he refuses (Mark 8:11–12; Matt. 12:38–39) and denounces the quest for signs (cf. John 4:48). Yet Paul speaks of miraculous apostolic signs (2 Cor. 12:12), and Jesus is characterized in Acts 2:22 as "a man attested to you by God with mighty works and wonders and signs which God did through him in your midst." In the Gospel of John, Jesus repeatedly performs signs that are intended to evoke faith in him (2:11), although they also cause offense (11:47–48), and the Evangelist seems to be aware of the inadequacies of miracle faith (i.e., faith based on signs) except as the beginning point for a more adequate perception and understanding of Jesus (2:23–25; but cf. 20:30–31). ***See also*** Miracles. D.M.S.

signet. ***See*** Seal.

Sihon (*si*´hon), a king of the Amorites whose capital was Heshbon, a city lying east of the northern tip of the Dead Sea. The etymology of his name is obscure, as are the circumstances of his origins. According to the OT Sihon opposed the Israelites as they sought to move from the south through Transjordan. The two forces clashed at Jahaz, resulting in the defeat of Sihon and the incorporation of his territory into the Israelite tribal holdings (Num. 21:21–30; Deut. 2:24–37; Judg. 11:18–22). While the Israelites were not to inherit Moabite or Ammonite territory, the area attributed to Sihon's kingdom and claimed by Israel seems to have included some territory also claimed by Ammon and Moab.

Recent archaeological work in the general area attributed to Sihon—essentially the area between the headwaters of the Jabbok and the Arnon—has shown some occupational evidence dating to the Late Bronze Age and earliest Iron Age (fifteenth to twelfth centuries B.C.). None of this evidence relates directly to Sihon with the exception of the excavations at Tell Hesban, north of Madeba. Only scattered twelfth-century B.C. artifacts have been found there, and they give indication of a very small settlement during the end of the period assigned to Sihon. Nevertheless the memory of this defeat lived on in Israelite consciousness (1 Kings 4:19; Ps. 135:11; 136:19; Neh. 9:22). J.A.D.

Silas, Silvanus (*si*´luhs, sil-vay´nuhs), generally regarded as alternate names for the same person, a leader in the early church and an associate of Paul. The Letters of Paul and 1 Peter refer to him as Silvanus (a Latinization), but Acts prefers Silas (either a Semitic or a shortened Greek form). According to Acts 15:22–35, Silas and Judas Barsabbas, prophets in the Jerusalem church, were sent along with Paul and Barnabas to take the apostolic decrees from the Jerusalem conference to the church in Antioch. Silas's background was probably similar to that of Barnabas and John Mark, and it was thus perhaps no accident that they encountered one another more than once in early Christian history. For example, when Paul and Barnabas at Antioch quarreled over Mark (Acts 15:36–41), Paul chose Silas to accompany him on a mission tour in Asia Minor and ultimately into Macedonia and Achaia (Acts 15:41–18:5).

Silvanus (Silas) is mentioned in the Letters of Paul (1 Thess. 1:1; 2 Thess. 1:1; 2 Cor. 1:19) and in 1 Peter (5:12). Except in 2 Cor. 1:19, he is connected with the writing of the Letters. He is either a co-author (in the case of Paul) or a secretary or courier (in the case of 1 Peter).

Certainly Silas was an important figure in the churches in Macedonia (Acts 18:18 suggests that he may have remained in Macedonia when Paul left) and may have been regarded as an apostle (1 Thess. 2:6; cf. 2 Cor. 1:19). His early connections with the church in Jerusalem were no doubt helpful in giving added theological legitimacy to the Pauline mission. Silas's Roman citizenship, reported in Acts 16:37–38, would also have been of considerable personal help to Paul on his travels. ***See also*** Barnabas; Barsabbas; Mark; Paul; Peter, The First Letter of. A.J.M.

Siloam (*si*-loh´uhm) **Inscription,** a Hebrew inscription recovered from the Siloam tunnel in Jerusalem. The text commemorates the excavation of the tunnel, which connected the spring of Gihon, the principal source of water for ancient Jerusalem, with a reservoir within the city known as the pool of Siloam.

The Gihon arises on the eastern slope of the Ophel, the southeastern hill of Jerusalem, upon which the City of David was located. Originally, therefore, it emptied into the Kidron Valley.

After the occupation of the site, however, an open basin was dug at the mouth of the spring to collect the waters. From this basin, known as "the upper pool," the waters were conveyed south along the slope of the city mound by an aqueduct called "the conduit of the upper pool" (2 Kings 18:17; Isa. 7:3). Recent excavation has shown that this aqueduct was in part a tunnel and in part an open canal, so that in addition to receiving the flow from the upper pool it collected rainwater from the slope of the mound. It contained a number of "windows," through which water could be released for the irrigation of the valley below. The reference in Isa. 8:6 to "the waters of Shiloah that flow gently" probably reveals the name for this water system that was in use during the reign of Ahaz. "Siloam" is a later, Greek form of "Shiloah." At the mouth of the aqueduct was another reservoir called "the lower pool" (Isa. 22:9). "The Pool of Shelah" (Neh. 3:15) and "King's Pool" (Neh. 2:14) are probably other names for this second reservoir.

Because the original Shiloah or Siloam channel lay outside the fortifications of the city, it was difficult to protect during a siege. As part of his preparations for Sennacherib's attack on Jerusalem, therefore, Hezekiah sealed the old outlet of the upper pool (2 Chron. 32:2–4, 30; cf. Isa. 22:8–11) and devised an underground passage to divert the flow of the Gihon to a reservoir within the fortified precincts of the city (2 Kings 20:20), evidently the "reservoir between the two walls" of Isa. 22:11. The shaft of Hezekiah's tunnel followed a sinuous path through 1,749 feet of bedrock under the City of David to a new pool on the western slope of the Ophel in the valley later known as Tyropoeon. The name of the older aqueduct was transferred to the new system. The first-century Jewish historian Josephus knew the western reservoir as Siloam, and in John 9:7 Jesus refers to it as "the pool of Siloam." However, the modern village of Silwan, which also preserves a form of the ancient name, is located across the Kidron to the east of the Gihon spring.

The Inscription, now in the Museum of the Ancient Orient in Istanbul, was found in 1880 by two boys wading inside the tunnel some 20 feet above the western reservoir. It consists of six lines incised on the lower part of a prepared surface on the rock wall of the shaft. The blank upper surface has led some scholars to suppose that part of the inscription is missing; others believe that the text was originally intended to be surmounted by a relief. The Inscription cannot be dated long before 701 B.C., the year of Sennacherib's siege of Jerusalem. The script is the Hebrew lapidary hand of the eighth century B.C., and the language is comparable to the standard Hebrew prose of the Bible. The text describes the completion of Hezekiah's tunnel by two crews who, having set to work from opposite directions, dug until only three cubits (ca. 4.5 feet) of rock separated them at a point one hundred cubits (ca. 150 feet) beneath the streets of the city. From there they were able to guide each other through the remaining rock by shouting. This was possible, we are told, because of something extending north and south in the rock. Perhaps this was a fissure, as the translation below suggests, but the Hebrew word is obscure.

Cast of the Siloam Inscription originally carved on the wall of Hezekiah's tunnel, Jerusalem, describing the construction and completion of the tunnel, which connected the Gihon spring to the Pool of Siloam; eighth century B.C.

The Inscription may be translated as follows:
1. The [ ] of the penetration. This is how the penetration took place. While [the diggers were] still [wielding]
2. their axes towards each other, with three cubits still to be pen[etrated, they could he]ar each other sho-
3. uting, for there was a *fissure* in the rock running to the south [and to the nor]th. So at the moment of pene-
4. tration, the diggers struck towards each other, axe against axe. Then the waters flowed
5. from the spring to the pool—one thousand two hundred cubits. And one h[un-]
6 red cubits was the height of the rock above the heads of the digger[s]. P.K.M.

Silvanus. ***See*** Silas, Silvanus.

silver (Heb. *kesep),* a pale, precious metal capable of being hammered or drawn out thin, known to people of Bible lands as early as 3000 B.C.

Silver mining and metallurgy were known and practiced by craftsmen at Ebla (Tell Mardikh in Syria). Some Ebla texts show the value of cattle in silver, and list silver as tribute from Mari, recording once as much as 2188 minas of silver (1 mina equals 47 grams). Silver bars, daggers, adze-heads, and small ceremonial shovels are in evidence from biblical times, as are pieces of jewelry and amulets. Silver was used as a standard for business transactions and as a measure of wealth. Excavations at Ur of artifacts from ca. 2500 B.C. show Sumerian use of silver for musical instruments, pipes, statuettes, and filigree jewelry.

The source of silver in antiquity for the Bible lands was likely western Asia Minor and particularly the islands of the Aegean. The 1984 explorations by H. G. Bachmann may be able to pin the source specifically to the island of Sifnos, one of the Aegean Cyclades group. The Laurion mine near Athens was in use by 1000 B.C. as a source of silver. Spain's Rio Tinto silver mines were likely the source of silver for Phoenician and Roman coinage.

Among the most recent archaeological findings in Jerusalem are two little silver scrolls bearing texts that include God's name in Hebrew. While the divine name Yahweh has been found on inscriptions in other parts of the country, this is the first time this name has appeared on an archaeological find in Jerusalem. The scroll dates to the sixth century B.C.

The first biblical reference to silver from among the approximately four hundred OT passages from Genesis to Malachi is Gen. 13:2, where Abraham's possession of silver along with his cattle and gold mark him as a wealthy man. He purchased the burial cave at Machpelah from Ephron the Hittite for four hundred shekels of weighed silver (Gen. 23:16). Joseph, the Hebrew in Pharaoh's court (ca. 1750 B.C.), had a silver cup which he placed in his brother Benjamin's sack (Gen. 44:2, 5, 12, 16). Later he gave Benjamin "three hundred shekels of silver" (Gen. 45:22). As early as the period of the judges (ca. 1200–1000 B.C.), the Israelites knew of silver craftsmanship, as reported in Judges where Micah's mother took eleven hundred pieces of silver to a silversmith for fashioning an idol (Judg. 17:1–6).

Other OT references include silver used for foundations, decorations, vessels for worship, and trumpets for the tabernacle (Exod. 26:19; 27:10, 17; 36:24, 26; Num. 7:13, 14; 10:2), and the Jerusalem Temple with its treasury (1 Kings 7:51; 1 Chron. 28:15, 16; 2 Chron. 2:7; Ezra 8:26, 28; Neh. 7:71). Figuratively, silver and the refining process are used to show the testing of people's hearts (Ps. 66:10; Isa. 48:10), great abundance (Zech. 9:3; Isa. 60:17; Job 3:15; 22:25; 27:16), and either positively the brightness of a dove's wings (Ps. 68:13) and the purity of God's word (Ps. 12:6) or negatively the corrosive deterioration of God's people (Jer. 6:30; Isa. 1:22). Silver was known in the raw state (1 Kings 15:15; Exod. 31:4; 35:24, 32) as well as mined (Job 28:1) and well refined (Prov. 10:20; 1 Chron. 29:4; Mal. 3:2, 3; Ezek. 22:20). Long before coinage silver was known as a standard of wealth (Gen. 13:2; 24:35; Exod. 25:3; Num. 22:18) and was weighed out for payment of an obligation by measures such as the shekel, talent, or mina (Gen. 20:16; Exod. 21:32; Lev. 27:16; Josh. 24:32). Silver was used for special articles of value or prestige such as Joseph's drinking cup (Gen. 44:2), a royal crown of silver and gold (Zech. 6:11), and as jewelry given to Rebekah (Gen. 24:53); as booty received from Egyptian women (Exod. 3:22); and as silver-studded ornaments for Solomon's bride (Song of Sol. 1:11). Oppositely, silver was often a material for idols as early as the Exodus and Judges and as decried in the prophets (Exod. 20:23; Judg. 17:4; Isa. 2:20; Jer. 10:4; Dan. 2:32, 33; Hos. 13:2).

The NT mentions silver vessels (2 Tim. 2:20), idols (Rev. 9:20), and shrines to Artemis of Ephesus made by Demetrius the silversmith who feared Paul's preaching (Acts 19:23–27). Money had no ransoming power (1 Pet. 1:18). Peter had no silver (Acts 3:6) and Paul earned none for preaching (Acts 20:33). Books on magic arts burned by new Christians at Ephesus were valued at fifty thousand pieces of silver (Acts 19:19). Judas received thirty pieces of silver for his betrayal of Jesus (Matt. 26:15; 27:3, 5, 6, 9). Generally belittled in the NT, silver cannot be compared to the Deity (Acts 17:29) or Christ (1 Cor. 3:12). Wealth measured in silver corrodes and corrupts (James 5:3) and brings only weeping instead of joy (Rev. 18:22). Disciples of Jesus take no silver on their missionary ventures (Matt. 10:9). R.A.C.

Simeon (sim´ee-uhn; Heb., "to hear"). **1** The second son of Jacob and Leah (Gen. 29:33).

Simeon and his brother Levi massacred the men of Shechem to avenge the rape of their sister Dinah (Gen. 34). Simeon was later held hostage in Egypt when Joseph sent the other brothers back to Canaan for Benjamin (Gen. 42:24). Subsequently Simeon and his six sons migrated to Egypt with the entire family of Jacob (Gen. 46:10; Num. 26:12–14; 1 Chron. 4:24). In Jacob's blessing, Simeon was rebuked because of his actions at Shechem and was told his descendants would be divided and scattered (Gen. 49:5–7).

The tribe of Simeon was given an allotment within the tribal territory of Judah in the southernmost region of Canaan. Their cities included Beer-sheba, in the center of the Negev; Ziklag (possibly modern Tell Sheri'ah) and Sharuhen (modern Tell el Far'ah?) in the western Negev; and Hormah (modern Tell Malhata?) in the eastern Negev (Josh. 19:1–9). Simeon joined forces with the tribe of Judah during the early phase of the Israelite conquest of Canaan (Judg. 1:3–17). Simeon's subsequent history is shrouded in silence. In the days of Hezekiah (727–698 B.C.) the tribe achieved a military victory over the Amalekites, the perennial enemy of the inhabitants of the Negev (1 Chron. 4:41–43). During the Divided Monarchy (tenth to eighth centuries B.C.) Simeon seems to have been reckoned as one of the ten tribes belonging to the Northern Kingdom (cf. 1 Kings 11:30–32; 12:20–23; 2 Chron. 15:9). Little else is known of its fate; it is not mentioned after the Exile (586 B.C.). **2** An ancestor of Jesus according to Luke's genealogy (Luke 3:30). **3** An early, devout man of Jerusalem during the days of Herod who was looking for "the consolation of Israel" (Luke 2:25–35). He had been promised by the Holy Spirit that he would see the Messiah before he died. Simeon recognized the infant Jesus as the Messiah when Jesus' parents presented him at the Temple. He held the infant in his arms and praised God, "For mine eyes have seen thy salvation" (v. 30). He declared, "This child is set for the fall and rising of many in Israel" (v. 34). **4** The Hebrew name of Simon Peter ("Symeon"; 2 Pet. 1:1 in Greek; Acts 15:14, although the Symeon there may be Symeon Niger mentioned in Acts 13:1; see 5). **5** A Christian at Antioch with prophetic and teaching gifts, who served the church there together with Barnabas and Saul prior to the latter's first missionary journey (Acts 13:1). His surname, Niger (Lat., "black"), suggests that he was an African. D.A.D.

Simon (*si*´muhn). **1** Simon Maccabeus, the son of Mattathias Hashmon, a ruler in Palestine (142–134 B.C.). **2** Simon Peter, one of the twelve apostles (Matt. 10:2; Mark 3:16; Luke 6:14). **3** The second "Simon" among the Twelve, otherwise called Simon "the Zealot" (Luke 6:15; Acts 1:13) or "the Cananaean" (Matt. 10:4; Mark 3:18). **4** Judas Iscariot's father (John 6:71; 13:2, 26). **5** One of Jesus' brothers (Matt. 13:55; Mark 6:3). **6** The leper of Bethany in whose house Jesus was anointed with "very expensive ointment" (Matt. 26:6–13; Mark 14:3–9). **7** The Pharisee whose house was the scene of Jesus' anointing by a "sinful" woman (Luke 7:36–50, likely a variant verison of 6). **8** "A man of Cyrene" (North Africa) identified by Mark as father of Alexander and Rufus, who was compelled to carry Jesus' cross (Matt. 27:32; Mark 15:21; Luke 23:26). **9** The leatherworker (tanner) in Joppa with whom Peter remained "for many days"; during this stay Peter had his vision of the clean and unclean animals (Acts 9:43; 10:5–6, 32). **10** Simon Magus, a magician from Samaria (Acts 8:9–24); ***see*** Simon Magus. ***See also*** Alexander; Apostle; Bethany; Brothers; Cananaean; Cyrene; Disciple; Joppa; Judas; Peter; Pharisees; Rufus; Tanning; Twelve, The; Zealot. P.L.S.

Simon Magus (*si*´muhn may´guhs), a magician ("Magus" is from the Gk. for "magic"; cf. Acts 8:11) in Samaria who became a Christian believer and was baptized as a result of the preaching of Philip, according to Acts 8:9–24. Subsequently, however, he was excoriated by Peter for attempting to purchase the power of the Holy Spirit. Thus, in Acts, he becomes both a negative model for the superiority of the Spirit of Christ over magic and, like Ananias and Sapphira, of the folly of greed (cf. Acts 5:1–11).

Acts, which calls him simply Simon, tells us nothing about his origins. Perhaps he was not a Samaritan but lived among the strictly Gentile population of the area. The name Magus appears in later legends about him in the Clementine literature (a series of writings that deal with St. Clement of Rome and name him as author) and the church fathers, where he is either an opponent of Peter or an early Gnostic. Although in Acts Simon apparently repents (8:24), some later Christian writers regarded him as the veritable father of heresy (cf. Acts 8:10: "This man is that power of God which is called Great"). ***See also*** Ananias; Gnosticism; Holy Spirit, The; Magic and Divination; Peter; Philip; Samaria, District of; Sapphira. A.J.M.

simple, term with the connotation of "unsuspecting" (Heb. *tom;* 2 Sam. 15:11) referring to someone who is naive, foolish, easily deceived, and led into evil (Heb. *pethi;* Job 5:2; translated by different expression in Deut. 11:16; Hos. 7:11; Prov. 20:19). It is also used to refer to persons whose innocence makes them an easy target for deceit (Rom. 16:18).

Sin (sin; KJV; RSV: "Pelusium"), the "strength of Egypt" (RSV: "stronghold of Egypt") which, according to Ezek. 30:15, is one of the places destroyed by the Babylonian king Nebuchadnezzar. The Hebrew word comes directly from the Egyptian *sin,* "fortress." Sin was an important stronghold protecting Egypt's northeast

frontier. The Pyramid Texts of the Old Kingdom mention Sin as the provenience of good wine. A prince of Sin is mentioned in the Assyrian Annals of Ashurbanipal. Called Pelusium by the Greeks, Sin has been identified with modern Tell Farama, situated in the northeast corner of the Nile delta about twenty-four miles southeast of Port Said. This site has never been systematically excavated. ***See also*** Nebuchadnezzar. J.M.W.

sin, that which is in opposition to God's benevolent purposes for his creation. According to the biblical writers, sin is an ever-present reality that enslaves the human race and has corrupted God's created order. The concept of sin is first and foremost a religious concept, because all sin is ultimately against God, God's laws, God's creation, God's covenant, and God's purposes. It is the basic corrupting agent in the entire universe.

There are numerous Hebrew and Greek words used to designate sin in the biblical writings. Perhaps the most basic is a Hebrew word meaning "revolt" or "transgression" and indicating a deliberate act of defiance against God. This idea lies at the heart of the Genesis account of the beginning of sin (Gen. 3:1–7), where the essential problem lies in the desire of the humans to "be like God." All sin is an act of idolatry, the attempt to replace the Creator with someone or something else, usually one's own self or one's own creation. Paul understood this very well, as he indicates in Rom. 1:18–3:20: all humankind lies under condemnation because all are idolators of one type or another.

Manifestations: From this basic idea derive most of the other ideas connected with the attempt to describe the many different manifestations of sin. There is sin that is characterized by falling short of God's requirements or "missing the mark"; there are cultic sins (failure to observe the ritual requirements), political and social sins, and "spiritual" sins (e.g., envy, hate, etc.). In the NT, there is the "unforgivable" sin (against the Holy Spirit), which, in modern terms, might be paraphrased as an attitude or mind-set wherein a person willfully refuses to accept the forgiveness of sin offered by God through his Son (Matt. 12:22–32; Mark 3:19b–30; Luke 12:8–10; cf. also 1 John 5:16–17). There is sin implicit in the failure of a person to do right, especially toward one's fellow human beings (e.g., Matt. 25:31–46; Luke 16:19–31), the failure of a person to use God-given ability (e.g., Matt. 25:14–30; Luke 19:12–26), and there is sin even in ignorance, where one commits unconscious or inadvertent sin (e.g., Lev. 5). Perhaps the most heinous sins are those done "with a high hand" (i.e., deliberately and arrogantly; e.g., Num. 15:30–31) and the sin of hypocrisy, especially among "religious" persons (e.g., Matt. 23; Acts 5:1–11).

Universality: Because sin is such an integral feature of human experience, both individual and corporate, many people have argued for a doctrine of "original sin," i.e., sin that is "born into" persons as human beings. There is no passage in the Bible that directly teaches such a doctrine, but there are many that certainly point to the universality and even inevitability of sin in human life. The OT prophets, for example, located the source of sin in the "heart," i.e., in the very depth of one's being, the seat of volition and action (e.g., especially Jer. 5:23; 17:9–10; cf. Ezek. 36:26; Isa. 29:13). In the NT, Paul insists that "all people, both Jews and Greeks, are under the power of sin" (Rom. 3:9; cf. 1:18–3:20; 5:12–21). The words of the author of 1 John rise up in the face of any notion that sin can be totally overcome and avoided in this world: "If we say we have no sin, we deceive ourselves, and the truth is not in us. . . . If we say we have not sinned, we make him a liar, and his word is not in us" (1:8–10).

Origin: As for the origin of sin, the OT writings have very little to say about the matter, the story in Genesis 3 being the only passage to speak directly to this issue. During the intertestamental period (ca. the last three centuries B.C.), however, many ideas were prevalent about the origin of sin. Most of the speculation focused on the story in Genesis 3 and the additional story in Gen. 6:1–4 about divine creatures having intercourse with human women. As a result of the development of later religious thinking regarding demons and Satan, many linked sin to an outside power that forced its way into the human situation. Others believed that humans were born with conflicting "inclinations," one toward good and one toward evil. These inclinations were constantly struggling to obtain controlling influence in each person's life. In the NT, Paul related the sinful condition of the human race to the original transgression of Adam, insisting at the same time, however, that the result of sin (death) "spread to all people" not simply because of Adam's sin but "because all people sinned" (Rom. 5:12).

God's Activity: Whatever the origin of sin, the cumulative testimony of the biblical writers is that sin is universal, something that enslaves every person individually and that corrupts society collectively. Further, the enslavement of sin is something from which the human race cannot extricate itself by its own efforts. Perhaps the most persistent motif permeating the pages of the Bible is that of human sin and God's activity in dealing with it. In the OT writings, the emphasis is upon God's covenant with the Hebrew people, the establishment of a new relationship between God and the people such that all people could somehow learn about and enter into the proper divine-human relationship. In the NT writings, the emphasis is upon an even closer relationship between God and humankind through the new

covenant in Jesus of Nazareth. Through Jesus, the Kingdom of God has been proclaimed and inaugurated, sinners have been forgiven and reconciled to God, and a new relationship has been established that will bring the hopes, dreams, and aspirations of all the biblical writers to fulfillment. This is to be accomplished through the work of God in Christ to break the enslaving power of sin and liberate people from its sway. People must, however, participate in the process and in the struggle (e.g., Rom. 7). ***See also*** Atonement; Demon; Devil; Evil; Expiation; Fall, The; Forgiveness; Grace; Guilt; Holiness; Justification; Pardon; Reconciliation; Redemption; Regeneration; Salvation; Sanctification; Satan. J.M.E.

Sin, Wilderness of, an area distinct from the "Wilderness of Zin." The Wilderness of Sin was a desert area "between Elim and Sinai" (Exod. 16:1), where the Israelites "murmured against Moses and Aaron" (Exod. 16:2–3), and where manna was first given to satisfy their hunger (Exod. 16:13–36). The Exodus is said to have continued to Rephidim via Dophkah and Alush (Exod. 17:1; Num. 33:11–12). Unfortunately, none of the places can be identified exactly, although it is possible that Dophkah is near the ancient Egyptian turquoise and copper mines at modern Serabit el-Khadim. If so, the Wilderness of Sin would be at the western foot of the Sinai massif. ***See also*** Elim; Rephidim; Sinai; Zin, Wilderness of. D.B.

Sinai (*sī´nī*; derivation uncertain, perhaps related to the Mesopotamian moon god Sin). **1** The Sinai Peninsula, a large, wedge-shaped block of territory that forms a land bridge between Africa and Asia. Sinai is bounded on the west by the Suez Canal and Gulf of Suez, while the Negeb and Gulf of Aqaba form the peninsula's eastern border. Sinai's northern and southern limits are clearly defined by the Mediterranean Sea and the Red Sea, respectively. Its total area is ca. twenty-four thousand square miles. The southern apex of this inverted triangle is ca. two hundred and forty miles from the Mediterranean shore; the northern base extends from Rapha to the Suez Canal, a distance of ca. one hundred and twenty-five miles.

Since it is actually part of the Saharo-Arabian desert, Sinai's climate is arid. The peninsula's extensive wadi system drains an annual rainfall that seldom exceeds 2.5 inches, except along the Mediterranean coast. More diversity is found in the geology and topography of Sinai's three major regions. The northern region consists of a low, sandy plateau and includes large tracts of sand dunes and some oases; this coastal zone has served as a thoroughfare for many ancient and modern armies. Sinai's central region is a high, limestone plateau that has little water and sparse vegetation. The peninsula's southern region is covered by rugged, granite mountains, some of whose peaks exceed 8,000 feet in elevation and are snow-capped in winter.

Although the Sinai Peninsula may appear to be inhospitable to human occupation, a number of settlements dot modern maps of this territory. The bedouin population alone numbers ca. fifty thousand. Recent archaeological research demonstrates that this wilderness has been occupied by sedentary and/or nomadic peoples, albeit intermittently and sparsely, for ca. thirty thousand years.

Naturally, the prehistoric inhabitants of Sinai had contacts with neighboring regions, but the earliest significant evidence of such connections dates to ca. 2650 B.C. At this early date, the Egyptians began mining Sinai's turquoise, an enterprise that led to later Egyptian activities in the peninsula. Most famous are the turquoise and copper mines at modern Serabit el-Khadem, a site in west-central Sinai that was worked throughout most of the second millennium B.C. The proto-Sinaitic inscriptions from Serabit el-Khadem date to ca. 1500 B.C. and represent the earliest stages in the development of a Semitic alphabet.

This script also serves as an example of the kinds of cultural exchanges that occurred in the Sinaitic corridor. Other contacts came through commercial and military activities in this region and, while the Bible notes that Sinai's environment was hostile (Deut. 1:19; 8:15), it also

The Sinai Peninsula appears as an inverted triangle in this photo taken from an orbiting satellite.

observes that Sinai was not impassable. When Abraham, Jacob, and the family of Jacob made their way between Canaan and Egypt, the trade routes across the peninsula were already well established. Many centuries later, Saul and David fought the Amalekites in northwestern Sinai (1 Sam. 15:7; 27:8), and Elijah made a pilgrimage to this region's famous mountain (1 Kings 19:8). Still later, Joseph, Mary, and Jesus entered the Sinai as they fled from Herod (Matt. 2:13).

Throughout its history, Sinai was crossed or occupied by many other peoples—Assyrians, Babylonians, Persians, Greeks, Nabateans, and Romans—but the most famous sojourn in this wilderness was made by the Hebrews after the Exodus. Indeed, Sinai was the setting for some of the most important events in Israelite history. The OT does not, however, refer to the entire peninsula when it uses the word "Sinai." Instead, the OT mentions five smaller, distinct tracts of wilderness in this large territory (i.e., Shur, Sin, Sinai, Paran, and Zin).

2 The Wilderness of Sinai, the biblical name for the small, distinct wilderness region in which Mount Sinai was located. Its exact location cannot be ascertained, since its limits are defined in relation to other place names that also defy accurate pinpointing. In general, the Bible locates this tract of wasteland in between the wildernesses of Sin and Paran and in the vicinity of Elim, Rephidim, and Kibroth-hattaavah (Exod. 16:1; 19:1–2; Num. 10:12; 33:15–16). The traditional location of the wilderness of Sinai is in the south-central part of the peninsula. It was in this wilderness that the Israelites were encamped when they received the law (e.g., Exod. 19:1–2; Lev. 7:38), were numbered (Num. 1:19; 3:14; 26:64), and celebrated the Passover (Num. 9:5). It was also in the wilderness of Mount Sinai that Moses encountered the burning bush (Exod. 3:1–2; Acts 7:30, 38).

3 Mount Sinai, the mountain on which the law was delivered to Moses (Exod. 31:18; 34:29, 32; Lev. 26:46; 27:34; Neh. 9:13). The biblical writers refer to Mount Sinai by various names (e.g., "the mountain," "the mountain of God," "Mount Horeb," "the mountain of Horeb," and "the mountain of God in Horeb"). This mountain played a significant role in the spiritual development of Moses (Exod. 3:1–12), and its sacred character was magnified when Sinai became the locus of divine revelation par excellence (Exod. 19:18, 20, 23; 24:16; Deut. 33:2; Judg. 5:5; Ps. 68:8). Indeed, the Lord's presence on this peak came to symbolize divine protection (Judg. 5:4–5; Ps. 68:8). In his allegory of the two covenants, Paul uses Sinai to symbolize the old system (Gal. 4:24–25; see Heb. 12:19–21).

Although Exodus and Numbers provide many details concerning the itinerary followed by the Israelites in their trek from Egypt to the plains of Moab, few of these places can be identified with any certainty. In fact, the general direction of the wanderings in Sinai is still debated, although scholars usually choose between three alternate routes (i.e., a northern, central, or southern route). Consequently, the location of Mount Sinai is also disputed. As many as a dozen mountains in Sinai and northwestern Arabia have been identified with this sacred spot, but none of them has been accepted by all scholars. Since none of the theories concerning Mount Sinai's location is supported by archaeological evidence, consideration must be given to the Jewish, Christian, and Muslim traditions that relate to the proposed sites. Once this word of caution has been stated, one can safely say that Jebel Musa, or another mountain in its immediate vicinity, remains the most likely candidate. This identification assumes that the Israelites followed a southern route across the peninsula and places the wilderness of Sinai and its fabled mountain in south-central Sinai. ***See also*** Exodus; Horeb, Mount; Sin, Wilderness of.

sinew, a word that in biblical usage appears to cover a variety of anatomical elements including tendons, ligaments, and possibly muscle and other tissues. In Gen. 32:32 it may even refer to nerve tissue. It is used figuratively in Isa. 48:4 for stubbornness. In Job 10:11 and Ezek. 37:6, 8 the actual connective human tissues seem to be involved. "The sinews of his thighs" in Job 40:17 in the description of an animal in sexual arousal or anger may refer to the penis or related organs.

Sinim (s*i*n´im, KJV; RSV: "Syene"). ***See*** Syene.

Sinites (sin´*i*ts), a Canaanite tribe (Gen. 10:17; 1 Chron. 1:15). They have usually been associated with Lebanon or Phoenicia, but nothing about such a location is certain.

sin offering. ***See*** Worship.

Sion (s*i*´uhn), the term in the KJV where the RSV has "Sirion" (Deut. 4:48) or "Zion" (Matt. 21:5 and other NT texts). ***See also*** Sirion.

Sirach (s*i*´ruhk), **Son of** (Heb. *Ben Sirach*), the author of Ecclesiasticus, also known as The Wisdom of Sirach. ***See also*** Apocrypha, Old Testament; Ecclesiasticus.

Sirah (*si*´ruh), **the cistern of** (KJV: "the Well of Sirah"), the location from which the rebellious Absalom was called by Joab who subsequently killed him (2 Sam. 3:26–27). It is probably near Hebron, but its location is not precisely known. ***See also*** Absalom; Joab.

Sirion (sihr´ee-uhn), the name used for Mt. Hermon by the people of Sidon (Deut. 3:9; 4:48). Ps. 29:6 employs the word in parallel poetic construction with Lebanon, as does Jer. 18:14, reinforcing the reference to Mt. Hermon despite some variations in the Hebrew text.

Siron (*si*´rahn). ***See*** Senir; Sion.

Sisera (sis´uh-ruh), the commander of nine hundred chariots opposing Israel for control of Esdraelon (Judg. 4–5). Sisera's name is of non-Semitic origin; he is possibly connected with the early Sea Peoples (the biblical designation of this group as "Philistines" is generic). His headquarters at Harosheth "of the nations" (possibly *Muhrashti* of the Amarna Letters) lay somewhere in the Sharon Plain. In Judg. 4 his overlord was "Jabin king of Canaan" at Hazor (4:2; 23–24; 1 Sam. 12:9 LXX; Ps. 83:9). If not anachronistic, the name evokes a memory of a peaceful settlement by Kenites near the northern Kedesh (and thus near Hazor) in the preceding era (Judg. 4:11, 17 as flashback). Sisera headed forces of the "kings of Canaan" in the far older poem (Judg. 5:19). With Israelite strength in the hill country (4:5) and Galilee, Barak at Kedesh in south Naphtali summoned ten units (hardly 10,000) from Zebulun and Naphtali to muster at Mt. Tabor. Judg. 5 lauds four more tribes. Battle was joined "at Taanach, by the waters of Megiddo." A cloudburst and an ensuing flash flood gave the advantage to Israel. Sisera's forces were destroyed in retreat, while he fled on foot to the tent of the Kenite woman Jael. Feigning hospitality she received him into her tent and then killed him (Judg. 4:17–22). The war may be dated ca. 1125–1100 B.C., when Megiddo was abandoned and Taanach was violently destroyed.

"Sons of Sisera" are listed among Temple slaves (Ezra 2:53; Neh. 7:55; 1 Esd. 5:32). ***See also*** Barak; Judges, The Book of. R.B.

Sismai (sis´m*i*; KJV: "Sisamai"), the Jerhameelite son of Eleasah and the father of Shallum (1 Chron. 2:40).

sister, a term referring to physical or spiritual kinship. We know of Moses' sister (Exod. 2:4) and Aaron's sister (Exod. 15:20). Marriages were prohibited with one's full or half sister (Lev. 18). Yet "sister" is used for the beloved in Song of Songs 4:9–11, perhaps referring to fictive kinship ties. Members of Jesus' circle were "brother, sister, and mother" (Matt. 12:50). The co-worker Phoebe was Paul's "sister" (Rom. 16:1); young women in the churches of the pastoral Letters of the NT were also called "sisters" (1 Tim. 5:2). ***See also*** Brothers.

sit. ***See*** Gestures.

Sitnah (sit´nuh; Heb., "hostility"), a well dug by Isaac's servants, water rights for which were contested by the servants of Gerar's king Abimelech (Gen. 26:19–21). It may be near Rehoboth in south-central Judah but it has not yet been precisely located.

Sivan (*si* ´van), a word taken into Hebrew from the Akkadian language (*simannu*), it is used in Esther 8:9 as a synonym for the third month, which largely falls in May or June.

six, a number that appears occasionally in the Bible without apparent symbolic significance. The mysterious number of the beast in Rev. 13:18—666—is the number of its name (v. 17). In Hebrew and Greek, letters were used also as numerals. Each name thus had a numerical value, calculated by adding the numerical values of the letters. 666 is the numerical value of "Nero Caesar" in Hebrew. ***See also*** Beasts; Numbers; Revelation to John, The.

skirt, a word that in biblical usage designates three aspects of clothing. **1** A loose corner of a garment (1 Sam. 15:27; 24:4–5) like the one David removed from Saul's robe. **2** Both literally and figuratively the edge of a garment. For a literal description of the decoration to be put on the edge of the ephod, see Exod. 28:33–34; 39:24–26. Jer. 13:22, 26; Lam. 1:9; and Nah. 3:5 use the term figuratively as the sign of Jerusalem's shame. **3** The KJV uses the term for the "mouth" of a garment (RSV: "collar"; Ps. 133:2).

Skull, Place of the. ***See*** Calvary.

Skythopolis (ski-thop´uh-lis). ***See*** Beth-shan.

slave. ***See*** Servant; Slavery.

slavery in the ancient Near East, the total subjection of one person to another. Aside from crown and temple slavery, slave labor played a minor economic role in the ancient Near East, for privately owned slaves functioned more as domestic servants than as an agricultural or industrial labor force. The chief source of crown and temple slaves was captives of war (1 Kings 9:21; Num. 31:25–47; Josh. 9:23), while that of private slaves was defaulting debtors and their families (Exod. 22:2; 2 Kings 4:1) or indigents who resorted to voluntary self-sale (Lev. 25:39; Exod. 21:5–6; Deut. 15:16–17).

Ancient Near Eastern law collections deal mostly with the slave in relation to an injuring third party, thus emphasizing the slave's status as chattel. However, most biblical

Terra-cotta tablet inscribed with a contract concerning the purchase of a slave by Lugal-Ushumgal, prince of Lagash; Tello, ca. 2300 B.C.

legislation focuses upon the relationship of slaves to their own masters, thus emphasizing the slaves' humanity. Although the Bible acknowledges the slave's status as the property of the master (Exod. 21:32; Lev. 25:46), it seeks to restrict the master's power over the slave. The master was punished for excessive use of authorized force leading to the immediate death or permanent maiming of the slave (Exod. 21:20, 25–26). The slave was part of the master's household (Lev. 22:11) and was required to rest on the Sabbath (Exod. 20:10; Deut. 5:14) and to participate in religious observances (Gen. 17:13; Exod. 12:44; Lev. 22:11; Deut. 12:12, 18; 16:11, 14).

In contrast to ancient Near Eastern treaties providing for the mutual extradition of fugitive slaves, biblical law prohibited such extradition and granted them asylum (Deut. 23:16–17; but cf. 1 Kings 2:39–40). The servitude of a Hebrew debt-slave was limited to six years (Exod. 21:2; Deut. 15:12; Jer. 34:14). Upon manumission, slaves were to receive gifts (Deut. 15:14) to enable them economically to maintain their new freedom. The servitude of voluntarily self-enslaved Hebrews ended with the onset of the Jubilee Year and their return to their patrimonies (Lev. 25:13, 40).

Slavery continued in the Roman Empire in NT times, and many slaves became Christians (e.g., Col. 3:22–24; 1 Tim. 6:1–2). While the institution of slavery as such is not condemned in the NT, Paul urged Philemon to treat his slave Onesimus as a brother rather than as a slave (Philem. 15–16). ***See also*** Law; Slavery in the New Testament. B.L.E.

slavery in the New Testament. Among the many relationships of personal power and submission constituting the patriarchal society of Greco-Roman antiquity, the most extreme form was slavery, the legal ownership of one person by another as property to be used at will.

Despite the sense that God opposed the enslavement of Judeans by Judeans, Judeans had practiced debt slavery, including the sale of children by impoverished parents, for centuries in the context of a peasant society. Such slaves, some highly placed, are significant characters in parables of Jesus (Matt. 18:23–34; 24:45–51; Luke 16:1–13; 17:7–10). The Romans had developed a slave society in which as much as thirty-five percent of the population were slaves, primarily as the result of enslaving rather than killing large numbers of conquered enemies. Such slaves functioned as managers and accountants as well as field hands, dominating large-scale production in both the countryside and the urban areas and providing their owners' primary income. This income, enabling the leisure class to develop high culture, supported in turn the maintenance of large numbers of domestic slaves, including cooks, body attendants, teachers, physicians, and musicians, who not only provided personal services but also displayed the owner's status and prestige. This is the context for references to slaves and slavery-related metaphors in the NT.

Roman enslavement, whether by capture in war, birth to slave women, rescue of abandoned infants, purchase, self-sale (1 Cor. 7:23; *1 Clem.* 55:2), or kidnapping (1 Tim. 1:10; Rev. 18:13), meant "social death," cutting the slave off from family, former home, and property. Children of enslaved women grew up knowing no other social condition (see the allegory in Gal. 4:21–31); such were most of the slaves mentioned in the Pauline Letters. In this state of degradation and dishonor, the slave's identity depended entirely upon the owner. With few limits, owners could sell, set free, punish, or reward individual slaves as they wished. How slaves were used and treated depended entirely on the character and mood of the owner.

To understand NT texts mentioning slavery, one must keep in mind major factors that distinguish first-century slavery from that later practiced in the New World: (1) race differences played no role, and an enslaved person generally could not be distinguished by appearance; (2) education was encouraged and enhanced a slave's value (some slaves were better educated than their owners); (3) many slaves functioned in sensitive and highly responsible positions

(see Phil. 4:22: "those of the emperor's household," some of whom were Christians); (4) persons sometimes sold themselves into slavery to escape poverty, pay debts, climb socially, and obtain special jobs (see Erastus in Rom. 16:23, who probably sold himself to the city of Corinth to secure the position of "city treasurer"); (5) slaves could control property (including owning their own slaves!); (6) slaves' cultural and religious traditions were largely those of the free; (7) no laws prevented public assemblies of slaves (there was no consciousness of being a social class or of suffering a common plight); (8) the majority of urban and domestic slaves could anticipate being set free (manumitted) by age thirty, becoming "freedmen" or "freedwomen" (1 Cor. 7:21–23; Acts 6:9). Astonishingly, if manumitted by a Roman citizen, the slave was granted citizenship and a new "social life."

Slavery had become such an accepted part of the social fabric that no teachers of morality thought to question its practice, including the Stoic philosopher Epictetus, who was educated while a slave. No plan to abolish slavery motivated the well-known slave revolts that were confined to the period of rapid Roman expansion (140–70 B.C.). Only the Essenes at Qumran (see Josephus *Antiquities* 18.18–22) repudiated slavery in principle. While not rejecting slavery, the NT nowhere seeks to justify it, and Gal. 3:28 challenges its effects. To our knowledge, neither Jesus nor his immediate followers owned slaves, nor did Paul, Barnabas, or Timothy. Jesus' call for his followers to forgive debts (Matt. 6:12) would have undermined the basis for debt slavery.

Slaves gained a new "social life" as "brothers and sisters" in the Corinthian house-churches. Onesimus, the only certain slave in the NT whose name we know, was probably a managerial slave owned by the house-church patron Philemon, whose trust he betrayed. While seeking to engage Paul as his advocate, Onesimus became a Christian himself, leading Paul to exhort Philemon to treat Onesimus "no longer as a slave but as a beloved brother" (Philem. 15–17).

The "household codes" (Col. 3:22–4:1; Eph. 6:5–9; 1 Tim. 6:1–2; 1 Pet. 2:18–21) sought to transform attitudes endemic to both owners and slaves. A concern for the reputation of Christians in the eyes of patriarchal society left slavery, if not patriarchal attitudes, intact. Neither the selling of children nor the sexual exploitation of slaves is addressed directly in the NT.

Paul continued the OT's use of slave metaphors when describing himself and Timothy as "slaves of Christ Jesus" (Rom. 1:1; Phil. 1:1), thus adding them to the tradition of God's servants, Abraham, Moses, and David. Paul also indicated a sharp contrast between "slavery" to sin and "slavery" to righteousness or to God (Rom. 6:12–23). ***See also*** Slavery in the Ancient Near East; Freedman; Freeman, Freewoman; Liberty; Onesimus.

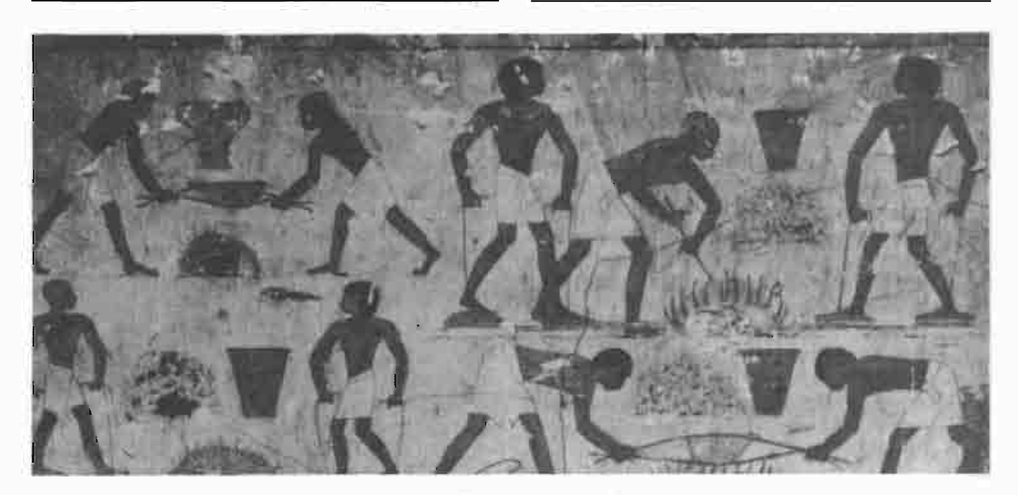
S.S.B.



sledge, an instrument used for threshing grain. It was made of long, flat pieces of wood, turned up in the front, on which would be placed stones for weight. The underside was studded with sharp stones or pieces of metal (Isa. 41:15; Amos 1:3; Job 41:30). ***See also*** Threshing.

slime, a moist, slippery substance of moderate viscosity. In the OT it is used to symbolize something that has no taste (Job 6:6), or something that is impermanent, as the trail left by a snail (Ps. 58:8). The KJV often uses the word "slime" for the RSV's "bitumen." ***See also*** Bitumen.

sling, a weapon used to hurl small projectiles at an enemy, human or animal. This simple device was made of a cloth pad (i.e., "the hollow of a sling," 1 Sam. 25:29) and two cords, one attached to each side of the pad. Ammunition consisted of smooth brook pebbles (1 Sam. 17:40), hammer-worked stones, or, in the Greco-Roman period, lead pellets. To "load" the weapon, the warrior placed a projectile on the pad, which was held with one hand; a small pouch was created when the slinger pulled the cords taut with the other hand. While holding the ends of the cords, the sling was whirled in the air, thereby building up centrifugal force. At the proper instant, one cord was released, and the missile was fired at its target.

While the sling was long used by shepherds to protect their flocks from predatory animals, this weapon was also used at an early date in warfare. Indeed, the story of David's victory over the heavily armed Goliath illustrates the military value of slings (1 Sam. 17). The accuracy of the left-handed slingers from the tribe of Benjamin was famous (Judg. 20:16; 1 Chron. 12:2). From at least the tenth century B.C. onward, many ancient Near Eastern armies had regular units of slingmen (2 Kings 3:25; 2 Chron. 26:14). The sling was so well known in ancient Hebrew society that biblical writers referred to this weapon in symbolic ways (1 Sam. 25:29; Job 41:28; Prov. 26:8; Jer. 10:18; Zech. 9:15). ***See also*** Weapons. G.L.M.

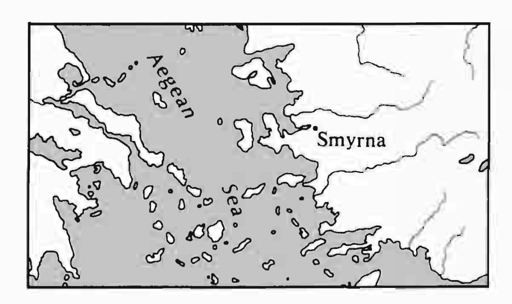
smith, one who works metal. The first-named smith of the Bible is Tubal-cain in Gen. 4:22. He is the son of Lamech and Zillah, a brother of

Copper foundry workers; detail of an Egyptian wall painting from the tomb of Vizier Rekhmire, fifteenth century B.C.

Naamah of the eighth generation from Adam. Described as the hammerer of crafts, thus associated with the arts and crafts of earliest humankind, Tubal-cain is known traditionally as the father of metallurgy.

Descriptions of the smith's craft are found in Isa. 44:12 and in Ecclus. 38:28. In Isaiah the term refers to an ironworker laboring over the coals of his forge, shaping the metal with hammers, powered by his strong arm. The passage in Ecclesiasticus pictures the smith seated at an anvil intent on the pattern of the iron object and its decoration. These descriptions serve as analogies demonstrating the power, diligence, and skill of the smith's work. Of all such craftsmen, not known for their counsel or discipline, it is said that they "keep stable the fabric of the world" (Ecclus. 38:33, 34).

The Bible knows of smiths for silver (Judg. 7:14; Acts 19:24), gold (Isa. 40:19; 41:7; 46:6), iron (Isa. 44:12), and bronze (1 Kings 7:14). The name also describes a thousand men taken to Babylon during the second wave of exile under Jehoiachin. A significantly large proportion of the exiles (one-tenth of all captives) were smiths (2 Kings 24:14, 16; Jer. 24:1; 29:2).



A more general term for a craftsman or artisan is sometimes translated as smith (Heb. *horesh*). The activities described by the term include the sharpening of plow points (1 Sam. 13:19), bronze working such as that of Hiram of Tyre's father (1 Kings 7:14) and, in Isaiah, workmen who make idols and weapons (Isa. 40:19; 41:7; 54:16). Deut. 27:15 tells of a curse laid upon such idol makers and Hos. 13:2 reports that Ephraim is condemned for perpetuating the sin of idolatry.

The earliest archaeological finds related to the smith's craft come from Tell Mardikh (Ebla) in Syria dating to the early bronze age (ca. 3200 B.C.) where excavators found a ceremonial hammer of gold and silver and pictures in bas-relief attached to wooden frames with copper pegs. A few of the frames had been overlaid with gold. Texts from Ebla indicate a guild or caste of smiths, and one burial site contained evidences of the goldsmith's art.

Many processes and techniques of the smith's craft are mentioned in the Bible including forging, casting, beating, overlaying, furnishing, whetting, cutting, and soldering. R.A.C.

Smyrna (smuhr´nuh), an ancient city (modern Izmir, Turkey) on the west coast of Asia Minor. It is one of the seven cities mentioned in the book of Revelation (1:11). It lay at the end of a major east-west road, possessed an excellent harbor, and was surrounded by rich farmland. The city's leadership was consistently loyal to Rome. A temple dedicated to the worship of Rome (*dea Roma;* Lat., "the goddess Rome") was built there in 195 B.C.

The message addressed to Smyrna reflects conflict between Christians and Jews (Rev. 2:9–10). It may be that local Jewish leaders were appearing before the city authorities or the Roman governor (cf. Acts 17:5–8) and accusing their Christian neighbors of crimes. Polycarp, bishop of Smyrna, was martyred in A.D. 156.

The account of the martyrdom makes clear that there was great hostility between the local Jewish and Christian communities at that time.

Information about the Christians in Smyrna between the time of the composition of the book of Revelation and the martyrdom of Polycarp is available in the letters of Ignatius, bishop of Antioch, written early in the second century. ***See also*** Revelation to John, The. A.Y.C.

snail, a gastropod mollusk. Its sole biblical appearance in Ps. 58:8 is symbolic of impermanence by reference to its slimy trail. The KJV also uses the term for some unclean food (RSV: "sand lizard" in Lev. 11:30).

snake. ***See*** Serpent.

snare, a trap; technically, it is a slip-knotted cord or wire pulled tight to wrap and hold the leg(s) of an animal or bird when it steps into the loop to get the bait or by accident. Biblical usage includes reference to its use in catching birds (Ps. 91:3) and animals (Amos 3:5), but it is more frequently used symbolically for death (2 Sam. 22:6; Ps. 116:3), the actions of wicked people (Ps. 119:110), or the devil (1 Tim. 3:7). It capitalized on surprise, a feature often noted (Luke 21:34), and caused its victims to enmesh themselves while struggling to get free (Prov. 22:25). It depended on deceit to be successful (Prov. 21:6) and was camouflaged by hunters to take the prey by surprise (Ps. 64:5). R.S.B.

snow, cystallized water formed when moisture-laden air is chilled. It is relatively rare except in the northern reaches of biblical lands and at higher elevations. It is common in the mountains of Lebanon, northern Syria and Turkey, but it is rare in Jerusalem or the Transjordan. It was known well enough for biblical writers to refer to it literally (Ps. 148:8; Prov. 25:13; Isa. 55:10; Jer. 18:14; 2 Sam. 23:20). It also served as a common standard for whiteness, whether as symptomatic of illness like leprosy (Exod. 4:6; Num. 12:10; 2 Kings 5:27) or in its own right (Ps. 51:7; Isa. 1:18; Dan. 7:9; Matt. 28:3; Rev. 1:14). It was recognized to be properly seasonal (Ps. 26:1) and its control lay in the hand of God, as with all of nature (Job 37:6; 38:22). Its whiteness symbolized the ultimate in purity (Lam. 4:7). R.S.B.

snuffer. ***See*** Temple, The.

So (soh), the "king of Egypt" (2 Kings 17:4) to whom King Hoshea sent messengers just before the latter revolted against the Assyrians. The Assyrians under King Shalmaneser then attacked Samaria (725 B.C.). The identification of "So" is uncertain since no name similar to this one appears anywhere in the Egyptian records. "So" may refer to the twenty-second-dynasty king Osorkon IV, who ruled Egypt ca. 727–720 B.C., or it may be derived from an Egyptian term *pa Saw(w)*, which means "the Saite" and indicates an individual from the city of Sais in the Egyptian Delta. ***See also*** Pharaoh.

soap, a cleansing agent formed by the hydrolysis of fat with an alkali. In the Bible it refers to cleaning both the body (Jer. 2:22) and clothes (Mal. 3:2). The composition of such soap in biblical times probably used olive oil as the fat and some salt-bearing plants as the alkali source.

sobriety. ***See*** Drunkenness; Vine.

sociology of the New Testament. Throughout the twentieth century there have been a variety of scholarly efforts to utilize insights from the social sciences to increase understanding of the texts and of the historical processes involved in the origins of Christianity. In recent decades the level and the diversity of this kind of scholarly activity have increased markedly. These developments have been fostered by and have contributed to the radical redefining of older historical and cultural assumptions about Judaism and Greco-Roman culture that dominated scholarly theories earlier in this century. The neat distinction between Palestinian Judaism and Hellenistic Judaism and the notion that the rabbinic Judaism of the Talmud and Mishnah was already normative in the first century A.D. have been thoroughly discredited. Methodologically, the earlier practice of imposing on the historical evidence such sharply differentiated categories as church/sect and charismatic/institutional has also been shown to be simplistic and inaccurate.

The major factors leading to the fruitful use of the social sciences are not only new methodological insights but also new sociocultural information about Judaism and Christianity in the early centuries of the Common Era. The new information includes the discovery and ongoing analysis of such documents as the Dead Sea Scrolls and the Gnostic library from Nag Hammadi, but also the results of archaeological finds that have resulted in recognition of the wide impact of Greco-Roman culture on Galilee in the first century and in awareness of the evolution of the synagogue in the post-temple period. Fresh examination of the canonical and extra canonical Gospels and of the NT Letters has been aided by insights from the social sciences. Among the scholars pioneering in the use of social science methods for understanding the NT and the historical development of early Christianity have been Wayne Meeks and Bengt Holmberg, in their analysis of the implications of the Pauline Letters for the circumstances of the gentile churches to whom Paul wrote and the patterns of authority and decision making that are implicit in them. Gerd Theissen, John Gager, and Howard Kee were among the first to

employ insights from sociology in the reconstruction of the circumstances for the writing of the Gospels.

Developments in the social sciences in the past two decades have had direct and fruitful implications for the study of Christian origins. Of prime importance has been the fresh appraisal of the nature of scientific knowledge as a consequence of the insights of Thomas S. Kuhn in *The Structure of Scientific Revolutions* (1970), which showed that the choice of an analytical paradigm by a scientist has a basic impact on the data under scrutiny as well as on the results of the investigation. Kuhn agrees with Ludwik Fleck, an earlier Polish historian of medicine, who affirmed that facts arise and are known only by virtue of a given thought style characteristic of a given thought collective. Accordingly, what earlier biblical scholars took to be "facts" about the circumstances of the origins of Christianity and the interpretation of the documents from this movement may tell us more about the scholars than about the historical development that they are purportedly describing. This insight about the social conditioning of what is called knowledge has been set forth in an illuminating way by Peter Berger and Thomas Luckmann in *The Social Construction of Reality* (1966), and by Berger in *The Sacred Canopy* (1967). Human beings establish and maintain a relationship with the natural world and the culture that surrounds them through language, symbols, concepts, values, and activities that provide understanding and relative stability. These perceptions are given objective status as "truth," but also internalized to provide individual and social identity. Society seeks to maintain these structures of understanding and behavior as essential for social order and cultural continuity. What is powerfully important in stabilizing social structures is not only what is affirmed by members of the society, but also what are simply the shared assumptions of its members, including unacknowledged perceptions about the meaning of the common language, and the implicit meaning of certain literary and other communicative styles.

These insights have direct implications for both translation and interpretation of early Christian texts, since attention must be paid to the specific connotations of crucial terms, awareness of which can be gained only by careful assessment of the specific sociocultural context in which the writing is produced and to which it is addressed. Akin to the linguistic distinctions are the changing literary modes used by Jews and early Christians, which must be examined in light of the form and functions each served in its own culture. Sensitivity to such factors is enhanced by insights from other aspects of the social sciences, especially as they have been perceived and articulated in recent decades. For example, the *Sibylline Oracles* produced by Jewish writers can be understood only against the background of the function of the Sibyllines in the Roman culture. The importance of such interpretive distinctions has been heightened by the growing evidence of diversity within Judaism in the Hellenistic and early Roman eras. The projection of oral law and rabbinic modes of exegesis back to the time of Moses and the assumption that they provided the norms for Judaism throughout history have been effectively discredited in recent decades. Positively, the interchange of Jews and early Christians with the variety of literary modes and philosophical concepts operative in the wider Roman world requires scholars to employ analytical methods refined in the social sciences in order to become sensitive to the cultural complexity and the specific concepts operative in early Christianity as reflected in the NT. A major factor in the diversity that is now evident in Judaism at the beginning of the Common Era is the different ways in which Jewish groups understood themselves to be the covenant community. Some (such as Philo of Alexandria and the author of the Wisdom of Solomon) sought to develop syntheses between their biblical tradition and insights gained from Hellenistic philosophy. Others (such as those who produced Daniel and the other apocalypses) were convinced that God had vouchsafed to their own special group information and guidelines for them to prepare for the coming crisis when God would bring judgment on the wicked and vindicate them. Still others believed that if they maintained distinctive identity through careful obedience to God's law as they understood it, God would preserve them by their periodic withdrawal for study and devotion (the Pharisees) or their complete withdrawal from mainstream Jewish society (the Dead Sea community). Some insisted that only gaining and maintaining political independence would permit them to carry out God's will (the Maccabees and later Jewish revolutionaries). It is in response to this range of community formations that the early Christian movement arose and must be understood historically. Insights from the social sciences are of great value in tracing and understanding these developments and the literature that they produced.

Community Formation: Clifford Geertz, in *The Interpretation of Cultures* (1973), defines culture as a historically transmitted pattern of meanings embodied in symbols, a system of inherited conceptions expressed in symbolic forms by means of which human beings communicate, perpetuate, and develop their knowledge about and attitudes toward life. He quotes Suzanne Langer's description of the function of symbols to synthesize a people's ethos—the tone, character, and quality of life, its moral and aesthetic style and mood, and the shared worldview, the way things are in sheer actuality, and the most comprehensive ideas of order. Ritual serves to structure the authority of the religious perspective by induc-

SOCIOLOGY OF THE NEW TESTAMENT

ing a set of moods and motivations and defining an image of a cosmic order by means of a single set of symbols. These symbol systems serve as sources of information in terms of which the life of the community can be patterned, both individually and socially. When major strains develop within the culture and resources for coping are lacking, new ideologies arise that recast and revise as well as innovate with the aim of producing new maps of social reality and new matrices for creating a new collective consciousness. The struggle is for personal identity that can be collectively ratified and publicly expressed in order to create an ordered world.

In his *Communities of Discourse* (1989), Robert Wuthnow analyzes various proposals to explain cultural change, decrying simple socioeconomic explanations (such as those of Max Weber or Karl Marx) and calling for attention to actual historical factors that have led to cultural innovation, including the impact of new intellectual insights and of creative leaders. He describes cultural change in terms of three stages: (1) production of alternatives to prevailing assumptions and expectations; (2) proliferation of charismatic figures, offering alternatives within the movement, resulting in a range of options and the ultimate necessity to make some choices as to the community norms; and (3) institutionalization as the outcome of this process of debate followed by routinization of the dominant concepts and patterns of behavior. He sees this not as an automatic process, but as the result of the work and perceptions of creative leaders, responding to new models that are becoming discernible in the culture.

The importance of symbol and ritual in group identity has been highlighted by Suzanne Langer in *Philosophy in a New Key* (1942). The now discredited notion that sense data are the ultimate basis for human understanding is being replaced by recognition that shared verbal symbols provide the ground of knowledge and group identity. Verbal modes of analysis range from critical analysis to myth, which takes into account both social forces (leaders, masses, customs, laws, traditions) and the cosmic forces that provide the context of human life. The symbols are the means of representation for these factors that shape human existence and provide a framework of meaning and purpose. It is precisely the symbol systems of ancient and modern cultures that anthropologists are currently engaged in analyzing, including religious movements. The implications of these methods and observations are of major importance for analysis of the NT and the diverse communities that produced it.

The combined import of these analytical insights for the study of the NT is obvious and basic. Jesus and the movement that he launched are to be perceived as beginning with the symbol systems of covenant community inherited from the range of options represented from within postbiblical Judaism. In light of the social, political, and cultural threats that the Roman Empire represented, Judaism was searching for new modes of community identity for those who claimed to be the people of God. Jesus offered yet another, which by its radical social inclusiveness and relaxation of ritual boundaries was seen as a threat to both the religious and the political order. Among his followers, diversity of response to him and his definition of God's people, led by such charismatic figures as Paul and Peter, resulted in tensions and conflict in the very first generation of the movement, in spite of the common affirmation that Jesus was God's unique agent for covenantal renewal. The different cultural environments from which Paul and the others came are reflected in the resources on which they drew for providing direction, norms, and structure to the movement. The cultural differences are likewise evident in the literary forms and the linguistic features of the various writings of the NT.

Community Models: Another important development in the social sciences with direct relevance for the study of Christian origins is the careful distinction that has been drawn between categories and models. Both sociologists and historians seeking to use sociological methods have, probably unwittingly, treated insights offered by pioneers in the social sciences in ways that were never intended by their discoverers. For example, throughout the present century there has been a continuing impact on historical inquiry from the distinction between church and sect as formulated in the sociological theories of Emile Durkheim and Max Weber with respect to their observations about the collective nature of religious thought. The ideal types (church and sect) have provided a base for analysis of religious movements based on Ernst Troeltsch's formulation of sharp distinctions between them: church as tradition-oriented, accommodating to the prevailing culture, and intending to provide encompassing participation for the whole of society; sect as a small conversionist group, critical of the social and religious establishment, and finding its participants chiefly among the lower socioeconomic levels of society. This approach came to function as a classification system for religious movements in general, although the two categories were expanded to include other median types. Largely ignored by those using these categories was Weber's warning that the "ideal type" was not a historical reality but a conceptual construct intended to foster analysis of historical configurations by identifying both shared and distinctive features. Although certain aspects of this theoretical distinction continue to be useful, the mounting evidence that in the first century A.D. there was not a broad center of orthodox belief and practice among Jews shows

that in Judaism of the first century there was no counterpart to the established church that served as the point of departure for these sharp sociological distinctions. There was the Temple and the elaborate cultus carried out there, in which Jews of many persuasions chose to participate. Yet the literary and other historical evidence that has survived from the period indicates that there was great diversity among Jews in Palestine and the Diaspora as to which aspects of their tradition and what configuration of the covenant tradition were to be regarded as the basis for their identity as the people of God.

Another model that has been widely employed for historical analysis and NT interpretation is the "millenarian movement." Yet the data on which generalizations about such groups are based derive from modern, non–Middle Eastern evidence, such as Peter Worsley's study of Melanesian "cargo cults." The features that are identified as characteristic of millenarian groups include expectation of the overthrow of the present order of society, a strong sense of community, and the brief time of existence of the movement. The first two of these are scarcely unique among social movements, and the last does not fit the Christian movement, which altered, but never abandoned, its eschatological expectations. A more abstract and encompassing range of features was sketched by Mary Douglas in her study of modes of identity in religious communities, *Purity and Danger* (1966). She describes two dimensions of community structure: group and grid. The former is the degree of commitment required of members of the community, and the latter is the degree of control exercised over the members. She suggests four main types: (1) low grid/low group, which fosters individualism; (2) high grid/low group, which results in a complex society in which well-defined roles are assigned and accepted by the members; (3) low grid/high group, in which only the external boundary is clear, and the status of members is open and subject to negotiation; (4) high grid/high group, a hierarchical institution where leaders are respected and conformity is rewarded. Yet Douglas is explicit that these descriptive features are not categories into which groups are to be assigned by the analyst. Instead, they are catalytic agents to heighten the sensitivity of the interpreter for detecting features that are shared with other groups and those that are unique. In spite of this warning, some scholars currently use Douglas's scheme as a system of classification for segments of early Christianity. Her proposal is useful for helping to sensitize the historian or interpreter about implicit features of the material under scrutiny, but it violates her intention if the scope of features that she traces is converted into a set of categories.

An important observation about the use of models in sociological analysis—and by extension, in historical analysis—is that of T. F. Carney, in *The Shape of the Past: Models and Antiquity* (1975). He notes that sociological models are less than theories and more than analogies. Theories are based on laws and general principles, which are aimed at explaining evidence and statements. The model serves as a link between theories and evidence, in that it is created and defined in order to serve as an instrument for identifying and interpreting a mass of detail concerning certain social phenomena. Thus, for example, a literary model (such as an apocalypse) or a social model (such as the criteria for participation in a group) will aid in identifying, organizing, and interpreting a mass of detail about some ancient material. The model is suggestive, rather than fixed and rigid. Deviations from the model in the phenomenon under examination are as significant and important as the aspects of conformity that are discerned. The model is essential in offering questions to be pursued, rather than determinative of the classification to which the evidence is to be assigned. One should not extrapolate from those aspects of the model to which the item under examination conforms and come to conclusions about identity. The distinctive features are as important as those that are shared with the model.

The same kind of awareness of similarity and difference with respect to social contexts of ancient documents must be maintained at the lexical level. Comparative analyses of linguistic usages are essential, but the analyst must keep in mind the distinctive connotations and import that words and concepts are given in a particular social setting. This requires the translator or interpreter to examine the literary setting, the cultural milieu, the major social and cultural issues implicit in a document before settling on the meaning of the language that is used in it. A case in point is the term "righteousness," which is crucial in the Letters of Paul and in the Gospel of Matthew. Yet identical meanings cannot be assigned in both these bodies of literature. For Paul, *dikaiosunē* (Gk., "righteousness") refers to the action of God, who in Christ is reconciling the world to himself and setting his people in right relationship with him (Rom. 3:21–26; 2 Cor. 5:18). In Matthew, on the other hand, righteousness is total obedience to the divine will that Jesus has made possible (Matt. 3:15).

Kindred areas of social phenomena that should be explored by interpreters of the NT are the sociology of literature and the intellectual history of the Greco-Roman world as it is reflected in social perspectives evident in the early Christian literature. The older analyses by form critics spoke of the "setting-in-life" of the gospel tradition, for instance, but then proceeded to assign certain traditions in wholly arbitrary fashion to categories: aphorisms and proverbs to the historical Jesus; miracle stories

to the Hellenistic church, with its interest in the (purely hypothetical) "divine men"; eschatological pronouncements to the Pauline-influenced early church, etc. Ironically, a leading form critic (Bultmann) insisted on the timelessness of the true message of Jesus, so that for him the setting-in-life of that tradition was ultimately inconsequential.

The social function of certain types of literature included in the NT are important clues to the aims of the author. This is the case, for instance, in the book of Acts, which comparative studies in the sociology of literature have shown is akin in style and strategy not only to historical writing of the early Roman period but also to the so-called Hellenistic romances, which use fascinating narratives of divine activity in behalf of the central figures as propaganda in behalf of the divinity. One such work, the *Ephesiaca* of Xenophon, for example, describes the journeys of a pair of devotees of Isis in which they visit Athens and Ephesus and which culminate in a sea voyage during which the pious couple is miraculously delivered from a fierce storm. The cultural similarities with Acts in literary style and intent as religious propaganda are unmistakable. Perceptive analysis of the aims and self-understanding of the community that stands behind Luke and Acts is offered by Philip F. Esler in *Community and Gospel in Luke-Acts: The Social and Political Motivations of Lucan Theology* (1987).

Issues Raised Through Sociological Methods: The value of contemporary sociological methods for the analysis of the NT writings and the reconstruction of the complex historical developments that gave rise to them lies in the questions that these insights pose for the investigator in the process of interrogating the ancient texts and sources. These methods do not furnish neat categories into which the ancient data can be classified, but they sensitize inquirers so that they know what to look for in this evidence. The questions that the social sciences now pose for the literary and historical examiners of early Christian literature and related evidence may be grouped as follows:

Group Boundary Questions: Who draws the boundaries that define the group? What factors are regarded as threats to maintaining these boundaries? Do the threats to the boundaries arise within the group or from outsiders? What are the temporal and social limits of the group? Does the group emphasize the identity of its members or the criteria for participation?

Authority Questions: How is power exercised within the group, and how are the power figures authorized for their roles? What is the structure of power within the group, and how are the power figures ranked? What titles are assigned to the leaders, and what is their status? Who is in charge of the group, and how is the leader chosen? Can authority be passed on to successive generations and, if so, by what process?

Status and Role Questions: Is there definition of groups by age or are sex roles defined? Are the members assigned by class or rank within the total group? Do certain members enjoy special privileges? Are values indicated concerning wealth or property, or concerning clothing and ritual equipment? If conflict is evident within the group, what are the issues? What are the resources for resolving them? Who is authorized to perform rituals and to adjudicate disputes?

Ritual Questions: What are the basic procedures within the group that lead to initiation and celebration and mark stages of transition within the community? Who performs these rites or official actions, and how are they understood by the group? How are these rites or procedures formalized, and how are they passed on to successors? Is there evidence of changing understanding or practices in matters of ritual on the part of successive generations? In what ways and for what reasons do these official procedures change? What language is used in these ritual and/or formal procedures?

Literary Questions with Social Implications: What genre(s) does the group use for communication within the group, and to outsiders? What is implied by this choice of genre(s)? How does the choice of genre by the author affect the message that is being conveyed to the reader/user? What are the major themes in the text of the communication? What strategy is employed to convey the message? Who is affirmed in the document, and who is under attack? Has the author adapted the genre in order to serve certain special or distinctive needs? What are the specifics of the genre modification, and what are the ends that are sought? Is there a canon observed by the community? How is it defined, and what does it include? What does the literary organization of the document imply about the conceptual and social order of the community for which it was prepared?

Questions About Group Functions: What are the dynamic forces that gave rise to and sustain the community? What are the shared goals, and what are the chief aids and obstacles to their attainment? What are the major factors in the wider culture that challenge or threaten the community? Who are the prime enemies, and how are they to be combatted? Does the group have certain normative practices akin to body language? If so, what are they, and what do they signify? Are there disparities or outright contradictions between various texts that the group produced, or between its principles and its practices? How are these tensions handled? What are the ritual practices by which group identity is established and maintained?

Questions Concerning the Symbolic Universe and the Social Construction of Reality: What values, hopes, anxieties, and moral standards are shared by the members of the group? What is revealed concerning the group's symbolic

SOCIOLOGY OF THE NEW TESTAMENT

universe by the statements about superhuman beings (good and evil) and in the reports of miracles, visions, portents, magic, and healing? How is the course of history understood, and what is the place of the group within that cosmic scheme? What is its view of time? Is it unidirectional or cyclical? Is it meaningful, or to be superseded? How does the group understand God, in divine essence and in divine activity? Are the divine actions discernible within history, within the cosmic structure, or primarily within the experience of the individual? Does the group's perception of reality include dualistic features? How is evil perceived? Do these evil factors appear in moral, social, political, or cultural modes? How is the group to respond to these evil powers? What are the dominant symbols in terms of which the group perceives its place in the universe and in the purpose of God? Are these symbols shared with other groups? If so, what is distinctive about the self-perception of the group under primary analysis?

Indications of the Import of Sociological Methods: In recent years there has been a remarkable convergence between the results of archaeological discoveries and attention to the life-world or sociocultural context of Christian origins; this helps in direct ways to illuminate the life-world that was operative behind various NT writings. For example, excavations in Galilee and analysis of the results during the past decade have led to a radical shift in understanding of the social setting in which the Jesus movement began. Instead of the older notion that this region was a predominantly rural, cultural backwater, excavations have shown how much Sepphoris, the Herodian capital of Galilee located a few miles from Nazareth, was shaped by Greco-Roman culture, complete with an agora, baths, theater, and mosaic pavements typical of the era. It was located on major trade routes between Syria and Palestine and between the Decapolis and the Mediterranean ports. Careful study of Capernaum shows that it, too, was a significant center of trade and that its synagogue dates from centuries after the time of Jesus, as do all the structures in this region erected solely as places of worship and study (in contrast to the *proseuchē*, which earlier was a convenient gathering place for pious Jews). These were contemporaneous with the rise of the rabbinic movement in the second century A.D., which had its primary center in Galilee.

Major changes in understanding the social context in which apocalypticism took shape in the Greco-Roman world came with a colloquium on that subject in Uppsala in 1983. What became clear was that the apocalyptic worldview was not the product of a Jewish fringe group that subsequently influenced some of the early Christians, but that it developed on a broad cultural and geographical base during the Hellenistic period. Subsequent studies have shown developments among Hellenistic philosophers of the Cynic and Stoic persuasions analogous to those of Jewish and Christian apocalypticists, including the viewpoints expressed by such advisers to the Roman emperors as Cicero and Seneca, both of whom awaited a fiery renewal of the ages accompanied by divine judgment on the wicked and vindication of the righteous. As a result of these sociocultural insights, historians can now recognize the high probability that the apocalyptic features of the synoptic tradition (in Q and Mark) were by no means later accretions, but were an integral part of the oldest Jesus material. Further, one can now understand better why the apocalyptically oriented Christian message embodied in these strands of the gospel tradition and in the Letters of Paul so rapidly and effectively found a sympathetic audience in the wider Roman world.

Similarly, careful attention to the cultural setting of the early Roman world enables one to understand the origins and aims of other forms of the gospel tradition. Already noted is the parallel between the book of Acts and the Hellenistic romance, a favorite propaganda medium for religious movements in the Roman period. The author has with great skill combined this with linguistic and narrative features of the Septuagint evident in his version of the gospel, which provided him with the historic-cultural base out of which developed the potentially universal religious movement that he depicts in Acts, utilizing a popular communication medium of his contemporary culture. In the Gospel of John the author has drawn on the literary modes and religiophilosophical perspectives of another facet of the culture of his time: mystical, visionary, highly symbolic features that invite the reader to participate in the divine life that is offered through Jesus, God's human revelatory agent: the Logos become flesh.

Studies of the adaptation of the Platonic and Stoic traditions in the so-called Middle Platonism of the second century A.D. highlight the use of mystical symbolism to invite the inquirer to share in the divine and timeless sphere of life. For Plutarch, who was the major voice of this intellectual development, the world is a theater in which the cosmic drama is played out between Ultimate Being and the forces in the material world that are the ground of evil, but God (Apollo [understood as *a-pollo*] is interpreted as being "not Many," and hence the One) will ultimately triumph. Sharing in that cosmic victory are those who devote themselves to the knowledge of the One, and thereby come to experience immortality. In this same century some Christians adapted this view of reality and adopted it as the basis of their own understanding of Christian faith and existence. Building on the creation of the Adam story, they developed their own mythic image of Anthro-

pos (Gk., "human being"), from whom all human beings are descended by a process of fragmentation and dispersal. Those who understand and relive this drama that provoked the rise and triumph of evil in the material world are enabled by their divinely granted knowledge to acquire ontological status and power. They recognize that the cosmos is incurably evil and must be rejected, so their goal is to escape from entanglement in it and to become united with the divine, who is perceived by the true seeker through knowledge of the truth. The powerful effect that this movement had on certain Christians is evident in their having reworked the gospel tradition in such a way as to depict Jesus as a timeless divine revelatory figure who came in human guise to invite human beings to escape the limitations of space, time, and bodily existence, so that they might gain eternal union with Ultimate Unity. This transformation was assumed to be possible for those who laid hold of the Gnosis (i.e., knowledge) that he brought, divesting themselves of such limitations of human existence as sexual and physical identity. The development of this life-world is already evident in the second-century writing known as the *Gospel of Thomas.* There it is affirmed that the "kingdom of God" (which now connotes achievement of Gnostic identity) is entered through knowledge of one's true self and is discovered within (*Gos. Thom.* 3). Indeed, personal identity is forfeited, since the one who receives this revelation ("drinks from my mouth") will become like Jesus and will be identical with him (*Gos. Thom.* 13, 108). The true Gnostic has existed since before the world was created (*Gos. Thom.* 19) and in finding the kingdom is merely returning to the eternal source from which he or she came (*Gos. Thom.* 49). What has happened in this transformation of the gospel tradition is that the historical orientation and apocalyptic-type hope of renewal of God's people and of the creation has been replaced by a flight to the realm of eternity, where such human limitations as time, body, and physical or social conflict are overcome through absorption into the Ultimate Unity.

In sharp contrast, the Gospel of Matthew is written in a social setting where the chief concern is how the will of God is to be obeyed by his people. It was written in the post-70 period, at the time that the rabbinic movement was becoming the chief option for Jews, now that the priesthood and Temple were gone and nationalistic hopes were crushed. Perceptive analyses of the social setting of this Gospel show that it addresses precisely the issues under consideration within the emergent rabbinical movement: the binding force of the law of Moses, and the specifics of conformity to that tradition in order to qualify for covenantal participation. The structuring of Matthew and the details of the adaptation and supplementation of the Q and Markan traditions indicate that this Gospel was written as an alternative to the developing rabbinic definition of the true people of God.

Other sociological methods and insights have been employed with illuminating results by Wayne Meeks, in *The First Urban Christians: The Social World of the Apostle Paul* (1983), and by Bengt Holmberg, in *Paul and Power: The Structure of Authority in the Primitive Church as Reflected in the Pauline Epistles* (1978). Meeks has selectively and illuminatingly drawn on insights from anthropologists and social historians to draw the outlines of the urban settings in which Paul carried out his work and the patterns that prevailed in the communities that developed as a result of his evangelistic and instructional endeavors. The themes that he traces include urban life in the cities of the eastern Mediterranean, the social level of the Christian communities that formed there, and the pattern and structure of the typical community, involving governance, ritual, theological beliefs, and patterns of life of the members. The sharp distinction that Meeks draws between the "village culture" of Jesus and his first followers and the subsequent urban development of Christianity may be called into question by mounting evidence of the depth and range of impact of Hellenistic culture on Galilee, but his careful analyses of status models and authority roles within the community provide important new insights and should serve as examples for utilization of the social sciences by NT interpreters. In other studies Meeks has also shown how the early Christians built various models of community based on, or in reaction to, various types of contemporaneous Jewish communities.

Similarly illuminating results through the use of sociological insights were obtained by John H. Elliott in *A Home for the Homeless: A Sociological Exegesis of I Peter, Its Situation and Strategy* (1990). He shows that the churches of northern Asia Minor at the end of the first century were facing persecution as a result of their refusal to participate in the divine honors to the emperor and sketches the mixture of hope of apocalyptic deliverance, community stability, and civil obedience that are to characterize their common life in the interim. Another type of sociocultural adaptation on the part of first-century Christians is evident in the Letter to the Hebrews, which shows the influence of Jewish speculation about Wisdom as the divine agent by which God accomplishes his purpose in the creation and reveals his being and purpose to the faithful. But it also reveals how that wisdom tradition and the early church's understanding of Jesus are interpreted in terms provided by Hellenistic philosophy, both Stoic and Platonic. These features are evident in Hebrews, where the role of Jesus is depicted through the use of technical philosophical terms (*hypostasis* ["nature"], *archēgos* ["pioneer"], and *teleiōtēs* ["perfector"]; Heb. 1:3; 12:2; cf. *elenchos* ["proof"], 11:1) as the ulti-

mate reality of God's redemptive purpose, in contrast with the timebound cultic system of the Temple. In a sharply contrasting perspective, the Apocalypse of John pictures the Temple as eliminated in the new eschatological order that will prevail, where the city of God comes to earth from heaven and God's presence is direct and complete (Rev. 21), rather than symbolized by the Holy of Holies in the traditional Temple. The same motifs are operative in the various NT writings in significantly different ways, as a consequence of the range of sociocultural settings and assumptions that are operative in the various early Christian communities. In every instance, there are clear anticipations or parallels to these developments in postbiblical Judaism and in the wider Greco-Roman world, as the richly diverse literature of this period shows. To speak of "the Mediterranean culture," as though it were uniform throughout the Greco-Roman world, is to ignore the evidence. Careful attention to and defining of the various symbolic universes that were operative in this culturally diverse scene, as called for by the sociological methods of recent times, are essential for sensitive historical and exegetical treatment of the early Christian writings.

Refined versions of the older sociological analyses of leadership roles in religious movements—dating back to Weber and Troeltsch—continue to be useful in tracing the shifts during the first century of Christianity's existence from its charismatic origins to its institutional forms. This process, as Meeks has noted, is clearest in the Pauline corpus, where the transitions are apparent when one moves from the authentic Pauline Letters to those probably written by his near successors in leadership (the writers of Colossians and Ephesians) to those coming from a later generation (the Pastorals: 1 and 2 Timothy, and Titus). The twin aims of these post-Pauline writings are to establish authority for the leadership and to achieve unity among the various churches. Organizational and structural images are used to describe the people of God: household of God, apostles and prophets as foundation, the whole structure as a holy temple, God's dwelling place (Eph. 5:21–6:9). The leadership qualifications and roles are even more specifically described in 1 Timothy 3. In Titus 2 the importance of sound doctrine is stressed, indicating that faith as trust in God has been replaced by faith as correct belief (2:2). Other kinds of sociocultural adaptation of the Pauline traditions are apparent in the book of Acts, where Paul is pictured as adjusting his message for audiences that range from synagogue gatherings to an assembly of intellectuals in Athens to Roman officials. Analogous, though by no means identical developments have been shown in the Johannine community as well. Additional evidence of the early Christian moves toward institutional modes of faith, ethics, leadership, and community organization have long been recognized in such writings as those of the Apostolic Fathers, but the clarity and relevance of more recent work in the social sciences heightens the significance and sharpens the results of this kind of inquiry.

Essential for gaining awareness, sensitivity, and meaningful analysis of this richly diverse range of evidence about Christian origins preserved in the NT and in Jewish and Christian writings and documents from the period 150 B.C. to A.D. 150 is the use of insights and methods derived from the social sciences. The intent of this methodological approach is not to reduce the social, literary, and conceptual data to doctrinally neutral raw material, but to sensitize the interpreter to the range of dynamic factors at work in the origins of Christianity. Only in this way can one discern, define, and account for the broad sweep of responses to Jesus and the movement he launched as evident in the richly diverse cluster of documents known as the NT. ***See also*** Apocalyptic Literature; Covenant; Daniel, The Book of; Essenes; Galatians, The Letter of Paul to the; Jesus Christ; John the Baptist; Magic and Divination.

sociology of the Old Testament. Interest in the sociology of the OT—that is, all aspects of ancient Israelite society and the social changes that took place in Israel during the biblical period—is part of a more general concern with uncovering the historical setting of the biblical literature, a concern that is already reflected in the OT itself. Thus, for example, the editors of the book of Psalms sought to understand some of the Davidic psalms more clearly by identifying the occasions in David's life that prompted him to compose them. This historical information was then added to the Psalms' superscriptions as an aid to readers (e.g., Pss. 3; 18; 51; 54; 60). In a similar way, general historical information has been added to some of the prophetic books in order to make their oracles more comprehensible (e.g., Isa. 1:1; Jer. 1:1–3; Amos 1:1).

Interest in the sociology of the OT intensified after the end of the biblical period. Readers of the OT began to recognize that an ever growing gap separated them from the world of the biblical writers and that this gap sometimes obscured the meaning of the text. The OT authors

SOCIOLOGY OF THE OLD TESTAMENT

lived in a particular historical society and participated fully in its culture. Their language included idioms and images that were current in their own time, and they referred to events and social customs that were known by their contemporary readers and hearers. When ancient Israelite society ceased to exist, however, some of these references became unintelligible, and some of the richness of the text's meaning was lost. The more the language and cultural experiences of the OT readers diverged from those of the biblical writers, the less clear the text became.

Early Studies: At least by the Middle Ages, Jewish and Christian interpreters began to try to reconstruct aspects of Israelite society in order better to understand the OT's message. Explorations into OT sociology in this period were usually unsystematic and employed a variety of investigative techniques. Unusual Hebrew words and idioms in the Bible were compared with similar constructions in rabbinic Hebrew and in Arabic, and some attempt was made to analyze the literary conventions that governed OT poetry. Social and cultural customs were explained by referring to the works of authors who were closer historically and culturally to the biblical period, and some medieval interpreters even drew on their own experiences to shed light on Israelite society.

The use of contemporary comparative material became even more common in the eighteenth and nineteenth centuries, when the social sciences began to establish themselves in universities throughout Europe. Sociologists such as Herbert Spencer (1820–1903), Karl Marx (1818–1883), Max Weber (1864–1920), and Émile Durkheim (1858–1917) studied social phenomena in their own time and described the regularities and overall patterns that were thought to exist in all societies, both ancient and modern. At the same time, anthropologists began to collect information on a variety of cultures, most of which were thought at the time to be "primitive" societies totally untouched by Western civilization. Some anthropologists, such as Sir Edward B. Tylor (1832–1917) and Sir James George Frazer (1854–1941), tried to organize these new data in such a way as to demonstrate the gradual evolution of human culture from primitive beginnings to the advanced state that it had reached in Western Europe. Later anthropologists, such as Bronislaw Malinowski (1884–1942) and A. R. Radcliffe-Brown (1881–1955), however, rejected this comprehensive approach and stressed instead the necessity of studying cultural data thoroughly in their own social context and then describing the complex interaction of the parts of the society as a whole. This view of the task of social anthropology led to the production of a number of detailed studies of individual societies. Modern social anthropologists continue this type of research, although they are more interested in the process of social change than were their scholarly ancestors.

From the very beginning of their establishment as academic disciplines, sociology and anthropology attracted the attention of biblical interpreters interested in reconstructing ancient Israelite society. By the middle of the nineteenth century, archaeologists were beginning to uncover large amounts of textual and cultural material from the ancient Near Eastern societies that surrounded Israel, and this comparative evidence added new depth to the scholarly understanding of Israelite history. This understanding was further enriched when biblical interpreters began to apply the results of sociological research to the Bible and to the ancient Near Eastern evidence.

One of the early attempts at a sociological interpretation was made by the sociologist Max Weber, who tested his theories on the origins of capitalism by reconstructing a social history of biblical Israel. Weber concluded that Israel was originally a conglomeration of seminomadic and settled agricultural groups that were unified through their common allegiance to a covenant and governed periodically by "charismatic" leaders. This early social structure changed with the rise of the monarchy, when a strong central government robbed the individual tribes of their power. The monarchy helped to create a class of wealthy landowners, and the society was soon divided economically into two distinct social classes. The oppression of the poor provoked the judgment oracles of the prophets, who advocated a return to the earlier egalitarian society and stressed the necessity for ethical behavior in response to the demands of the covenant. Weber's reconstruction was quickly taken up and amplified by biblical scholars, and Adolphe Lods (1867–1948) and Antonin Causse (1877–1947), among others, produced histories of Israel based on Weberian principles. Less influential at the time were the sociological theories of Marx, Durkheim, and Tylor, although Tylor's work did convince important biblical scholars, including W. Robertson Smith (1846–1894) and Julius Wellhausen (1844–1918), that contemporary cultural data could safely be used to reconstruct the religion and society of ancient Israel.

In contrast to the way in which biblical interpreters used nineteenth-century sociological research, the new anthropological data were generally used less systematically. Frazer tried to apply his enormous collection of material to specific biblical passages, and others invoked anthropological parallels to explain particular "primitive" features of Israelite society. More responsible was the use that biblical scholars made of anthropologists' comparative studies of folklore. Beginning with the pioneering work of Hermann Gunkel (1862–1932), interpreters reexamined the OT literature in order to uncover signs of its original oral form. Taking a cue from folklore studies, Gunkel argued that distinctive literary genres could be isolated in the OT and

SOCIOLOGY OF THE OLD TESTAMENT

that their preliterary structures could be recovered. Each of these genres had a particular social setting in Israel's national life, and Gunkel thought that these settings could be reconstructed with the aid of cultural data drawn from modern societies. Gunkel's approach, with its stress on the sociological dimensions of Israelite literature, has had a profound influence on OT research, and his method continues to be used today, although in a somewhat modified form.

Current Research: In spite of early enthusiasm for the application of sociological research to the OT, this sort of comparative approach was soon rejected by biblical interpreters, and by the middle of the twentieth century interest in the sociology of the OT had almost disappeared in the scholarly community. The primary reason for this rejection was the recognition by biblical scholars that the sociological and anthropological research they were using contained serious flaws. Some of the overarching sociological theories were based on unsound data, while others had difficulty dealing with unique social phenomena that could not be made to fit general sociological patterns. In the case of anthropology, material had sometimes been collected unsystematically and had been presented as part of a general theory of culture, the validity of which could not easily be supported. Comparative material of this sort was then imposed on the biblical evidence, and the result was a distorted picture of early Israelite society. Biblical interpreters therefore turned away from sociological studies and occupied themselves with the theology, literary genres, and traditions of the text.

In recent years, however, OT interpreters have again recognized the important role that social factors play in shaping any piece of literature and have begun to do research on the sociology of the OT. At the same time, new developments in the social sciences have provided researchers with more sophisticated tools and have helped them to avoid the problems associated with earlier comparative studies.

Several major approaches to the study of ancient Israelite society are now being employed. Using revised versions of the theories of Weber and Marx, some scholars have analyzed Israel's social structure in the period of the judges and have given coherent descriptions of the changes that occurred when Israel made the transition from a tribal society to a monarchical state. Others have collected the detailed studies of individual societies provided by social anthropologists and have then used this comparative material to study the nature and function of particular religious and social phenomena in ancient Israel. This sort of approach has been used to explore Israel's tribal organization and to analyze prophecy and apocalyptic. Finally, archaeologists working in the land of Israel have begun to apply more sophisticated techniques of analysis to their material and have succeeded in reconstructing the social setting of some of the cultural remains they have found. In particular, they have begun to recognize the importance of studying sites outside of major urban centers in order to understand more clearly the daily lives of rural people whose activities are not well represented in the biblical texts. Detailed work of this sort throws important light on how ancient Israelites lived and thus aids in understanding the texts that they produced.

Much of the new research on the sociology of the OT has not yet been tested and integrated into a comprehensive picture of the nature and development of Israelite society. As a result, there is no commonly accepted account of Israel's social history, and some scholars are even skeptical that such a history can be written. This skepticism is due largely to the recognition that relatively few archaeological remains survive from the biblical period and to the belief that the primary account of Israel's social history, the OT itself, is a tendentious work by much later writers and therefore a poor source for sociological reconstruction. While it is certainly true that all literary sources, including the OT, are likely to have particular points of view, most historians of ancient Israel believe that all relevant texts, when properly understood, have a role to play in scholarly reconstruction. Against the background of the archaeological and biblical data, then, it is possible to reconstruct a general outline of Israel's social history. Given the limitations of the evidence, this history will be far from complete and will focus primarily on the urban settings and groups from which most of the OT literature comes. Details can be filled in only when additional studies have been done, and new archaeological discoveries can always modify what was previously thought to be true.

Early Israelite Society, a Lineage-Based System: Although archaeologists have traditionally traced the origins of biblical Israel to the movements of West Semitic (mostly Amorite) peoples that took place in Mesopotamia during the second millennium B.C., scholars are now increasingly inclined to begin Israel's history with the social and political changes that occurred in Palestine at the end of the Late Bronze Age (ca. 1550–1200 B.C.) and the beginning of the Iron Age (ca. 1200 B.C.). At this time many of the area's established cities went into a period of decline, and a number of small agricultural villages began to appear in previously uninhabited areas, particularly in the central hill country north of Jerusalem. These villages were generally unfortified and devoid of public buildings, and consisted mostly of collections of small houses, particularly the well-known four-room house. Assuming that these settlements were home to at least some of the Israelites living in Palestine during this period, it

seems safe to conclude that early Israelite society was organized primarily on the basis of kinship. In such systems the basic social unit is the nuclear family (parents and their children), and this family model is extended throughout the rest of the social structure. Two nuclear families can be related to each other by tracing common descent from a single figure in an earlier generation, a grandparent. The nuclear families related in this way constitute an extended family, whose head is the ancestor from whom all of the family members are descended. Extended families can, in turn, be related to each other by tracing their descent to a still earlier ancestor, usually not living, and the resulting group can be seen as a single social unit, sometimes, though inaccurately, called a clan. Clans, in turn, can form tribes by claiming to be descendants of a single person, and in theory the process can be continued indefinitely until the whole society is united as one massive kinship unit. The society or any of its parts can then be described by employing a segmented or branched genealogy, a family tree. Kinship organizations of this sort are usually called "lineages" by anthropologists.

Although a lineage-based society can, in theory, include any number of people, in fact lineage genealogies usually include no more than ten generations of ancestors, and the normal practice is to mention only five or six generations. This limit on genealogical depth means that the actual number of people in the society is also limited. There are two major reasons for this limitation. First, lineages tend to become socially unstable as they grow larger. Social and political authority in a lineage is vested in the lineage head, the oldest living member of the lineage and the person from whom all of the remaining members are descended. In small lineages, such as the nuclear or extended family, this person is capable of enforcing lineage decisions and maintaining social unity. In larger lineages, however, the lineage head named in the lineage genealogy is likely no longer to be living, and no one person can exercise authority in the lineage. This means that disputes must be settled by negotiations between the living heads of the smaller constituent lineages. As more people become involved in this process, there is more likelihood of disagreement and of a permanent split in the lineage. Second, most of the affairs of everyday life involve only the nuclear or perhaps the extended family. These groups therefore have a greater degree of social reality than do larger lineage groups, which may become important only on ritual occasions or in times of war, when individual families are incapable of defending themselves.

The archaeological evidence suggests that Israelite society was organized as a hierarchical lineage system at least as early as the period of the judges (twelfth century B.C.), and this picture is also consistent with the biblical evidence (Josh. 7). The frequent use of branched genealogies in Genesis further suggests that Israel's ancestors were similarly organized (Gen. 22:20–24; 25:12–16; 35:22–26; 26:1–43; 46:8–27), although it is doubtful that these lineages were originally as large or complex as the OT suggests. Early Israelite lineages of various sizes presumably settled in small agricultural villages, although some may have focused on herding and entered into a symbiotic relationship with the inhabitants of villages and towns (Gen. 12:6–9; 13:12–18; 33:18–20; 35:16–21; 37:12–17). The Israelites practiced farming (Gen. 26:12–16), but they were also sheep breeders, who periodically left their camps in search of pasture for their animals. In return for supplying the townspeople with wool and meat, these Israelites received from the towns agricultural products and some manufactured goods. Although there is no direct evidence on this point, it is likely that individuals occasionally left the lineage and took up residence in a town either because they were driven out of the lineage for some reason or because they sought better economic opportunities.

Israel's lineage-based social system survived more or less intact into the period of the judges and could have provided a basis for the unity of Israelite society. The lineages involved seem to have been relatively small, however, and the few recorded attempts to form large lineages produced social structures that became progressively more unstable as time passed. Although all Israelites may have shared common religious beliefs, this religious unity did not always translate into social harmony. It was sometimes difficult to get all of the tribes to participate in defending individual groups (Judg. 5:15–17), and occasionally local disputes led to intertribal war (Judg. 19–21). There are several likely reasons for the progressive disintegration of Israel's larger lineages. First, after the Israelites settled in Canaan, their economy became more complex. Some groups may have moved into existing towns and taken up occupations there. Others became farmers in small hill country villages. The population began to grow, both because of improvements in the economy and because non-Israelites were incorporated into the Israelite lineages. The increase in population forced farmers to put new land under cultivation and pushed them into areas where Israelites had not previously lived. It is thus likely that some of the lineages became too large to function efficiently, and as a result they fragmented and group unity became difficult to maintain. Second, a number of Israel's smaller lineages seem to have been isolated geographically by the mountainous terrain, and this made their participation in larger lineage groups more difficult. Finally, outside of the lineage heads, Israel seems to have had no leaders capable of getting the small lineages to act together as a group. On occasion prophets such as Deborah

SOCIOLOGY OF THE OLD TESTAMENT

may have played such a central role, particularly in time of war (Judg. 4:4–10), and Levites may have served as itinerant priests and administrators, but the nature of the lineage structure prevented a single person from exercising political control over several lineages at the same time.

In an attempt to solve the problem of social unity that is inherent in any lineage system, some Israelite lineages, mostly in the north, adopted the practice of delegating political authority to individual chiefs for a particular purpose and for a limited period of time. These "judges" were believed to have been chosen directly by God in times of danger and served primarily as military leaders (Judg. 2:11–23). Some groups apparently wanted to make the office of judge hereditary and to move Israel in the direction of a genuine monarchy, but this would have altered the traditional social structure and was resisted (Judg. 8:22–9:57).

The Effects of the Monarchy: The line between lineage-based society and monarchical state began to be crossed decisively with the election of Saul as Israel's ruler. The change did not take place, however, without considerable opposition from some of the lineages, which feared the loss of their political power; moreover, it is unlikely that Saul's dominion was as extensive as the OT suggests. The OT narratives of Saul's rise reflect several different attitudes toward the idea of kingship, and it is difficult to know to what extent the stories reflect historical reality. It is probably safe to assume, however, that the strongest opposition to the monarchy came from the powerful northern tribe of Ephraim, whose point of view was represented by the prophet Samuel. As a prophet, Samuel gave divine legitimation to the idea of an extremely limited monarchy, and he sought to retain control over Israelite worship, to prevent the establishment of a principle of dynastic succession, and to ensure Saul's continued dependence on the lineage militias. When Samuel did not completely succeed in his attempt, he anointed David in Saul's place and thereafter opposed Saul with all of the power of his important office (1 Sam. 7–16).

David (late eleventh–early tenth century B.C.) was more successful in consolidating the power of the monarchy, but he still experienced some limits to his authority, and it is likely that the old lineages remained strong during his reign. After Saul's death, the northern tribes rejected Davidic rule and unsuccessfully attempted to maintain their own monarchy. David, however, had political support from his own southern tribe of Judah and from a heterogeneous group of supporters that had no allegiance to the lineage system (1 Sam. 22:2). With this political base, he became king of Judah at Hebron, and his authority was later recognized by the north. Although he was successful in bringing the remaining Canaanite cities (including Jerusalem) under Israelite control and in extending his power across the Jordan, he does not seem to have made serious attempts to break the power of the old lineage system, and the economy did not improve radically during his time. The nuclear and extended families apparently remained the basis of the social system, and the rebellions that took place during his reign attest to the continued life of the lineage system (2 Sam. 16; 20). David did, however, install a central bureaucracy in his new capital of Jerusalem and included in it members of his own family and some of his Judahite supporters. He may have also used forced labor for some of his building projects, but his attempt at systematic taxation does not seem to have been successful.

Royal power was further centralized under Solomon (ca. 965–924 B.C.), who increased Israel's foreign trade, particularly with Tyre, and engaged in extensive building projects. This must have led to the creation of a large class of merchants, although there is not much archaeological evidence of economic growth, and it may be that Solomon's trading ventures were not as successful as the biblical texts indicate. It is certain, however, that the central government increased its power enormously during Solomon's reign. The building projects required both money and labor, and to obtain these Solomon reorganized his kingdom to facilitate tax collection and the recruitment of forced labor. In the process he broke down some of the old tribal boundaries, thus further weakening the lineage structure, and created a complex hierarchy of royal officials. As is typical with monarchies, political, religious, and economic power began to be drawn toward the central government and toward those involved in government-supported economic enterprises.

Solomon's harsh imposition of royal authority provoked a revolt in the north, and after the king's death the northern tribes withdrew to set up their own state under Jeroboam (1 Kings 11–12). This revolt was originally supported by northern prophets, such as Ahijah of Shiloh, who opposed Solomon on both religious and political grounds. Ahijah and the groups he represented may have originally thought that the new monarchy in the north would restore them to the central roles in the religious establishment that they had enjoyed in the time of Samuel, but if so, their hopes were dashed when Jeroboam set up a state that simply duplicated the abuses of Solomon's kingdom. Ahijah therefore condemned the Northern Kingdom and became the first of a chain of prophets who opposed the religious and political policies of the crown (1 Kings 12–14). Only during the time of the prophet Elisha did this critique succeed in bringing about a change in the government's point of view, but this prophetic victory was short-lived, and the Northern Kingdom soon returned to its former ways (2 Kings 1–10).

SOCIOLOGY OF THE OLD TESTAMENT

Although the prophets described in the books of Kings had nothing good to say about the religious practices of the northern state of Israel, in economic terms the north was relatively successful. Beginning with Jeroboam, Israel (also called Ephraim) enjoyed slow but steady economic growth and under the Omride dynasty (881–842 B.C.) became a major military and commercial power. The archaeological record contains evidence of expanding agricultural production and trade. Important industries were developed in pottery, textiles, wine, olive oil, and metal products. Given the hierarchical organization of the state, however, the growing economy primarily benefited those at the top of the social structure, such as merchants and government officials. Those in the lower classes became victims of the system, losing income and often hereditary land. This situation was condemned by the prophets Amos and Hosea, who saw economic oppression as a symptom of a greater religious illness. The prophets' oracles of doom were eventually fulfilled when the Northern Kingdom was destroyed by the Assyrians in 722 B.C.

In the Southern Kingdom, Judah, the economic and political situation was rather similar. Political power was fully centralized in Jerusalem, which was also the country's major economic and religious center. Distinct classes of priests and bureaucrats grew up around the capital, and because of the continuity of the Davidic dynasty, members of the royal family were more influential than was the case in the North. After the fall of the Northern Kingdom, a series of disastrous political moves by the Judean kings made it necessary for them to pay heavy tribute, first to the Assyrians and later to the Babylonians. These bills were paid primarily at the expense of the lower classes, and the resulting poverty and oppression were condemned even by prophets such as Isaiah, who basically supported the ideals of the Jerusalemite establishment.

The Exile: The destruction of Jerusalem and the Temple in 586 B.C. was a turning point in Israel's social history. Although the period of the Exile and the reconstruction still requires more study before a complete history can be written, several trends in the development of Israelite society can be noted. First, the Exile effectively ended the existence of an Israelite central government in Jerusalem. Although some of those who returned from Babylon may have tried to reestablish the Davidic dynasty, the real political power in Jerusalem was held by a succession of foreign rulers: first the Babylonians, then, in order, the Persians, Greeks, and Romans. Thus, after the Exile anyone who wanted to exercise political power had first to come to an understanding with a foreign government. Second, with the monarchical form of government destroyed by the Babylonians, the older lineage system seems to have reasserted itself, at least at the levels of the extended family and the nuclear family. Cuneiform texts from Babylon show that family ties were maintained by the exiles, and a renewed interest in genealogies in the postexilic OT literature suggests that the lineage may have again become an important social group (1 Chron. 1–9). Third, at least some of the exiles prospered economically during their stay in Babylon and were tempted to integrate themselves completely into the surrounding culture. Finally, the Exile saw the development of numerous conflicting religious, political, and social groups, each advocating different explanations for the disaster and suggesting different ways in which a new Israel could be built.

The Postexilic Period: The intergroup conflicts that began in the Exile became more serious when the Persian government actually allowed the exiles to return to Palestine (sixth–fifth centuries B.C.). Issues that were previously theoretical then became real, and the exiles had to decide how the new government would be structured and how the new Temple would be built. The postexilic OT books all reflect these debates and suggest that Israelite society became more fragmented as the reconstruction progressed. Priestly groups who did not return to power in the Temple opposed those who did. Advocates of cooperation with the Persians came into conflict with those who supported renewed Israelite independence. Those who returned from exile despised those who did not, and the builders of the new Temple excluded from the religious community Israelites who had remained in Judah during the Exile.

As the postexilic period (late sixth century B.C. on) continued and more groups were deprived of social, political, and religious power, apocalyptic religion took on new life. Groups that considered themselves excluded from their rightful place in society increasingly looked for a solution to their problems at some future time when God would directly intervene in history in order to realize their expectations. Apocalyptic literature, such as that found in the latter parts of the books of Daniel and Zechariah, was produced by a number of these groups, although only a few such writings have found their way into the OT. The apocalyptic programs that these groups created varied depending on the composition of the group, but all of the scenarios reflected a feeling that the social structure was out of alignment and required major reform. Only in a few cases were these hopes fulfilled during the OT period, and most apocalyptic groups remained a minority voice in the midst of a hostile culture. ***See also*** Amorites; Apocalyptic Literature; Biblical Criticism; Covenant; David; Exile; Family, The; Jerusalem; Judges, The Book of; King; Priests; Prophet; Samuel; Saul; Semites; Sociology of the New Testament; Solomon; Temple, The; Tribes, The.

Soco (soh'koh; Heb., "thorny"; KJV: "Socho"). **1** A town in Judah between Adullam and Azekah (Josh. 15:35). It was used later by Philistines (1 Sam. 17:1), fortified by King Rehoboam of Judah (2 Chron. 11:7), and then used again by the Philistines (2 Chron. 28:18). It was probably modern Khirbet 'Abbad about two miles south of Azekah. **2** A second town in Judah (Josh. 15:48), probably the modern Khirbet Shuweikeh about ten miles southwest of Hebron. **3** A town in Solomon's third district (1 Kings 4:10). It was probably modern Tell er-Ras located about ten miles northwest of Samaria. **4** A descendant of Judah and a son of Heber (1 Chron. 4:18). Even in this case it may be a place name, possibly the one in Josh. 15:48 above. R.S.B.

sod, an archaic term used in the KJV for boiled food (Gen. 25:29; 2 Chron. 35:13; Lam. 4:10).

Sodom (sod'uhm), perhaps the best remembered of the five cities of the valley (Gen. 19:29). The city's inhabitants joined with neighbors in fighting the marauding Chedorlaomer, the king of Elam (Gen. 14:1). Abraham's nephew, Lot, chose Sodom for his residence (Gen. 13:8–13).

A precise location is not given for the city though the general area is associated with the Dead Sea. Archaeological research early in the twentieth century suggested to some that Sodom, along with other cities of the valley, is located under what is now the shallow, southern end of the Dead Sea. Furthermore, this research assigned a date for Sodom early in the second millennium B.C. on the basis of observable settlement patterns in the general area and the assumption that the chronological reckoning of the patriarchal narratives implied such a date. There is no positive evidence that ancient Sodom is submerged under the Dead Sea, however. More recent investigation has shown in detail that there were urban areas just to the east and south of the Dead Sea during most of the third millennium and in places perhaps into the early second millennium as well. Indeed, on the basis of the excavations of the Bab ed-Dhra (located on the tongue of land extending into the Dead Sea from its eastern shore) and at Numeira (further south on the eastern shore), some have proposed that to these two sites belong the valley cities of the Genesis narrative. Both of these cities were inhabited during most of the third millennium.

Sodom is remembered as a wicked city that brought divine wrath upon it. The Genesis narrative records both attempted sexual perversity and gross inhospitality (Gen. 19:1–11). Other writers use Sodom as an example of warning (Deut. 29:16–28) and sometimes as an accusation against the covenant people (Amos 4:11; Isa. 1:9–11). This principle extends into the NT period, where references to the wickedness of Sodom may still be found (Matt. 10:15; Luke 10:12; Rom. 9:29, quoting Isaiah; 2 Pet. 2:6; Jude 7).

There is also an interesting reference to the "Sea of Sodom" (i.e., the Dead Sea) in 2 Esd. 5:7, where it is stated that in the days to come this "dead" sea will produce fish as a miraculous sign. ***See also*** Abraham; Lot. J.A.D.

sodomy, a generic term for copulation that is not "natural" and heterosexual, derived from the story of Sodom whose inhabitants sought to have sexual relations with Lot's visitors (Gen. 19:1–11). The Bible frequently condemns male homosexuality (Lev. 18:22; 20:13; Rom. 1:27; 1 Cor. 6:9) as well as bestiality (Exod. 22:19; Lev. 18:23; 20:15–16; Deut. 27:21), presumably because it considered male and female to be natural correlates (see Gen. 1:27; 2:18–24). Lesbianism along with male homosexuality is condemned by Paul (Rom. 1:26–27).

sojourn, a noun that derives its meaning from the meaning of the verb "to live among for an extended time." Therefore it is applied to the stay of a people (particularly Israel's tribes) in a place for any length of time, such as Jacob's tribes in Egypt (Gen. 47:4), the man of Judah (Elimelech) in Moab (Ruth 1:1), or Jacob and Isaac at Hebron (Gen. 35:27).

sojourner. ***See*** Foreigner; Gentile; Stranger.

soldier, a person involved in military activity, one who is trained for war. The word "soldier" appears in the Bible quite frequently, along with a number of synonymous terms (see 1 Chron. 12:23–38 for an extensive list of examples). Special attention should be drawn to the phrase "men who drew the sword," since this action identifies the soldier's primary function (i.e., combat) and symbolizes warfare in general (Judg. 8:10; see Ezek. 21:3). During the biblical period, warriors were equipped with a variety of offensive and defensive weapons; fully armed soldiers from two distinct eras are described in 1 Sam. 17:5–7 and Eph. 6:11–17, with the latter reference comparing the panoply of a Roman soldier to the Christian's spiritual armor. Distinction was made between infantrymen, horsemen, and charioteers (Ezek. 26:7; Acts 23:23).

Assyrian infantry and cavalry equipped with spears and bows pursuing fleeing desert raiders; from a relief at the palace of the Assyrian king Ashurbanipal at Nineveh, seventh century B.C.

Although other ancient Near Eastern peoples had standing armies at an early date, the Hebrews had no professional soldiers until the establishment of the monarchy (eleventh century B.C.). Abraham's "trained men" were obviously skilled warriors, but they were recruited from his household (Gen. 14:14). The Hebrew conquest of Canaan (thirteenth–twelfth centuries B.C.) was accomplished by tribal militias of adult males (Num. 1:1–46). Since combat entailed great risk and called for courage and strength, some men were exempt from military service (Deut. 20:5–8). The Levites were not counted among those who were "able to go forth to war," but they offered reassurance to soldiers before battles (Num. 1:47–50; Deut. 20:1–4). In the period of the judges and the early reign of Saul (twelfth–eleventh centuries B.C.), soldiers were mustered to battle by trumpet call or messengers (Judg. 6:34–35; 1 Sam. 11:7–8).

The beginning of a standing army in Israel may be seen in the special force that Saul gathered together (1 Sam. 13:1–2; 14:52). David continued this process by developing his famous bodyguard of "mighty men" (1 Sam. 22:2; 2 Sam. 10:7) and by making a census of the Israelites, a necessary step in the establishment of a national army (2 Sam. 24). Thereafter, the professional soldier was the norm. Mercenaries were also a part of this early Israelite army (2 Sam. 20:23; 2 Chron. 25:6).

Soldiers usually shared in the loot captured in battle (Num. 31:27; Deut. 21:11; Josh. 22:8), and their return from war was a cause for celebration (Judg. 11:34; 1 Sam. 18:6–7). As in modern armies, the soldier's routine included guard duty (Judg. 7:19).

Because the Roman Empire was maintained by military power, the Roman soldier was a common sight in NT times. Soldiers were involved in the arrest and crucifixion of Jesus (John 18:3, 12; 19:2, 23–25, 32, 34). After Paul was arrested in Jerusalem, he was frequently in the company of soldiers; the apostle used the word "soldier" to describe his co-workers (Phil. 2:25; Philem. 1:2; see the figurative use of "soldier" in 1 Cor. 9:7 and 2 Tim. 2:3–4). ***See also*** Army; War. G.L.M.

solemn assembly, the translation generally used for the Hebrew terms *atzeret* and *atzarah.* These terms refer to gatherings of the people, in a state of ritual purity, for sacred, religious purposes. These purposes include set festivals, such as the seventh day of the Festival of Unleavened Bread (Deut. 16:8) or the eighth day of the Festival of Booths (Lev. 23:36; Num. 29:35; 2 Chron. 7:9; Neh. 8:18). They might also include special assemblies such as that called by Jehu for Baal (2 Kings 10:20) or for times of emergency (Joel 1:14; 2:15–16). Such assemblies were sometimes criticized by prophets when the people acted unjustly in their

everyday lives (Isa. 1:13; Amos 5:21). ***See also*** Worship.

Solomon (sol´uh-muhn; also known as Jedidiah; Heb., "Yahweh's beloved," 2 Sam. 12:25), David's son by Bathsheba and his successor, who reigned for forty years in the second third of the tenth century B.C. Although 1 Samuel 12 implies that Solomon was Bathsheba's second child by David, born after the child conceived during their adulterous affair had died, 1 Chron. 3:5 may indicate that there were intervening children.

As David grew old, his son Adonijah began to take steps to succeed his father with the support of several court officials, including the general Joab and the priest Abiathar. Another faction gained the support of Bathsheba in approaching David on the basis of a previous promise, not recorded in the Bible, that Solomon would be his successor. David affirmed his commitment to Solomon, who was immediately installed by the priest Zadok with the assistance of Nathan, the prophet, and Benaiah from the royal guard. Solomon served as co-regent until David's death, at which time Adonijah, who had previously agreed to accept Solomon's succession, sought Bathsheba's support in his request to marry Abishag, who had served David in his old age. Solomon saw the request as a threat and had Adonijah executed along with his supporter Joab. The priest Abiathar was expelled from Jerusalem and Shimei, a Benjaminite who had caused problems for David, was restricted from leaving Jerusalem on pain of death, a threat that was later carried out (1 Kings 2).

Reign: Solomon appears to have been responsible for a political consolidation, demonstrated by his creation of administrative districts cutting across the old tribal boundaries (1 Kings 4:7–19). His priestly activities also suggest a substantial expansion of the king's role (1 Kings 8; contrast 1 Sam. 13). Solomon's reign was also characterized by vigorous activity in the international sphere. His empire included trade routes linking Africa, Asia, Arabia, and Asia Minor, thus generating substantial revenue while supporting widespread commercial activities, including, apparently, participation in the horse trade based in Asia Minor. His fleet sailed from Ezion-geber in the Gulf of Aqaba to Ophir on the coast of the Red Sea (either in eastern Africa or western Arabia). The Bible ascribes to him seven hundred wives, including Moabite, Edomite, Phoenician, and Hittite women (1 Kings 11:1), at least some of whom he doubtless married as part of political alliances. Among these were an Egyptian princess, whose father (probably Pharaoh Siamon) gave Solomon the city of Gezer, and an Ammonite woman, whose son Rehoboam eventually succeeded to the throne. Solomon's extensive building program included store cities as well as fortifications. In Jerusalem, he built an elaborate palace complex, which took thirteen years to complete, and a temple, which took seven, with the assistance of

Solomon is portrayed as a wise teacher in this late fourteenth-century illustration for the book of Proverbs.

King Hiram of Tyre. The Bible's description strongly suggests Canaanite influence, as one would expect under the circumstances. Solomon also gave Hiram twenty cities in Galilee.

Wisdom: Such activities brought wealth and a cosmopolitan atmosphere to Solomon's kingdom. His wisdom is said to have "surpassed the wisdom of all the people of the east, and all the wisdom of Egypt" (1 Kings 4:30, Hebrew 5:10), reflecting the kind of international intellectual activity Solomon's political accomplishments would suggest. According to the OT, this wisdom was God's response to Solomon's request, when offered whatever he might choose, for an understanding mind (1 Kings 3:5–9; Solomon is already called wise in 2:9). The OT makes much of his wisdom, describing his ability to determine which of two prostitutes was a disputed child's true mother (1 Kings 3:16–27), to answer difficult questions posed by the queen of Sheba (1 Kings 10:1–3), and to tell fables and sing songs (1 Kings 4:32–33, Hebrew 5:12–13). This tradition is reflected also in the ascription of several sections of the book of Proverbs to him (see Prov. 1:1; 10:1) along with the book of Ecclesiastes (see Eccles. 1:1), where his wealth and wives no doubt served as a useful backdrop for the author's own purposes. Solomon's many wives and internal references to his wealth (e.g., Song of Sol. 3:8) probably played a role in the traditional ascriptions of Song of Songs to him (Song of Sol. 1:1), just as the tradition that he wrote poetry was doubtless important in the ascriptions of Psalms 72 and 127. His impact, in part as the last Davidic king to rule over a united kingdom, seems also to have served as an inspiration for the activities of Judah's eighth-century B.C. King Hezekiah (see 2 Chron. 30:26; Prov. 25:1).

Policy: The OT does not find all of Solomon's activities praiseworthy. The cosmopolitanism resulting from his participation in international affairs brought many foreign religious practices to Jerusalem along with a less stringent attitude than some biblical authors, at least, found acceptable. Whereas Solomon's policies about worship at some high places prior to the Temple's construction may have been countenanced, he is later condemned for building such shrines and for having married foreign women (e.g., Neh. 13:26). The book of Kings (e.g., 1 Kings 11:9–25) regards these as causing God's decision, announced by the Shilonite prophet Ahijah, to split the kingdom, removing ten of the twelve tribes from Davidic control.

Solomon's policies were not only religiously offensive. The OT explicitly mentions three political enemies—Hadad, an Edomite prince (1 Kings 11:14), Rezon of Zobah (v. 24), and Jeroboam of Israel (v. 26), each of whom sought refuge in Egypt, adding an international dimension to his opposition. Moreover, Solomon's building activities were expensive in both economic and human resources. (Some scholars consider the warning against royal behavior in 1 Sam. 8:11–17 to have been based on Solomon.) Later complaints suggest a high level of taxation, while the Bible mentions the use of forced labor, limited to non-Israelites according to some sources (1 Kings 9:20–22), but not according to others (1 Kings 5:13). The schism that followed Solomon's death is implicitly ascribed to his policies (1 Kings 12:4). To what extent the invasion by Pharaoh Shishak, which took place five years after Solomon's death, fits into this is less clear (see 1 Kings 11:40).

The OT's view of Solomon is thus ambivalent. On the one hand, his reign clearly marks the peak of Israelite success, both politically and religiously (although Chronicles suggests and Kings implies that some credit for initiating the building of a temple should be given to David). It is in Solomon's reign that the promises made to the patriarchs come to their fulfillment (1 Kings 4:20). On the other hand, syncretism and the influx of foreign practices under Solomon mark the beginning of religious decay, accompanied by growth in internal dissent and the emergence of external enemies.

The proverbial nature of Solomon's glory and his wisdom is reflected in sayings of Jesus (Matt. 6:29; 12:42). Matthew also lists Solomon as one of Jesus' ancestors (Matt. 1:6–7). ***See also*** David; Wisdom. F.E.G.

Solomon's Pools, three reservoirs, one above another, 714 feet (217 m.), 441 feet (134 m.), and 390 feet (120 m.) long respectively, about twelve miles (19 km.) south of Bethlehem, below Qala't el-Burak, a seventeenth-century Turkish fort later used as a caravanserai. Constructed no later than the second century B.C. and repaired by Pontius Pilate, as well as more than once subsequently, these supply water along two aqueducts to Jerusalem. The identification with Solomon is derived from Josephus, a Jewish historian of the first century A.D. ***See also*** Pilate, Pontius.

Solomon's Porch. ***See*** Solomon's Portico.

Solomon's Portico, a colonnade thought to have been situated along the east side of the Temple enclosure built by Herod the Great as part of his restoration of the Temple of Jerusalem. If so, the portico would have been directly above the Kidron Valley, facing the Mount of Olives. With the destruction of the Temple in A.D. 70, nothing from this colonnade remained standing, and there have been no excavations along the east side of the Temple Mount. Jesus was familiar with this porch (John

10:23), and, after his resurrection, the apostles gathered there with the people (Acts 3:11; 5:12). ***See also*** Temple, The. M.K.M.

Solomon's Seal. ***See*** Seal of Solomon, The.

Solomon's servants, foreign slaves used for menial tasks in Solomon's Temple (Ezra 2:55, 58; Neh. 7:57, 60; 11:3). They were similar in function to the Nethinim (Ezra 8:20) who helped the Levites after the Exile (586 B.C.). ***See also*** Nethinim.

Solomon's Temple. ***See*** Temple, The.

son, a male offspring. The Hebrew word *ben* (Aramaic *bar,* Gk. *auios)* enjoyed a rich semantic range, although it is used most often in the Bible with reference to actual physical lineage. In the plural it frequently combines with the word Israel to designate a specific group of people, male and female (the Israelites). An adopted son was also referred to by this word. In polite address persons with no actual kinship to the speaker were afforded this title; the one addressed was ordinarily an inferior (cf. the aged priest Eli's use of "my son" in speaking to the child Samuel, 1 Sam. 3:16). The expression "son of" came to describe a characteristic feature of something. For example, "son of fatness" with reference to the land suggests fertile soil (Isa. 5:1), and "son of strength" connotes might. A similar use of "daughter" occurs (cf. "daughters of song," Eccles. 12:4) and "daughter of Zion" really means the sister city, Jerusalem. When used with a place, as in "sons of Zion," the meaning is "inhabitants." In Proverbs and Ecclesiastes "my son" develops into a technical form for a student, although it seems also to retain its literal sense in many instances. This designation of students as sons was also the practice in Egyptian and in Mesopotamian wisdom literature. The biblical prophetic tradition uses the expression "sons of prophets" to describe professional membership in the prophetic guild (cf. Amos 7:14). Likewise, allegiance to a particular deity was expressed in this way (sons of Chemosh, Num. 21:29; cf. sons of Belial, KJV Deut. 13:13), and "sons of God" alludes to divine beings (godlike creatures). Satan belonged to this select group, according to Job 1:6. The singular "son of man" simply meant "human" at first (e.g., Ezek. 2:1) but eventually signified a heavenly being who descended to earth (Dan. 7:13–14; cf. Mark 8:38), whereas "son of God" was merely an exalted way of referring to a great man.

In the NT, the use of the word "son" to designate a physical descendant (e.g., Matt. 21:28; Mark 13:12; Luke 15:31) is also common. In addition, the apostle Paul uses the word to denote a close and affectionate relationship in the Christian faith, both of individuals (1 Cor. 4:17; Phil. 2:22; Philem. 10) and of groups (1 Cor. 4:14). Because the term "son" was used to denote the unique filial relationship of Jesus to God (Matt. 3:17; Mark 1:1; Luke 9:35; Acts 3:26), it also came to be applied to those who through trust in Jesus attained the same relationship with God (John 1:12; 1 John 3:1–2). ***See also*** Son of God; Son of Man. J.L.C.

song. ***See*** Music.

Song of Ascent (KJV: "Song of Degress"), a musical piece sung by pilgrims as they climbed the hill to Jerusalem at the time of festivals such as the Feast of Booths, the Festival of Weeks, and the Passover, which were celebrated in the Temple. A number of such songs are preserved as Psalms 120–134. ***See also*** Music; Psalms, The.

Song of Solomon, the (Heb. *Shir Hashshirim,* "Song of Songs," which means the best or greatest song), a poetic OT book known also as "Song of Songs" or "Canticle (of Canticles)." The attribution of the work to Solomon probably derives from that monarch's renowned marriages (1 Kings 11:3) as well as from the mention of his name in the Song (1:5; 4:6–11; 8:11–12). There is no certainty about the date, although the prevalent opinion is inclined to the postexilic period (after the mid-sixth century B.C.).

The Song has been divided into several love poems (from five to fifty), depending on the interpretation of transitions within the eight chapters. However, a dialogue between a man and a woman runs throughout the work and gives it a certain unity. The characters in the work are a man (idealized as a king and a shepherd), a woman, and the daughters of Jerusalem. These latter function as a foil for the

OUTLINE OF CONTENTS

The Song of Solomon

I. Title and introduction (1:1–6)
II. Dialogue between the man and woman (1:7–2:7)
III. Reflections (2:8–3:11)
   A. Reminiscence by the woman (2:8–17)
   B. Loss and recovery (3:1–5)
   C. Description of Solomon's wedding procession (3:6–11)
IV. Dialogues (4:1–8:4)
   A. Dialogue between the man and woman (4:1–5:1)
   B. Dialogue between the woman and the daughters (5:2–6:3)
   C. Address of the man to the woman (6:4–12)
   D. Dialogue between the man and woman (7:1–8:4)
V. Appendices (8:5–14)

woman's statements. It is not likely that the work was conceived as a drama with three characters, wherein a king and shepherd vie for the hand of a peasant maiden. There may be allusions to the divine marriages known from ancient Near Eastern literature (M. Pope), but these do not enable us to understand the Song as a whole.

The poems are of several kinds: songs of yearning, admiration, self-description, description of the beloved (similar to the Arabic love poem called a *wasf*). There may even be a proverbial saying in 8:6, where the power of love is compared to that of death, and its flame "the flame of Yahweh himself" (NJB).

The literal historical interpretation of the Song understands it as an exchange of love between a man and a woman. It is not clear that the setting is a marriage celebration. The two lovers express their feelings for one another in extraordinarily vivid, erotic, and exotic imagery (animals, flowers, spices, etc.). The closest analogy to this Hebrew poetry is the Egyptian love song; it also moves in the same make-believe world of love.

The traditional interpretation by both the synagogue and church found in the Song another level of meaning: the love between God and people, i.e., the Lord and Israel, Christ and the church or the individual person. Such an interpretation can become arbitrary when individual details are explained in allegorical fashion. But if the work as a whole is interpreted in the light of the prophetic understanding of the covenant as a marriage relationship (e.g., Hos. 1–3; Isa. 62:5), this level of meaning can be defended. ***See also*** Love; Marriage.

Song of the Three Children, the, one of the Additions to Daniel found between Dan. 3:23 and 3:24 in the Septuagint (LXX) and Theodotion. It includes:

I. The Prayer of Azariah, the Hebrew name of Abednego (vv. 1–22)
II. Additional narrative material describing the intensity of the flames (vv. 23–27)
III. A hymn sung by the three youths while in the furnace (vv. 28–68).

The prayer and the hymn are probably independent liturgical compositions done in Hebrew and later adapted sometime during the second century B.C. to fit the story in Daniel 3. The addition follows the practice of supplying prayers and songs at appropriate places in stories, but it may also have been intended to shift the emphasis of Daniel 3 from the tyranny of the king to the piety of the three youths. The prayer is penitential in character and seems to reflect the desecration of the Temple by the Syrian king Antiochus IV Epiphanes in 167 B.C. It treats the catastrophe as the consequence of "our sins," begs God's mercy for the sake of his promise to Abraham (cf. Gen. 12:1–3), Isaac, and Israel (Jacob), and, in the absence of a "place to make an offering before thee" (v. 15), it presents the sacrifice of "a contrite heart and a humble spirit" (v. 16). The last suggestion echoes Psalm 51 but also anticipates the ultimate transformation of Judaism under the Pharisees and rabbis from a religion centered around the Temple to one concerned with prayer, acts of mercy, and the way of Torah.

The hymn calls upon God's creatures to bless him, moving from heavenly to earthly things, then from animals to humanity, and finally to Israel. While its order is related to Psalm 148, it is possible that both the psalm and the hymn are dependent upon a system of cosmic order present in speculative wisdom. In contrast to the prayer, in which the Temple seems to be desecrated, the hymn places God in his temple (v. 31), although it may well be that the heavenly rather than the earthly temple is intended—an idea from the conceptual world of postbiblical Judaism (cf. Rev. 11:19).

Protestants include the Song of the Three Children among the Apocrypha, while Catholics retain it as part of the book of Daniel. ***See also*** Apocrypha, Old Testament; Daniel, The Additions to. D.W.S.

son of God, a person or a people with a special relationship to God, often with a special role in salvation history.

In the Old Testament: In the OT and pre-Christian Judaism there are four notable uses of the term "son of God." First, it is predicated of Israel constituted as a nation through the Exodus (e.g., Exod. 4:22; Hos. 11:1). Second, it is a title given to the monarch at the time of enthronement (e.g., Ps. 2:7, a coronation psalm). Third, angels are called "sons of God" (e.g., Job 38:7, NRSV note). Fourth, in the apocryphal/deuterocanonical Wisdom of Solomon it is applied to the righteous individual (Wisd. of Sol. 2:18, RSV; NRSV: "child"). Primarily it denotes not physical filiation but a divine call to obedience in a predestined role in salvation history.

It is a matter of dispute whether the term "son of God" was already current in pre-Christian Judaism as a messianic title as Mark 14:16 would seem to suggest. Yet in view of the discovery of Ps. 2:7 with a messianic interpretation in the Dead Sea Scrolls (4QFlor 10–14) it is probably safe to conclude that it was just coming into use

with this meaning during the period of Christian origins.

In the New Testament: The pre-Easter Jesus undoubtedly had an unusual experience of God as his *Abba* (Aramaic, "Father"), perhaps paralleled only in certain charismatic figures in first-century Judaism. He addressed God with this intimate appellation, normally reserved for an earthly father (e.g., Mark 14:36). Although the synoptic tradition contains two sayings in which Jesus refers to himself as "Son" in relation to God as his Father (Mark 13:32; Matt. 24:36; Matt. 11:27 [Q]), the authenticity of these sayings is widely questioned. Perhaps Jesus in certain parabolic contexts compared his relationship to God with that of a son to his father (John 5:19, assuming with some British scholars that Matt. 11:27 [Luke 10:22] is a submerged parable, later reinterpreted as a Christological statement). Thus it remains uncertain whether Jesus directly referred to himself as "son" in relation to God as his father. The most we can be certain of is that, since his use of *Abba* implies a distinctive filial consciousness, it implies the idea that he is in some distinctive sense God's "son."

The use of "Son of God" as a Christological title should be clearly distinguished from the Father/Son language. The evidence suggests that in spite of the title's occasional appearance in the synoptic Gospels, it did not come into use until after Easter. At his resurrection/exaltation Jesus was declared (better: "appointed") "Son of God" (Rom. 1:4). This belief seems to have arisen through the application of Ps. 2:7, already interpreted messianically at Qumran, to the Risen One (Acts 13:33; cf. Heb. 5:5). The use of the word "appointed" in Rom. 1:4 indicates that at this stage in the history of Christian thought the title "Son of God" denoted an office or function in salvation history, rather than a metaphysical quality as in later dogmatics. This usage is in accord with OT Jewish thinking. Such a Christology is sometimes designated "adoptionist." Yet it is not adoptionist in the later heretical sense, according to which Jesus, having initially been purely human, was later promoted to divine status. Rather, it means that at his resurrection/exaltation Jesus embarked upon a new stage in his role in salvation history as a mediator of God's final offer of salvation.

In the course of time the moment at which Jesus was appointed "Son of God" in this functional sense was pushed back to his baptism, as is indicated by the voice from heaven (Mark 1:11). In Mark's perspective this was the moment at which Jesus was designated for his messianic role. The process of retrojection of the Christological title "Son of God" does not entail the Christologizing of a previously unmessianic life, for from the earliest time after Easter the community had recognized that God had been at work in the earthly Jesus (Acts 2:22; 10:38) and terms such as "prophet" or "servant" were used to indicate that in his early lifetime Jesus had appeared as God's agent (e.g., "prophet," Luke 24:19; "servant," Acts 3:13). "Son of God" simply takes over the function of these early titles. It has also been suggested that the Son of God Christology was first pushed back only to the moment of the transfiguration (Mark 9:7), but this is unlikely since the voice at the transfiguration seems rather to have been modeled on the voice at the baptism. Once this process of retrojection had shifted the crucial Christological moment to the baptism, the title "Son of God" could be used occasionally by others, e.g., the demons (Mark 3:11). Yet Jesus never claims the title "Son of God" for himself. While he is represented as accepting it at his trial before the Sanhedrin (Mark 11:61–62), both Matthew (27:54) and Luke (22:67–68) are at pains to tone down Jesus' acceptance of the title as though what he says to the high priest is, "It—like the title 'Messiah'—is your word, not mine." The crowd's outcry "for he said, 'I am God's Son'" (Matt. 27:54) is clearly secondary as a comparison with the Markan parallel shows.

A further development in this process of retrojection is the idea of the sending of the Son. This appears in a formula exhibiting a constant pattern: God as subject; a verb of "sending" or its equivalent; the Son as object; and a statement of God's saving purpose in sending the Son (see Gal. 4:4–5; Rom. 8:3–4; John 3:17). In the parable of the vineyard (Mark 12:6) a similar image occurs, though without an explicit statement of saving purpose. The roots of this saving formula probably lie in the earlier designation of Jesus as "prophet," which in turn originates in his own self-understanding. Jesus had a strong sense of mission (cf. Mark 9:37), a consciousness shared by the OT prophets, on whom it was patterned (e.g., Isa. 6:8). When "Son of God" took over from "prophet," the sending-of-the-Son formula came into being.

A related formula is that of the "handing over" or "giving" of Jesus (Mark 14:21 [Matt. 26:24; Luke 22:22]; Rom. 4:25; John 3:16). This in turn could have its roots in the earlier designation of Jesus as "servant of God," for the term "handed over" or "delivered" occurs in the fourth servant song of Deutero-Isaiah (Isa. 53:6, 12 in the Septuagint version).

It is sometimes held that the sending formula expresses a preexistence Christology referring to the incarnation of the preexisting Son. The origin of preexistence Christology is, however, probably later than that of the sending formulas, for the latter almost certainly antedate the writings in which they occur. Thus Gal. 4:4 is widely held to be pre-Pauline, and John 3:16–17 similarly to be pre-Gospel material. Nevertheless Paul himself probably, and John certainly, understood these formulas in the light of their own preexistence Christologies.

In the birth narratives of Matthew and Luke the title "Son of God" is shifted back to the conception, birth, or infancy of Jesus (Luke 1:32, 35; Matt. 2:15). This does not imply a preexistence-incarnation Christology or a divine sonship in the metaphysical sense. Rather, it implies Jesus' predestination from the womb for a messianic role in salvation history. The functional meaning of divine sonship is made particularly clear in Luke 1:32–33.

There is a growing scholarly consensus that the preexistence Christology originated not with the title "Son of God," but with the identification of Jesus as the incarnation of divine Wisdom. This identification underlies the development of preexistence Christology in the Wisdom hymns of the NT (Phil. 2:6–11, though the presence of preexistence in this hymn is sometimes questioned; 1 Cor. 8:6; Col. 1:15–20; Heb. 1:2–3; John 1:1–18). This identification leads to the expansion of the meaning of "Son of God." The preexistent Wisdom or Word of God is as such also the eternal Son of God, who was with God "in the beginning" and was the agent of creation, revelation, and redemption. That ontological identification has already taken place in the Logos hymn of John 1 (see v. 14; also v. 18, if "Son" rather than "God" is the correct reading).

The traditional dogmatic Christology of Nicaea (A.D. 325) and Chalcedon (A.D. 451) and of subsequent orthodoxy rests upon the Johannine development from a functional to a metaphysical Christology. ***See also*** Abba; Father; Incarnation; Jesus Christ; Messiah; Son; Wisdom.

son of man, a term with a variety of meanings in the Bible.

In the OT, "son of man" is an idiomatic way of speaking of a human being, or of humanity collectively. In the Psalms (Pss. 8:4; 80:17, RSV), "son of man" (Heb. *ben'adam*) is used in synonymous parallelism with "human being." In Ezekiel the prophet is addressed by God or by an angelic messenger as "son of man" (NRSV: "mortal"; e.g., 2:1, 6), suggesting the prophet's weakness and finitude as contrasted with the divine majesty. In Dan. 7:13 (RSV), the Aramaic equivalent (NRSV: "one like a human being") is used as a symbol for the faithful people of God contrasted with other kingdoms symbolized by animals. Some scholars identify "son of man" here with an angelic figure who, however, is related to the people of God.

In intertestamental Judaism this image was developed into an apocalyptic messianic figure (*1 Enoch* 37–91), the agent of divine judgment and salvation. It is disputed whether this development had already occurred before the time of Jesus and Christian origins. A similar development is found in 4 Ezra (2 Esdras) 13, a document dating from the end of the first century A.D.

In the NT, the usage of the term "Son of man" is at first sight simple enough. With one exception (Acts 7:56) and apart from the citation of Ps. 8:4 in Heb. 2:6 (RSV) and an allusion to Dan. 7:13 in Rev. 1:13, the term is used exclusively by the pre-Easter Jesus in reference to himself. It is customary to classify these occurrences in the synoptic Gospels under three headings: sayings in which Jesus refers to his present activity during his earthly ministry (e.g., Mark 2:10 and parallels; 2:28 and parallels; 10:45a [Matt. 20:28]; Matt. 8:20 [Q] and 11:19 [Q]); sayings in which Jesus refers to his impending Passion and/or resurrection (Mark 8:31 [Luke 9:22]; 9:9 and parallels; 9:31 and parallels; 10:33 and parallels; and 10:45b); and sayings in which he refers to his future activity as Judge and Savior at the end (e.g., Mark 8:38 and parallels; cf. Luke 12:8 [Q]; Mark 13:26 and parallels; 14:62 and parallels; Luke 17:22, 24, 26, 30 [Q]). In John, "Son of man" as a self-referent of Jesus has a more varied usage, the most characteristic being those sayings that speak of the exaltation of the Son of man, an expression that makes a double allusion to the cross and resurrection/ascension (John 3:14; 8:28; 12:34). John 1:51 looks like an original parousia saying (third category above) transferred to the present ministry (first category). John 6:53 speaks of eating the flesh and drinking the blood of the Son of man and John 9:35 (if the text is correct) of believing in the Son of man.

The difficulties begin when one asks about the origin of the term. Is it authentic to Jesus? If so, in what sense did he use it? Is it a post-Easter Christological title retrojected upon the pre-Easter Jesus? Regarding the term's origin, it is widely held, especially among German scholars, that "Son of man" was a title already current in pre-Christian Jewish apocalyptic writings (Dan. 7:13; *Similitudes of Enoch*).

On the other hand, it has been argued by some, especially British scholars, that there was no pre-Christian, apocalyptic title "Son of man," and so no light is cast by such sources on the way Jesus used that phrase. Jesus must have used "Son of man" merely as a self-designation, perhaps as a self-effacing way of referring to himself simply as a human being (cf. Ps. 8:4).

This usage could account for both the present and the suffering references. Sometimes, in this view, the future sayings are explained as post-Easter developments under the influence of Dan. 7:13. A variant of this view, popular among some American scholars, is that Jesus used it in authentic sayings not as a self-referent, but in a generic sense. Mark 2:28 is susceptible to this interpretation. All other (titular) "Son of man" sayings are in this view post-Easter creations.

Those who accept the view that there was in pre-Christian Jewish apocalyptic a concept of "Son of man" sometimes argue that Jesus used it in reference to a transcendental figure distinct from himself (see esp. Mark 8:38; Luke 12:8 [Q], where Jesus appears to distinguish between himself and the coming of the Son of man). This coming Son of man will vindicate Jesus' present offer of final salvation. After Easter, with the rise of an explicit Christological faith in Jesus, his followers then saw in him his own vindicator. Thus they were able to identify him with the apocalyptic Son of man.

As this survey indicates, there is at present no unanimity among scholars as to the origin or the exact meaning of "Son of man."

sons of God, children of God, phrases denoting superhuman beings. The words "sons of" (Heb. *bene)* in this phrase indicate the members of a people, tribe, or group, just as "sons/children of Israel" (Heb. *bene ysrael*) means "Israelites." The "sons" or "children of God" in the OT refer to different beings, the main alternatives being reflected in two prominent groups of texts.

In the first group is the enigmatic passage in Gen. 6:1–4, which gives an account of how the union of "the sons of God" with "the daughters of men" produced a race of "mighty men that were of old." Here the expression clearly refers to divine beings, and male divine beings at that, given their union with human women. The passage is a remnant of ancient Near Eastern mythological tradition. In the Ugaritic texts, for example, the pantheon or the gods as a whole are identified as the children of the chief god, "the totality of the sons/children of El."

There are other OT texts in which "sons/children of God" refers to divine beings. In Job 38:7 the phrase occurs in parallel with "the morning stars" (RSV), and in Ps. 89:6, a heavily mythological hymn, God is beyond comparison with other deities, the "sons of God" (RSV fn.). In Ps. 29:1 the "heavenly beings" (RSV fn., "sons of God") are called to praise God. The expression also appears in Deut. 32:8 (RSV reading with 4Q from the Dead Sea Scrolls and similar to LXX; MT reads "sons of Israel"). The phrase is closely related to the idea of a heavenly court as in Psalm 82 (see also, e.g., Isa. 6; Ezek. 1–3).

The other prominent context, reflecting a somewhat different use of the term, is Job 1–2, in which "the satan" is one of "the sons of God" (1:6; 2:1). Here the LXX translates the phrase "angels" (Gk. *angeloi*). That seems to be an accurate interpretation, for the "sons of God" here certainly are not deities as such. They are subordinate to God and function primarily as messengers. Similar in force is the reference in Dan. 3:25 to the fourth figure in the furnace whose appearance was like "a son of the gods." In later, mainly apocalyptic, reflection such ideas provided the basis for accounts of the rebellion or fall of the angels (*1 Enoch* 6–36; *Jubilees* 5:1–10). In the NT, the two phrases "sons of God" and "children of God" are synonymous, and refer to those who accept Jesus Christ as God's gift of reconciling grace (Gal. 3:26; see also Rom. 8:14, 16, 19, 21). While Jesus specifically identified those who make peace as God's sons (Matt. 5:9), for the most part the two phrases came to mean what we express with the word "Christian" (e.g., John 1:12; Phil. 2:15; Heb. 12:7; 1 John 3:1; 5:2). In all cases, "sons" means both men and women. ***See also*** Angel. G.M.T.

sons of prophets, a term probably denoting a group of professional prophets (e.g., 1 Sam. 10:5). When Amos asserts he is neither a prophet nor a prophet's son, he is probably disclaiming any identification with such a group (Amos 7:14). ***See also*** Prophet.

Sons of Thunder. ***See*** Boanerges.

soothsayer, one who foretells events. The word has a negative connotation in the OT, where soothsayers are classed with sorcerers (Jer. 27:9) and with magical practices (Deut. 18:10, 14) and are forbidden to Israel (Mic. 5:12).

sop. ***See*** Morsel.

Sopater (soh´puh-tuhr). ***See*** Sosipater.

Sophereth (sof´uh-rith; Heb., "scribe"), a family of Temple servants who returned to Jerusalem in postexilic times (Neh. 7:57; RSV: "Hassophereth," Heb., "the scribe," Ezra 2:55; 1 Esd. 5:33).

Sophia (soh-fee´uh), the Greek word for "wisdom," occasionally used to identify the personification of wisdom as a woman in Proverbs 1–9, Ecclesiasticus 24, Wisdom of Solomon 6–12, and Bar. 3:9–4:4. The Greek is used because the figure of wisdom personified seems to take on a special life in Hellenistic Judaism, where she is suggestive of Philo's *logos,* the rationality of God, and may be intended to counter the role of the goddess Isis in the Hellenistic world. Where Hellenistic Judaism speaks of Sophia either as hidden in heaven at the throne of God or as revealed on earth in Jerusalem, in later Gnosticism Sophia is the "aeon" whose fall from the spiritual world gives birth to the psychic and material world. ***See also*** Wisdom; Apocrypha, Old Testament; Gnosticism.

sorcery. ***See*** Magic and Divination.

Sorek (sor´ik), the name of the valley (and brook) where Delilah, Samson's lover who betrayed him, lived; it is mentioned only once in the Bible (Judg. 16:4). There Samson was captured by the Philistines and taken to their city Gaza, where he destroyed the temple of Dagon. The story, along with other evidence, indicates that the area, once inhabited by the tribe of Dan and serving as the boundary between Dan and Simeon, was under Philistine control during the period of the judges (1200–1000 B.C.).

The valley extends between Ashkelon and Gaza in southwestern Palestine, and the brook that bears its name runs westward and then northward into the Mediterranean Sea from the area near Beer-shemesh. In biblical times this city served as the guardian of the Sorek Valley, which is known in modern times as Wadi es-Sarar. ***See also*** Delilah; Samson. F.R.M.

Sosipater (soh´sip´uh-tuhr), a Jewish Christian who, with Timothy, Lucius, and Jason (all except Timothy are referred to as "my kinsmen"), joins Paul in sending greetings in Rom. 16:21. Perhaps he was the same person as Sopater of Beroea, who accompanied Paul through Macedonia as he prepared for his last trip to Jerusalem (Acts 20:4).

Sosthenes (sos´thuh-neez). **1** The "ruler" of a Jewish synagogue in Corinth while Paul was there, according to Acts 18:17. He either replaced Crispus as synagogue leader when the latter became a Christian or had shared the office with him (Acts 18:8). Sosthenes was beaten by a local mob in the presence of Gallio the proconsul, who chose not to intervene in what he regarded as a religious dispute (Acts 18:12–17). **2** The co-author with Paul of 1 Corinthians (1:1). If he is the same person described in 1, he became a Christian and possibly went from Corinth to Ephesus to visit Paul with the delegation of Stephanas, Fortunatus, and Achaicus (1 Cor. 16:17–18). Otherwise, nothing further is known about him. ***See also*** Corinth; Crispus; Gallio; Paul; Synagogue. A.J.M.

soul, a word in the Hebrew Bible with a wide range of meanings. God "breathed the breath of life" into Adam and he became a "living soul" (Gen. 2:7); Adam is *living* clay, as opposed to ordinary clay (Gen. 3:19). This life principle can ebb and flow; one may fear for one's soul (Ezek. 32:10), risk one's soul (Judg. 5:18), or take one's soul (1 Kings 19:4). "Soul" may refer to an individual person: Leah bore sixteen "souls" (children) to Jacob (Gen. 46:18). For a Hebrew, "soul" indicated the unity of a human person; Hebrews *were* living bodies, they did not *have* bodies. This Hebrew field of meaning is breached in the Wisdom of Solomon by explicit introduction of Greek ideas of soul. A dualism of soul and body is present: "a perishable body weighs down the soul" (9:15). This perishable body is opposed by an immortal soul (3:1–3). Such dualism might imply that soul is superior to body.

In the NT, "soul" retains its basic Hebrew field of meaning. Soul refers to one's life: Herod sought Jesus' soul (Matt. 2:20); one might save a soul or take it (Mark 3:4). Death occurs when God "requires your soul" (Luke 12:20). "Soul" may refer to the whole person, the self: "three thousand souls" were converted in Acts 2:41 (see Acts 3:23). Although the Greek idea of an immortal soul different in kind from the mortal body is not evident, "soul" denotes the existence of a person after death (see Luke 9:25; 12:4; 21:19); yet Greek influence may be found in 1 Peter's remark about "the salvation of souls" (1:9). A moderate dualism exists in the contrast of spirit with body and even soul, where "soul" means life that is not yet caught up in grace. ***See also*** Flesh and Spirit; Human Being. J.H.N.

source criticism. ***See*** Biblical Criticism; Synoptic Problem, The; Sources of the Pentateuch.

sources of the Pentateuch, the materials from which the first five books of the OT were composed. As a very extensive composition that incorporates many diverse genres and discrete units of material, the Pentateuch (Genesis through Deuteronomy) is without parallel in ancient Near Eastern literature. The question of how this unique composition was produced has occupied biblical scholarship for four centuries, and various models accounting for the composition of the Pentateuch have been propounded. No single model satisfies the evidence conclusively.

There are two broad types of models. One views the Pentateuch as the product of an author who worked earlier traditions and sources into a new, independent composition. The other sees the Pentateuch as a composite, produced by a redactor who edited parallel literary

SOURCES OF THE PENTATEUCH

documents into a single text. Some envision a longer history of oral tradition and literary sources behind the documents the redactor used, some a shorter history. Some reconstruct a series of redactions prior to the final one; others imagine a single redaction. It is also possible to mix the two models.

Critics of all schools agree that behind the text of the Pentateuch lie earlier sources. They exist, however, only as a result of scholarly hypothesis; we have no actual texts. The theory that the text was not written as a single original creation entails developing procedures for finding the components of the text. It should be borne in mind that the process of discovering sources reflects some model of textual composition in the mind of the critic.

Identifying the Sources: The Pentateuch quotes one source. It cites "The Book of the Wars of the Lord [Heb. *Yahweh*]" as the source for a border description in Num. 21:14–15. The excerpt appears to be in verse form, and the term for "book" (Heb. *sefer*) refers to a written record (e.g., Exod. 32:32; Num. 5:23; Deut. 17:18; 24:13). Apart from its intriguing title, that is all we know about this book. Num. 21:27 attributes a song about the fall of Moab to unidentified "ballad singers" (Heb. *moshelim*), which does not necessarily imply a written source. One may, however, compare this source to "The Book of Jashar," a written source from which the song at Gibeon (Josh. 10:13), David's lament (2 Sam. 1:18), and Solomon's hymn (Greek version of 1 Kings 8:13) were excerpted, and suggest that songs, like that in Num. 21:27–30, too, were excerpted from a written source.

The Pentateuch further implies discrete written sources when it delineates specific records that Moses was to have written down: the indictment of Amalek (Exod. 17:14), the laws of Exodus 20–23 (Exod. 24:4), the cultic laws of Exodus 34 (Exod. 34:27–28), the Israelites' itinerary (Num. 33:2), the Deuteronomic law code (Deut. 31:9, 24), and the poem in Deuteronomy 32 (Deut. 31:22). Exod. 24:12 and Deut. 9:10 attribute a written form of the Decalogue to God, suggesting that it, too, had been a discrete source. It would also seem that the genealogy of ten generations from Adam to Noah in Genesis 5 once enjoyed independent written existence as it is introduced as a "book" (v. 1).

Identifications of other sources in the Pentateuch are based on less explicit evidence or more subtle discriminations. The clearest cases are those in which the source of one passage is another text within the Pentateuch. Exod. 1:1–5 seems to draw directly on, and abridge, the family tree of Jacob in Gen. 46:8–27. The narrative outline of the Israelites' journey from Egypt to Moab, extending from Exodus 12 through Numbers, directly excerpts the itinerary in Numbers 33 (see, e.g., Exod. 12:37; 13:20; 14:1, 8, 22; 15:22–23, 27; 16:1; 17:1; 19:2). One could infer that an author or editor used material from written sources to frame the narrative or provide it with continuity.

On the basis of the distinctive character of genealogical and other lists, and the inference that such lists were excerpted and inserted in passages like Exod. 1:1–5 and the narrative of the wilderness journey, one might also deduce that other lists were incorporated into the Pentateuch from elsewhere. Further support may be found in lists that abruptly break off before their anticipated end. An example is the genealogy of the Israelites in Exod. 6:14–27, which stops at Levi because the text's interest is in tracing the lineage of Moses and Aaron, as the conclusion of the passage states. An even more abrupt case is Gen. 37:2: "This is the history [lit., generations] of the family of Jacob." The expected genealogy of Jacob's twelve sons jumps ahead to Joseph, the focus of the ensuing narrative.

Lists such as the Numbers 33 itinerary, genealogies, and the list of the kings of Edom (Gen. 36:31–39) display distinct beginnings and closings and a distinctive style. When critics observe distinct beginnings and closings and a distinctive style in other passages in the Pentateuch, they tend to conclude that these, too, were incorporated into the present text, or its sources, from earlier sources.

Gen. 2:4a, for example, says: "These are the generations of the heavens and the earth when they were created." Verse 4b then says: "In the day that the Lord God made the earth and the heavens . . ."—another beginning. There follows an account of creation different from the one in Gen. 1:1–2:3 in both content (e.g., man was created before vegetation and the other animals) and style (e.g., the former account names God *Elohim* only, the latter *Yahweh;* the former denotes the act of creation by "create" [Heb. *bara'*], the latter by "form" [Heb. *yatsar*]). It tells a story with a beginning, middle, and end (3:24). One could deduce that Gen. 2:4a closes the preceding story and that Gen. 2:4b begins another, partly parallel one, and that each derives from a different source.

Collections of law (especially Exod. 20:22–23:19; 34:10–27; Lev. 17–26; Deut. 12–26) and archaic poems (e.g., Gen. 4:23–24; 27:27–29, 39–40; 49:2–27; Exod. 15:1–18; Num. 21:14–15, 17–18, 27–30; 23:7–10, 18–24; 24:3–9, 15–24; Deut. 32:1–43; 33:2–29) also stand out in genre, structure, and style and are attributed to independent sources. Most of these law collections and poems are set off by introductory and/or closing formulas.

In passages where divergence in content and style is not accompanied by some explicit indication of a distinct source, identifying sources is less certain. We shall consider two such types of sources: those that are discerned within the text of the Pentateuch, and those that are hypothesized to have existed outside the text.

Source-Critical Analysis: Critics have attempted to analyze passages into their components by segregating units that diverge in content and style. Repetitive duplication, substantive inconsistency or contradiction, abrupt digression, and sustained difference in terminology have been taken to suggest boundaries between sources. Although none of these features would in and of itself indicate different sources, the coincidence of a number of these features in the same place suggests such distinctions.

A case in point is the Flood story in Gen. 6:5–9:19. Here we encounter repetitions, contradictions, and consistent divergences in style and terminology from passage to passage. The text fluctuates between passages in which God is called "the Lord" (Heb. *Yahweh*): "the Lord" commands Noah to take seven pairs of all pure animals and one pair of the impure animals into the ark, and it rains for forty days and nights; and passages in which God is always called "God" (Heb. *Elohim*): God commands Noah to take only one pair of each animal, and the Flood rises for a hundred and fifty days. In addition, the former passages are characterized by a more personal "Lord" who "grieved to his heart" (6:6) about human behavior and "shut [Noah] in" the ark (7:6). The latter passages feature a genealogy (6:9–10), details of age and date (7:6, 11; 8:4–5, 13–14), and the covenant (6:18; 9:8–17).

The former passages, which we shall follow scholarly convention and call "J" for its use of the Hebrew tetragrammaton *J(Y)HWH,* and the latter passages, which we call "P" ("Priestly") for reasons to be explained below, also employ distinctive vocabulary. Contrast these two descriptions of destruction of life by the Flood:

J: "Everything on the dry land in whose nostrils was the breath of life died" (7:22).

P: "And all flesh died that moved upon the earth, birds, cattle, beasts, all swarming creatures that swarm upon the earth, and every man" (7:21).

Critics are impressed by the fact that the stylistic difference here corresponds to the two accounts of creation, which likewise employ different names for God. Compare J here to J in Gen. 2:7: "Then the Lord God formed man of dust from the ground, and breathed into his nostrils the breath of life . . ."; and P here to P in 1:28: "And God said to [the humans], "Be fruitful and multiply, and fill the earth and subdue it; and have dominion over the fish of the sea and over the birds of the air and over every living thing that moves upon the earth." This last verse also resembles 9:1–3 and other passages attributed to P in the Flood story.

It has been hypothesized that behind the Flood story lie two written sources, which extend beyond this story to include a creation account and many other units. The present text has been produced by intersplicing these two sources. A source-critical analysis is:

J: 6:5–8; 7:1–5, 12, 16b–17, 22–23; 8:6–12, 13b, 20–22; 9:18–19.

P: 6:9–22; 7:6–11, 13–16a, 18–21; 7:21–8:5; 8:13a, 14–19; 9:1–17.

Using similar criteria, critics isolate another source, "E," as it refers to God as *Elohim,* distinct from both J and P. Although E is difficult to identify outside Genesis, critics assign to it chapters that seem to present an alternate version of an episode that occurs in J: Gen. 20:1–17 (E), which doubles Gen. 12:10–20 (J); Gen. 21:8–20 (E), which doubles Gen. 16:1–16 (J); and Gen. 21:22–34 (E), which doubles Gen. 26:17–33 (J). Characteristic of E is that God appears less immanently than in J, through a messenger (angel) or dream. Commonly, J and E are understood to be combined in several narratives, for example, the story of Joseph (Gen. 37–50). In J Judah tries to save Joseph, the father is called Israel, the Ishmaelites buy Joseph and take him down to Egypt. In E Reuben tries to save Joseph, the father is called Jacob, and the Midianites kidnap Joseph. Style and vocabulary are also adduced to identify the two sources.

Once separated, the hypothetical sources in the Flood story, the Joseph narrative, and other texts do not appear complete. Some narrative material was probably omitted (e.g., J's description of the ark). More crucially, we have no idea what or how much material of these sources is not in the Pentateuch. We cannot be sure of the full extent and shape of the sources.

Hypothesizing Sources Outside the Text: Because many cultures transmit epics and other literary forms orally, and because the Bible frequently refers to oral performance or transmission of its texts or traditions (e.g., Exod. 13:8; 15:1, 21), oral sources may lie behind the Pentateuch and its written sources.

Oral traditions, of course, leave no record and their postulation is entirely speculative. Deut. 26:5–10, however, presents a formula summarizing Israel's story from the descent of the ancestors from Canaan to Egypt through God's deliverance of Israel from Egypt and guidance to the land of Canaan. This "credo," as it has been called, was to be recited by Israelites bringing first-fruit offerings to God. Perhaps, it has been suggested, this credo is a miniature of a large epic, verse in form and oral in medium, stretching from the patriarchal promises to the arrival of Israel at the promised land. Fragments of what looks like ancient verse (e.g., Exod. 19:3) dot the Pentateuch; they could be vestiges of the epic.

That prose texts in the Pentateuch may have been transformed from earlier epic verse can be argued in two further ways. First, the prose account of crossing the Red Sea in Exodus 14 seems to adapt parts of the archaic song in

SOURCES OF THE PENTATEUCH

Exodus 15. Second, several of the prose episodes in Genesis 1–11 include occasional bursts of archaic verse (e.g., 1:27; 2:23; 3:14–19; 7:11b) and exhibit poetic patterns or diction (e.g., "the deep" [Heb. *tehom*], and "beasts of the earth" [Heb. *ḥayeto-'erets*], in Gen. 1). The written sources, or the redactors or authors of the Pentateuch, then, may have employed an extensive oral epic, or a number of smaller works in verse, in composing the present text, just as they drew upon "The Book of the Wars of the Lord" and the "ballad singers."

More remote, and for the most part indirect, sources of sections of the Pentateuch are narratives and laws attested in other works of ancient Near Eastern literature. Among the many possible interrelations are: the Mesopotamian flood story (note the episode of the birds in the *Epic of Gilgamesh* Tablet 11) and the Flood story in Genesis; the Egyptian "Tale of Two Brothers" and Genesis 39; the Akkadian legend of Sargon and the birth story of Moses in Exodus 2; various law codes and Exodus 21–23; the Assyrian vassal treaties and the curses in Deuteronomy. Compare, e.g., Deut. 28:23–24 with this excerpt from the Vassal Treaties of Esarhaddon: "May all the gods . . . turn your soil into iron. . . . Just as rain does not fall from a copper sky, so may there come neither rain nor dew . . . , but let it rain burning coals in your land . . ." (James B. Pritchard, ed., *Ancient Near Eastern Texts Relating to the Old Testament,* 3d ed. [Princeton: Princeton University Press, 1969], p. 539). Since the correspondences go much further, a literary dependence of Deuteronomy 28 on Assyrian or Aramaean vassal treaties of about the eighth century B.C. seems likely.

The Documentary Hypothesis: The prevailing account of the composition of the Pentateuch in modern scholarship is the "Documentary Hypothesis." In most versions of the theory four documents are hypothesized to have been redacted in forming the Pentateuch: J, a Judean source of about the tenth century B.C.; E, a north Israelite source of about the eighth century B.C.; D, the core of Deuteronomy, which is identified with the "book of the law (*torah*)" that was promulgated by King Josiah in 622 B.C. (see 2 Kings 22–23); and P, which is variously dated before, during, or after the Babylonian exile of the sixth century B.C. The redaction is generally understood to have taken place in stages: first JE, then JED, then JEDP. In each stage of redaction editorial adaptation and reshaping of the prior material is assumed. Most of Exodus 25–Numbers 36 is assigned to P, as are the first and last chapters of the Pentateuch, giving the impression that partisans of P were the final redactors. The final redaction occurred by the fifth century B.C.

The chronological sequence of the documents is reconstructed by relating the other sources to D. Laws in JE seem to precede Deuteronomy. JE (e.g., Exod. 23:19) allows Israelites to bring offerings to God to any sanctuary, but D (e.g., Deut. 12:13–14) restricts offerings to a single site. Several laws in D appear to revise laws in JE. For example, Deut. 15:12–28 follows the structure and uses some of the phraseology of the slave law of Exod. 21:2–6 (JE). D, however, treats women the same as men, unlike JE, and exhorts the Israelites to be generous toward manumitted slaves. The law concerning rape in Deut. 22:23–27could be regarded as an expansion of the less comprehensive law in Exod. 22:15–16. Alternatively, JE and D could in both cases be drawing on a common source.

The position of P is even more problematic. Its laws focus on the rituals of the sanctuary, the priesthood, and ritual purity, hence its label, "Priestly." P does not abide offerings made by anyone but an anointed priest of the Levite tribe. Thus, whereas in J's Flood narrative Noah offered the excess pure animals he took into the ark as thanksgiving to God after the Flood, in P's version Noah took no extra animals and made no offering as he was not a proper priest. P does not, however, explicitly forbid offerings at any but a single sanctuary, as D does. If P were later than D, P might presuppose the centralization of sacrificial worship in D and feel no need to legislate it. On the other hand, once ritual slaughter is centralized, as in D, it means any Israelite who wants to eat meat must travel to the one sanctuary. D makes allowance for profane slaughter of animals so that Israelites need not travel to the sanctuary for this purpose (Deut. 15:22–23); P forbids it (Lev. 17:3–4). Perhaps, then, P does not assume centralization of worship and is not later than D.

All that is clear is that JE, D, and P differ in the substance of many of their laws and differ in their terminology as well. Favorite idioms of D and P can be readily identified.

Content and style also serve to associate the legal portions of P with narratives attributed to P (see above on P and the Flood story and compare, e.g., Exod. 39:32 with Gen. 2:1–3, and Lev. 11:46 with Gen. 1:21, 24).

Whether the material attributed to J, E, and P ever existed in single, long, parallel documents that covered the extent of the Pentateuch cannot be deduced merely from the identification of fragments of sources with affinities to one another throughout the text. Prior to redaction, J, E, and P may have existed as collections of small units. From the variety of sources we have identified above, it would also seem that the Pentateuch embodies many materials besides J, E, P, and D.

Conclusion: Although the Pentateuch may allude to prior sources in certain passages, for the most part the final text does not call attention to its diverse sources. Had some of the sources circulated independently, the Pentateuch may at one time have been recognized as a composite. It does seem, however, that the process that constituted the Pentateuch, in each of its stages,

tended to blend and integrate its material into a new entity, a text to be read as a continuous whole. ***See also*** Bible; Old Testament.

sowing, the act of scattering seeds as part of the cultivation of food grains. While the seeds of some crops were planted more carefully than Near Eastern cereals, "sowing" typically refers to the wholesale scattering of wheat and barley. Unlike their Mesopotamian counterparts, who sometimes used a seeding device that was attached to the plow, Egyptian or Palestinian farmers simply carried a container full of seed and broadcast this seed with their free hand.

In contrast to Western practice, the Palestinian farmer often plows after sowing, thereby working seeds into the soil for protection and germination; this practice is apparently presumed in Jesus' parable of the sower (Matt. 13:3–8). If plowing precedes sowing, livestock may be driven across a field to harrow the seed.

The Mosaic law contains regulations on sowing (Lev. 11:37–38; 19:19; Deut. 22:9). Eventually, sowing attained metaphorical significance (Ps. 126:6; Prov. 11:18; Matt. 13:3–43; 2 Cor. 9:6; Gal. 6:7–8). ***See also*** Farming; Plow; Seed.

G.L.M.

Spain (spayn), a large peninsula in southwestern Europe known since Roman times as Hispania; it first received the Ligurerians from Italy, then the Celts (sixth century B.C.), who were then challenged by the Iberians (fifth century B.C.). Known by the Phoenicians and the Greeks, Spain was invaded by Carthage in 237 B.C. but lost to Rome in 206 B.C. After some two hundred years of stubborn resistance, a "pacified" Spain gave Rome three emperors and many of her best soldiers. Although Spain appears in Rom. 15:24, 28 as the intended western horizon of Paul's mission, this hope was probably cut short in Rome by Paul's martyrdom.

span. ***See*** Weights and Measures.

sparrow, a term that may refer to any small, brown bird that flits and twitters. Both the Greek and Hebrew words are frequently translated "bird" in the RSV (Pss. 11:1; 102:7; 104:17; 124:7; Eccles. 12:4; Lam. 3:52). Sparrows (Old World "sparrows" are members of the weaver family) are mentioned as nesting near the Temple altar (Ps. 84:3). They were sold in the marketplaces of the Middle East as inexpensive food for the poor, and Jesus used them as a symbol for something of minimal value (Matt. 10:29, 31; Luke 12:6, 7).

speaking with tongues. ***See*** Tongues, Speaking with.

spear, a close-range weapon composed of a long wooden shaft on which was mounted a shorter, pointed blade (i.e., spearhead). During the biblical period, the spearhead was usually made of bronze or iron, and it was attached to the shaft in various ways. Through most of the spear's early history, a tanged blade was inserted into the end of a split shaft, and the juncture was tightly bound. By the middle of the second millennium B.C., the socketed spearhead became almost universal. Artistic representations and excavated examples demonstrate that spearheads were made in different sizes and shapes

Warrior holding a spear with a triangular spearhead; from a Moabite stele, second millennium B.C.

(e.g., leaf-shaped, triangular, and barbed blades). Since the spear was a major weapon in most ancient armies, metallurgical advancements were quickly adapted for the production of stronger and more effective spearheads.

The RSV uses "spear" to translate several words in the Hebrew OT; some distinction is made, however, since one of these Hebrew terms (*kîdôn*) is more frequently rendered "javelin" in the English text (see passages where both weapons are named, e.g., 1 Sam. 17:6–7, 45; Job 39:23; 41:16; Ps. 35:3). Although these two weapons were similar in form, they served different functions in combat. The spear was used primarily for thrusting or stabbing (Num. 25:7–8; 1 Sam. 26:8; 2 Sam. 23:8, 18, 21, as opposed to 1 Sam. 18:11; 19:10; 20:33), but the lighter, shorter javelin was a medium-range weapon designed for throwing. Apart from a disputed reading in Matt. 27:49, the spear's only appearance in the NT is in John 19:34. The two hundred "spearmen" who escorted Paul to Antipatris (Acts 23:23) might have been javelin throwers.

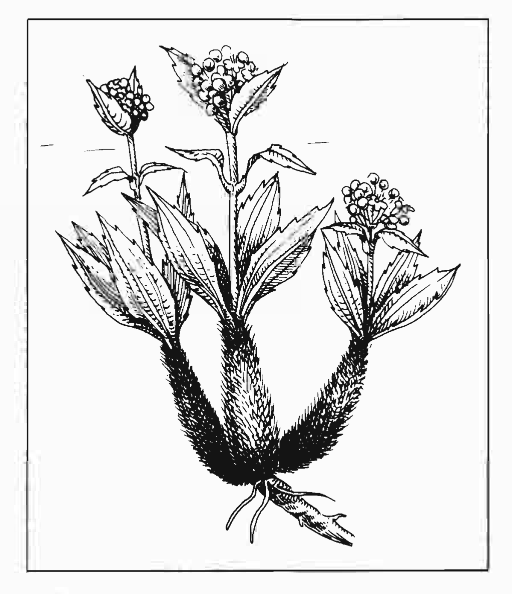
Although it is not so frequently mentioned as the sword, the spear was a well-known weapon in the biblical period. Deborah lamented the lack of spears in her army (Judg. 5:8; cf. 1 Sam. 13:19–22), thereby acknowledging their importance. To emphasize his trust in the Lord, David belittled Goliath's dependence upon sword, spear, and javelin (1 Sam. 17:45–47). Since spear and shield complemented each other in hand-to-hand combat, they are often mentioned together (2 Kings 11:10; 1 Chron. 12:8; 2 Chron. 11:12; 14:8). Indeed, one's ability "to handle spear and shield" made one "fit for war" (2 Chron. 25:5). Naturally, giants carried very large spears (1 Sam. 17:7; 2 Sam. 21:16).

Figurative references to the spear are rare but potent (Pss. 35:3; 46:9; 57:4). The prophets speak about the future age of peace as a day in which spears would be converted into pruning hooks (Isa. 2:4; Mic. 4:3; see Joel 3:10, where the opposite process was envisioned). ***See also*** Soldier; War; Weapons. G.L.M.

speck (KJV: "mote"), a small fragment of chaff, fiber, wood, etc. Jesus criticized the judgmental tendency when he said that we see such specks in the eyes of others but not the logs (note the hyperbole) in our own (Matt. 7:3–5; Luke 6:41–42).

spelt, a variety of wheat generally known as *Triticum dicoccoides* or more specifically *Triticum aestivum spelta*. In biblical usage it refers to a crop that survived the hail plague because of late germination (Exod. 9:32), a crop used to border the field (Isa. 28:25), and an ingredient for bread (Ezek. 4:9).

sphinx, the Greek name for a creature having a lion's body and human head. In Greek legend, this mythical beast posed a riddle that only



Ivory and gold winged sphinx from Nimrud, eighth–seventh century B.C.

Oedipus could answer. The sphinx was a common artistic motif in ancient Egypt. Stone sphinxes served as guardians in front of temples; sometimes a row of sphinxes was placed along each side of the temple's avenue of approach. The most famous sphinx is the enormous recumbent example (240 feet in length) cut out of the living rock alongside the causeway leading up to the pyramid of King Khafre (Gk. *Chephren*) at Giza (ca. 2550 B.C.). The head of this creature is thought to be a representation of the king himself. The Sphinx may represent Khafre in the guise of the sun god Aton who guards the Giza necropolis.

In Mesopotamian art, the sphinx was shown with wings and either a male or female head. Hittite sphinxes always had female heads. Later on, in Greek art, the sphinx was represented with female breasts and wings. The cherubs mentioned in the Bible may have been sphinx-like creatures with a human head, lion's body, and wings (e.g., Exod. 25). ***See also*** Cherub. J.M.W.

spices, salves, perfumes, or aromatic oils. Spices were part of the luxury trade of the ancient world; a "balm," resin of *Pistacia mutica*, was among the gifts sent to Joseph (Gen. 43:11). Balsam oil or perfume in general appears in the catalogue of wealth that flows through Tyre (Ezek. 27:22). Spices were used in the anointing oil, perhaps a balsam oil (Exod. 35:28; 1 Kings 10:2). "Spices" may also refer to a sweet-smelling cinnamon or a sweet cane (Exod. 30:23). Aromatic oils and perfumes were used for embalming and anointing a corpse (Mark 16:1; Luke 23:56; John 19:40). P.P.

spies, those who seek to obtain privileged information secretly. In the OT, spies are involved in three complexes of material: the dispatch of twelve spies by Moses to reconnoiter the land of Canaan (Num. 13–14; Deut. 1:19–46); the sending of two spies to Jericho by Joshua (Josh. 2); and the mission of the five spies sent to Laish as part of the Danite migration to the North (Judg. 18). The usual form of the spy story includes the selection and dispatch of the spies, their return and report, the announcement that God has given the reconnoitered land to Israel, and the report of the subsequent invasion and conquest. J.S.K.

Spikenard.

spikenard (KJV; RSV: "nard"), a scented ointment or perfume imported from the Himalayas in alabaster boxes and opened on special occasions (Song of Sol. 1:12; 4:13, 14). In the NT it is its expense (approximately one year's wages) that is emphasized (Mark 14:3–5; John 12:3–5).

spinning and weaving, the arts of producing yarn and cloth from fibers of various kinds. Spinning and weaving were traditionally women's arts in the ancient Near East and Greco-Roman world, and they remained a common household occupation even when weaving became a male profession or profession shared by men (among them perhaps Paul, Acts 18:1–3). The distaff represented the female domain, and portraits of noblewomen with spindle in hand show that spinning was common to all classes of women. The woman praised in Proverbs 31 "seeks wool and flax . . . puts her hands to the distaff, and . . . hold[s] the spindle" (vv. 13, 19). She clothed her family, but also produced for the market (vv. 21–24). The women of Israel spun the wool, flax, and goats' hair for the tabernacle hangings and coverings (Exod. 35:25–26), though the weaving was done, or directed, by men (v. 35). Before Josiah's reforms women wove vestments in the Temple for the Asherah cult figure (2 Kings 23:7). Delilah wove Samson's locks in her loom (Judg. 16:13–14).

Textile production was an important industry of the palace and temple in ancient Syria and Mesopotamia, often employing slave labor. Ebla (in modern Syria) was the center of a far-reaching textile trade (ca. 2300 B.C.), and Phoenician weaving and dyeing were renowned. Early Egyptian models recovered from tombs show workrooms with women engaged in various operations of cloth production. Men appear as weavers in later texts, working in government factories or at home looms under contract.

Wool and flax were the common textile fibers of Palestine, Mesopotamia, and Greece, while goats' hair was used for tent fabrics, coarse mantles, and sackcloth. Wool was often dyed to produce patterned weaves, including intricate tapestries. Linen, the main textile of Egypt, was usually left white, since it was difficult to dye. Cotton was not used in Palestine until Hellenistic times.

The fiber was prepared for spinning by washing, retting (soaking to separate out the flax), and carding to produce a fluffy mass. This was secured on a hooked stick (distaff) held under the spinner's left arm, and wisps of fiber were drawn out in a continuous strand as they were spun—or a lightly twisted rope (rove) was formed with the fingers and coiled in a pot or basket. The drawn-out fibers were attached to a spindle, with which they were twisted and attenuated into a strong thin yarn. The spindle was a rod, 9 to 15 inches long and tapered at both ends, with a notch or hook at one end to catch the yarn and a perforated disk (whorl) of stone, bone, or pottery to weight it and steady

Woman spinning; stone relief, seventh century B.C.

its rotation. The spindle was twirled in the hand or hands, rolled against the thigh, or suspended after being set in motion. As a length of thread was formed it was wound onto the spindle and the process was repeated.

Weaving was done by intersecting one set of threads (the warp), attached to a loom, with a running thread or threads (the weft or woof). Several types of looms were used in biblical times. The common loom of early Palestine and Greece consisted of two vertical beams fixed into the ground with a horizontal beam attached at the top (cf. Samson's spear "like a weaver's beam," 1 Sam. 17:7). The warp threads were hung from the crossbeam and weighted in bunches with small clay or stone weights (common objects in excavation sites). In later times, a lower crossbeam was introduced, and the web was woven up, rather than down as in the warp-weighted loom. The ancient Egyptians used a horizontal loom consisting of two beams held by pegs in the ground, with the warp stretched between them. Similar looms are used by bedouins today.

The weft was drawn by a shuttle through a "shed" created by separating the warp threads into two series by means of a heddle (today called a warping stick). After each passage of the shuttle the new thread was pressed firmly into the growing fabric with a sword-shaped beater (batten), pin, or (later) comb. Patterns were made by adding or alternating different colors of yarn and by changing the interlacing of warp and weft. Gold and silver "thread" was also used (Exod. 39:3). Simple garments were commonly woven in one piece, as Jesus' seamless tunic (John 19:23). Tassels were formed at the lower corners (Num. 15:38) from the free warps left when the garment was cut from the loom (Isa. 38:12). ***See also*** Asherah; Linen; Pin; Tabernacle; Wool. P.A.B.

spirit. ***See*** Flesh and Spirit; Holy Spirit, The; Soul.

Spirit, the Holy. ***See*** Holy Spirit, The.

spiritual gifts, a concept present only in the NT, primarily in the Pauline Letters, although the idea of being empowered by the Holy Spirit for particular tasks is by no means alien to the OT (e.g., Judg. 3:10; Num. 11:29). Various Greek terms are employed when these are in mind, but most notably *ta pneumatika,* which emphasizes the spiritual origin of the gifts (*pneuma* means "spirit"; see 1 Cor. 14:1), and, more often, *ta charismata,* which emphasizes that they are bestowed as an act of divine grace (*charis* means "grace"; see Rom. 12:6). In distinction from "the fruit of the Spirit," which all Christians are to manifest without variation (Gal. 5:22–23), the gifts of the Spirit are understood to vary from one believer to another (Rom. 12:6; 1 Cor. 12:4–11; cf. 1 Pet. 4:10).

In the Letters of undisputed Pauline authorship, there are four separate listings of the Spirit's gifts (Rom. 12:6–8; 1 Cor. 12:8–10; 12:28; 12:29–30), but since no two of the lists are identical it seems clear that no one list is intended to be definitive. The various gifts may be grouped under three general headings:

The *gifts of utterance* include prophecy (Rom. 12:6; 1 Cor. 12:10, 28; cf. 1 Cor. 12:8; 14:6), with which the ability to distinguish between true and false prophecy is closely associated (1 Cor. 12:10; cf. 14:29 and 1 Thess. 5:19–21); instruction (Rom. 12:7; 1 Cor. 12:28; cf. 1 Cor. 14:6); speaking in tongues (1 Cor. 12:10, 28; cf. 14:1–19); and the ability to interpret speaking in tongues (1 Cor. 12:10, 30; cf. 14:5, 13).

The *gifts of practical ministry* are caring for the needy (Rom. 12:7–8): serving, encouraging (TEV), contributing, performing acts of mercy, and perhaps giving aid (1 Cor. 12:28: helping); and administration (1 Cor. 12:28; perhaps giving aid in Rom. 12:8).

Healing (1 Cor. 12:9, 28) and performing miracles (1 Cor. 12:10, 28) are *gifts of wonder-working faith,* this "faith" (1 Cor. 12:9; cf. 13:2) being distinguishable from the faith "reckoned as righteousness" (Rom. 4:5) of which Paul usually writes.

The gift of apostleship, ranked first in 1 Cor. 12:28, is active in all three ways: in the ministry of the word (e.g., 1 Cor. 1:17; 4:17), in pastoral care (e.g., Rom. 15:25–29; Philemon), and in the working of miracles (e.g., 2 Cor. 12:12; Gal. 3:5). It is notable, however, that the lists in Eph. 4:11 and 1 Pet. 4:10–11 include only gifts of intelligible utterance and of practical ministry; there are no references to speaking in tongues or miracle working.

Responding to disruptions caused by speaking in tongues in his Corinthian congregation, Paul emphasized that every believer is graced by some gift and that all gifts are bestowed by "the same Spirit" (1 Cor. 12:4–11). Nevertheless, since their purpose is to serve "the common good" (12:7), he concluded that prophecy, intelligible to all, is to be preferred to speaking in tongues, intelligible only to God (unless there is an interpreter; 1 Cor. 14:1–5). ***See also*** Apostle; Corinthians, The First Letter of Paul to the; Holy Spirit, The; Miracles; Paul; Prophet; Teaching; Tongues, Speaking with. spitting. ***See*** Gestures.

sponge, the porous skeleton of marine animals, whose fibrous connective structure has water-retaining properties that make it useful for bathing. The Gospels report that Jesus was offered a sponge soaked in wine vinegar to drink

on the cross (Mark 15:36; Matt. 27:48; John 19:29).

springs. ***See*** En-gannim; En-gedi; En-rogel; Gihon; Jericho; Siloam Inscription; Water.

squad (KJV: "quaternion"), the English translation of a Greek word designating a group of four soldiers. It is found in Acts 12:4 (cf. also John 19:23), where Peter was placed in the custody of four such groups, one for each of the three-hour-long night watches. Normally, one squad would be sufficient, one person standing guard on each of the watches while the other three slept. Apparently Peter was thought to need especially careful guarding. ***See also*** Guard, Bodyguard; Prison; Soldier.

square, a rectangle with sides of equal length. **1** A shape required for many of the appurtenances of the Temple described in Exodus (e.g., 27:1; 28:16) and Ezekiel (e.g., 43:16, 17). **2** A level area near the city gate in ancient cities used for various public assemblies (e.g., 2 Sam. 21:12; Job 28:7).

stable, a shelter for animals, usually donkeys, horses, or other draft animals. The tradition of Jesus' being born in a stable derives from Luke's reference to Mary's putting the baby "in a manger" (Luke 2:7), a feeding trough usually found where animals are corralled. Caves used for such shelter are common even in modern times in the Near East. The KJV's "stable" in Ezek. 25:5 is rendered more correctly by the RSV as "pasture."

Stachys (stay′kis), a Christian who received a special greeting from Paul (Rom. 16:9).

stacte (stak′tee), an ingredient to be used in preparing incense (Exod. 30:34). The meaning of the Hebrew root *nāṭāp,* "to drip" or "ooze," has led some to identify it as the sap of the storax tree, *Styrax officinalis,* or the opobalsamum tree, *Commiphora opobalsamum.*

staff. ***See*** Rod.

stairs, stepped ledges providing access up or down that are integrated into the construction of a building or other facility. Stairs were most common as a device for reaching the second floor or roof of a house. Biblical usage is somewhat diverse. The Temple built by Solomon had stairs to both the second and third stories (1 Kings 6:8). Repairs were made in Jerusalem in postexilic times, using the stairs down from the "City of David" as a zone marker for repair responsibility (Neh. 3:15; see also 12:37). Special stairs for Levites are mentioned in Neh. 9:4. In Ezekiel's vision of the Temple the inner court vestibule facing the outer court had a stairway of eight steps on the south, east, and north sides (40:31, 34, 37). In this description access to second and third stories was by a single stairway on the side (41:7).

Stairs were part of normal temple access in Roman architecture, in many instances using the foundation platform as a step or steps (Jerash, Baalbek, Petra, Pergamum). The same was true of the earlier Greek temples. Cities frequently cut elaborate stairways to ensure access to the water supply (Gezer, Megiddo, Gibeon). Some fascinating inside and outside stairways were built in both public and private buildings by the Nabataeans (modern Umm al-Jimal has some of the best preserved of both types). Ramps, rather than stairways, characterized some Egyptian construction (Hatshepsut's tomb at modern Deir el-Bahri), but the interior stairs in the great pyramid of Cheops at Giza are still spectacular. R.S.B.

stall, a space for one animal within a stable or barn. The biblical usage betrays less precision, using the term for what would now be called a pen. In Amos 6:4 the "calves from the midst of the stall" reflects the still-used practice of isolating animals for special preslaughter fattening or "finishing." Mal. 4:2 reports the typical exuberance of young animals released from their pen into open pasture. More traditional individual pens may be specified in 1 Kings 4:20, citing Solomon's forty thousand stalls of horses (2 Chron. 9:25), but 2 Chron. 32:28 and Hab. 3:17 may have indicated the group pens again. R.S.B.

stars, Star of Bethlehem, respectively, the self-luminous bodies in the sky (except meteors, comets, and nebulae) and the star that guided the Wise Men to the infant Jesus at Bethlehem (Matt. 2:1–12). In modern times, the sun is considered a star; in ancient times, however, and in the Bible, the sun, moon, and stars are distinguished (Gen. 1:16). Moreover, while planets are not considered stars today, biblical writers considered them such, for the "Day star, son of Dawn" (Isa. 14:12), was most likely Venus, and "the star of the god Rephan" (Acts 7:43) was probably Saturn.

In the ancient Near East, the stars were regarded as supernatural beings (divinities) affecting human destiny. The same was true in Greek and Roman culture, particularly after the time of Alexander the Great (fourth century B.C.). Astrology sought to predict coming events through observing the courses of the stars and planets. A lament over Babylonia refers to Babylonian astrologers "who divide the heavens, who gaze at the stars, who at the new moons predict what shall befall you" (Isa. 47:13).

In the OT, the stars are not thought of as divinities, although certain passages imply that stars and planets influence human events (Job 38:33; cf. Judg. 5:20), and astrology is rejected

as a foreign influence (Jer. 10:2). The stars and constellations have been created by God (Gen. 1:16; Pss. 8:3; 136:9; Job 9:9; Amos 5:8). God has named them (Ps. 147:4; Isa. 40:26) and has set them in their courses (Jer. 31:35; Job 9:7). No one can count them (Gen. 15:5; 22:17; 26:4).

There is evidence that star worship was introduced in both the Northern and the Southern Kingdoms. Amos (eighth century B.C.) condemned it in the Northern Kingdom (Amos 5:26). Introduced in the Southern Kingdom during the reign of Manasseh (687–642 B.C.; 2 Kings 21:3–5), star worship was suppressed by Josiah (640–609 B.C.; 2 Kings 23:4–14). The book of Deuteronomy, which played a major role in Josiah's reform of 621 B.C., condemns star worship (4:19; 17:2–5). Instances of star worship were thus anomalies in the history of Israel; it was generally condemned as a form of idolatry.

The Star of Bethlehem, according to Matt. 2:1–12, led the Wise Men from the East to Jerusalem (2:1–2) and Bethlehem (2:9) during the reign of Herod the Great (37–4 B.C.). Although there have been different theories concerning the identity of this star, the prevailing consensus in modern times has been that the so-called Bethlehem Star would not have been a star at all but rather a conjunction of the planets Jupiter and Saturn in the constellation Pisces in 7 B.C., having the appearance of a great star. Moreover, Pisces was considered in astrological traditions a constellation of the Jews. Matthew's account is probably a blend of astrological lore and midrashic interpretation of OT texts: "a star shall come forth out of Jacob, and a scepter shall rise out of Israel" (Num. 24:17) and "nations shall come to your light, and kings to the brightness of your rising" (Isa 60:3). The tradition of a heavenly sign appearing about the time of Jesus' birth was seen by Matthew as a fulfillment of the OT texts, understood as messianic promises, and he related the story to show both the fulfillment of prophecy and the universal significance of Jesus. ***See also*** Astrologer; Midrash; Moon; Sun; Wise Men. A.J.H.

stater (stay´tuhr), a Greek silver coin worth about four drachmas, the wages for four days' work. The stater in Matt. 17:27 was probably the heavier stater from the mint at Tyre accepted by Jews as a holy shekel. ***See also*** Money.

stealing. ***See*** Robbery.

stele, stela (stee´lee, stee´luh; Gk., "standing stone"; pl. stelae), an upright stone slab, usually inscribed, used to commemorate an event, mark a grave, or give a dedication to a deity. Egyptian stelae have been found at several sites in Palestine, such as Beth-shan, Timna, and Deir el-Balah. Canaanite stelae are known from Beth-shan, Hazor, and Tell Beit Mirsim. A small piece of an inscribed Hebrew stele was found at

Black limestone stele of Melishipak II, the Cassite king of Babylon; 1200 B.C.

Samaria; this fragment contains only a single word, *asher* ("who, which"). Several uninscribed stelae were discovered in the Israelite sanctuary at Arad. The most famous stele from Palestine is the Moabite Stone, written ca. 850 B.C. on behalf of Mesha, king of Moab, in a language close to Hebrew. This stele, found at Dhiban (biblical Dibon) in 1868, records Mesha's victory over Israel and his building activities at various Moabite sites. ***See also*** Mesha; Moabite Stone, The; Writing. J.M.W.

Stephanas (stef´uh-nuhs), Paul's first convert, together with his household, in Corinth (1 Cor. 16:15; cf. 1:16). Apparently he remained loyal to Paul, and when trouble broke out in the Corinthian church he accompanied Fortunatus and Achaicus on a visit to Paul in Ephesus with information about the problems (1 Cor. 16:17–18). Some of these problems were also detailed by a letter (1 Cor. 7:1), which may have been carried by the trio. They may also have carried the letter known to us as 1 Corinthians back to Corinth. Stephanas is strongly commended by Paul as one worthy of exercising authority in the church (1 Cor. 16:16). ***See also*** Achaicus; Corinth; Corinthians, The First Letter of Paul to the; Fortunatus; Paul. A.J.M.

Stephen (stee´vuhn), a leader in the early Jerusalem church whose story appears in Acts 6:1–8:2. The other references to Stephen in the NT refer to this story (Acts 11:19; 22:20).

According to Acts 6:1–6, a dispute had developed in the Jerusalem church between the "Hel-

lenists" (probably Jewish Christians from the Diaspora whose first language was Greek) and the "Hebrews" (Palestinian Jewish Christians who spoke Aramaic). In order to resolve the dispute, seven Hellenists were chosen for positions of leadership, one of whom was Stephen. Thus, Stephen functions in Acts as the key representative figure for the very significant Hellenistic Jewish element in the primitive Jerusalem church.

Stephen is portrayed in Acts as a bold man, wise, full of faith, and possessed of the Holy Spirit (Acts 6:5, 8, 10). The ecstatic aspect of Stephen's short Christian career is highlighted in the account. It was by the power of the Spirit that Stephen confronted his fellow Hellenists who did not believe in Jesus as Messiah. They, in turn, brought Stephen's activities to the attention of a wider audience: the Sanhedrin (Acts 6:11–15).

Apparently, the opposition to Stephen was based primarily on a deduction he had made from his messianic faith in Jesus: that, with the vindication of Jesus as Messiah, the religion of the Temple had outlived its usefulness and the Mosaic law should now be seen in a new and different light (Acts 6:11–14; cf. Matt. 24:2; Mark 13:2; Luke 21:6). Stephen's opponents understood that this deduction would undermine the basic legitimacy of the religious practice associated with the Temple.

The speech of Stephen in Acts 7:2–53 is presented as Stephen's defense of his position. It also functions, however, as a model of early Christian apologetic to Hellenistic Judaism. The essential point is that Israel has always been slow to accept a dramatic new activity of God in fulfilling his promises. After the promises were given to Abraham (vv. 2–8), Israel systematically rebelled against the call of its inspired leaders (vv. 9–43) and was too prone to isolate the presence and activity of God to local places such as the Temple rather than see God in crucial historical events such as the recent case of Jesus' exaltation in Jerusalem (vv. 44–53). Once again, Israel was in danger of misperceiving a new expression of God's activity. According to Acts, this message angered Stephen's audience and he was stoned to death without judicial hearing before either Jewish or Roman authorities (vv. 54–58).

It is clear that the writer of Acts wished to draw a close parallel between Stephen's death and that of Jesus (see Luke 23:34; Acts 7:60). Stephen and Jesus, both filled with the Spirit, died unjustly with a word of forgiveness on their lips.

As Stephen, especially in his death, is linked to Jesus, so also Acts links him to the future with the mention of Saul's (i.e., Paul's) consenting presence at the martyrdom (Acts 7:58; 8:1; 22:20). Stephen's death and the subsequent scattering of his fellow messianic Hellenists led to the mission of Philip in Samaria and elsewhere (Acts 8:4–40) and ultimately to the wider mission spearheaded by Paul throughout the eastern part of the Roman Empire (see Acts 11:19).

Thus, although Stephen appears in only one episode in Acts, the author of Acts was conscious of the immense theological and historical significance of the early Hellenistic Jewish Christians in Jerusalem of whom Stephen is the exemplary figure. ***See also*** Hebrews; Hellenists; Law; Martyr; Paul; Persecution; Sanhedrin; Temple, The; Torah. A.J.M.

steward, a word used to translate a number of terms and expressions in the Bible common to all of which is the idea of "overseeing" the possessions, business affairs, property, servants, the training of children, etc., of an owner or master. A steward is one who is placed "over the house" (Gen. 43:19; 44:1, 4; 1 Kings 16:9; 18:3; etc.). That "house" can be a private household and its function (Gen. 44:1; Luke 12:42; Gal. 4:2), a specific task (1 Chron. 29:6), a palace (Esther 1:8; 1 Kings 18:3; Isa. 36:3; Luke 8:3), business affairs (Matt. 20:8; Luke 16:1–8), a city treasury (Rom. 16:23), and in the NT in a metaphorical sense of the divine mysteries, i.e., the gospel revelation (1 Cor. 4:1), a divine commission (1 Cor. 9:17), or a divine gift (1 Pet. 4:10).

Bishops/elders are called stewards (Titus 1:5–9) and are expected to possess holy qualities as they manage the household of God. The apostle Paul also saw himself as a steward (1 Cor. 4:1–2) who would have to give an account of his stewardship (1 Cor. 4:3–4; cf. 2 Tim. 4:7–8) as the Apostle to the Gentiles (Eph. 3:2; Gal. 2:7–8; Rom. 1:5–6; 13–15). There is also a sense in which every Christian is a steward entrusted with a divine gift (1 Pet. 4:10). Faithful and wise stewardship of this gift or "talent" will result in blessing and reward but unfaithfulness will result in judgment (Luke 12:42–43; Matt. 25:14–30). R.H.S.

stoa (stoh´uh; Gk., "colonnade"), an open colonnade with a back wall to which columns were joined by the roof. A stoa might be used as an independent architectural unit, used as an entrance porch, or placed on one or more sides of a court. Large stoas have inner rows of columns or sections of solid wall that make the stoa more like an enclosed hall. Shallow projecting wings with gables on either end give the free-standing stoa a more balanced appearance. In Hellenistic times stoas of two or more stories were developed. Those built on hills might have several stories or substructures. The upper story often served as a gallery over the lower section of the stoa.

A stoa served many purposes: it was a place for council meetings, for law courts, or for magistrates' headquarters; a repository for public documents; a building housing offices, shops, and storerooms; or a meeting place for a school.

A school of philosophy took its name from such a meeting place (Stoics), and when Paul was in Athens, he was confronted by them in the marketplace around which the stoas in Athens were ranged (Acts 17:17–18). ***See also*** Agora; Athens; Stoics. P.P.

Stoics (stoh´iks), members of a philosophical school founded in Athens by Zeno (335–263 B.C.). Although the scholars of the school developed theories of physics, cosmology, and logic, it was best known for its emphasis on moral conduct. The school was named for the "Painted Porch," a colonnade (Gk. *stoa*), in which it met at Athens. The Stoics held that the entire universe was a living creature animated by the divine Logos (reason or mind). This Logos was identified with Zeus. Every person was a slave of the ruling Logos.

Since the Logos pervaded everything, whatever happened in the universe was governed by this universal law of nature or providence. All human beings were brothers and sisters in this universal, living body. This imagery was well suited to the cosmopolitan empires of the period. Since everything that happens to people was determined, the only way in which individuals could control their lives was to control the passions governing how external events affected them. Control of oneself was the avenue by which humans showed their freedom and superiority to fortune.

In the turbulent world of Roman politics, many leading Romans found the Stoic philosophy a consolation and guide for life. One frequently faced sharp, sudden reversals of fortune that called for the resources of inner discipline expounded by the Stoics. One of the most famous Stoic teachers and writers of the first century, Epictetus, was a lame Phrygian from Hierapolis, who had been slave to Nero's freedman Ephaphroditus. After gaining freedom, Epictetus lectured to large audiences that they should only be concerned about what was under their control. Another famous Stoic teacher was Nero's tutor and advisor, Seneca, who retired from the court when Nero's career turned bad and was later forced to commit suicide by the suspicious emperor. In the second century, the emperor Marcus Aurelius, who had studied Epictetus, recorded his meditations while in the field with the army. Stoicism did not hold out hope for life after death but sought to call people to identify with the divine reason immanent in the cosmos. Some Stoic philosophers in Athens discussed Paul's religious views with him (Acts 17:18). P.P.

stone, any of a large variety of hardened natural inorganic, often mineral, substances. Occurring frequently in Syro-Palestine and Anatolia, largely absent in Mesopotamia, and available only up the Nile in ancient Egypt, stone forms the most stable construction material provided in nature. Found in Palestine largely as limestone mixed with some chert, or sandstone, or the volcanically produced and very hard basalt, it provided amply for everyday construction needs. Precious and semiprecious stones were another matter. They were frequently imported from various supply points, as with turquoise from the Sinai peninsula. Ore-bearing stone carrying copper and iron was located in the southern reaches of both Palestine and the Transjordan.

Biblical references provide examples of the wide spectrum of uses to which stone was put. It could serve as a memorial, shrine, and pledge (Gen. 28:18–22). It could cover wells (Gen. 29:2–10) and doorways to tombs (Mark 15:46; Matt. 27:60; Luke 11:39). It could be worked into bowls, mortars, pestles, sockets for doors, and other implements (Exod. 7:19). It served as a weapon, whether thrown by hand (Exod. 8:26), sling (1 Sam. 17:49), or catapult. It symbolized immediate destruction by its action of sinking rapidly in water (Exod. 15:5), and its immobility could symbolize death (Exod. 15:16). It could give the weary rest (Exod. 17:12), serve as construction material for altars (Exod. 20:25), or be a public record of binding law (Exod. 24:12), the accomplishments of persons (Exod. 28:10), or noteworthy events, as with royal stelae. It could serve as a device of public execution (Lev. 24:14) or private anger (Exod. 21:18). Used as an object of worship (Lev. 26:1) it could be conducive to sexual excess (Jer. 3:9, in probable reference to ritual prostitution as part of Canaanite religion) or other idolatry (Ezek. 20:32; Deut. 28:36, 64; 29:17). It could serve as a memorial of significant events (Josh. 4:1–10), or of covenant renewal (Josh. 24:26–27), or as a named boundary point (Josh. 15:6; 18:17). It served as a platform for executions (Judg. 9:5, 18), and as a weapon it could be honed to fine accuracy (Judg. 20:16). It stood as the measure of hardness (Job 38:30, for ice; 41:24, for the human heart). It could cause accidental stumbling (Ps. 91:12) or serve as a device of magic (Prov. 17:8). Stone of special quality served as cornerstones for walls or buildings (Isa. 28:16), but it could symbolize ultimate ruin (Hos. 12:11). It symbolized the opposite of nourishing bread (Matt. 7:9) but could in properly fashioned form hold water or wine (John 2:6–11).

Use of stone for tools like axes, knives, scrapers, hammers, and grinders, which began in prehistoric times, has continued in some respects to the present day in the biblical lands, especially in rural life. When boys get into a fight, the first weapon likely is a quickly grabbed rock. Stoning remains part of the punitive procedures used in some parts of orthodox Judaism. ***See also*** Limestone. R.S.B.

stoning, a form of capital punishment. Most of the offenses punished by stoning were crimes

against the sovereignty of God. They included blasphemy (Lev. 24:15–16; cf. 1 Kings 21:13; Acts 7:11, 58), incitement to worship other gods (Deut. 13:6–10), worship of other gods (Deut. 17:2–7), worship of Molech by child sacrifice (Lev. 20:2–5), divination by mediums (Lev. 20:27), violation of the Sabbath (Num. 15:32–36), and violation of the taboo of devoted objects (Josh. 7:25). Stoning is specified also in cases of adultery (Deut. 22:21; 24; cf. John 8:3–7), filial insubordination (Deut. 21:18–21), and homicide by a goring ox (Exod. 21:28–29).

A description of the procedure in judicial stoning may be gleaned from various references. The stoning usually took place outside the city (Lev. 24:14; Num. 15:35; Deut. 17:5; 22:24; 1 Kings 21:13; but cf. Deut. 22:21). The criminal probably was stripped (Ezek. 16:39). The witnesses were the first to cast stones, followed by the entire community (Deut. 13:10; 17:7; cf. John 8:7). Accounts of nonjudicial stoning are recorded in 1 Kings 12:18; 2 Chron. 24:21.

The custom continued into NT times, as attested by the stoning of Stephen (Acts 14:19; cf. John 8:5, 7). The fact that Jesus died by crucifixion rather than stoning shows it was a punishment inflicted not by Jews but by the Romans. ***See also*** Law. B.L.E.

storage, the laying up of supplies for future use. Biblical references to storage focus on the special accommodations of store-cities and storehouses in addition to the routine acts of saving material or, metaphorically, emotions and other human traits.

Store-cities were used in Egypt (Exod. 1:11) where Israelites helped build them. Solomon's construction program included store-cities (1 Kings 9:19; 2 Chron. 8:4–6) in addition to fortifications and other facilities. Store-cities in Naphtali were captured by Ben-hadad of Syria during his invasion of Israel at the time of King Baasha (902–886 B.C.; 2 Chron. 16:4). Jehoshaphat built store-cities in Judah during his rule (874–850 B.C.; 2 Chron. 17:12). In each of these cases it is likely that the facilities were intended to cache military goods in addition to economic supplies.

Storehouses required assigned gatekeepers and watchmen (1 Chron. 26:15) and were regular parts of the postexilic Temple facility (Neh. 10:38). Royal storehouses could provide equipment for rescuing a person in trouble (Jer. 38:11–13). The Temple storehouse retained the tithes of the people (Mal. 3:10), and storehouses were coupled with barns as routine equipment for rich humans (Luke 12:16–19) but were not found among nature's inhabitants (Luke 12:24). Royal storehouses served to supply people in times of famine (Gen. 41:56), and empty storehouses at such times were a disaster (Joel 1:17).

As for materials kept in storage, references include edible food (Gen. 6:21); crops (Luke 12:17) elsewhere specified as grain (Gen. 41:49), wine (2 Chron. 11:11, 32:28), wheat, barley, and oil (Jer. 41:8); and iron (1 Chron. 22:3). People also stored documents (Ezra 6:1); silver, gold, and sacred vessels (2 Chron. 5:1); and baggage (Isa. 10:28).

In popular cosmology God's storehouses held the wind (Ps. 135:7; Jer. 10:13; 51:16), snow and hail (Job 38:22), and the ocean (Ps. 33:7). People could store up sin (Hos. 13:12) and violence (Amos 3:10) and wrath for days to come (Rom. 2:5) as well as wisdom (Prov. 2:7). Stores could be carried off as booty of war (Isa. 39:6) and the very heavens and earth could be stored for the eschatological fire that would judge "ungodly men" (2 Pet. 3:7).

Archaeological evidence shows that storage containers ranged from modest jars, bowls, and perfume juglets (silver tetradrachmas were found in a jug at Shechem and Islamic coins in a lamp at Hesban) to large store jars, to dry and wet storage pits and cisterns, to caves, to elaborate buildings such as those found at the Hittite capital of Boghazkoi or Masada or Shechem (where the Late Bronze Age temple was adapted for storage in the Iron Age). Jars held some of the Dead Sea Scrolls and a small juglet retained some dried ink in the desk of the scriptorium at Qumran. Some storage chambers could be entered only by ladders over the walls, and subterranean storage pits were frequently sealed with stone lids. Material could be stored on house roofs as well. R.S.B.

stork, a large wading bird. The Hebrew word usually translated as "stork" (*ḥasîdâh*) could also appropriately be translated "heron," which should perhaps be included in the term. Two species of stork migrate through Palestine in spring: the white stork (*Ciconia ciconia*) and, less frequently to be seen, the black stork (*Ciconia nigra*). Jer. 8:7 probably refers to the seasonal appearance of the stork, whereas Ps. 104:17 ("has her home in the fir trees") enigmatically refers to storks once nesting in Palestine. Zech. 5:9 compares the wings of angels to those of a stork, although it was considered an unclean animal (Lev. 11:19; Deut. 14:18). I.U.K.

stove. ***See*** Oven.

stranger ("sojourner" or "alien" in some translations), in the Bible one who is not a member of a particular social group. Accordingly, Abraham was a stranger among the Hittites at Hebron (Gen. 23:4) as were Moses in Midian (Exod. 2:22) and the Israelites in Egypt (Deut. 23:7; cf. Ruth 1:1). After the settlement in Canaan, the term not only designated a temporary guest but also acquired the more specialized meaning of a resident alien who lived permanently within Israel. No doubt because the Israelites were keenly aware of their own heritage as strangers without rights in a foreign land, they developed

specific laws governing the treatment of strangers (Exod. 22:21; 23:9; Deut. 10:19). Since the temporary guest was protected by the rather strict conventions of Near Eastern hospitality (e.g., Gen. 18:1–8; cf. Heb. 13:2), the laws more directly affected the resident alien who had no inherited political rights. Strangers were to be treated with kindness and generosity (Lev. 19:10, 33–34; 23:22; Deut. 14:29). They were included in the Israelite legal system (Lev. 24:16, 22; Num. 35:15; Deut. 1:16) and were subject to most of the religious requirements, such as the laws of ritual cleanliness (Lev. 17:8–13; but cf. Deut. 14:21) and the keeping of the Sabbath and fast days (Exod. 20:8–10; Lev. 16:29). They could celebrate Passover if they were circumcised (Exod. 12:48–49) and could offer sacrifices (Num. 15:14–16, 29). Ezekiel even envisioned a time when they would be granted an inheritance in the land as a sign of full citizenship (Ezek. 47:22–23). In later Judaism, the laws concerning strangers developed into the regulations governing the acceptance of Gentile proselytes into Judaism. In the NT "stranger" usually means simply someone who is not known (Matt. 25:34–40; John 10:5) or, in some older translations, a foreigner (Luke 17:18; Acts 17:21).

The term "stranger" also appears in a figurative sense, usually in appealing to the generosity and mercy of God in dealing with his undeserving people (Ps. 39:12; 119:19; 1 Chron. 29:15). The idea of dwelling in a land owned by someone else is also applied theologically to the relationship of the people Israel to the land; it belonged to God and they were the strangers in it (Lev. 25:23).

The NT picks up this concept in two different ways. On one level, the Gentiles, who were excluded by Judaism from being the people of God, are no longer aliens and strangers in the new Christian community but are counted as full citizens of God's own household (Eph. 2:11–21). On another level, the Christian is not a citizen of this present world but a citizen of the heavenly kingdom and is therefore only a stranger or a pilgrim in this world (1 Pet. 1:1, 17; 2:11; cf. Heb. 11:13). ***See also*** Foreigner; Hospitality; Proselyte. D.R.B.

strangled animals, animals the flesh of which could not be eaten because they were not slaughtered according to Jewish law, which calls for slitting the throat and draining the blood. This law also applied to meat eaten by Gentiles living among Jews (Lev. 17:10–14). In Acts 15:20, gentile Christians were enjoined not to eat meat from strangled animals, so that they could share table fellowship with Jewish Christians.

straw, the dried parts of grasses or herbaceous plants often used as fodder for animals (1 Kings 4:28; Gen. 24:25, 32). It is also the by-product of the processing of cultivated cereals, either the stubble of the cut grain left in the fields for the herds to graze over or the chaff separated by winnowing from the threshed grain (Pss. 1:4; 83:13). Straw was used as a binder for mud bricks (Exod. 5:7–18) or, when mixed with animal dung, as an efficient fuel for kitchen hearths (Isa. 25:10). ***See also*** Chaff.

stripes, wounds inflicted by beating with a whip or rods (Exod. 21:25; Isa. 53:5; 1 Pet. 2:24 where Isa. 53:5 is applied to Jesus). Deut. 25:2–3 prohibits a judge from condemning a person to more than forty lashes, so Paul speaks of receiving "forty lashes less one" at the hands of Jewish authorities (2 Cor. 11:23). ***See also*** Scourge.

stumbling block, any obstacle that may cause someone's downfall, whether literal (Lev. 19:14) or figurative (as elsewhere in the Bible). In Ezekiel it is idolatry (e.g., 14:3–4, 7), while in Jer. 6:21 it is left unspecified. According to Isa. 8:14–15, the disobedient stumble over their God, and in the NT this thought is applied to the unbelievers and Christ (Rom. 9:32–33; 1 Pet. 2:8). Paul specifically calls Christ's death a stumbling block or offense (Gk. *skandalon*) to the world (1 Cor. 1:23; Gal. 5:11), but he also warns that believers who flaunt their newfound freedom in Christ may place a stumbling block (*proskomma*) or hindrance (*skandalon*) in the way of others who do not share their knowledge (Rom. 14:13; 1 Cor. 8:9). ***See also*** Liberty; Rock; Snare; Stone. V.P.F.

suburbs, the term in the KJV for the RSV's "common land" (Lev. 25:34) or "pasture lands" (Num. 35:2). The term designates open grazing terrain around villages or cities. Such plots are referred to as associated assets when cities are assigned (Num. 35:7; Josh. 14:4; Ezek. 45:2 [RSV: "open space"]; and others). The word is not used in the Bible in its modern sense of residential areas surrounding a metropolis.

Succoth (suhk'uhth; Heb., "booths," "tents," or "temporary dwellings"). **1** A town in the Jordan Valley on the OT "Way of the Plain" (2 Sam. 18:23), which connected it with such towns as Adam, Zarethan, and Pella, and on a major route from central Palestine to Transjordan. Jacob returned from the East to Shechem by this route after his meeting with Esau (Gen. 33:17). Josh. 13:27 places it in Gad, although its previous control by Sihon, king of Heshbon (Hesban), would locate it farther south, near Madeba on the plateau. When Gideon was driving the Midianites out of Esdraelon to their homeland in eastern Transjordan, he asked the inhabitants of Succoth to give nourishment to his three hundred warriors. Perhaps because they feared reprisals from the Midianites, they refused him scornfully, for which after his victory he meted out brutal punishment (Judg. 8:5–16).

The final biblical mention of Succoth concerns the bronze vessels to be used in the Temple, which Solomon had cast "in the clay ground between Succoth and Zarethan" (1 Kings 7:46; 2 Chron. 4:17, which has "Zeredah" in place of "Zarethan"). Two parallel passages in the Psalms (60:6; 108:7) celebrate the conquest of the "Vale of Succoth" as well as the territory of Shechem, and, in the following verses, the whole of Transjordan. This celebration evidently belongs to the period of the United Monarchy (ca. 1025–922 B.C.), and probably to the reign of Solomon rather than that of David, who would have discouraged any idea of "conquering" Shechem.

All these passages put together indicate that Succoth was a place of considerable importance, fairly close to the east bank of the Jordan, where there was a ford giving access both to Shechem and to Esdraelon, and with easy access to the Transjordan plateau. Unfortunately, neither Succoth itself nor the neighboring towns of Zarethan and Penuel can be identified with any certainty. At present the weight of scholarly opinion seems to favor Tell Deir ʻAlla for Succoth, about two miles (3 km.) north of the Jabbok (modern Zerqa), with Zarethan perhaps at Tell es-Saʻidiyeh about two miles (3 km.) farther north, and Penuel at Tulul edh-Dhahab one and a half miles (2.5 km.) up the Jabbok.

Tell Deir ʻAlla was apparently first occupied in the Late Bronze Age (ca. 1500 B.C.) and was evidently at that time an important sanctuary, but it was destroyed by an earthquake at the beginning of the twelfth century. The contemporary scholar Yohanan Aharoni suggests that the "officials of Succoth" in the Gideon story were priests of this sanctuary, and that its destruction belongs to the same occasion.

Subsequently itinerant metalworkers occupied the tell in the twelfth century, and they were followed in the period of the United Monarchy by new immigrants from further east, who built a small walled town on the tell. This was captured by the pharaoh Shishak of Egypt during the reign of Jeroboam I of Israel (ca. 926–907 B.C.). Deserted for a considerable period, it was reoccupied and the sanctuary rebuilt in the seventh century B.C., but it was once more destroyed at some point in the Persian period and not reoccupied until the Middle Ages. H. J. Franken, who excavated the site in 1960–64, seriously doubts the identification of Tell Deir ʻAlla with Succoth and suggests that it may have been Gilgal. The nearby, but much smaller, Tell Ekhsas, "Hill of Booths" and Tell es-Saʻidiyeh have also been proposed, and the question still remains a very open one.

2 The first stopping place on the Exodus route (Exod. 12:37; Num. 33:5–6), often identified with Tel el-Mashkutah on the eastern edge of the Nile Delta; but this now seems very dubious. The name may perhaps indicate a merely temporary encampment. ***See also*** Adam; Gideon; Heshbon; Midianites; Pella; Penuel; Shechem; Shishak; Sihon; Transjordan; Zarethan. D.B.

Succoth-benoth (suhkˊuhth-beeˊnoth; Heb., "booths of girls"), the name of a god (perhaps Sarpanitu, although it is not certain) worshiped in Samaria by the Babylonians (2 Kings 17:30) brought there under Assyria's population displacement policy. In order to keep conquered areas pacified, Assyria deported native populations and replaced them with foreigners. That policy was implemented in the Northern Kingdom, Israel (Samaria), when it fell to Assyria in 721 B.C.

suffering, pain or distress, one of the most persistent of all human problems. Even those who experience relatively minor suffering in their own lives are constantly confronted with the suffering of others—within their own families, among their acquaintances, or even in distant lands. Suffering takes many forms: physical pain, frustrated hopes, depression, isolation, loneliness, grief, anxiety, spiritual crisis, and more. Such unpleasantness comes to good religious people, too. Certainly, the biblical peoples struggled with the presence of suffering in their lives and sought ways to understand it and cope with it that could include their belief in both God's power and God's goodness. The biblical responses to suffering can be divided into five categories.

Suffering as the Result of Human Sin: The most common way to understand the presence of suffering in the world is to say that it is the fault of human beings. The first three chapters of Genesis state that the world was intended to be a good place but that the disobedience of the man and woman (with a little help from the snake) introduced suffering into the world (as demonstrated by the curses in Gen. 3:14–19). No longer is the world the way God wanted it to be. All descendants of the first parents are now born into a sinful world where there is the potential for disaster. All are vulnerable to the possibility of suffering in their lives. The mere fact of being human and living in a world where people hurt each other and themselves can account for much of what is called suffering.

Other OT texts push the idea of cause and effect between human sin and human suffering a bit further. Historians and prophets interpret the meaning of specific calamities in Israel's history. In the time of the judges, all went well for the people when they were obedient to God, but when they turned against God, the Almighty would raise up an enemy to punish them. When they finally cried to God in desperation, God would raise up a judge to fight on their side and restore their good fortunes. Thus, the ups and downs of Israel's history can be explained (says the Deuteronomic historian in Judges, Samuel, and Kings) as rewards for

fidelity or punishment for idolatry. Similarly, the greatest catastrophe, the Exile, is seen as fit retribution for all of Israel's and Judah's failings (see esp. 2 Kings 17). Such a calamity would not have occurred if God did not will it (God has the power), and God would not have allowed it if it were not just (the people deserve it).

This is not yet, however, a belief in just retribution in each individual life. Good people as well as evil people suffered and died in the defeat by the Babylonians. When a whole nation is destroyed, it is impossible to make such fine distinctions. When a city is destroyed, good and bad alike are affected. Nevertheless, it is still possible to say, as these texts do, that the suffering is retribution for wicked behavior.

Other OT texts, however, do speak as if just retribution even for individuals is possible. Ezekiel 18 argues that God will deal with each individual, rewarding or punishing all persons according to their own deeds and not because of what their parents have done. Many of the Proverbs imply that the one who leads a good life will be more successful and less likely to suffer than one who defies God. Job's counselors were convinced that a good God who works in the world would never do such horrible things to Job if Job had not done something to deserve it. Though Job seemed to be innocent, he must have had a secret sin of which he needed to repent before his good fortunes would return.

This theory about the origin of suffering may work fairly well as a general statement about the state of the human race or even to account for the suffering of a decadent society. It becomes more and more suspect, however, as a way to differentiate why one individual suffers and another does not. There are too many examples of innocent sufferers and wicked people who prosper for this to be pushed as a universal explanation for an individual's suffering. Many sufferers who have read the texts that see suffering as punishment need to know that other biblical passages argue against a simple-minded and heavy-handed universalizing of the retribution doctrine. The book of Job shows that the counselors are wrong and Job, as he said, was an innocent sufferer. In Luke 13:1–5 and in John 9, Jesus indicates the mistake of interpreting each example of suffering as if it is the consequence of someone's sins. In the apocalyptic frame of mind of many NT books, it is actually more likely that the good people will suffer rather than the evil ones. Jesus warns his listeners that if they follow him, they should be prepared to take up their crosses (Mark 8:34–35). Following Jesus is no guarantee that one will avoid suffering.

Suffering Leading to Some Greater Good: Although suffering is by definition a very undesirable experience, it may lead to some greater good. As terrible as it seems at the time, one may look back on it from a distance and realize that some good has come from it. Many have found this to be a helpful way to find meaning in their suffering. It avoids preoccupation with suffering as punishment, with God as the Judge, and turns the sufferer toward the future and the possibilities that God will work something good from what seems so bad.

Suffering may be of benefit to other people. Joseph suffered greatly at the hands of his brothers, who sold him into slavery. At the end of his life, however, Joseph looked back at his life and saw that many people had benefited because of his suffering (Gen. 50:15–21). He was in the right place to prepare for the famine. He would not have been there if his brothers had not done evil toward him. They are indeed guilty of a hostile act toward him, but God used their wickedness and Joseph's suffering to bring about a greater good. It was, however, only with considerable hindsight that Joseph was able to come to this conclusion. Similarly, it is hard for most sufferers to believe this until enough time has elapsed that the trauma of suffering has been put into a larger perspective.

Christians believe that the suffering of Jesus Christ is somehow of benefit to all humanity. His death, brought about by human beings acting out of wicked motives, has been turned by God into the Christians' most central saving act. The suffering of one has benefited the many.

Another variation of this biblical understanding of suffering is the idea that a person's own suffering is of benefit to him or her. Many have attested that they are better people after being tested by the fires of adversity. Eliphaz (Job 5:17) and Elihu (Job 33:15–18; 36:8–12) suggest this possibility to Job. Prov. 3:11–12 describes suffering as the discipline of a loving parent, an idea picked up and expanded by the author of Hebrews (12:3–11). In Rom. 5:1–5, Paul tells his readers to rejoice in their suffering because it will help produce endurance and character and hope in them. Such words as these have often been comforting to sufferers, though only if this is a conclusion of their own and not an "answer" imposed on them by someone who seems callous to the reality of their present pain.

Suffering Caused by Cosmic Evil Forces: The first view discussed blames humans for suffering, either collectively or individually. The second view hedges a bit on the blame but sees God's role as one of turning what is bad into something that, if not good, at least can be of some benefit. Another possibility is that the cause of suffering is neither human beings nor God but supernatural forces for evil, hostile to both God and humans, too powerful for humans to withstand on their own but no match for the Almighty. Most of the OT does not personify this power for evil as the Devil or Satan. The Devil is never mentioned, and Satan as a cosmic figure occurs in only three places—Job 1–2; 1 Chron. 21:1; and Zech. 3:1–2. The snake in the

Garden of Eden is never called Satan, though later generations of interpreters surely made the connection. Other poetic passages in the OT refer to the Sea or a sea monster as a personification of superhuman powers of evil (e.g., Isa. 27:1; 51:9–10; Job 7:12; 26:12).

In the NT, suffering is often ascribed to the presence of demons (Luke 9:38–39), evil spirits (Acts 19:11–12), Satan (Luke 13:16), or the Devil (Acts 10:38). Psychological, physical, and spiritual suffering may be caused by these evil forces and are not due to human sin or God's execution of justice.

In modern times, many people are uncomfortable with these images as a way of identifying the origin of suffering. On the other hand, many find that there is no better way to talk about some forms of suffering. Some experiences of suffering are so terrible, so enormous in scale or depravity, that it is difficult to believe that humans are bad enough or that God is cruel enough to cause them. If one believes in a third force that is a common enemy of both God and humans, it is possible to join forces with God, not needing to blame either God or self, knowing that God will ultimately triumph over anything that can hurt humankind (see, e.g., Rom. 8:35–39).

The Mystery of Suffering: Human efforts to explain with satisfaction all experiences of suffering are doomed to frustration. Answers may be found that are partially satisfying, that may work in some cases, or that may provide some help for the need to find meaning. No matter how hard one tries, however, unanswered questions remain. At some point, one is finally confronted with the necessity of giving up the intellectual search and leaving the unknown in the care of God.

For chapter after chapter, Job and his friends try out all the best explanations for suffering that their tradition has to offer. Every interpretation offered up by the counselors is promptly rejected by Job. None of their answers fits. He wants a word directly from God, an explanation that will either acquit him or bring out into the open God's indictment against him. When God finally speaks in chaps. 38–41, it is not what Job has anticipated at all. Job cannot get in a word to force his own agenda. God overwhelms him with a comparison between the power and wisdom of the Almighty on the one hand and the weakness and ignorance of human beings on the other. Human beings cannot even begin to comprehend the complex wonders of the created order, let alone the mysteries of human suffering. There is an enormous gap between what God knows and what people know. Humans should be content to be human, leaving to God those matters that are, and will always be (at least this side of the grave), beyond human comprehension. God's presence apparently gives Job the confidence to trust God with those things that he cannot find out for himself. His relationship with God is now secure enough that he can live with unanswered questions.

Permission to Lament: This final category is of a different sort than the others. Whether or not humans can find answers to their questions about suffering, they still need some ways to cope with the immediate experience. The biblical laments provide some help, not with the "why" questions, but with the "how" questions. How can one survive? How can one get through the long nights of pain, the months of loneliness without the loved one, the weeks and months when despair hangs like a heavy weight around one's neck? "How long, O Lord?" The laments (e.g., Psalms 3; 5; 10; 17; 38) provide a biblical resource that helps sufferers to keep praying to God even when they are angry with God, doubtful of God's good intentions, uncertain even where God might be found. They give them permission to express negative emotions without fear of reprisal from God. They remove the isolation, letting people know that others who have traveled this way before, even great heroes of the faith like David and Jeremiah, have had thoughts and feelings similar to their own. They are not the only ones who have ever lived who have felt like this. Perhaps they are not losing their minds or their faith.

In modern culture, there is an enormous pressure to stifle lament, to take one's pain with a "stiff upper lip," to smile on the outside and conceal the pain on the inside. The response of biblical peoples to the suffering in their lives can be helpful to all who seek ways to deal with unpleasant thoughts and emotions that intrude into their existence in times of great trial.

There is no single biblical answer, then, to human questions about suffering. Rather, several possibilities are explored and presented. Some answers will be helpful to those who search for understanding; some will not. Some will ring true at one time in a person's life, but not at another. There will be times when no solution is forthcoming and one can only pray for the faith that is able to turn unanswered questions over to God. Throughout one's pilgrimage of suffering, however, there is assurance from the biblical writers that God will hear the prayers of those who cry out for help and comfort (e.g., Pss. 65:2; 66:16–20; 102:1–2, 17; Mark 11:24; 2 Cor. 1:8–11; Phil. 1:19–20). ***See also*** Apocalyptic Literature; Demon; Devil; Evil; Job, The Book of; Prayer; Providence; Satan; Sin.

Sumer (*soo*´muhr), an ancient civilization situated in the alluvial plain between the Tigris and Euphrates rivers in the southern part of what is now Iraq. The Sumerians developed the first major civilization of the ancient Near East. Together with Akkad, its neighbor to the north, the country was later known as Babylonia. Major cities of Sumer included Ur (the birthplace of Abraham, Gen. 11:26–32), Uruk (biblical Erech), Lagash, Nippur, Shuruppak, Eridu, Kish, and Eshnunna. Archaeological excavation of these cities and others in the past century has yielded a wealth of information on the culture, history, literature, and religion of Sumer, providing important material for understanding the cultural context of the ancient Near East and the Hebrew Bible.

The Sumerians were not the original inhabitants of the Tigris-Euphrates plain. They entered the plain approximately 3300 B.C., displacing the native population known to scholars as Ubayids. The Sumerians' original homeland is uncertain, although their non-Semitic, agglutinative language, like that of the Turkic peoples, suggests south-central Asia as a possibility.

Originally, Sumer consisted of a number of city-states, each with its own protective god. Political power was held by the free citizens of the city and a governor, called *ensi.* But as the city-states vied with one another for power and as pressures from outside invaders increased, the institution of kingship (Sumerian *lugal,* "big man") emerged, whereby the ruler of one city-state dominated others.

Kings: The first known king of Sumer is Etana of Kish (ca. 3000 B.C.). He is described as the "man who stabilized all the lands." His descendant, Enmebarragesi, built a temple in Nippur to Enlil, god of the air and chief of the Sumerian pantheon. This established Nippur as the leading cultural and religious center of all Sumer.

Kish eventually lost its power as the kings of Uruk, Lagash, and other cities established their hegemony over the region. Conflict among the city-states so weakened the country that by 2360 B.C., a Semitic king, Sargon I of Agade (biblical Akkad), was able to conquer Sumer. During the rule of the kings of Agade (2360–2180 B.C.), the region became known as Sumer-Akkad and Akkadian, the Semitic language of Akkad, began to replace the Sumerian language. Sargon's grandson, Naram-sin, plundered the temple of Enlil at Nippur. Later Sumerian writers saw Enlil's anger as the cause of an invasion by the Gutians, who overran Naram-sin's empire and destroyed Agade.

After several generations, Sumer began to recover under the leadership of King Gudea of Lagash. After the last of the Gutians were overcome, Ur-nammu founded the third dynasty of Ur (2050–1950 B.C.), which saw a renaissance of Sumerian culture. The famed ziggurat of Ur, a stepped-pyramid structure with a temple dedicated to the moon god, Nanna-sin, was built during this period. The law code of Ur-nammu is the earliest law code known in history. Later invasion by Amorites and Elamites resulted in the destruction of Ur and the following centuries saw continuing struggle between the Sumerian city-states. Finally, around 1750 B.C., the Semitic king Hammurabi of Babylon defeated King Rin-sin of Larsa and became the sole ruler of Sumer-Akkad. This marks the end of Sumer and the beginning of Babylonia.

Invention of Cuneiform Writing: Nevertheless, much of Sumerian culture continued to thrive in Babylonia. Perhaps the most important

Shamash, the Akkadian sun god, stepping through the mountains at dawn with rays springing from his shoulders; cylinder seal impression, ca. 2400 B.C.

Sumerian contribution to civilization was the invention of cuneiform writing, a wedge-shaped script formed by pressing a reed stylus into wet clay tablets, which were later dried, baked, and stored in libraries. The Babylonians and other surrounding peoples adapted the cuneiform script to their own languages so that for centuries cuneiform was the dominant mode of writing in ancient Mesopotamia. Most Sumerian tablets contain economic and administrative records but others include mythology, history, hymns, wisdom texts, law, and much more. Of special interest to students of the Bible are the aforementioned law code of Ur-nammu, the Sumerian King List, the Flood Story of Ziusudra, the Paradise Myth of Enki and Ninhursag, early forms of the Gilgamesh Epic, and the Descent of Inanna to the Underworld.

Sumerian religion included a large number of gods and goddesses identified with the forces of nature. Prominent among them were the four creating gods who controlled the major elements of the universe: An, the sky god; Ki, the earth goddess later known as Ninhursag; Enlil, the air god and chief of the Sumerian pantheon; and Enki, the god of water and wisdom. Other important deities included Nanna, the moon god; Utu, the sun god; and Utu's daughter Inanna, the evening star, known to the Babylonians as Ishtar. Inanna's husband was the vegetation god, Dumuzi (Babylonian Tammuz). Dumuzi was conceived as a dying and rising god. During the dry season when nothing grew, he was in the world of the dead. But in Sumerian mythology, Inanna rescues him for six months of the year during which time the rains come and the earth blooms. Their reunion was celebrated at the New Year Festival when the king and a priestess assumed the roles of Dumuzi and Inanna in a sexual sacred marriage rite, thus assuring continued fertility and prosperity for the coming year. ***See also*** Babylon; Mesopotamia.

sun, the star around which the earth orbits. The sun was recognized in the Bible as a beneficent source of light and heat (Deut. 33:14) upon which all life depended, but its power to smite was also known and feared (Isa. 49:10; James 1:11). Created and appointed by God to "rule over the day" (Ps. 136:8), it marked the hours and seasons by its movements (Gen. 1:14–16), and it marked directions by its rising and setting (Isa. 45:6; Deut. 11:30). It surveyed the whole earth from its heavenly course (Ps. 19:6), marking all that occurred below as existence "under the sun" (Eccles. 1:3, 9). It traversed its course like a runner (Ps. 19:4–5), or as drawn by horses and chariot (2 Kings 23:11). It was resplendent as a bridegroom (Ps. 19:5), as enduring as the ages (Ps. 72:17). Surrounding peoples worshiped the sun (Babylonian Shamash; Egyptian Re, Aton) and place names like Beth-shamesh (Heb., "House or Sanctuary of the Sun") attest such worship in pre-Israelite Canaan. Illicit sun worship was also found in Israel (2 Kings 23:5, 11; Ezek. 8:16). The sun's radiance and restorative power served as figures of God's eschatological reign (Mal. 4:2: "the sun . . . with healing in its wings"; Isa. 30:26; cf. Rev. 21:23), and divine intervention in history was signaled by miraculous changes in the sun's course or appearance (darkening, Isa. 13:10; Mark 13:24; premature setting, Amos 8:9; advance or retreat, Josh. 10:12; Isa. 38:7–8).

Susanna (*soo*-zan´uh). **1** The heroine of the deuterocanonical book who is falsely accused of adultery by two elders whose advances she refused. In the story she is successfully defended by a wise youth, Daniel. The story precedes the book of Daniel in the Septuagint and follows it in the Vulgate. **2** One of the group of women who traveled with Jesus and his disciples and provided for them (Luke 8:3). ***See also*** Apocrypha, Old Testament; Susanna (one of the Additions to Daniel).

Susanna, one of the Additions to Daniel in the Greek translations of the Hebrew OT, found after chap. 12 in the Septuagint (LXX) version and at the beginning of Daniel in Theodotion. It was probably composed in Hebrew and appended to some manuscripts of the Hebrew-Aramaic ver-

sion of Daniel sometime prior to 100 B.C. Susanna is the story of Daniel's rescue of a young and beautiful woman, condemned to death for adultery as a consequence of a plot by two magistrates to blackmail her into having intercourse with them.

The story opens with the marriage of Susanna to Joakim, in whose house the local court sits (vv. 1–6). Two of the elders or magistrates of the court desire Susanna and look for an opportunity to find her alone (vv. 7–14). As she takes a bath in her garden, they hide and then give her the choice of submitting to them or having them accuse her falsely of adultery (vv. 15–21). Susanna refuses their demands (vv. 22–23). She is accused, tried, and condemned to death (vv. 24–41). In response to her prayer for help, God sends the youth Daniel to aid her (vv. 42–46). He interrogates the two elders separately, proving their guilt, and the court sentences them to death in Susanna's place (vv. 47–62). The story concludes with Susanna's parents and husband praising God and the note that this case first established Daniel's reputation among the Jewish people (vv. 63–64).

The story is a masterpiece of the art of Jewish narrative. Like Tobit, Judith, the Rest of Esther, and the stories in Daniel 1–6, it illustrates how God defends the righteous who call upon him. The difference in the case of Susanna is that the threat comes from within the Jewish community rather than from outside it. Susanna also reflects the isolation of upper-class Jewish women in postbiblical times through virtual confinement to the home and the use of the veil in public. Protestants include the book among the Apocrypha, while Catholics consider it part of the canonical text of Daniel. ***See also*** Apocrypha, Old Testament; Daniel, The Additions to; Women. D.W.S.

swaddling, the practice of wrapping newborn infants in strips of cloth to keep their limbs straight. Ezek. 16:4 indicates the procedure that was followed in the birth of a child: the umbilical cord was severed, the infant was washed and then rubbed with salt, and then it was wrapped in cloths. According to Luke 2:7, 12, Jesus was wrapped in swaddling cloths after his birth. The Hebrew word of which "swaddling" is the English translation could also denote cloths used in the binding of broken limbs (cf. Ezek. 30:21) and was sometimes used figuratively (cf. Job 38:9). ***See also*** Child, Children. J.M.E.

swallow, a small bird of the family Hirundinidae. It is not certain that either of the two Hebrew words (*deror, sis*) translated "swallow" (RSV) represents the bird we know by that name. The first term (*deror*) appears twice in the OT; once in Ps. 84:3 along with a general term for "bird" to portray the peace and tranquility of the Jerusalem Temple, and once in Prov. 26:2 where it is used to compare an unfounded curse to the flight of a bird. The second term (*sis*) is likewise used twice; once as a simile to describe the sound of clamor from the sick Hezekiah (Isa. 38:14), and once as an example of habit in contrast to the fickleness of God's people (Jer. 8:7). F.R.M.

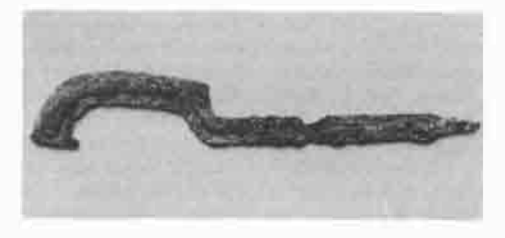
swearing. ***See*** Oath.

swine, or pig, a stout-bodied, short-legged omnivorous mammal, family Suidae. Swine are "unclean animals" in the OT, because they have cloven hooves but no ruminant stomach (Lev. 11:7; Deut. 14:8). The prohibition against the pig as a food animal for Jews is probably rooted in religious prohibitions against animals sacred to other peoples. The modern fear of a trichinosis infection, a parasitic and often lethal disease transmitted to humans by consumption of insufficiently cooked pork, is valid but unlikely to be the original reason for regarding swine as ritually unclean (Isa. 65:4; 66:3).

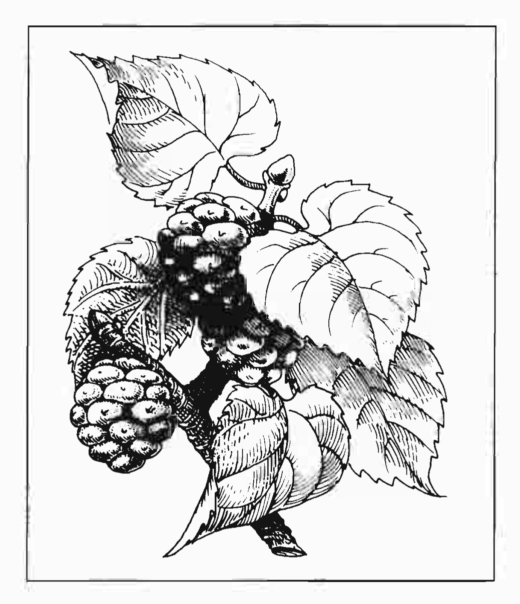
The pig was domesticated in Neolithic times (ca. 9000–4500 B.C.) from the wild boar (*Sus scrofa*), which still roams the Jordan Valley and the Jordanian highlands in great numbers today. Pigs were useful animals, because they converted all kinds of otherwise unusable food, such as leftovers, rodents, acorns, and roots, into meat. But they also required careful herding to keep them away from cultivated areas.

The low estate to which the prodigal son fell is signified by his occupation as a swineherd (Luke 15:15, 16). Pigs also figure in the story in Matt. 8:28–34, where Jesus heals two men by allowing their demons to occupy a herd of swine that then rushes headlong into the Gadarene Lake. The proverbial foolishness of "casting pearls before swine" has its origin in Matt. 7:6, while the saying "like a gold ring in a swine's snout" stems from Prov. 11:22. I.U.K.



sword, a close-range weapon composed of a metal blade, which was usually bronze or iron in the biblical period, and a wood or bone handle (Judg. 3:22). The sword is distinguished from the dagger on the basis of length; the former designation is normally applied to weapons that are over one foot long. Depending upon its function (i.e., slashing or stabbing), the blade was single- or double-edged (Judg. 3:16; Ps. 149:6), curved or straight, pointed or blunt. Since swords were so common in the ancient world, the biblical writers provided few descriptive details about these weapons. Fortunately, archaeologists have recovered many swords and daggers from virtually every period of antiquity; this makes it possible for readers of the Bible to obtain some understanding of the weapons mentioned in particular biblical episodes.

Between the third millennium B.C. and the Greco-Roman period (333 B.C.–A.D. 324), the sword evolved through a variety of shapes,



lengths, and levels of durability. The earliest swords were made of bronze and averaged only about 10 inches in length; blades were double-edged, straight, and pointed. While this dagger-like weapon was used primarily for stabbing, the longer sickle-sword was made for slashing. Through the centuries, numerous changes were made in blade production and in the method of attaching the blade to its hilt, but the major change in the development of swords took place when iron-working became widespread. Archaeological and biblical evidence points to the Philistines' early monopoly on the military use of this superior metal (1 Sam. 13:19–22). With the arrival of the Iron Age ca. 1200 B.C., the straight, long sword was developed as a formidable weapon for the first time in history. Since iron possesses greater hardness and strength than bronze, iron was ideal for the forging of longer blades and more durable cutting edges. The double-edged, pointed sword reached a length of 30 inches, and this weapon was strong enough for thrusting and slashing. Although the long sword was improved and used throughout the Mediterranean region until relatively modern times, Greek and Roman soldiers also used shorter swords. The typical sword of Roman soldiers in NT times was the *gladius,* a lightweight, well-balanced weapon with a blade about 2 feet long (see Eph. 6:17: "sword of the Spirit," Lat. *spiritus gladius*).

Between the first biblical reference to the sword, the mysterious "flaming sword" in Gen. 3:24, and the final mention of this weapon, the sword of judgment in Rev. 19:21, the term "sword" appears in the Bible well over four hundred times, making the sword the most frequently mentioned weapon in Scripture. References to swords occur in accounts from every biblical period. Most passages refer to the literal weapon of war, but the sword also symbolizes aggression (Jer. 2:30; Matt. 26:52), disharmony (2 Sam. 2:26; Matt. 10:34), deceit (Ps. 55:21), divine assistance (Ezek. 30:21–25), God's word (Eph. 6:17; Heb. 4:12), and divine wrath (Isa. 34:5–6; Jer. 50:35–37; Ezek. 21:9–20; Hos. 11:6). Since the sword was normally kept in a sheath (1 Sam. 17:51), the drawn sword signified war (Judg. 8:10). The prophets allude to the drawn and sheathed sword to symbolize the threat of God's judgment (Jer. 47:6; Ezek. 21:3–5, 28–30). Highly figurative are the book of Revelation's references to the sword of judgment that protrudes from the Lord's mouth, a probable reference to the power of his words of judgment (1:16; 2:12, 16; 19:15, 21). Above all of this military terminology stands the hope that an age of peace will eventually eliminate the need for swords (Isa. 2:4; Mic. 4:3; see Joel 3:10, where this situation is reversed). ***See also*** Soldier; War; Weapons. G.L.M.

Curved sword from the excavations at Byblos, eighteenth century B.C.

sycamine (sik´uh-meen), a tree used in an example by Jesus (Luke 17:6). Most authorities believe it to be black mulberry.

Sycamine (black mulberry).

sycamore (*Ficus sycomorus*), the biblical sycamore, or mulberry fig, that thrives in warm lowland areas of the Holy Land, a tree not to be confused with the sycamore of more temperate regions. Although its fruit is smaller than and not as tasty as that of the regular fig, it is a popular food, especially for the desert bedouins, who often pause in the shade of its low, spreading branches. The wood, though soft and porous, is quite durable and is therefore often used in the manufacture of furniture and for the construction of buildings (1 Kings 10:27; 1 Chron. 27:28; Isa. 9:10; Amos 7:14; Luke 19:4). P.L.C.

Sychar (*si*´kahr), according to John 4:5, a village in Samaria where Jesus spoke with the Samaritan women (John 4:5–42). John 4:5 locates the village near a field reputedly given by

Jacob to his son Joseph, with a well still active in Jesus' time (4:6). The actual site of the village is disputed, most scholars holding for Tel Balata, ancient Shechem (Lat. and Gk., "Sychem"; cf. Acts 7:16), but some for the nearby village of Askar. Both are near what is called today "Jacob's Well," some thirty miles due north of Jerusalem. The solution depends in part on the accuracy of the site of Jacob's Well. ***See also*** Jacob; Jacob's Well; Joseph; Samaria, District of; Samaritans. C.H.M.

Sychem (*si*ˈkuhm). ***See*** Shechem.

Syene (*si*-ee'nee; KJV: "Seveneh"), a town on the east bank of the Nile just north of the First Cataract. Called *Swn* (modern Aswan) by the Egyptians, it was at the southern border of Egypt; Ezekiel's pronouncement on the forthcoming fate of all Egypt at the hands of the Babylonians speaks of "from Migdol to Syene" (Ezek. 29:10; 30:6). On the island of Elephantine (Heb. *Yeb),* across from Syene, there was a late sixth- and fifth-century B.C. military colony in the service of the Persians. The Elephantine Papyri, several groups of Aramaic documents found on the island, show that this colony included many Jews, who had their own temple to God, were permitted to celebrate the Passover festival, and lived both on the island and in Syene. ***See also*** Passover, The; Temples. J.M.W.

symbol, a term derived from the Greek noun *symbolon,* meaning "token," "insignia," or means by which one party (e.g., an ally or partner) identifies another. The noun comes from a verb meaning "to put together" or "to compare." One thing, usually concrete and specific, represents or stands for something else, usually abstract and generalized.

Although the word is not found in either the OT or the NT, symbolic words, objects, or actions are common throughout the Bible. Biblical symbolism (in the phrase of Paul Tillich) "opens up reality and opens up the soul." The symbol provides a place where spiritual and material come together. It arouses an awareness of God and God's will or purpose. For example, the law, the land, the covenant, and the Temple are symbols of God's electing grace. They are things present and visible that represent things transcendent or invisible, namely, God's electing grace and Israel's response of obedience. The symbol thus also opens depths within our own being. The inherent power of the commandment "You shall be holy, for I the LORD your God am holy" (Lev. 19:2) is that human beings, created in God's image and likeness, are the supreme symbol of God in the Bible. In the NT, the sense of the human as symbol of God reaches its culmination in John 1:14. Jesus, the divine Word incarnate, is the central symbol for NT faith. He is the one in whose human life God is present and revealed.

Loaves of bread and a fish, which were symbolic in early Christian art of the Eucharist; wall painting from the catacomb of St. Callixtus, Rome.

Natural Symbols of God's Power and Grace: Heaven and earth "proclaim God's handiwork." They reveal the splendor and power of God (Job 38:4–41; Pss. 19:1; 65:5–8; 103:19; 104:1–4). Since all that God has made is good (Gen. 1:31), living things and even inanimate matter can reveal the covenant relationship with the Creator. The relation between Israel and Yahweh finds expression in the love between bride and bridegroom (Ps. 45; Isa. 61:10). The fig tree and the vine (Jer. 24:1–8, cf. Luke 13:6; Isa. 5:1–7) symbolize Israel; wine in plenty, the abundance of the messianic age (Amos 9:12; Joel 3:18). The covenant manifested in the "bow in the cloud" (Gen. 9:8–17) stands as a reminder of God's promise not to destroy the natural order. It is therefore also a reminder of the grace and mercy of the Creator toward all living creatures. Oil, a natural product, is in both the OT and NT a symbol of the honor shown to a guest (Ps. 23:5; Luke 7:38, 46), of joy (Isa. 61:3), or respect for the dead (Mark 16:1).

Natural Symbols of Sin and Estrangement from God: Heaven and earth also provide symbols of human sin and the need for divine redemption. The Synoptics (Mark 13:24–25; Matt. 24:29; Luke 21:25) use the traditional terminology of Jewish apocalyptic (e.g., Isa. 13:10; 34:4; Ezek. 32:7) to symbolize political upheaval and the end of the world. The darkness of night conveys terror (Ps. 91:5), threat of murder (Neh. 6:10), and national or personal evil or iniquity (Isa. 9:2; cf. 8:22; 60:2; John 11:10, cf. 9:4). Nicodemus came to Jesus by night (John 3:2). The later reference in the Fourth Gospel to night (19:29) suggests that the earlier reference is more than casual. To be estranged from God is to be "in darkness" (1 Thess. 5:5–7) and far from salvation (Rom. 13:12). In the new Jerusalem this eschatological darkness is past, for the glory of God is its light (Rev. 21:23–24), "and there will be no more night" (22:5).

Other natural symbols include fire as a mark of divine judgment (Gen. 19:24; Exod. 9:24; but cf. Gen. 15:17 and Lev. 9:23–24, where it denotes the divine acceptance of the sacrifice).

Water in the Noah tradition (Gen. 7:11–12) is no longer the source of created life (Gen. 1:9) but the mark of divine judgment (Gen. 7:4). This symbolism of sin and death underlies such NT references to baptism as Rom. 6:3–4; Col. 2:12; and 1 Pet. 3:18–21. In 1 Cor. 10:1–2 Paul sees baptism as symbolized by the passage through the Red Sea. James compares the evil spoken by the tongue to bitter water (James 3:11). In contrast, the absence of sap or water (as in the dried-up fig tree) is a sign of faithlessness or failure to be fruitful in obedience to God or Jesus Christ (Mark 11:20–21; Matt. 21:9–10).

God's Revelation in Event and Word: Revelation in the OT is supremely God's self-disclosure in the mode of word or speech. Only through such revelation can the gulf created by human sin be bridged. Since it expresses the reality of God—a reality that is not otherwise directly knowable—the word that comes to the prophets unveiling God's character or call (e.g., Isa. 1:2; Ezek. 1:3; Mic. 1:1) is the supreme symbol of God's self-disclosure. This word denotes God's will, presence, wisdom, or power to create, renew, or heal (1 Sam. 15:10; Ps. 119:105; Isa. 55:11; Jer. 37:17; Ps. 33:6; Ezek. 37:4; Ps. 107:20). The God so revealed is described throughout the OT as King, Lord, and so on, but imagery of childbearing and nurture is also frequent (Num. 11:12; Hos. 11:1, 3, 4, 8; Jer. 31:20; Isa. 42:14; 46:3–4; 49:14–15; 66:12–13; Pss. 22:9; 131:1–2).

For Israel, the Teaching or Torah, revealed to Moses and the Jewish people, was the sum of Israel's religious doctrine and the foundation of its existence. In preparing the people for the revelation and reconciliation symbolized by the events in Exodus 19–24 (culminating in the sealing of the covenant in blood), Moses instructed them to wash themselves (Exod. 19:10–11). Earlier, the mysterious fire in the bush presaged a revelation and commission from God (Exod. 3:1–6); the pillars of cloud and fire that accompanied the people on their journey (Exod. 13:21–22) testified to the watchful presence of God. Now, on Sinai, the cloud (Exod. 16:10) betokened the divine light or glory.

Menorah, shophar, and other traditional Jewish sacred objects; third-century pottery sherd from Beit Natif.

Two symbols chiefly identified with the covenant are the Sabbath (Exod. 20:8–11; 23:12; Deut. 5:12–15), with its religious worship and ethical instruction, and circumcision. The life of Israel depended on keeping the Sabbath (Jer. 17:24–27; Ezek. 20:19–20; 44:24). The Sabbath was to be a day of rest, for God had rested on the seventh day and sanctified it (Gen. 2:1–3). In the Deuteronomic code, the Israelites were to remember the Sabbath by refraining from oppressing subject peoples, since they themselves had once been slaves (Deut. 5:12–15). In the P tradition, circumcision was the sign of the covenant made with Abraham (Gen. 17:1–14). It is a mark or token of initiation into the covenant community, as, in contrast, to be uncircumcised is to be outside that community (Ezek. 28:10; 31:18; 32:19). Jeremiah deepens the symbolism by calling for a circumcision of the heart (Jer. 4:4).

The Feast of the Passover symbolized different events connected with the Exodus. Each subsequent commemoration of the Passover was a reliving of the original experience in a symbolic manner. The eating of unleavened bread, for example, was a reminder that there had been too little time to obtain sufficient food for the journey (Exod. 12:33–34, 39). Later additions (such as placing a roasted shankbone at the *seder* table, for example) were linked to the symbolism of redemption from evil.

Symbolic Actions, Persons, Names, Places, Numbers, Objects, Colors, and Handedness: The prophets often conveyed a message in such enacted parables as Isaiah's walking barefoot and naked (Isa. 20), the spoiled waistcloth of Jeremiah (Jer. 13:1–11), and Hosea's experience through his marriage of God's displeasure with Israel's corrupt and syncretistic worship. For other symbolic acts, see also 1 Kings 11:29–30; 1 Sam. 15:27–28; Isa. 20:1–5; Jer. 19:1–11; 27:1–7; 28:10–11; 32:6–8; Ezek. 4:1–3; 24:15–18; Hos. 1–3. Clothing is often a symbol of the transient (Isa. 50:9; 51:6, 8). Tearing clothes is a mark of sorrow (Judg. 11:35) or anger (2 Kings 5:7). Paul expresses the inward transformation of the believer or of the believer's participation in Christ's death and resurrection as putting on new clothing (2 Cor. 5:2; Gal. 3:27; Col. 3:10; cf. 1 Cor. 15:53; Rev. 3:5). The giving of a name is frequently associated with the honor or character of its bearer or with good or painful events surrounding the bearer's birth. The names of Hosea's children ("Not pitied" and "Not my people," Hos. 1:6, 9) ex-

press God's condemnation of the house of Israel. Isaiah gave his son the name Shearjashub ("A remnant shall return") to signify the return of the remnant to carry on the history of Israel (Isa. 7:3). A new name often implies a change in a person's character or circumstance, for instance, for Abram (Gen. 17:1–8) or Jacob (Gen. 32:24–28). In the NT, Jesus' name is significant, since it points to his work of salvation (Matt. 1:21) and expresses the content of his mission (Acts 4:12).

Egypt, the land of the Jews' captivity, becomes in the Prophets a symbol of spiritual bondage (throughout Isaiah, Jeremiah, and Ezekiel; cf. Mic. 7:15; Hos. 8:13; 9:3). In Stephen's sermon (Acts 7:1–53) the deliverance from Egypt illustrated God's saving power (cf. Acts 13:17). Elsewhere Egypt denotes the unfaithfulness to God of the ancestors (Acts 7:39; Heb. 8:9; Jude 5) or the place of death (Rev. 11:8). Other place-names are symbolic of rebellion against God (e.g., Babel, Gen. 11:1–9) or of religious deviance (e.g., Samaria, Mic. 1:6–7). In contrast, Canaan symbolized the land of the covenant because its cities and people were God's heritage (2 Sam. 10:12; 21:3); above all this was true of Jerusalem, the place of the Temple and God's dwelling place (Ps. 48:1–3; cf. Ps. 84).

Certain numbers have particular associations in the OT, the number one often suggesting wholeness or indivisibility (Deut. 6:4, marg.). Three is prominent in the Gospels (Matt. 12:40; 26:61; 27:40, 63; Mark 8:31; 14:58; 15:29; Luke 11:5; John 2:19–20). Four (Ezek. 10:21; Acts 11:5), seven (esp. in Revelation, see Rev. 1:4; 2:1; 4:5; 5:6; 8:2, etc.), ten, one hundred, and one thousand (all frequent) indicate completeness or fullness of some kind. Forty is a moderate round number (as in Gen. 7:12; Matt 4:2). Sacred objects such as amulets, made of various materials, were worn for protection against evil or for blessing. In the form of a capsule, they were at times fixed to a doorpost (Deut. 6:8–9). The color white symbolized purity (Ps. 51:7; Isa. 1:18; Dan. 11:35, marg.). In the transfiguration account of the white garments of Jesus (Matt. 17:2; Mark 9:3; Luke 9:29) and the appearance of the angels at the tomb (Matt. 28:3; Mark 16:5; Luke 24:4), the color white suggests the dawn of the resurrection (cf. Rev. 1:14). Black, in contrast, indicates death or mourning (Job 30:30; Isa. 13:10; 50:3; Jer. 4:28; Rev. 6:5 may refer to famine); and red, guilt, bloodshed, or warfare (Isa. 1:18; Nah. 23:3; Zech. 6:2; Rev. 6:4; 12:3). Blue is associated with sacred places or vestments (Exod. 26–28).

Handedness also has symbolic significance. God brought Israel out of Egypt with a mighty hand (Gen. 32:11; cf. 2 Chron. 20:6; Ps. 89:21), a symbol of divine omnipotence and protection. Striking the hands together is a sign of anger (Num. 24:10); spreading out the hands, prayerful supplication (2 Chron. 6:12); clapping the hands, joy (Ps. 47:1); placing them on the head, sorrow (Jer. 2:37). To put one's right hand on another's head is a way of blessing (Gen. 48:18). The use of hands in the ritual sacrifice of the Day of Atonement (Lev. 16:14–16) symbolizes the transfer of guilt to the scapegoat. To lay hands on someone can mean to hand over authority (Num. 27:15–19; Deut. 34:9). In the NT, laying on of hands is a gesture of blessing (Matt. 19:13, 15) or healing (Matt. 9:18; Mark 5:23; 6:5; 7:32; 8:23; Luke 13:13; Acts 28:8). In the context of baptism (Acts 8:17–19; 9:17; 19:6), it implies a bestowal of the Spirit. It is also used of commissioning or ordaining for a service (Acts 6:6; 13:3; 1 Tim. 4:14; 2 Tim. 1:6).

Sacred Symbols: From the time of the entry into Canaan, holy places commemorated events associated with ancestors, kings, or heroes; for example, Bethel (Gen. 12:8) or Dan (1 Kings 12:26–31). The significance of such sacred places diminished when the Temple became the one holy place for the Hebrews. While evidence varies from the pre- to the postexilic period, the symbolism of the Temple and its furnishings generally remains constant. In the Temple erected by Solomon, the idea of a portable sanctuary had not been wholly lost, even though the God of Israel had acquired a fixed dwelling place. Two cherubim covered the Ark in the Holy of Holies. They appear to have carried a throne, the earthly site of the *shekinah* or glory of the Lord, as the following passages suggest: 1 Sam. 4:4; 2 Sam. 6:2; Pss. 80:1; 99:1; Ezek. 43:6–7; 9:3; 10:19. The ephod or priestly garment and the breastplate (Exod. 28–29) symbolized the spiritual dignity of the priest. The robe of the high priest, adorned with pomegranates and bells, the turban with its inscription "Holy to the LORD" (Exod. 28:36–38), and all the sanctuary furnishings were sacrosanct: altar, utensils, and incense (Exod. 29:37; 30:10, 27–29, 34–38). Kneeling as an attitude of prayer (1 Kings 8:54; Ps. 95:6) is symbolic of reverence or humility (2 Kings 1:13), just as standing (Ps. 33:8; Ezek. 2:1) expresses awe or attentiveness.

God's Revelation in Jesus Christ: Salvation in the NT is understood in terms of an essentially new event and word. The divine Word (*logos*) "became flesh" (John 1:14). The divine glory in all its fullness dwells in Jesus Christ (Col. 1:19). When the Word of God became flesh, he made the image of God visible. He is truly God, not a symbol of God. He is also truly human, and not merely a symbol of true humanity, for he assumed the form of those who bear God's image. He entered the very creation that is subject to sin and death, to renew it through his own death and resurrection (Phil. 2:6–11). Paul summarizes the content of his preaching as "the message (*logos*) about the cross" (1 Cor. 1:18). This shows the inherent power of a new symbol to denote the salvation that was central to the church's proclamation. The cross is a typical NT

symbol of the sufferings and death of Christ (1 Cor. 1:17–18; cf. 2:1–2; Gal. 3:1) and of the believer's self-renunciation in order to follow Christ (Mark 8:34; Matt. 16:24; Luke 9:23).

The Letter to the Hebrews gives prominence to the idea of perfection (Heb. 7:11; cf. 6:1), that is, Christ's perfection or fulfillment of the symbols of the former economy of grace. These foreshadowed the revelation given in Christ. All these, however, now yield place to the one who is the reflection of God's glory and is the exact imprint of God's very being (Heb. 1:1–3). Christ is the mediator of a better covenant, meaning that his sacrificial death replaced the covenant of Sinai (Heb. 8:6–7; 9:15; 12:24). The new covenant is better because in it the eternal world has become actual (Heb. 13:20–21).

The Parables: The special significance of the parables is that they symbolize in their own way the character of God's reign, the eschatological nature of Jesus' preaching, and the seriousness of his call to decision for God and God's salvation (see esp. the so-called kingdom of heaven parables, Matt. 13:44, 45, 47; 18:23; 20:1; 22:2; 25:1, with their characteristic introduction, "The kingdom of heaven is like . . ."). Mark 4:10–12 expresses the ambiguity and openness to misunderstanding inherent in the parables, an ambiguity they have in common with symbols. For those with ears to hear, the parables have done their work in revealing the secret of God's reign. Others do not perceive its presence in Jesus.

"Signs" in John's Gospel: In John's Gospel, the miracles of Jesus are distinct from the "signs and wonders" that many sought in the Hellenistic world. They are distinct no less from the miracles of the synoptic Gospels. John frequently uses the Greek word usually translated "sign" (John 2:11, 18, 23; 3:2; 4:48, 54; 6:2, 14, 26, 30; 7:31; 9:16; 10:41; 11:47; 12:18, 37; 20:30). The translation "characteristic" or "distinguishing mark" is also possible, since the miracles in John point to the messianic age that Jesus announces in his preaching. In John, Jesus' signs are typically followed by or associated with a teaching related to them: the feeding of the large crowd and the discourse on the bread of life (John 6); the healing of the blind man and the teaching about Jesus as the light of the world (John 8–9); and the raising of Lazarus and the "I am" saying about Jesus as the resurrection and the life (John 11). Many come to faith by means of the signs. For those who believe, they are proof of his glory, the glory that shines supremely in his death and resurrection, the greatest of his signs (John 12:31–33 and 18:32 both use the Greek verb meaning "to show by a sign"; cf. also 20:30–31).

Ecclesial Symbols: In his preaching and ministry, Jesus laid the foundation of the church of the post-Easter period. Since his followers saw themselves as the true Israel, the NT language about the church uses much of the religious and cultic language of the OT. The church is "a chosen race, a royal priesthood, a holy nation, God's own people" (1 Pet. 2:9), all phrases derived from Exod. 19:6. The early church also had its own distinctive ecclesial forms. Baptism, the universal symbol of incorporation into the church (as distinct from circumcision), symbolized dying to sin and rising to newness of life (Rom. 6:3–6; Col. 2:12) through the physical actions of descent into the water, immersion, and ascent from the water. The evidently simple rite of Romans and Colossians becomes in the later classical rites of baptism a complex symbolic ceremony, involving sight, sound, and movement. The Lord's Supper, as a visible sign of the death of Christ, is a remembrance of Jesus' last supper with the disciples (and other meals in his ministry), a participation or communion in his risen life (1 Cor. 10:16) and a foretaste or pledge of his completed work of salvation. The fourfold action of the Eucharist—taking bread, blessing, breaking, and giving—also becomes in later liturgical practice a highly developed and stylized ceremony.

Revelation (or the Apocalypse): The symbolism of the book of Revelation, unique in Christian apocalyptic literature, is largely drawn from OT sources, particularly Daniel. The message essentially is that the hope of the church rests on the certainty of God's salvation in Christ, despite the apparently overpowering supremacy of Satan. The symbolism of Revelation includes various spirits, angels, battles, cities, bizarre creatures, human figures, and numbers. Among these are the symbolic number of the beast, 666 (Rev. 13:18) and the four horsemen (Rev. 6:1–8).

synagogue (sin´uh-gog), a Greek word meaning a "gathering of things" or an "assembly of people." The Jewish synagogue is both a congregation of Jews who pray, read Scripture, and hear teaching and exhortation based on Scripture and the place where the congregation assembles. As the synagogue developed in rabbinic Judaism, it also became a place for study of the Bible, its commentaries, and Talmudic materials. The origin of the synagogue is

obscure, but it certainly existed by the first century A.D. in both Palestine and the Diaspora.

First-century A.D. synagogues in Palestine are attested by the Gospels. Jesus preached and discussed with Jewish leaders and congregations in synagogues (e.g., Matt. 4:23; 9:25; Mark 1:21; 3:1–6; Luke 4:16–28; 13:10). The synagogue was a place of prayer, reading of Scripture, preaching, and teaching. It is uncertain whether the many references to synagogues in the Gospels reflect the situation during Jesus' lifetime or the period after the destruction of the Temple (A.D. 70) when the Gospels were finally written. Josephus, the Jewish historian of the late first century, speaks of a few synagogues in the north of the Holy Land. Synagogues were certainly common in the Diaspora. Philo, the first-century Egyptian Jewish writer, attests to the presence of numerous synagogues in Alexandria. Inscriptions found at various places in the Roman Empire show that Jewish congregations were found in many places. Acts portrays Paul as teaching in synagogues wherever he goes (e.g., Acts 18:4; 19:8).

Origin: The origin of the synagogue remains unknown, but the question has produced a number of theories. Many have suggested that the synagogue arose in the Babylonian exile as a response to the loss of the Temple as the center of Jewish religious life. Though the suggestion is reasonable, no direct evidence exists for its presence and the biblical passages cited (Ezek. 11:16; 14:1) are far from convincing. In addition, no mention of the synagogue is made in Ezra and Nehemiah, nor is any destruction of synagogues mentioned during the Maccabean revolt. The public reading of Torah is described in Nehemiah 8 and mentioned in 1 Macc. 3:48, but these assemblies are extraordinary public gatherings; we do not know whether these practices were regularly done. Some scholars suggest that the Hellenistic crisis during the second century B.C., in which there was a conflict among Jews over acculturation and fidelity to tradition, produced the synagogue as a mode of resistance to Hellenism, i.e., Greek culture and custom. Since the synagogue existed in developed form in the first century A.D., it is likely that it came into being in the two centuries preceding, but no direct evidence for it then exists. In the Diaspora, some Egyptian inscriptions from the third and second centuries B.C. mention a "place of prayer" (Gk. *proseuchē*), but we do not know what went on in the houses of prayer and it is not certain that these refer to synagogues.

A building has been found on the island of Delos in the Aegean Sea that has been identified as a Jewish synagogue, but the building has no clear Jewish symbols or characteristics to identify it unambiguously as a synagogue. It is likely that Jews often met in a large room in a house. A building set aside for special religious purposes had to await a certain level of material prosperity and community development. In only four recently dug sites in Palestine have rooms or buildings been identified as synagogues: Masada, Herodium, Magdala (Migdal, Tarichaeae), and Gamala. The results of these excavations are preliminary and the identifications are not certain in all cases, especially for Masada and Herodium. Existing structures were transformed into assembly halls, but that they were specifically synagogues is not certain. In all cases the buildings or rooms are relatively small and unadorned and vary greatly in plan.

Physical Structure: Buildings that can be clearly identified as synagogues become plentiful both in Palestine and the Diaspora during the third century A.D. This is consistent with the development of rabbinic Judaism, which gradually asserted control over Judaism after the Temple was destroyed in A.D. 70 and which stressed synagogue- and school-centered prayer and study. Synagogue buildings were often decorated with mosaics and reliefs and were built in three styles, the basilica, the broadhouse, and the apsidal. The basilica was borrowed from Greco-Roman architecture and often had the entrance facing Jerusalem. The inside was rectangular and divided lengthwise by two rows of columns into nave and two side aisles. When the congregation faced Jerusalem to pray, they had to face the entrance; consequently a permanent Torah shrine, where the scrolls of Scripture were kept, and a *bema* (Gk., "platform"; a raised platform where the leaders of the congregation stood or sat) were difficult to establish. Contemporaneously the broadhouse design developed, in which one of the long walls of the rectangle faced Jerusalem and so a permanent Torah shrine and *bema* were possible. Later the apsidal synagogue developed, in which the entrance was on the side away from Jerusalem and the side facing Jerusalem had an apse (a large semicircular niche) for the Torah shrine and *bema*. Synagogues in the Diaspora followed similar designs, though sometimes Jews took over buildings built earlier and adapted them to their purposes. In all cases, the floor plan, orientation, and architecture varied considerably. Some Diaspora synagogues are notable for their size or beauty, e.g., the ones in Sardis in Turkey, Dura in Syria, Stobi in Macedonia, and Ostia in Italy.

Function: The function of the synagogue, how the congregation was organized, and what went on in the synagogue can only be surmised. In Palestine before the destruction of the Temple the synagogue would have been one of many indigenous organizations in Jewish villages and cities. People may have met to read Scripture and pray either in a house or outside, without any elaborate organization. In the Diaspora where Jews were a minority in the cities they inhabited, the synagogue probably functioned as the center of the community and its leaders

may have been community leaders recognized by the civil authorities. Synagogues were used to teach the young, to house visitors, and for communal meals.

Liturgy: The versions of Jewish prayers that have been transmitted in the tradition show that the synagogue liturgy did not have a fixed text but varied both in content and wording over time and from place to place. It is certain that Scripture was read, though probably not according to the later three-year and one-year fixed cycles of readings. Primacy was given to the Pentateuch, but readings from the Prophets were also included. The existence of many Targums (translation of the Hebrew Bible into the vernacular, Aramaic) and versions of the Septuagint (the Greek translation of the Bible) testifies to the importance of understanding the ancient text. Philo, Josephus, and the NT show that the Bible was interpreted to the people in the synagogues. It is also likely that the two most important prayers in Judaism were in use, though not according to a fixed text. The first is the *Shema,* consisting of three biblical passages (Deut. 6:4–9; 11:13–21; Num. 15:37–41) with attendant blessings. The second is the "Prayer," also called the *Amidah* or Eighteen Benedictions. This series of blessings has varied in text and number over time, but it is treated as very old in rabbinic tradition. ***See also*** Prayer.

syncretism, either a conscious combining of two or more religions over a short period of time, or a process of absorption by one religion of elements of another over a long period of time. In both types the absorbed elements are usually transformed and given new meaning by the fresh context. The borrowed item may remain outwardly the same but its new context signifies something quite new.

The religion of Israel as it emerged and developed in the late second and first millennia B.C. constantly reacted to the religions of the West Semitic ("Canaanite") world in which it lived. The Bible itself acknowledges the impact of neighboring religions through its constant polemic against some of their aspects and through its reinterpretation of other aspects. What is known about Canaanite religion (directly from the Ugaritic tablets of the late second millennium and indirectly from the Bible) and about the other religions of the ancient Near East suggests that Israel did its heaviest borrowing in its worship and legal systems, in its royal ceremonial, and in its wisdom literature. The portrayals of deities in the religion attested in the Ugaritic tablets influenced the depiction of Yahweh. The God of Israel combines traits of the prominent Canaanite god, El, the ancient patriarch who lives in a tent, and of Baal, the young god of the storm, mighty in war. Paucity of comparative evidence, however, makes it difficult to judge the exact extent of borrowing and transformation especially where institutions are concerned.

Some elements of Israelite religion are not attested in comparable literature; these elements seem rather to be derived from the uniquely biblical affirmation that Yahweh alone is God. Belief in one God meant that Yahweh had no consort and did not therefore create by sexual generation. It implied further than no statue could represent him to the worshiper since the prohibition against statues in the first commandment is part of the command to worship Yahweh alone. The conventional ancient depiction of the gods, the divine assembly, is in the Bible shadowy and utterly subservient to the Most High. Monotheistic faith informs the peculiarly Israelite phenomenon of prophecy; the prophets speak in the conviction that the people's conduct affects the entire course of history because all that happens on earth is in the hands of one God. Other biblical themes are related to the distinctively biblical confession: the extraordinary interest in world history as revelatory of the one God, the avoidance of conventional narrative about the gods acting in heaven, and the emphasis upon divine and human justice.

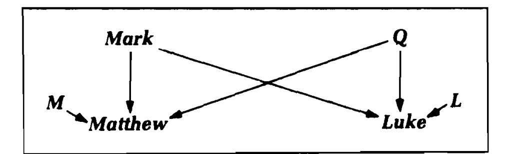
Though syncretism in the gradual sense noted above was always operative in Israel's history, the Bible sees certain periods as critical with regard to foreign influence. We prescind here from the popular narratives in Genesis about Israel's beginnings in which the ancestors are always different from the nations in the person of "the Canaanites," the local king, and Pharaoh. The conquest of Canaan, generally dated to the thirteenth century B.C., is accompanied in Deuteronomy, Joshua, and Judges by warnings not to intermarry with the Canaanites or to follow their ways. The reign of Solomon in the tenth century was a time of subversion of Israelite values by foreign wives (1 Kings 3–11). The ninth century in Israel and the early seventh in Judah were both periods of apostasy, to judge from the abundant literary record of apostasies for these periods. In the sixth century B.C., largely as the result of the Exile, the Jewish community defined itself against an alien environment through written Scripture and specific practices. These strong measures helped the Jewish community clearly to differentiate itself from its neighbors in the postexilic period. The next crisis of which there is record was the hellenization of many Jews in the wake of Alexander's conquest of the East in the late fourth century. The book of Daniel in the second century vehemently defends the ancient tradition against the new ways.

In the first century A.D., Christianity developed from Judaism, a development that was caused not by the influence of foreign ideas

upon the Jewish community but by an emphasis given by some Jews to the belief in Jesus as the Messiah, a belief interpreted in light of the apocalyptic tradition that already existed within early Judaism. Neither Judaism nor Christianity can therefore be adequately explained as purely syncretistic phenomena. R.J.C.

Synoptic Problem, the, the problem of accounting for the similarities and differences among the Gospels of Matthew, Mark, and Luke. If the four Gospels are printed in parallel columns with similar materials located alongside each other, it becomes clear that the first three have such similarities in content and order that their materials can be "seen together" (syn-optically). Hence they are called the "synoptic Gospels," in distinction from the more independent Gospel of John.

Such an arrangement also discloses extensive and detailed similarities of content and order among the first three Gospels, as well as significant differences. Many narratives are told in almost the same words (e.g., Matt. 14:13–21/Mark 13:3–32/Luke 21:7–33; and Matt. 3:7–10/Luke 3:7–9). The agreements are sometimes among all three Gospels (the "triple tradition"), sometimes between only Matthew and Luke (the "double tradition"), less frequently between only Matthew and Mark, and rarely between only Mark and Luke. There are also significant phenomena involving the order of pericopes: e.g., that Matthew and Luke almost never agree where Mark's order is not being followed, and that Matthew and Mark have rather different orders in their first sections (Matt. 1:1–12:21; Mark 1:1–3:21) but never disagree regarding the order of pericopes thereafter. Such phenomena cannot be explained by independent memory of the actual events. That the Evangelists independently drew from a common stock of oral tradition is apparently excluded by the extensive agreement in Greek (the original tradition was almost certainly in Aramaic) and by the phenomena of order. Some kind of literary interrelationship among the three Gospels is called for.



The earliest proposed solution was that of Augustine (fifth century A.D.), that the Gospels were written in the canonical order (i.e., Matthew, Mark, and Luke), with each of the later Evangelists utilizing the work of all his predecessors. This solution was generally accepted until the Enlightenment, when all such issues were examined with the tools of historical and literary methods. During the nineteenth century, almost every conceivable solution was proposed and tested, with only a few remaining as live options.

Today, most scholars consider some form of the Two-Source Hypothesis to be the most adequate solution: Mark was the earliest Gospel and was used independently by Matthew and Luke. Matthew and Luke also used another source (no longer extant), known as "Q," consisting mostly of sayings of Jesus. In addition, both Matthew and Luke incorporated traditions preserved only by themselves ("M" and "L," respectively), usually regarded as complexes of tradition rather than unified documents.

Alternative solutions to the Synoptic Problem are held by a minority of scholars: (1) the priority of Mark but without positing a Q, so that the double tradition is accounted for by Luke's use of Matthew (Austin Farrer and Michael Goulder); (2) the priority of Matthew, with Luke dependent on Matthew, and Mark written last as a conflation of Matthew and Luke (Griesbach or Two-Gospel Hypothesis); or (3) a complex elaboration of the Two-Source Hypothesis involving multiple editions and levels of interrelationship (M.-E. Boismard).

As with all historical issues, the Synoptic Problem cannot be definitively solved but remains a matter of probabilities. Its significance for historical interpretation lies in the importance of determining the dating, chronology, and interrelationships of our sources for the study of the life of Jesus, early Christianity, and the interpretation of the Gospels. ***See also*** L; M; Q. M.E.B.

Relationships among the Synoptic Gospels according to the Two-Source Hypothesis.

Syntyche (sin´ti-kee), a Christian woman in Philippi who received urgent exhortations from Paul to resolve her dispute with Euodia, a fellow Christian (Phil. 4:2–3). ***See also*** Euodia.

Syracuse (sihr´uh-ky*oo*z), a Greek colony on the southeast coast of Sicily, founded by Corinth ca. 734 B.C. It developed into the principal city of the island, with a fifth-century B.C. temple of Athena. Phoenician settlers were expelled in 234 B.C., but the city was taken by Rome in 212 B.C. On his voyage to Rome, Paul spent three days there (Acts 28:12).

Syria (sihr´ee-uh), an indeterminate regional term, sometimes signifying all the Levant (i.e., eastern Mediterranean shore) between Turkey and Egypt, sometimes the northern section, and sometimes only part of it. For ancient history the term "Syria" should be confined to the area surrounding Damascus, the Aram of the OT, which varied in size according to the strength of the rulers.

Geography: Damascus lies in a great oasis east of the Anti-Lebanon mountains, fed by the river Barada ("Abana," 2 Kings 5:12), which also pro-

vides a route westward into the elevated rift valley of the Beqa'a. Eastward the folds of the Anti-Lebanon spread fanwise toward the northeast, and southeastward lie the great basalt outflows, extending far into Arabia. These barriers to movement direct all routes toward the rich oasis, making Damascus a city of major commercial importance. The rainfall is everywhere scanty, however, with Damascus having only an average annual total of 8.6 inches (215 mm.). The whole area is therefore essentially desert, with settlements confined to the areas surrounding the rare springs. Further south Syria includes the better watered region of Bashan, which lies east of Galilee and which in NT times was divided into three areas: Gaulanitis on the west (OT "Geshur" and "Maacah"; modern Golan Heights), characterized by volcanic cones rising sometimes 1,500 feet (450 m.) above the plateau; the tableland of Batanea (OT "Argob," Deut. 3:4, or "Bashan"); and the wild volcanic area of Trachonitis, part of the territory of Philip (Luke 3:1). Bashan was famous in the OT for fertility and livestock (Ps. 22:12; Ezek. 39:18; Amos 4:1), and in NT times it exported grain to Rome.

Northward from Damascus the corrugated landscape created by the fanlike alignment of the mountains is still dry steppe with only minor settlements, although pasturage improves. The northern limit of this "nuclear Syria" is reached at the broad Homs-Palmyra Depression cutting inland from the coast north of Tripoli. An evident cultural divide, this marks the southern limit of the richer northern steppeland controlled by Hamath (modern Hama), and earlier, from 2400 to 2250 B.C., by Ebla (Tell Mardikh). It was the limit also of Israelite imperial ambitions (Num. 34:7–9; 2 Kings 14:25; Ezek. 47:15–17). West of the Anti-Lebanon, in the Beqa'a area, known to the Romans as Coele-Syria, the northward flowing river Orontes and the southward flowing Litani both rise, not far from Baalbek, about 3,000 feet (915 m.) above sea level. This valley provides an obvious access for invaders from both north and south, but it is not an easy route and the great trading caravans all went through Damascus. Unquestionably Damascus considered the Beqa'a as Syrian, but its control was intermittent.

Relations with Israel and Surrounding Empires: Israelite-Syrian relations were often antagonistic, but at times the two combined for mutual defense, as when King Ahab of Israel joined with Ben-hadad of Damascus and other rulers to resist the Assyrian Shalmaneser III at Qarqar (Tell Qurqur) in 853 B.C. Normally Syria dominated Israel, but David apparently conquered and garrisoned Damascus (2 Sam. 8:3–6), and Ahab gained commercial rights there (1 Kings 20:34). Jeroboam II of Israel (786–746 B.C.) is said to have conquered Damascus (2 Kings 14:28) and restored the empire of David and Solomon. The text is unfortunately obscure, but evidently Syria for a time paid tribute to Israel. Later (753–733 B.C.) King Pekah of Israel sought the help of Rezin of Syria against King Ahaz of Judah, but he achieved nothing (Isa. 7:1–17). Ahaz appealed for help to Tiglath-pileser III of Assyria, who conquered and ravaged Damascus in 732, making it part of his empire. Later, in 720, Sargon II overwhelmed Hamath. Thereafter Syria was a vassal, passing from Assyrian control to Babylonian, and becoming in 333 part of the empire of Alexander the Great. After Alexander's death in 323 Syria was governed by the Seleucids, who in ca. 300 made Antioch their imperial capital. From 64 B.C. and throughout the NT period Syria was under Roman control, forming part of a much larger province of that name.

Jesus never visited Syria, but after Pentecost Christianity spread rapidly into the region, and according to Acts Paul's conversion occurred as he traveled to Damascus to arrest the Christians there (Acts 9:1–25). The Nabatean king Aretas in distant Petra is said to have governed Damascus at the time (2 Cor. 11:32–33), but this seems doubtful. Perhaps the Nabatean ambassador had considerable authority in the city because of the importance of the Nabatean trade. *See also* Antioch, Aretas IV; Bashan; Damascus; Hamath; Trachonitis. D.B.

Syriac versions. *See* Texts, Versions, Manuscripts, Editions.

Syrophoenician (si'roh-fi-nish'uhn), the woman who, having heard of Jesus' ministry, sought healing for her daughter (Mark 7:26). She is also referred to as a Greek, i.e., as a Gentile, or, as some would say, a "pagan." The term "Syrophoenician" indicates that this woman was from Phoenicia, located in the Roman province of Syria, or, more specifically, from the area of the old cities of Tyre and Sidon. In the parallel passage (Matt. 15:22), the woman is called a "Canaanite," an ancient geographical designation that would have included this area. *See also* Canaan, Canaanites; Gentile; Greeks; Phoenicia; Sidon; Syria; Tyre. P.L.S.

Syrtis (suhr'tuhs), ancient name of two bays on the northern coast of Africa south of Sicily, between Cyrene and Carthage. The Greater Syrtis, now the Gulf of Sidra off Libya, was to the east; the Lesser Syrtis, now the Gulf of Gabes, to the west. Both held navigational dangers dreaded by sailors in antiquity (Acts 27:17), the Greater Syrtis being shallow and full of shifting banks of quicksand, the Lesser because of its winds and surf.

Opposite: The reading of the Torah, perhaps by Ezra; panel from the third-century A.D. synagogue at Dura-Europos.

T

Taanach (tay´uh-nak), a site in Palestine occupied for over three thousand years. Ancient Taanach is located at Tel Ta'annak next to the modern village that still bears the ancient name. It is situated on the southern edge of the Esdraelon Plain five miles southeast of Megiddo. The main route from the southern hill country to Megiddo and the Plain of Acco, and a route linking the Plain of Esdraelon with the Sharon Plain through the Carmel Range both passed by Taanach.

The earliest historical text mentioning Taanach is the relief at the Temple of Karnak in Upper Egypt of Pharaoh Thutmose III's first Asian campaign in 1468 B.C. The Akkadian tablets found in the excavations at Taanach, some of which are letters to the local king, are dated to about 1450 B.C. According to the biblical tradition Joshua defeated the king of Taanach (Josh. 12:21), and although the town was allotted to Manasseh (Josh. 17:11; 1 Chron. 7:29) and named a levitical city (Josh. 21:25), the Canaanites were not driven out (Judg. 1:27). Taanach is mentioned as the place where Deborah and Barak defeated the Canaanites, and the victory is celebrated in the Song of Deborah (Judg. 5:19). The town may not have been controlled by the Israelites until the period of the monarchy (late eleventh century B.C.); it is listed in one of Solomon's administrative districts (1 Kings 4:12). Taanach is mentioned in another Karnak relief describing Pharaoh Shishak's victorious campaign in Palestine in 918 B.C. It does not appear again in a historical source until Eusebius's *Onomasticon* of the fourth century A.D.

Taanach was one of the first sites to be excavated in Palestine in campaigns between 1902 and 1904 directed by Ernst Sellin. Spectacular finds included a Bronze Age patrician's house, a large incense stand with reliefs, and several Akkadian cuneiform tablets.

Between 1963 and 1968 excavations were undertaken by the Graduate School of Concordia Seminary, St. Louis, Missouri, and the American Schools of Oriental Research under the direction of Paul W. Lapp. The results represent the occupational history of the site.

Taanach was first inhabited in the Early Bronze Age about 2700–2400 B.C. (EB II–III). It was a typical city-state of the period as attested by its fortifications, their rebuilds, and the intricate stratigraphy. The site was then unoccupied for about seven hundred years except for campsite occupation near the beginning of the second millennium B.C. In the Hyksos period of the seventeenth and sixteenth centuries B.C. (Middle Bronze II C) it prospered again. There were massive fortifications of the Hyksos type and one of the earliest casemate constructions found in Palestine. The fine patrician house of the earlier excavation belonged to this period, and about sixty subfloor burials revealed a great variety of intramural burial practices. At the end of the sixteenth century the city suffered a substantial destruction but revived quickly for a flourishing era in the next half century, attested by a large Late Bronze I building complex with an adjacent cobbled street. This occupation came to an end near the middle of the fifteenth century, probably at the hands of Thutmose III in 1468 B.C.

Taanach cultic stand with reliefs of animals and a winged sun disk in the top row; tenth century B.C.

A modest occupation followed, and it is to this period that the Akkadian tablets may belong, including another found in the later excavations. There is little evidence of occupation from the late fifteenth to the late thirteenth century B.C., which suggests that the place name in Amarna tablet no. 248 does not refer to Taanach.

Several substantial structures belong to the twelfth century B.C., and a Canaanite cuneiform tablet concerning a shipment of grain was uncovered in one of these. The occupation ended in a violent destruction about 1125 B.C. which may be associated with the victory celebrated in the Song of Deborah (Judg. 5). The light eleventh-century settlement was followed by an important tenth-century occupation revealing an area that contained a mass of cultic material includ-

ing iron blades, pig astragali (bones), loom weights, three small stelae, about eighty reconstructable vessels, a unique cultic stand, and a complete figurine mold. This ended in a major destruction with ceramic evidence suggesting it was a result of Shishak's campaign of 918 B.C.

Later occupation was limited to a few Iron Age II remains, a number of stone-lined pits and a building of the Persian period (ca. 538–333 B.C.), and scattered Hellenistic shards. An impressive fortress was constructed on the highest part of the mound in the Abbasid period (ca. 750–969 A.D.). ***See also*** Deborah; Esdraelon; Megiddo.

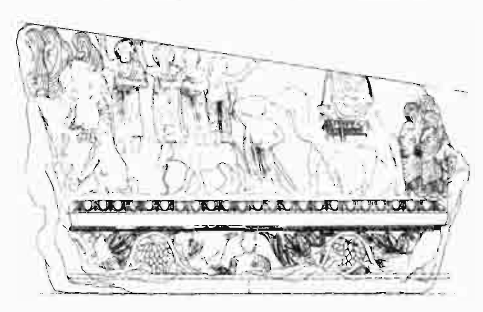
N.L.L.

Tabeel (tab´ee-uhl; Heb., "El [God] is good"). **1** The father of an unnamed person whom Pekah, the king of Israel (Northern Kingdom), and Rezin, the king of Syria, conspired to make king over Judah (Southern Kingdom) should they succeed in overthrowing Ahaz (Isa. 7:6). In some versions the name is Tabeal. **2** A Persian official residing in Samaria; he was one of those who wrote to the Persian king Artaxerxes protesting the rebuilding of the Temple in Jerusalem by the returned exiles (Ezra 4:7).

tabernacle (tab´uhr-nak´uhl), the portable sanctuary of the Israelites during the wilderness period, according to the Priestly sources of the Pentateuch and related texts. The directions for building it are given in Exodus 25–30 and the account of its actual construction follows in Exodus 35–40. It consisted of a rectangular enclosure, hung with curtains supported on poles, some 145 feet (44 m.) long, 72 feet (22 m.) wide, and 7 feet (2.2 m.) high (Exod. 27:18). Within this, there was another building, also curtained, divided in two by a veil, behind which was the Holy of Holies containing the Ark; before the veil stood the altar of incense, the seven-branched lampstand, and the table for the bread of the Presence (Exod. 25:30). In the courtyard outside this building stood the altar of burnt offering and the laver (Exod. 30:18). When the Israelites moved about during their wilderness wanderings, the whole tabernacle was dismantled by the Levites and re-erected by them wherever the tribes pitched camp (Num. 1:51). While it was stationary, the twelve tribes camped around it in a defined order (Num. 2:1–31), with the Levites in its immediate vicinity (Num. 1:52–53). The furnishings of the tabernacle were made of the finest and costliest materials (Exod. 25:3–7).

This picture raises doubts as to what extent the tabernacle can be considered an actual fact during the wilderness period. The constant movement of so large a structure is difficult to envisage in desert conditions, nor is it likely that wilderness Israel had the craftsmen, materials, or wealth to erect it. Above all, the Priestly account records a structure that, in its shape

An ark—which stood within the tabernacle—with draped curtain (*parokhet*) and flanked by seven-branched lampstands (*menoroth*), *lulavim*, shofars, and incense shovels; mosaic from the fourth-century synagogue at Hammath-Tiberias.



and the cultic objects it contains, resembles Solomon's Temple. What it presents is a description of the Temple under the guise of a portable sanctuary. It is thus a retrojection of the Jerusalem Temple to the wilderness epoch, in accordance with the Priestly view that all Israel's religious institutions originated at that time, but with the knowledge that a permanent building did not exist before the settlement in Canaan.

Tent of Meeting: But the Priestly account is not therefore a mere fiction. As well as using the word "tabernacle" (Heb. *mishkan*) for its structure, it also employs, some 130 times, the expression "tent of meeting" (Heb. *ohel mo'ed*). This refers to a much simpler type of shrine that is much more likely to have existed during the wilderness wanderings. It is described in an early passage, Exod. 33:7–11. From this we see that the tent of meeting was a simple tent that one man could pitch, it was outside the camp, unlike the tabernacle, which was in the middle, and it was looked after by a single officiant. It was not a place of sacrifice nor is there any real evidence that it sheltered the Ark. Rather it was a shrine for the receiving of oracles, and the divine presence did not reside permanently there but was manifested, in the form of a pillar of cloud, whenever Moses entered the tent to inquire of God. As such, it had a different function from a temple or tabernacle and there is nothing improbable in its existing later alongside a temple at Shiloh (1 Sam. 2:22) or alongside a high place as at Gibeon (2 Chron. 1:3) or, because it was easily portable, its being brought into Solomon's Temple (1 Kings 8:4). What the Priestly authors do is to build upon their knowledge of this ancient institution and transfer its most significant features to their picture of the tabernacle. So the divine cloud descends on the tabernacle (Exod. 40:34–35) and the "meeting" with God takes place over the Ark in the tabernacle (Exod. 25:22). The two are also brought together by the odd feature of a tent on top of the tabernacle (Exod. 36:14); the materials from which it was made, tanned ramskins and goatskins (Exod. 36:19), retain a genuine desert tradition, being those of a bedouin tent, and particularly the *qubba* (portable tent-shrine).

For the NT writers, the significance of the tabernacle is found in Exod. 25:40, which they interpret as meaning that the earthly tabernacle had a heavenly counterpart, which is the true tabernacle (Heb. 8:2, 5; 9:22). In Acts 7:44–50, the wilderness tabernacle, made according to the pattern of the one in heaven, is contrasted with Solomon's Temple made with hands, while in Rev. 13:6; 15:5; and 21:3 the only tabernacle envisaged is that in heaven. ***See also*** Ark; High Place; Levites; Temple, The.

Tabernacles, Festival of (or Booths, Ingathering, Heb. *Sukkoth*), along with Passover and the Festival of Weeks, one of three major pilgrimage festivals of Judaism. Celebrated for eight days (from the 15th of Tishri [late September or early October]), it was Israel's joyous, thanksgiving, autumnal harvest festival for the ingathering from the threshing floor and the winepress (Exod. 23:16; 34:22; Deut. 16:13–15). Its main distinctive ritual is the requirement to "dwell in booths" in commemoration of God's protection of Israel during the wilderness wanderings (Lev. 23:39–43; Neh. 8:13–18). The preeminent annual festival, called "the feast of God" (Lev. 23:39; Judg. 21:19) or "*the* feast" (1 Kings 8:2, 65; 12:32; Isa. 30:29; Ezek. 45:23, 25; Neh. 8:14; 2 Chron. 5:3, 7–8; John 7:10; cf. John 7:2), it was the occasion of the dedication of Solomon's Temple (1 Kings 8), the public reading of the Torah (every seven years, Deut. 31:10–11), and the future ingathering of all nations to Jerusalem to worship God (Zech. 14:16). ***See also*** Feasts, Festivals, and Fasts; Time. J.U.

Tabitha (tab´i-thuh), another name for Dorcas, a highly regarded Christian in Joppa (Acts 9:36–42). ***See also*** Dorcas.

tablets of the Law, the two stone tablets of the Ten Commandments inscribed by God on Mt. Sinai (Exod. 24:12; 31:18; 32:15–16; Deut. 9:10–11; 10:1–6; Exod. 34:28 is ambiguous). The first set was broken by Moses in his anger at the sight of the Golden Calf (Exod. 32:19). The second set was placed in the Ark of the Covenant.

Tabor (tay´buhr). **1** An isolated mountain rising to a height of 1,843 feet in the northeast portion of the Plain of Esdraelon. Its relative height and steep ascent from the plain below give one standing on it a commanding view of the valley

and of the heights of Mt. Carmel to the west and Mt. Hermon to the north. The slopes drain into the Jordan River on the east. Until recently the mountain was forested.

On the border of the tribal lands of Issachar (Josh. 19:22), Zebulun (Chisloth-tabor in Josh. 19:12, cf. 1 Chron. 6:77), and Naphtali (Josh. 19:34), it was the central place for Barak to gather his forces (Judg. 4:6, 12) and from there he descended for his battle with the Canaanites (Judg. 4:14). The north-south road from Hazor and Damascus to the pass of Megiddo and the Coastal plain passed around its foot, and the east-west route from the Megiddo Plain went between Mt. Tabor and the Hill of Moreh to the Sea of Galilee. Here Gideon's brothers were killed by the Midianite kings, Zebah and Zalmunna (Judg. 8:18).

Although not actually very high, Tabor's isolation in the plain led the Psalmist (Ps. 89:12) and the prophets (Jer. 46:18) to compare it to Mt. Carmel and Mt. Hermon. It may have been a sacred mountain from early times (cf. Deut. 33:18–19). It is not mentioned in the NT, but since the fourth century A.D. it has been celebrated as the site of the transfiguration. The date of the first church on the mountain is uncertain but pilgrim sources mention one in the sixth century. A crusader monastery fell to Saladin in 1187 and Melek el-Adel of Damascus fortified the mountain in the thirteenth century. On the summit today the Greek Orthodox have a monastery and the Franciscans have constructed a basilica over the ancient remains.

2 Tabor, Oaks of. They were located near Bethel (1 Sam. 10:3), but the exact location is unknown. ***See also*** Esdraelon; Transfiguration, The.

N.L.L.

tabret (tab´rit), a term in the KJV that the RSV renders "tambourine" (Gen. 31:27; 1 Sam. 10:5), "timbrel" (1 Sam. 18:6; Isa. 5:12; 24:8; 30:32; Jer. 31:4), or "one before whom men spit" (Job 17:6). ***See also*** Music; Timbrel.

tache (tak), a term in the KJV that RSV renders "clasp" or "hook," a term that appears primarily in texts regarding the tabernacle (Exod. 26:6; 36:13; and others).

Tadmor (tad´mor), a city (modern Tadmur) in Syria located in a fertile oasis in the Syrian desert a hundred and forty miles northeast of Damascus. Because of its location midway between Mesopotamia and the western arm of the Fertile Crescent it was an important caravan city from the second millennium B.C. to the early Islamic period (seventh–eighth centuries A.D.). During the height of its prosperity in the Roman period it was called Palmyra (from the Lat. for "the city of palms"). The well-preserved ruins from this era give a remarkably detailed picture of a wealthy Syrian metropolis. Its monumental architecture includes temples Semitic

Aerial view of the well-preserved ruins at Palmyra (Tadmor).

in plan but with classical decorative motifs dedicated to such gods as Bel, Nebo, and Baal Shamin, a theater, an agora, baths, and other typical elements of a Roman city, along with a large number of ornate tombs with elaborate sarcophagi and statuary. The large number of inscriptions from Palmyra in Greek and Palmyrene, the local Aramaic dialect, reveal its syncretistic religious traditions.

Tadmor is mentioned only once in the Bible: in 2 Chron. 8:4 Solomon is said to have built "Tadmor in the wilderness." The related but not identical passage in 1 Kings 9:18 reports that Solomon built "Tamar in the wilderness, in the land of Judah." Tamar (Heb., "palm") is known from Ezek. 47:19 and 48:28 as a town south of the Dead Sea. Masoretic tradition interprets the received text's reading "Tamar" as "Tadmor." It is not impossible that Solomon engaged in some building activity in Syria, especially in light of David's defeat of the king of Zobah (2 Sam. 8:3–6), but it is more likely that the text of Chronicles (and the Masoretic reinterpretation of Kings) is due to the enhancement (by the Chronicler or one of his sources) of Solomon's prestige by attributing to him construction or at least reconstruction of one of the more famous Syrian centers. ***See also*** Solomon. M.D.C.

Tahath (tay´hath; Heb., "beneath" or "low"). **1** One of the encampments of the Israelites during the journey in the wilderness (Num. 33:26–27); the site is unknown. **2** The son of Assir; he was a Levite of the clan of Kohath (1 Chron. 6:24, 37). **3** A descendant of Ephraim and grandfather of 4 below (1 Chron. 7:20). Some scholars understand Tahan (Num. 26:35) to be the same person (or the same as 4), although Tahan could be another son (descendant) of Ephraim (see 1 Chron. 7:25). **4** A descendant of Ephraim (1 Chron. 7:20).

Tahpanhes (tah´puhn-heez; KJV: "Tahapanes," Jer. 2:16), Tehaphnehes (Ezek. 30:18), the equivalent of Greek Daphnai, modern Tell Defenneh,

situated on the Pelusiac branch of the Nile in the northeast delta. According to Herodotus (*History* 2:30), the twenty-sixth-dynasty king Psammetichus I (664–610 B.C.) established a garrison of Greek mercenaries at Daphnai to guard against the Assyrians; later on the Persian king Darius I (522–486 B.C.) also kept guards there. In about 586 B.C., the prophet Jeremiah and other Jews sought refuge at Tahpanhes from the Babylonian king Nebuchadnezzar (Jer. 43:7; 44:1; 46:14). The British Egyptologist W. M. Flinders Petrie excavated Tell Defenneh in 1887 and discovered what are probably the remains of the fortress of Psammetichus. ***See also*** Jeremiah, The Book of. J.M.W.

Tahpenes (tah´puh-neez), the wife of an unnamed twenty-first-dynasty pharaoh; her sister was given in marriage to Hadad of Edom at the time of David (1 Kings 11:19–20). The name Tahpenes is not attested in any Egyptian source. It is probably a Hebrew transcription either of an Egyptian title meaning "the king's wife" or an Egyptian proper name. ***See also*** Hadad.

Tahtim-hodshi (tah´tim-hod´sh*i*), a place name found in the KJV for an area visited by David's census takers (2 Sam. 24:6; RSV: "Kadesh . . . of the Hittites"). If the RSV is correct, it referred to Kadesh in modern Syria, located at Tell Nebi Mend on the Oronte River south of Homs. It represented the northern limit of David's kingdom.

tale, a story that often contains imagined or exaggerated elements. To call something a tale implies it is an account unworthy of belief (Luke 24:11). In some older translations the word meant "tally," "total," or "number." More modern translations use other words: "number" (Exod. 5:18), "full number" (1 Sam. 18:27), or "count" (1 Chron. 9:28).

talebearing, gossiping; it is closely connected to slander in the Bible, which condemns both. Lev. 19:15–16 lumps slander together with legal injustice and even false testimony in a capital case, but Proverbs uses the same word to condemn the talebearer and to warn the wise not to associate with gossips (11:13; 20:19). The NT also lists both as sins (Rom. 1:29–30).

talent. *See* Money; Weights and Measures.

talitha cumi (tal´uh-thuh k*oo*´m*i*), an Aramaic sentence that means "young girl, arise," spoken by Jesus when he raised the daughter of Jairus from the dead. Mark translates it into Greek as "Little girl, I say to you, arise" (5:41). Many manuscripts have an eastern Aramaic form of the verb, "cum," instead of the Palestinian "cumi."

Talmai (tal´m*i*). **1** One of the sons of Anak (descended from the Nephilim, Gen. 6:4) who lived at Hebron when spies sent by Moses into that region of the Negeb returned with reports of giants in the land. The sons of Anak were finally driven away by the military commander Caleb (Josh. 15:14) or by Judahites (Judg. 1:10). **2** The king of Geshur whose daughter, Maacah, was one of David's wives and the mother of Absalom (2 Sam. 3:3; 1 Chron. 3:2). It was to Talmai that Absalom fled after killing his half-brother Amnon (2 Sam. 13:37). ***See also*** Caleb; Geshur; Maacah; Nephilim. F.R.M.

Talmon (tal´muhn). **1** A Levite gatekeeper (1 Chron. 9:17). Scholars are divided over whether this passage (1 Chron. 9:17–34) should be seen as a record of postexilic Jerusalem (after 586 B.C.; cf. Ezra 2:42; Neh. 11:19) or of a much earlier time used as an introduction to the narratives of Saul and David that follow. In either case, Talmon was probably seen as the ancestral head of a clan of gatekeepers (see Neh. 7:45; 2 below). If the passage is postexilic, he is probably the same as 3 below. **2** A levitical family group of gatekeepers ("sons of Talmon") who returned from the Babylonian captivity with Zerubbabel (Ezra 2:42; Neh. 7:45). **3** A Levite gatekeeper in postexilic Jerusalem (Neh. 11:19; 12:25). D.R.B.

Talmud (tal´mood; Heb., "teaching, study, learning, a lesson"), two long collections of Jewish religious literature, one called the Palestinian Talmud, and the other called the Babylonian Talmud. The Talmuds are commentaries on the Mishnah, the Hebrew code of laws that emerged about A.D. 200 under Rabbi Judah the Prince. The part of the Talmud that is commentary is called the *Gemara* (from the Aramaic word "to learn") and consists of atomistic analysis of the words and sentences of the Mishnah, comparison of one Mishnah with another, a selection of traditions related to the Mishnah, interpretations of Scripture, stories about rabbis and others, and long digressions on various topics. The bulk of the *Gemara* is written in Aramaic, the vernacular of the Jewish community of the time, but some traditions such as the *Baraitot* ("outside" traditions), which claim to be tannaitic (before A.D. 200), are in Hebrew. The Palestinian Talmud covers the first four orders of the Mishnah which are concerned with agriculture, feasts, women, and damages. It was completed in the mid-fifth century A.D: The Babylonian Talmud covers the Mishnaic orders of feasts, women, damages, and sacrifices and was completed in the mid-sixth century A.D., with many additions and modifications being made in the succeeding few centuries. The Babylonian Talmud was more fully edited than the Palestinian and became authoritative for most of Judaism because of the dominance of the Babylonian community well into the Islamic period. ***See also*** Mishnah. A.J.S.

Tamar (tay´mahr; Heb., "date palm"), a woman's name and a place name. **1** The Canaanite daughter-in-law of Judah, whom Judah promised successively to each of his three sons as each older one died without issue (Gen. 38:1–30). When Judah withheld Shelah, his youngest, fearing to lose him also, Tamar disguised herself as a prostitute and offered herself to her father-in-law. When she was exposed by her pregnancy, she identified her partner, who confessed that she had acted "more righteously" than he (Gen. 38:26). Tamar bore twins to Judah, Perez and Zerah. Through Perez she is reckoned to the ancestry of David (Ruth 4:12, 18–22; 1 Chron. 2:4) and Jesus (Matt. 1:3). **2** The daughter of David who was raped by her half-brother Amnon (2 Sam. 13:1–29). Her brother Absalom, to whom she fled, avenged her by having Amnon murdered. **3** Absalom's only daughter, "a beautiful woman" (2 Sam. 14:27), and his sister's namesake. **4** A city "in the wilderness," according to the RSV and the earliest form of the Hebrew text; the KJV and the traditional Hebrew vocalization read "Tadmor." **5** A city marking the southeast border point in Ezekiel's description of the restored territory of Israel (Ezek. 47:18–19; 48:28). The site remains unidentified (cf. Hazazon-tamar, Gen. 14:7). ***See also*** Absalom. P.A.B.

tamarisk (genus *Tamarix*), a tree or shrub referred to in Hebrew as *eshel.* Tolerating sandy and even saline soils, this drought-resistant tree grows in deserts as well as in watered places, near streams and marshes. The tamarisk is a graceful evergreen with tiny, jointed, grey-green, needlelike leaves which give it a feathery appearance. It provides year-round food for goats. Its wood is used for construction and is a good source of charcoal. Its common occurrence in desolate places makes tamarisk an ideal shade tree and a revered spot for burials (1 Sam. 31:13). ***See also*** Trees; Woods.

Tammuz (tam´uhz), the Hebrew form of *Dumuzi* (Sumerian, "proper son"), a god widely honored from the third millennium B.C. in Mesopotamia. The vast and complex Mesopotamian literature about this god shows three essential aspects of him: as lover and consort of Inanna; as one held in the underworld and mourned because of his absence; as the embodiment of spring vegetation and then of vegetation in general. Many laments are preserved that bewail the "far one" who has disappeared, detained in the underworld. The laments reflect the aspect of Tammuz as god of vegetation; his disappearance is connected to the drying up of the steppe in summer. His cult may have been brought to Israel by the Assyrians in the ninth and eighth centuries B.C. Aspects of Tammuz became synthesized with West Semitic gods of similar characteristics. Baal Haddu, for example, went down into the underworld, died, rose, and was mourned during his absence. Some of Dumuzi's traits also appear in Adonis, a god first attested in Greece in the fifth century B.C. In Ezekiel's vision of four sins being committed in the Jerusalem Temple, the third is a group of women weeping for Tammuz in the north gate (8:14). The women in Ezekiel are mourning this dying and rising god. The action is an abomination to Ezekiel who believes that God does not die and cannot be mourned. ***See also*** Ezekiel, The Book of; Sources of the Pentateuch. R.J.C.

Tanis (tan´is). ***See*** Raamses, Rameses.

tanning, the process of rendering leather permanently soft and pliable. Literally the Greek and Hebrew words for tanning translate as "reddened" or "to dye red." When skins or hides are transformed into leather, the skin darkens or "reddens" as a result of the process employed. The process of tanning is undoubtedly a very ancient form of technology whose practice is documented in ancient Egyptian texts and paintings. Once the hides were cleaned of all hair and foreign matter, they were ready for treatment in a special solution. The mixture consisted of plant juices, lime, and perhaps bark or leaves.

Due to the nature of the work, the population did not hold the tanner in high regard. The odors accompanying the process as well as the tanning of unclean animals were repugnant to townspeople. Thus we read that tanners were consigned to live outside of the town: Simon the tanner, for example, lived by the seaside, at Joppa (Acts 10:16). Nonetheless, Peter and a devout soldier displayed a more tolerant attitude by lodging with Simon (Acts 9:43; 10:7). Because of the many uses to which it could be put, leather was a valuable commodity. "Tanned rams' skins" were offerings given by the people of Israel at Mount Sinai (Exod. 25:5; 35:7, 23). These skins were fashioned into the coverings for the tent of meeting which housed the tabernacle (Exod. 26:14; 36:19; 39:34). Skins were also used for many products besides clothing: leather buckets, waterskins, wineskins, and butter churns (Gen. 21:14; Judg. 4:19; Matt. 9:17). S.L.R.

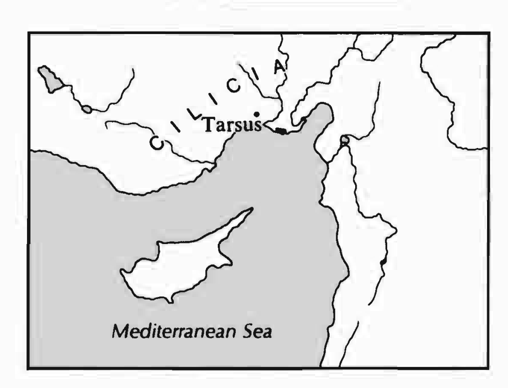
Taphath (tay´fath), Solomon's daughter who was married to Ben-abinadab, Solomon's administrator of Naphath-Dor (1 Kings 4:11).

Tappuah (tap´*yoo*-uh). **1** A town of the Shephelah (Josh. 15:34), perhaps modern Beit Nettif, west of Bethlehem. **2** A northern town on the border of Ephraim and Manasseh (Josh. 16:8), probably Tell Sheik Abu Zarad, south of Shechem. Ephraim possessed the town but the territory of Tappuah was occupied by Manasseh (17:8). Menahem sacked Tappuah (2 Kings 15:16). A king of Tappuah was beaten by Joshua

(Josh.12:17); probably one of the sites above is indicated.

tares. ***See*** Weeds.

target, the mark toward which something is delivered. Job depicts himself as the target of God's archers (16:12). The word is used in the KJV for two types of weaponry: 1 Kings 10:16 (RSV: "shields") and 1 Sam. 17:6 (RSV: "javelin").



Targums (tahr´guhmz), translations of the books of the Hebrew Bible into Aramaic, made when Aramaic was the common spoken language in Palestine. They were produced between about 250 B.C. and A.D. 300 and were usually read in the synagogues. ***See also*** Synagogue; Texts, Versions, Manuscripts, Editions.

Tarshish (tahr´shish). **1** A Benjaminite son of Bilhan (1 Chron. 7:10). **2** One of seven princes of the Medes and the Persians (Esther 1:14). **3** An unknown location famous for associations with sea traffic (1 Kings 10:22; 2 Chron. 9:21; Isa. 23:1, 14; 60:9; Ezek. 27:25; Jon. 1:3). The Jonah association suggests a location in the Mediterranean, and sites suggested have included Tarsus, and Tartessus in Spain. Isa. 23:1 rather suggests Cyprus or the Aegean, but 1 Kings 10:22 cites a Solomonic expedition that in other associations has suggested a route eastward to Arabia, India, or the coast of Africa. 1 Kings 22:48 cites ships of Jehoshaphat bound out from Ezion-geber, reinforcing the eastern route and eliminating a Mediterranean option. Whether because of its rich gold resources or some other reason, it tended to be idealized (Isa. 2:16). ***See also*** Ophir. R.S.B.

Tarsus (tahr´suhs), a large, prosperous commercial city located on the Cydnus River, about ten miles from the Mediterranean Sea at the foothills of the Taurus Mountains on the southeastern coast of Asia Minor. Situated 79 feet above sea level in the fertile eastern plain of the region of Cilicia, Tarsus became the capital of the region under the Romans.

According to the Greek geographer Strabo (ca. 63 B.C.–A.D. 23), the Cydnus River had its source from the melting snows of the mountains above the city. The river flowed through the ancient capital into a lake some five miles to the south which served as a naval station and harbor for Tarsus. It was because of the river that inland Tarsus had the opportunity to develop into a thriving maritime center.

This feature, combined with the fact that the main trade routes passed north through Tarsus to central Asia Minor via the Cilician Gates in the Taurus Mountain pass, or east via the Syrian Gates of the Amanus Mountains to Syria, gave Tarsus a cosmopolitan nature. Paul's boast, recorded in Acts, that Tarsus was "no mean city" (Acts 21:39) was certainly warranted. It

was the meeting place of West and East, of the Greek culture with its oriental counterpart.

The date of the foundation of the city is uncertain, but archaeological evidence shows habitation dated back to the Neolithic Period (ca. 5000 B.C.), and several Bronze Age (ca. 3000–1200 B.C.) cities were built successively on the site. In the middle of the tenth century B.C., the Assyrian king Shalmaneser III conquered Tarsus. When the city rebelled during the reign of Sennacherib a century later, it was destroyed. Rebuilt, Tarsus was under Persian control until it was taken in 333 B.C. by Alexander the Great, who resided there for a short period. The city passed into the hands of the Seleucid dynasty (312–65 B.C.), whose efforts to hellenize the inhabitants provoked an insurrection against Antiochus IV Epiphanes (2 Macc. 4:30). With the advent of the Romans, the region of Cilicia was organized into a Roman province with Tarsus as its capital.

Cicero, the Roman orator and statesman, was governor of Tarsus in 50 B.C. Mark Antony gave Tarsus the status of a free city, and it was here that he met Cleopatra in 41 B.C. It was under the rule of Augustus (27 B.C.–A.D. 14) that the city came to its golden age and was renowned as a center of intellectual life, surpassing even Alexandria and Athens. Tarsus had long been a center of Stoic philosophy, and several of its citizens were famous Stoic philosophers: Zeno, Antipater, Athenodorus, and Nestor. One of the basic tenets of Stoicism states that virtue is the only good as well as the means of fortification against all the pressures of life. This concept seems to be reflected in some of Paul's writings (e.g. Phil. 4:11–12).

The author of Acts understood Paul to be a citizen and native of Tarsus (Acts 9:11; 21:39; 22:3) and thus a Jew of the Dispersion (i.e., who lived outside Palestine). As a Jew of Tarsus, Paul would have been reared in a non-Jewish environment and would have spoken the common language of the Roman Empire, Greek. His knowledge of the Jewish Scriptures would have been from the Septuagint, the Greek translation from the original Hebrew. His Jewish name appears as "Saul" (only in

Acts), along with the Roman "Paul." ***See also*** Cilicia; Paul; Stoics. M.K.M.

Tartan (tahr´tan), an official title of rank within the Assyrian military, the commander-in-chief or field marshal second only to the king. An officer of this rank led Sargon's assault against Ashdod (ca. 712 B.C.; Isa. 20:1). Another officer of this rank was sent by Sennacherib along with two other officials, the Rab-shakeh and the Rabsaris, to demand Hezekiah's surrender of Jerusalem (ca. 701 B.C.; 2 Kings 18:17). In some versions the title is understood as a proper name; in others it is translated as "commander" or something similar. ***See also*** Rabsaris; Rabshakeh.

Tattenai (tat'uh-n*i*), the governor of the province "Beyond the River" (Ezra 5:3, 6) under Persian rule in postexilic times. The province name Abar-nahara, "beyond the river," included Samaria and Judea, thus covering the rebuilding at issue in this episode in Ezra. Tattenai, after reporting on the rebuilding in progress in Jerusalem, was instructed by the Persian government not to interfere (Ezra 6:6, 13), in keeping with Cyrus's decree (Ezra 6:1–5). ***See also*** Shetharbozenai.

Taurus (taw´-ruhs) **Mountains.** ***See*** Tarsus.

Taverns, the Three, a way station on the Appian Way, about thirty miles south of Rome, ten miles north of the Forum of Appius, where Paul was met by members of the Christian community of Rome, as he journeyed there from Puteoli (Acts 28:15). ***See also*** Appius, Forum of.

tax. ***See*** Money; Publicans; Treasures; Tribute, Tax, Toll; Worship.

Teacher of Righteousness, the leader of the Essenes when they withdrew from Jerusalem to Qumran about 150 B.C.; his real identity is unknown. He was a priest who was prominent in the Temple; one hypothesis suggests that he had been high priest during the period from the death of Alcimus in 159 B.C. to the accession of Jonathan Maccabee in 152 B.C. He may have been associated with the Hasideans (the "pious") who supported the Maccabees in their wars against the Hellenizers who wanted to introduce Greek customs among the Jews. He and his followers most probably rejected Jonathan as high priest because he was not from a high-priestly family.

The title "Teacher of Righteousness" may mean both the righteous teacher and the one who teaches righteousness. The title is in contrast to the Teacher's opponents: the preacher of lies who split from the community and the wicked priest in Jerusalem who persecuted the Teacher. The Teacher of Righteousness functioned as the true interpreter of Scripture for the community (1QpHab 7). The Thanksgiving Hymns (1QH) also found among the Dead Sea Scrolls stress God's mercy toward the community, the true knowledge of God, salvation, and the trials undergone by the teacher. ***See also*** Essenes; Qumran, Khirbet. A.J.S.

teaching, the process of instruction and the content of instruction. Little is known of the modes of teaching used in Israel during OT and NT times. Cultural parallels suggest that some schools were established to teach reading and writing to the small percentage of the population who were literate. Occupational, cultural and moral instruction took place within the family, clan, and village. Education for higher office probably took place within the king's court by scribes, and instruction in religious law was probably carried on by priests in the Temple. The books of Proverbs and Ecclesiasticus reflect some of the contents of higher education. The book of Deuteronomy stresses that the law of Israel must be taught and learned and this conviction continued into the rabbinic period.

In the NT Jesus is presented as the oral teacher par excellence (John 3:2; 13:13). In the Gospel of Matthew Jesus is presented as a teacher and large blocks of his teachings are spaced throughout the Gospel (chaps. 5–7, 10, 13, 18, 24–25). Little is said about how Christianity was taught in the early church. In Acts Paul is pictured as going to the synagogues to preach about Jesus and then withdrawing into the homes of believers to continue his ministry (Acts 18:4–7; 19:8–9). The Pauline and post-Pauline Letters speak of an office of teacher (1 Cor. 12:28–29; Eph. 4:11) but do not say how it was carried out. Emphasis is also put on the content of the message, which according to Paul must be the gospel (Gal. 1:6–9). Faithful teaching of the message is emphasized more and more in the later books of the NT, such as in the Pastoral Letters (1 Tim. 4:6, 11, 16; 6:2, 3). ***See also*** Education; School; Scribe. A.J.S.

teeth, a word used of both humans and animals, in both literal and figurative ways in the Bible. It is used as a symbol to denote predators or agents of devastation. God breaks the teeth of young lions (Job 4:10) but can also send the teeth of beasts (Deut. 32:24) as a punishment for turning to others who are no gods (v. 21). In the prophet Joel the devastation wrought by the teeth of locusts is taken as a judgment sent by God, calling the people to repentance (Joel 1:2–2:27; cf. Rev. 9:8). In addition to actual animals or insects, "teeth" is used of symbolic (Dan. 7:5, 7, 19) or mythic (Job 41:14) beasts and of human beings. The psalmist prays God will break the teeth of the predatory and impious (Ps. 58:3–6), and God is praised for not having delivered up the psalmist as a prey into the teeth of rampageous foes (Ps. 124:1–7; see also Ps. 3:7; Prov. 30:11–14).

"To gnash the teeth at or against" expresses deep hostility and intention of harm (Job 16:9; Pss. 35:16; 37:12; 112:10; Lam. 2:16; Acts 7:52). "To have white teeth" (Gen. 49:12) or "teeth like ewes" (Song of Sol. 4:2; 6:6) is a sign, respectively, of blessing and beauty. "An eye for an eye, a tooth for a tooth" expresses the requirement of a physical punishment equivalent to—but not exceeding—the injury received (Exod. 21:24; Lev. 24:20; Deut. 19:21). "Weeping and gnashing of teeth" is a characteristic response among those excluded from the Kingdom of God (Matt. 8:12; 13:42; Luke 13:28). "Cleanness of teeth" is synonymous with famine (Amos 4:6). "With" (KJV) or "by" (RSV) "the skin of my teeth" (Job 19:20) suggests, respectively, that only the gums are left in the mouth or that the escape was as narrow as the film on teeth. One can "have one's teeth set on edge" by vinegar (Prov. 10:26) or sour grapes (Jer. 31:30; Ezek. 18:2). J.G.G.

Tekoa (tuh-koh´uh), a name used in reference to a wilderness (2 Chron. 20:20) and to a town. Two persons known to David came from the settlement (2 Sam. 14:1–17; 23:26), and according to the author of Chronicles, Rehoboam fortified the site (2 Chron. 11:6). The settlement is located on a ridge about ten kilometers south of Bethlehem. Because of its vantage point warnings could be given if an enemy threatened Jerusalem from the south (Jer. 6:1). Most likely this site is the home of the prophet Amos (Amos 1:1) despite the claim of some scholars that Amos's home must be a Tekoa in Galilee, a site known in postbiblical times. J.A.D.

tell, the Arabic word for a natural hill or an artificial hill of accumulated debris from human occupation, the latter being its normal meaning in archaeological usage. Such *tell* formation was due to fundamental factors involving human settlement patterns as well as to weather and the peculiar nature of construction materials common in the Near East.

Settlement by communities was bound by the necessities of a stable fresh water supply, an economic base of support, and the defense potential of a site. A good combination of all three drew people to a location century after century, and each culture left its physical remains, whether by design or accident.

Weather in the Near East tends to be dry and hot, allowing unusually good preservation even of organic remains, in contrast to a temperate or jungle climate. Thus physical material left by a culture tends to be well preserved.

Construction material and building habits involved the extensive use of mudbrick, because of its ease of production everywhere, and the economic fact that it was cheaper and safer to tear down and rebuild a mudbrick wall than to try to repair its structural damage or fault. Remains of such mudbrick covered all material lost or discarded when it was mashed flat, thus preserving over the centuries layer after layer of human occupation debris. The catch-basin effect of major city walls surrounding a town simply increased the cumulative pace.

Tells, then, are the physical record of human occupancy starting with the first inhabitants of the site over bedrock or virgin soil and proceeding to the most recent inhabitants' deposits at the uppermost layer. Reading that record is the archaeological task called stratigraphy. The value of a tell is unpredictable. Huge formations like that at Beth-shan (over 100 feet high before excavation) are not necessarily most helpful. Tell el-Harmal in Iraq, a major administrative center, rose only four feet over the plain but contained much useful information. R.S.B.

Tell el-Milh, located in the Negeb near Arad, is typical of the artificial hills of accumulated debris from human occupation common in Palestine.

Tell Beit Mirsim (tel b*i*t meer´sim; also Kiriath-sepher). ***See*** Debir.

Tell el-Amarna. ***See*** Amarna, Tell el-.

Tema (tee´muh). **1** The ninth-named son of Ishmael (Gen. 25:15; 1 Chron. 1:3). **2** A location in northern Arabia, known for caravan traffic (Job 6:19), possibly an oasis (Isa. 21:14), with its occupying tribe named for the site (Jer. 25:23). Most agree it is the northern Arabian caravan intersection, Teima, located at the western edge of the Arabian Desert, east of the western mountain ridge, at 27°38′ N and 38°29′ E. Babylon's last ruler, Nabonidus, lived there some ten years, precipitating Persia's conquest of Babylon.

Teman (tee´muhn). **1** Edomite son of Eliphaz, the grandson of Esau (Gen. 26:9–11; 36:15; 42; 1 Chron. 1:36, 53). **2** A location in Edomite territory (Jer. 49:7,20; Ezek. 25:13?; Amos 1:12; Obad. 1:9; Hab. 3:3?). It appears to be a regional designation, and site identifications are all contested. The reference in Hab. 3:3 may refer to a more southern location, presently unidentified.

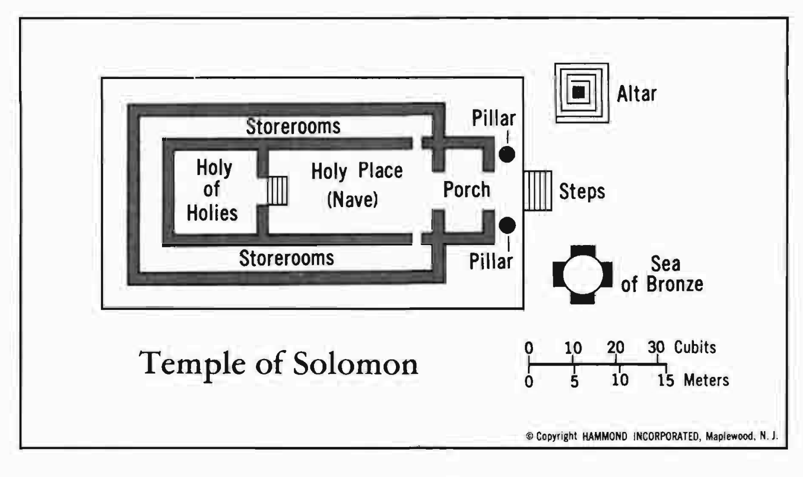
Temanite (tee´muh-n*i*t). **1** The tribal or geographical identification of Job's visiting friend Eliphaz (Job 2:11), who offered several speeches (Job 4:1; 15:1; 22:1). Having received the charge of God's wrath (Job 42:7), he obeyed the Lord's instructions (Job 42:9) and left the scene. It may refer to origins either in Edom (see Teman 2) or northern Arabia (see Tema 2). **2** The tribal or geographic identification of Hisham, an Edomite king (Gen. 36:34; 1 Chron. 1:45).

temperance. ***See*** Self-control.

The Temple

THE RELIGIOUS STRUCTURE in Jerusalem that was the center of Israelite national life in the biblical period, beginning with the monarchy (tenth century B.C.) and continuing until its final destruction by the Roman legions in A.D. 70. Even in the sixth century B.C., when the Temple lay in ruins for about seventy years as the result of the Babylonian conquest of the kingdom of Judah (586 B.C.), sacrifice took place in the Temple courtyard. The Temple Mount (Mt. Zion in Jerusalem) continued to symbolize, in prophecy and tradition, God's relationship with the people. Despite the fact that the Temple's existence for over a millennium was nearly continuous, it did undergo two major reconstructions, one following the Exile, beginning in 520 B.C., and the other as part of the enormous building projects carried out by King Herod, who reigned in Palestine from 37 to 4 B.C.

Because of these two rebuilding projects, it is customary to consider the Jerusalem Temple as having had three distinct stages of existence. The First Temple, also known as Solomon's Temple, is the product of Israel's United Monarchy in the tenth century B.C. The Second Temple was rebuilt on the site of its destroyed predecessor at the end of the sixth century; it is sometimes known as Zerubbabel's Temple because Zerubbabel was the chief political officer in the Persian subprovince of Yehud (Judah) at the time of the restoration of the Temple. The third stage of the Jerusalem Temple is known as Herod's Temple and consisted of Herod's enlargement and embellishment of the Second Temple.



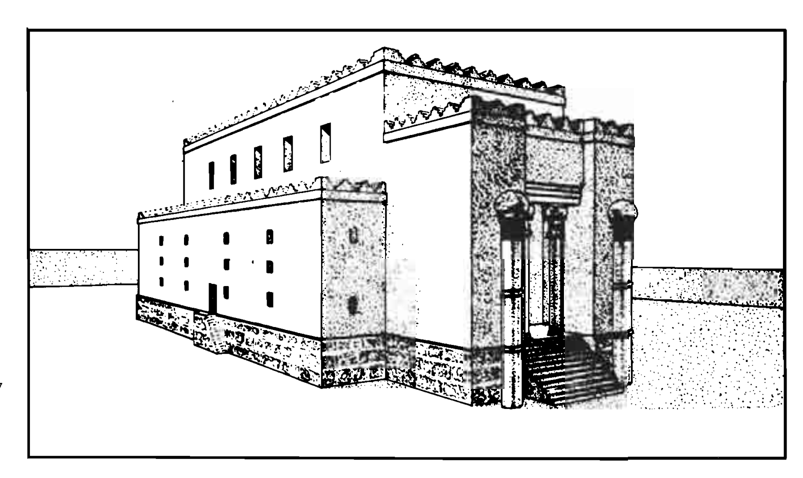
Although three major architectural periods for the Temple can be identified, many other changes in its ground plan, appurtenances, and decoration took place during the centuries when it stood in the administrative center of the nation in Jerusalem. Some of those changes are recorded in the biblical account of the monarchy; other alterations perhaps were made but were not included in the biblical record. Because of the continued refurbishing to which the Temple was subjected, the ancient sources that provide the bulk of the information about the Temple's appearance and function are sometimes confusing and contradictory. The building was one in its conceptualization but was many in its execution. Hence the sources from different periods would reflect the different appearances of what was, in concept, the same structure. These sources include twenty-three of the books of the OT and eleven NT books. In addition, many extrabiblical literary works, such as the Apocrypha and Pseudepigrapha, the Dead Sea Scrolls (especially the Temple Scroll), the works of Philo and Josephus, and the Mishnah, contribute to our knowledge of the Temple, particularly in its final form before the fall of Jerusalem in A.D. 70.

For many years, biblical scholars have tended to project back upon the ancient Temple their experience with contemporary religious edifices.

Yet sacrificial practices were carried out in Jerusalem, and that dimension of the Temple alone sets it apart from postbiblical religious buildings. Furthermore, temples in the ancient world functioned in many ways fundamentally different from the manner in which synagogues and churches operate in Western civilization. The Temple was not simply a religious or cultic building. Its very name—its most common designation in the Bible is "House of Yahweh"—indicates that it was conceived of as a residence for God and not as a place of public worship and prayer. In fact, the general populace had access only to the Temple courts and not to the inside of the structure itself. Even the clergy did not circulate freely within the building, the inner sanctum being off limits to all but the chief priest and to him only on one occasion annually (the Day of Atonement). Although the Temple was not a public building in the sense of its interior being open to the public, it was very much a public building in a political and economic sense. Because ancient Israel, even during the monarchy, was not a secular state, the Temple played an integral role in the organization, legitimation, and administration of the national community.

First Temple: The First Temple is known chiefly from the description in 1 Kings 6–8 and the parallel account in 2 Chronicles 2–4. Ezekiel also has an extensive Temple section (chaps. 40–46). However, because of the visionary nature of Ezekiel's description and because it probably dates from after the destruction of the Temple in 587/6 B.C., its reliability as a witness to the First Temple, at least as it appeared at the beginning of its history, is minimal. Not a trace of the first Jerusalem Temple is available archaeologically; and even if it were, it is doubtful that a razed building of the early first millennium could supply the kind of detail that exists in the biblical sources. Nonetheless, the archaeological recovery of other ancient temples in Syro-Palestine provides an important corpus of comparative material.

The basic shape of the Jerusalem Temple was a rectangle, which was subdivided laterally into three sections on the same axis, and all of the same interior width, 20 cubits. The building measured 60 cubits long and was 30 cubits high. (For the Temple, the royal cubit, 20.9 inches, is probably the intended unit of linear measure; that would make it about 105 feet long, 35 feet wide, and 52 feet high.) These are internal



In this plan of the Temple of Solomon, the "Sea of Bronze" is placed according to 1 Kings 7:39.

measurements based on the information in 1 Kings 6:2. The dimensions provided in Ezekiel (41:13–14) are for a 100 by 50 cubit structure. Ezekiel's data may reflect the external measurements of the Temple and include the subsidiary rooms built around it; they also may have been influenced by the proportions of the tabernacle, which was situated within a 100 by 50 cubit precinct. Although the interior decorations of the Temple are described in great detail (1 Kings 6), no information is given about its external appearance aside from the specifications about the hewn stone used for the walls. From the outside, the building probably presented a rather stark, formidable appearance.

Entrance to the Temple interior was gained by passing through the first of its three sections, the *'ulam,* which is related to an Akkadian word meaning "front" and which is translated "vestibule" by the NRSV (1 Kings 6:32; 2 Chron. 3:4). Other versions render it as "porch," "portico," or "entrance hall." None of these translations reflect accurately the function of this 10-cubit-deep section of the Temple. The *'ulam,* unlike the two other sections, was not flanked by the side chambers of the Temple. Directions for paneling its internal walls do not appear, in contrast with the instructions for the inner two rooms, making it questionable whether its walls were paneled or decorated at all. Instead, its manner of construction (1 Kings 7:12; cf. 1 Kings 6:36) is identical to the technique described for the construction of both the public court of the Temple and also the great court of the adjacent palace area. Furthermore, the doorways to the inner two sections are described in detail, but no doorway to the *'ulam,* is specified; it apparently had none. The account in the book of Kings also gives no height for the *'ulam.* This series of contrasts between the information about the two inner rooms and the details of the first room suggest that it was not an enclosed room at all but rather was an open-air forecourt through which the divine dwelling was entered in much the same way that every Near Eastern house was entered through its private courtyard.

The presence of Jachin and Boaz (two hollow, cast-bronze pillars) at the entrance to the Temple further suggests that the *'ulam* was a forecourt. These great bronzed columns were situated at the top of the ten stairs that, according to Ezekiel (41:8), led up to the 6-cubit-high platform on which the Temple stood. Each stood 18 cubits high

A depiction of the Temple of Solomon by T. A. Busink, an authority on ancient architecture.

(1 Kings 7:15; cf. 2 Chron. 3:35 and Jeremiah in the Septuagint, which record 35 cubits) and was surmounted by an elaborate capital or double capital of at least 5 additional cubits. The pair of Jerusalem pillars loomed large at the entrance to the Temple. They were highly visible elements of the Temple's architecture, and consequently they were the visual link for the general public to the unseen grandeur within the building. Furthermore, they were probably free-standing and as such represented the gateposts that were part of the entryway to the Temple's private forecourt.

The second section of the Temple was its main or largest room, measuring 40 by 20 cubits and reaching a height of 30 cubits. Its name in Hebrew, *hikhal,* is related to Akkadian and Ugaritic terms, and ultimately to a Sumerian word, meaning "great house" and referring to a palace or any large and imposing dwelling (as in Hos. 8:14; 2 Kings 20:18). The residence of a deity would qualify as a "great house," and in fact this term for the largest chamber of the Temple is occasionally used to designate the Temple as a whole (e.g., Jer. 7:4; Zech. 8:9). The NRSV calls it the "nave" (1 Kings 7:50; 2 Chron. 3:4–5); other translations include "main room," "temple proper," and "holy place." Like the more common name for the Temple, "house of the Lord," this term also signifies the conceptualization of a temple as an earthly dwelling place of the deity. A large and elaborate cypresswood doorway carved with cherubim and palm trees and overlaid with gold provided entry to the central room.

The size of the *hikhal* and also the fact that it had windows indicate that this was the chamber in which most of the cultic activity associated with the building's interior took place. The windows were probably clerestory windows, set in the upper part of the walls above the flanking series of external subsidiary rooms. In addition, the internal Temple furniture was situated in this room and required regular attending to. A small altar for incense, made of cedar and overlaid with gold, stood in front of the entrance to the third room. Ten golden lampstands, which probably consisted of cylindrical stands surmounted by multispouted lamps (1 Kings 8:49), were situated in two groupings, five on the north and five on the south. The third major appurtenance placed in this chamber was also made of gold, or at least overlaid with gold: the table for the enigmatic "bread of the Presence" (1 Kings 8:48). The floors and walls of cypresswood were overlaid with gold, the latter first having been carved with figures of cherubim and with flowers and palm trees. The extensive use of gold in this room and also in the third room is to be contrasted with the use of bronze for the other appurtenances: the huge "molten (or bronze) sea," the ten lavers with their stands, the pillars Jachin and Boaz, and probably the great altar for sacrifice. Made of the less valuable metal, they represented the lower order of sanctity of the outside courtyard in which they stood, to which nonpriests as well as priests had access.

The innermost chamber of the Temple is known in Hebrew as the *debir,* which the NRSV translates "inner sanctuary" (1 Kings 6:5; 2 Chron. 4:20; 5:9) and which other versions render "Holy of Holies," "oracle," "shrine," "adytum," or "most holy place." The Hebrew word may be related to the ordinary verb meaning "to speak," in which case the inner chamber would be the place where God speaks, or the

"oracle." Entrance to the innermost room was gained through olivewood doors; like the doors to the *hikhal,* they were carved with flowers, palm trees, and cherubim and were overlaid with gold. The carved walls and the floors, also like those of the central chamber, were covered with gold. The internal measurements of the inner chamber, 20 by 20 by 20 cubits, made it a perfect cube. Its height was 10 cubits less than that of the adjacent central chamber, with which it was otherwise so closely associated in construction and decoration. Perhaps a slightly elevated floor and lowered roof accounted for the difference and helped to create an architectural focus on the contents of the inner room. At the same time, its elevated floor may have symbolized its location in cosmological terms over the "rock of foundation," the primordial mound of creation.

The darkness of the *debir* was filled with two enormous olivewood cherubim, overlaid with gold, each with a 10-cubit spread to its outstretched wings and each 10 cubits high. Under the adjacent wings of the cherubim, which commonly represented the protective quality of supernatural beings (cf. Gen. 3:24) in ancient Near Eastern iconography, stood the "ark of the covenant of the Lord" (1 Kings 6:19). The Ark was the most important object in the Temple. If the building as a whole was conceived of as the earthly dwelling place of God, with the rich furnishings and decorations suitable for a microcosmic replication of the heavenly abode of the Lord, then the Ark was the object within that building that represented both the divine presence itself and also the binding covenantal relationship between God and Israel. Although the Israelites did not believe that God's presence could be localized or confined to a particular building, they shared with all peoples the psychological and emotional need for a visible and material indication that God was nearby. Because God was seen as the source of material blessing and national protection for the Israelites, affirmation of God's availability to provide those essentials was communicated by the physical structure that, with all its splendor, symbolized a divine dwelling and assured the people of ready access to their God.

The symbolic nature of the Temple as a residence for God went beyond the function of providing assurance to the Israelites that God was with them. Construction of the Temple was anticipated by David, who brought the Ark to Jerusalem and who, at least according to the Chronicler (1 Chron. 22:2–5), began the task of assembling the raw materials—stone, metal, and wood—from which the Temple would be built. Within four years of ascending to the throne, Solomon began the actual construction. Although the biblical sources may exaggerate the scope of the project, it is clear that Solomon gave great priority to its completion. An enormous workforce was assigned to the task (1 Kings 5:27–32; cf. 2 Chron. 2:17–18). Within seven years, a remarkably short span of time for a project of this nature, the work was completed. According to the biblical record, an elaborate, fourteen-day ceremony of dedication was held, with a guest list that included international as well as national dignitaries (1 Kings 8:1–2, 65).

The decision to build the Temple coincided with the formation of the monarchy and the emergence of Israel, for the only time in its long history, as a political power that was not only independent but that also was the dominant force in the Levant for almost a century. During

the reigns of David and Solomon, Jerusalem was the capital of a kingdom that appeared to have imperial control over territory that reached from "the entrance of Hamath to the Brook of Egypt" (1 Kings 8:65). The construction of the Temple was integrally related to the formation of the Israelite state and to the imperial claims of its capital in Jerusalem.

The formation of nation-states or city-states in the ancient world involved the concept that the nation's or city's chief deity approved and would support the concentration of power in the hands of the few who controlled the administrative structure of a state. Consequently, the building of a temple nearly always accompanied the establishment of a dynastic power. A temple building, as the visible symbol of a god's presence, was the most effective way for the leaders of a country to communicate, in the days before mass literacy and broadcast media, the fact that their god favored the political organization that was being established. The building of a temple added the essential note of absolute legitimacy to the formation of a new system of governance. The Davidic monarchy depended upon the existence of the Temple, as well as upon the skill and charisma of the monarchy's leaders, to secure the support and loyalty of the populace.

The legitimizing function of the Temple also operated on an international level. Its existence in Jerusalem demonstrated to non-Israelites—ambassadors and foreign wives, merchants and visitors—who had come to Jerusalem, especially during Solomon's long reign, that the God of Israel was present and had granted to the king his right to exercise dominion over Israel and over all the conquered territories. David had established extra-Israelite dominance through his brilliant use of military force; Solomon sustained that control through diplomacy. The Temple as part of the administrative center in Jerusalem bore the message that the Israelite domination of nearby states had divine sanction.

Comparative archaeology contributes to this understanding of the political role of the Temple. The situation of Jachin and Boaz as gateposts to the Temple's inner court (*'ulam*) made them highly visible symbols of the entrance of the invisible God into the Temple, just as stone-carved reliefs from ancient Near Eastern sites marked the important event of the bringing of the cultic image of a city's god into its dwelling place. The enigmatic names of the pillars indicate God's cosmic rule and power: Jachin perhaps means that God "has founded" the dynasty and Temple, and Boaz refers to the divine "power" emanating from the Temple. That the Jerusalem pillars surpassed in size analogous entry columns of other Syro-Palestinian temples suggests that the status of the Jerusalem Temple was greater than that of the temples of any other contemporary city-state or nation-state. The very size of the Temple as a whole presents a similar situation. The interior space of the Jerusalem sanctuary was considerably greater than that of the excavated temples of Syria and Palestine from the centuries closest to the existence of the Israelite empire. The Jerusalem Temple with its tripartite plan was part of Near Eastern architectural traditions for temples; but it surpassed similar buildings in size, as befitting its location in a city of international status.

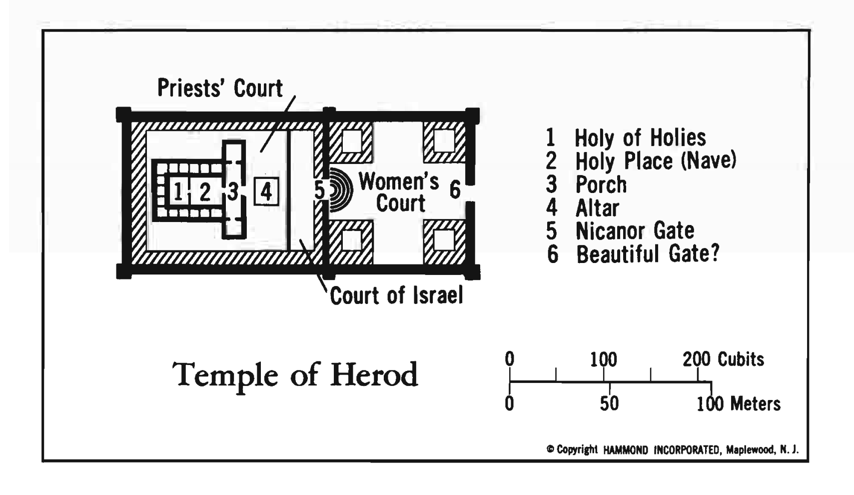
A further indication of the political role of the Temple can be seen in the way it incorporated imported materials and workmanship into its

decoration. Israel's lack of skilled workers and suitable raw materials led Solomon to enlist Phoenician aid. However, with Jerusalem conceived of by the Israelites as the theological center of the ancient world, the use of materials from all parts of that world also helped establish Jerusalem's cosmic centrality. The greatest influence upon the embellishment of the Temple can be found in the artistic traditions uncovered in the ruins of the major Syro-Hittite cities of the early Iron Age. Solomon used the visual embellishments best known to those populations to whom he most needed to communicate the divinely chartered rule and dominance of Jerusalem.

The international role of the Temple can also be seen in the elaborate, three-tiered complex of storerooms, thirty rooms to a story, which surrounded the Temple on three sides. The storage capacity of these rooms exceeded the needs of the Temple's rituals and personnel. Known as the *yatsi'a* (rendered "galleries," "side rooms," or "side chambers"), this structure housed the Temple treasury. It was a storehouse for religious objects as well as for precious items sent to Jerusalem as gifts and tribute or secured as booty or taxes. The fortress-like architecture of the Temple is a feature of its economic function, along with the palace, as a repository for the national wealth and even weaponry (cf. 1 Kings 7:51; 14:25–26; 15:18; 2 Kings 11:10; 12:4).

Second Temple: The Second Temple was built between 520 and 515 B.C. to replace the Temple built by Solomon, which had remained at the center of national life in the southern kingdom of Judah after Solomon's death until the Babylonians conquered Jerusalem. Renovations, repairs, and refurbishings may have altered the First Temple somewhat during the course of the centuries of the Judean monarchy (924–586 B.C.), but the basic structure had remained the same. The Babylonians destroyed the First Temple by carrying away all its precious items and furnishings, in the process dismantling those too large to transport easily, and then burning it (2 Kings 25:8–17). However, since only the roofing and internal paneling of the Temple were wooden and could be burned, the stone foundation and much of the superstructure probably remained. There is no indication that the walls were razed. With the prodding of the postexilic prophets Haggai and Zechariah and through the leadership of the high priest Joshua and the Persian appointed governor Zerubbabel, who was also a Davidic descendant, the work of restoration was carried out. Concern about the lack of splendor in the postexilic building (Hag. 2:3; Ezra 3:12) probably reflects the dearth of precious metals in its decoration rather than any diminution in its size.

Although the restored Temple was crucial in representing continuity with both the appearance and the role of the pre-exilic building and institution, a radical change took place in its traditional balance of religious and political-economic functions. Without a king to sit on the throne of David, the legitimizing role of the Temple in national life shifted to the priestly administrators of Judah, which had become the postexilic Persian province of Yehud. The priests had always been important in national life, but their responsibilities were enlarged after the Exile as they stepped in to fill the gap left by the absence of the civil authority of kingship. The Persians evidently allowed the high priest and his staff to assume much of the internal governance, fiscally



and legally, of Yehud. Zechariah's Temple visions, particularly in chaps. 3 and 4, continue the age-old concept of the Temple as a legitimizing factor for the administrative structure of the community. For Zechariah, the priesthood's role is expanded and the monarchic role becomes a matter of future expectation. The Temple stood alone, without the palace, as the center of semi-autonomous national life and as the focus of the dispersed community still in exile.

Third Temple: Herod's Temple comes at the end of the sequence of Jerusalem temples and is best known to us physically because of the extensive excavations along its western retaining wall and at many other buildings dating from the rule of Herod the Great (37 B.C.–A.D. 4). The Second Temple had undergone desecration and despoliation after the Greeks (325 B.C.) and then the Romans (63 B.C.) replaced the Persians as the imperial masters of Palestine. Yet Herod's temple-building project, described in considerable detail by the first-century historian Josephus and referred to extensively in other Jewish sources (especially the mishnaic tractate *Middoth*) and in the NT, went far beyond any simple task of refurbishing or repairing the sixth-century structure. Herod's struggle to take over the Judean kingdom and his monumental efforts to make it a significant part of the Roman Empire are reflected in the magnitude of his building projects.

Hebrew inscription (shown here in part) from the outer wall of the Temple Mount reads, "of the place of trumpeting"; first century B.C..

Herod, probably the descendant of an Idumean, was in essence a usurper of the throne in Jerusalem. He did not enjoy the traditional Jewish support that had been held by the Hasmonean (Maccabean) rulers who preceded him and who had combined the office of high priest with the kingship acquired as the result of their revolt against the Seleucids in the second century B.C. His grandiose building projects included the construction of an entirely new, gold-covered Temple, although with the sanctuary itself corresponding approximately to the Solomonic dimensions, on an enormous platform (ca. 169,000 sq. yds.) and within a broad public area (see Matt. 21:12; Mark 12:15). The Temple and its courts were surrounded by a Roman-style double colonnade and entered through monumental gates. Both the literary sources and the archaeological discoveries affirm that the builders of this vast complex sought to incorporate the current Greco-Roman architectural fashion. It is questionable that Herod's intentions arose

from religious sensibilities or allegiance to the God of Israel. The political dimension that had always been present in temple building came to dominate Herod's plans. His attention to the Temple would win over, he hoped, dissident Jewish elements within his kingdom. Furthermore, the scale and style of the Temple, as of the other buildings of Herodian conception, were meant to make a visual statement to Rome about the importance of the Jewish kingdom.

Jesus driving the money changers from the Temple (Mark 11:15–19); alabaster relief at the Basilica of St. Mark, Venice, sixth century A.D.

The importance of the Temple in the religious life of Jews at this time is evident in the NT. The birth of John the Baptist was announced in the Temple (Luke 1:11–20), and the sacrificial offering for every Jewish male child was offered there for Jesus (Luke 2:22–24). The Temple was also the place his future prominence was announced by Simeon (Luke 2:25–35) and Anna (2:36–38). Jesus' religious significance was first seen in the Temple (Luke 2:42–51), and he taught in its precincts when he went to Jerusalem (Mark 12:35; John 7:14, 28). His later purging of its worship practices (Mark 11:15–19) figured prominently in the charges that brought about his death (Mark 14:58; 15:29; cf. 13:1–2). Early Christians continued to gather in the Temple (Acts 2:46; cf. 3:3; 4:1–2), and Acts records that Paul was arrested there at the instigation of his opponents (Acts 21:27).

The largest and grandest of the Jerusalem temples was also the shortest lived. The Roman siege of Jerusalem had the Temple as its focus, and Titus and his legions set fire to the edifice in A.D. 70. Today, the Muslim shrine called the "Dome of the Rock" or the Mosque of Omar stands on the Temple site.

The destruction of the Jerusalem Temple hardly brought an end to its importance for Judaism and Christianity. Without the presence of a physical temple building the religious communities focused on its future existence. The early Temple had been a force for Jewish survival; the idea of the heavenly temple, which had always been part of the Temple idea, continued to exist in Jewish life. At the same time, the hope for rebuilding the Temple persisted, spawning the intense consideration of Temple matters in rabbinic texts. In contrast, the early church paid little heed to the notion that the Temple might be re-

Romans carrying spoil, including a menorah and trumpets, from the Temple; relief on the Arch of Titus, Rome, A.D. 81.

stored. Its eschatological visions of a new Jerusalem had no place for a temple. Yet the temple idea persisted in Christianity as well in the conception of Jesus as the sacrifice that secured eternal redemption.

Despite several postbiblical attempts to rebuild it—the most notable initiated by Julian the Apostate (ca. A.D. 362–363), perhaps to disrupt the Christian character of Jerusalem—Temple restoration efforts proved futile. Yet interest in the physical characteristics of the building, its furnishings, and its rituals surfaced in the rich tradition, nearly two thousand years old, of graphic representations of various features of the sacred building. Depictions of the Temple have been found in nearly every available artistic medium—such as mosaic floors, tomb paintings, sculpture, gilded glass, coins, and manuscripts—from Roman antiquity to the present. The many detailed architectural reconstructions and models produced by nineteenth- and twentieth-century scholarship continue the millennia-old focus on the Jerusalem Temple.

temples, religious structures which were probably the most important and most visible institutions in the biblical world. Their prominence as architectural structures on the ancient landscape is a reflection of their integral role in the political and economic structure of ancient society. While we think of temples primarily in terms of their religious dimension, i.e., as relating specifically to deities, temples were in fact basic components in the political organization and administration of territorial units, from city-states to nation-states or empires, in the ancient Near East.

The English word "temple" is misleading in its usage as a translation of certain terms in the Hebrew Bible. Derived from the Latin word *templum,* which strictly speaking denotes separated or marked-off space, or a holy place, it could theoretically denote any of a number of types of worship places known in the biblical world, including altars, high places, and stelae. English parlance, however, normally uses "temple" to indicate an actual building or structure that partakes of the sacred.

The essential nature of such a building in OT times is revealed in the two Hebrew terms translated "temple": *bayit,* "house [of God]," and *hikhal,* "[Yahweh's] palace." These words differ from the two NT (Greek) terms for temple: *naos,* which denotes a sacred building, and *hieron,* which refers to a sacred area or place.

Both Hebrew terms are essentially secular in origin, both refer to a structure rather than to a holy place or precinct, and both conceptualize such a structure as a residence or dwelling for the deity. While neither the Israelites nor their Canaanite neighbors may have adhered to the literal notion of a deity inhabiting an earthly building, that idea undoubtedly underlies the origins of all ancient Near Eastern temples and continued to function symbolically throughout the biblical period. Indeed, the plan, furnishings, personnel, and service associated with temples can be reconstructed rather well on the basis of both archaeological and textual sources. All this information depicts the functioning of an institution intended to provide amply and royally for the needs of its divine inhabitant, even if the earthly house was only a pale copy of the deity's real and splendid residence in heaven.

Archaeological Data: The archaeological investigation of temples is not quite so simple a matter as it might seem. Since the organizing principle of temple building was the construction of a dwelling place for a god, the designs for temples were drawn, at least in the earlier stages of their architectural history, from the typical plans for larger human houses or palaces. Identification of excavated buildings as temples is thus problematic.

Nonetheless, a number of features usually allow certain buildings to be identified as temples. Temples tend to be located in prominent places within a city. As part of the administration of the political unit in which they existed, they were often adjacent to similar, and often larger, royal buildings. Together, the royal and divine residences, which we call palace and temple, constituted a separate precinct in an ancient city. At least in some cases, the temple-palace complex was set off as an acropolis or as a raised and/or walled section of the city. Even if a palace was not included, the temple by itself, since it was technically sacred space, would normally have been separated from the rest of the city by surrounding courtyards and walls, although the dwellings of the city's inhabitants were often built up against the courtyard walls.

In addition to the prominence of their location, temples can often be identified as residences for deities by some architectural divergence from the secular monumental buildings of their time. Size alone is not a criterion since, as we have noted, palaces might exceed temples in size. However, the thickness of a temple's walls matched or even surpassed that of the walls of adjacent palaces. The temple was in a sense like a fortress, protecting the sanctity of the god, the lavish furnishings of the god's dwelling, and also the precious commodities brought into and stored in the temple storerooms.

Perhaps the most indicative feature of a temple is that its ground plan typically includes, in its innermost part, a special recess or distinct small room meant for the statue of the resident deity. Furthermore, the artifacts recovered in buildings that might be classified as temples include a repertoire of pottery forms and other objects not found in normal domestic settings. Superior workmanship, religious symbolism in the decoration, and costly materials characterize such artifacts and allow them to be designated "cultic objects." They constitute the furnishings of the deity's house and the vessels for the provision of all the god's needs. Finally, the courtyard of a temple if it can be fully excavated would be expected to reveal an altar. As a place for burnt offerings of all kinds and for animal sacrifice, altars had to be outside the roofed temple building, although small altars might exist inside the building for the burning of incense.

Types of Temples: With these criteria in mind, the existence of temples in many of the major cities occupied by the Canaanites or Philistines, either prior to or contemporary with ancient Israelite origins in Palestine, can be established with reasonable certainty. Two major types of temples have been recognized. The oldest is called the *broad-room,* which was basically a rectangular or roughly square room with the entrance on one of the long sides and a niche or platform for the god opposite the entrance. The orientation is thus along the short axis. Some of the earliest examples, as in Early Bronze Age

Early Bronze Age (3000–2000 B.C.) "broad-room" at Ai, which may have been a temple.

(3000–2000 B.C.) Ai and Megiddo and possibly also at Arad, are clearly derived from typical Early Bronze Age house architecture. It is to be noted that some scholarly dispute regarding their identification as temples persists. The basic broad-room was expanded in various ways: by the addition of ancillary rooms around the associated courtyard, by the development of the niche into a discrete cella (shrine-room), or by the construction of a portico at the entrance.

The last two mentioned features extend the short axis of the building and so relate the broad-room sanctuary at least in some instances to the other major temple type, the *long-house* buildings, in which the orientation is along the long axis. In their more developed forms, they consisted of a series of rooms, usually two or three, along an axis so that an officiant would have to pass through each room in succession to reach the innermost room. Usually, the second or middle room in a long-house temple was largest; it provided the space for the daily rituals carried out in attending the resident deity. The first room served as an anteroom or inner court; it marked the transition from the profane exterior world to the sacred space within. The third room was a cella, the place where the deity lived, as marked by a statue. It was the most holy spot in the temple, the place where the divine presence was accessible to humans. Courtyard space and sometimes annexes or subsidiary rooms for personnel and equipment often combined within the tripartite building itself to form a sacred precinct. The basic tripartite arrangement is evident in several Megiddo and Hazor structures as well as, according to the biblical description, in the Jerusalem Temple. This type emerged in the Middle Bronze Age (2000–1500 B.C.), with the earliest examples perhaps being the extremely thick-walled fortress temples of Shechem, Hazor, and Megiddo.

This typology does not exhaust the kinds of temples excavated in Palestine. The Philistines, as at Tel Qasile, evidently had their own variation; and so did those Canaanites strongly influenced by Egyptian (as at Beth-shan) or northern (Syrian) traditions. In addition the so-called square temples, such as the one from the beginning of the Late Bronze Age (1500–1200 B.C.) at Amman, are set apart from urban areas; but such buildings may not be temples at all but rather mortuary installations. In short, there is no dominant form, although all types tend to have an inner and outer sanctuary as well as an anteroom. Each example adhering roughly to one of the major types nonetheless exhibits its own unique characteristics. Similarly, no dominant pattern of orientation can be discerned, except that orientation tends to remain constant at a given temple site over the duration, often many hundreds of years, of its existence. This may indicate that the principle of orientation relates to the layout of the city in which the temple is built and not to any theological concerns.

Further developments in temple architecture appeared, beginning in the Hellenistic period (300 B.C.–300 A.D.), with the introduction of Greco-Roman temples into Palestine. These imposing structures along with the older Semitic sanctuaries helped determine the architectural form of the synagogues and churches that emerged in the early centuries A.D. While early Christians continued to participate in Temple worship in Jerusalem (Acts 2:46), after its destruction in A.D. 70, a destruction predicted by Jesus in word (Mark 13:2) and act (Mark 11:15–16), the Christian community did not build its own temple. Worship was held in houses, which owed more to the synagogue than to the Temple in Jerusalem.

Biblical Information: The archaeological recovery of Palestinian temples is supplemented by biblical references to temples, or residences for non-Israelite gods, at various places. 1 Samuel mentions the "House of Dagon" (5:2, 5) and the "House of Ashtaroth" (31:10). Judges refers to the "House of Baal-berith" (9:4) and the "House of El-berith" (9:46). Although the latter two temples are at Shechem, they cannot with certitude be related to any of the excavated buildings at that site. Neither can the "House of El" of the patriarchal stories be linked with any remains from Bethel.

The Bible also records the existence of a number of Israelite temples in addition to the major one in Jerusalem. While the terminology associated with such buildings does not usually include the designation "House," other information indicates that a temple building or an equivalent tent shrine, rather than simply an altar or high place, is to be understood. Except for the Northern Kingdom sites of Dan and Bethel, these possible Israelite temples (Shiloh, Gilgal, Mizpah, Hebron, Bethlehem, Nob, Michah's Shrine in Ephraim, Ophrah, and Gibeah) are mentioned in sources describing the premonarchical or early monarchical periods. None of them have been recovered archaeologically. Furthermore, it is not clear that any of them continued to function once the Jerusalem Temple was built. Outside of Jerusalem, the only temple apparently exist-

ing in the Southern Kingdom (Judah) during the monarchy, a cultic building at Arad, is not mentioned in the Bible. It is known only from excavations, and its very identity as a temple has been questioned.

The apparent disappearance of non-Jerusalem temples from Israelite territory once the Jerusalem Temple was built by Solomon is evidence in part of the administrative nature and political role of temples, which served to legitimize the political power responsible for their construction and maintenance. The non-Jerusalem buildings were regional centers servicing the tribal groups. With the centralization of political power in a monarchy, the location of the mechanisms of statecraft in one capital city meant that the complementary cultic institutions likewise shifted to that place, although altars and high places continued to exist throughout Israel. The close connection of the god's dwelling with political administration is further indicated by the fact that temples were not public houses of worship. They were entered only by priests, although the laity could enter the courtyard and worship there. The archaeological evidence of temple size and layout, along with the information from both the Bible and Near Eastern temple texts about temple personnel and ritual, allows for such a conclusion. ***See also*** Temple, The; Worship.

temple servants. ***See*** Nethinim.

temptation, generally an enticement to do evil; the term is used in the Bible to convey two somewhat different ideas. The first is that of "testing" or "proving by testing," to determine the depth and integrity of one's commitment to God (see, e.g., God's command to Abraham to offer his son Isaac as a sacrifice in Gen. 22:1–19; also the testing of Job in Job 1–2). In the NT, some of the writers thought of persecution as a "testing" in this manner (e.g., 1 Pet. 1:3–9). The intent of this testing is ultimately to strengthen the person's faith and devotion to God.

The second nuance of temptation is more in line with modern popular understandings of the term, namely, an enticement toward sin leading to a deliberate act of evil against God or one's neighbor. The biblical writers are careful, however, to make it clear that God does not "tempt" humans to do evil (e.g., James 1:12–15) and in fact makes available the resources necessary to resist temptation (e.g., 1 Cor. 10:13). The familiar petition in the Lord's Prayer dealing with temptation probably should be understood as "Do not allow us to go into temptation" (Matt. 6:13a), as the original Aramaic likely would have read. It is quite possible, moreover, that the reference is to "testing" rather than to "temptation" as this is popularly understood.

A quite different aspect of "temptation" or "testing" in the biblical writings is that of human beings attempting to put God to a test, usually for the purpose of testing God's plans or purposes (e.g., Judg. 6; cf. Matt. 12:39) or, even more, to determine whether they can manipulate God (e.g., Ps. 95:8–11; cf. Matt. 4:5–7; Luke 4:9–12). Such activities stem from a lack of trust in God and his promises. This understanding seems to be involved in the most famous of all temptation accounts, the temptation of Jesus by Satan (Matt. 4:1–11; Mark 1:12–13; Luke 4:1–13).

All of the synoptic Gospels (Matthew, Mark, and Luke) have accounts of Jesus' temptation, although only Matthew and Luke give any details (John's Gospel has no such account). In each Gospel, the temptation takes place immediately after Jesus' baptism, which is interpreted as his commissioning for the messianic ministry, a ministry to be characterized by ser-

Jesus tempted by the devil to throw himself from the pinnacle of the Temple in Jerusalem (cf. Luke 4:9–12); fourteenth-century mosaic depiction at the Kariye Church, Istanbul.

vanthood (Matt. 3:13–17; Mark 1:9–11; Luke 3:21–22; cf., e.g., Mark 10:45). The temptation is not for Jesus to prove his divine Sonship to himself. Such Sonship is never questioned in the NT. Rather, the temptation or "testing" is implicitly presented as Jesus' struggle over whether to obey God's call to be a servant-messiah or to interpret messiahship in the traditional terms of power, strength, and conquest. Such a struggle can be detected throughout the Gospel accounts of Jesus' ministry, where it is made clear that the disciples never really understood Jesus' commitment to a servant ministry.

In the biblical writings, therefore, temptation or testing has these two nuances: the strong inclination of humankind toward evil when it is known that God wills good and testing situations that may demonstrate one's commitment to God and God's ways and even strengthen one's faith. In each, if people overcome temptation, i.e., pass the test, their faith has been enhanced and their character strengthened (e.g., Rom. 5:3–5). ***See also*** Persecution; Sin; Suffering.

ten. *See* Numbers.

Ten Commandments, the, a series of commands from God to the chosen people, mediated by Moses. The text of the Decalogue (Gk., "ten words") or Ten Commandments is given in its entirety twice in the OT with only slight variations. In Exod. 20:1–17 the setting is Mount Sinai; Moses brings down to the people the two tablets of the law written by the very hand of God (Exod. 24:12). In Deut. 5:6–21 the text is part of Moses' recitation of the history of salvation with which he prefaces his last will and testament.

Origin and Setting: Everything about the Ten Commandments suggests that it was a text intended to be memorized and publicly recited by the covenant community. Not only are the commandments in number equal to the fingers of both hands, but a similarity of form also pervades most of the list: "you shall not" is followed by a verb. Placed at the very beginning of the lengthy block of legal materials known as the Sinai passage (Exod. 19:11–Num. 10:10), the Decalogue functions as a summary of the covenant tradition suitable for recitation on public occasions of national reaffirmation of loyalty to the sovereign God. Although the OT makes no specific mention of a regular "feast of covenant renewal," the events recalled in Deuteronomy 27 and in Joshua 24 appear to be such occasions: the people gather at Shechem, swear their allegiance to the law, and watch as inscribed stones are set up to preserve the terms of the covenant. We may even suppose that certain religious officials were responsible to lead the recitation of the law on these occasions, and that these "covenant mediators" may have interpreted the Ten Commandments for their own generation. Prophetic preaching may have its origins in this task of proclamation (see Hos. 4:1–2).

Function: Israelite law can be separated into two large categories: case law and categorical law. The former, represented, for example, in the "Book of the Covenant" (Exod. 20:22–23:33), preserves decisions about actual cases reached through the judicial processes of a settled agricultural community. Biblical case law is roughly equivalent to our common law. Categorical law, on the other hand, does not seem to emerge from actual cases but sets forth the broad principles of community life. The Ten Commandments and similar lists of legal sentences (see Deut. 27:15–26; Lev. 19:13–18) amount to something like the constitutional law of ancient Israel. In function the Ten Commandments can be compared to ten posts supporting the fence separating the viable community of Israel from the marauding beasts of disorder, confusion, and bloodshed howling outside the pale. Of all the statutes needed to regulate the life of the community, these ten were deemed essential beyond all others. Should any one of these ten fence-posts collapse, chaos could break in and wreak havoc in the community. For Israel, survival itself was at stake with every one of these ten categorical imperatives.

The Commandments in Brief: The commandment reckoned to be the first one by most Protestants and Eastern Orthodox Christians, "you shall have no other gods before me" (Exod. 20:3; Deut. 5:7) is considered the first half of the second commandment in Jewish tradition. In Lutheran and Roman Catholic tradition, this commandment is combined with the prohibition against graven images to form the first commandment; Exod. 20:17 is then divided into two commandments to make up the ten. This commandment does not deny the existence of other gods, but it demands total allegiance on the part of Israel to its own God, the covenant-giver. The prohibition against graven images (Exod. 20:4–6; Deut. 5:8–10) may in the first instance have been aimed at images of Israel's own God, Yahweh. God will not be localized in an object such as a golden calf (see Exod. 20:4–6; 1 Kings 12:28), because to permit this to happen would make God an object of manipulation. God has images in the world (Gen. 1:26), but they walk on two feet and they love God and keep the commandments (Exod. 20:6). The prohibition against the misuse of the name of God (Exod. 20:7; Deut. 5:11) is directed at another form of manipulation of the deity for personal interest. Magical, imprecatory, and other trivial cultic uses of the sacred name are forestalled.

The commandment to rest on the Sabbath is motivated in Exod. 20:11 by the Creator's own Sabbath rest. In Deut. 5:12–15 the Sabbath is a day of remembrance of liberation from Egyptian

slavery. The commandment to set one day apart from all others ("to keep it holy") stands as a bulwark against endless self-destructive human greed, and spares Israel the horror of being a Sabbathless culture. The command to honor father and mother (Exod. 20:12; Deut. 5:16), the only one accompanied with a promise, promotes a community climate in which the chances of survival are enhanced by a tradition of tender solicitude shown by the young toward the older generations. The uninterrupted flow of community tradition from one generation to the next is also ensured by the "honor" shown to the father and—in a perfectly equal way—to the mother. Technically speaking, "You shall not kill" (Exod. 20:13; Deut. 5:17) prohibits only that kind of antisocial killing, done in vulgar self-interest, that poses a threat to the very existence of the community. Jesus' radicalization of this commandment in Matt. 5:21–26 suggests that the definition of antisocial murderousness could evolve and that the commandment could come to mean more than it originally meant.

"You shall not commit adultery" (Exod. 20:14; Deut. 5:18) guards marriage and family against the intrusion of third parties and the socially disruptive questions of the legitimacy of children and the transfer of the family legacy. "You shall not steal" (Exod. 20:15; Deut. 5:19) may originally have included, as the object of the verb, the term "a man" (see Exod. 21:16). As it stands, however, this commandment protects private property from illegal attachment. The prohibition against bearing false witness (Exod. 2:16; Deut. 5:20) is aimed not so much at lying in general as it is at perjury in court. The very survival of a community is threatened when the weak, disadvantaged, and falsely accused can find no remedy before impartial judges informed by credible witnesses. Finally, the commandment against covetousness (Exod. 20:17; Deut. 5:21) points for the first time beyond public and overt acts to private attitudes. Like all Hebrew verbs of mental activity, however, "to covet" also includes an element of enactment. It is action in rehearsal. Unenforceable as it may be, in its attack upon inordinate desire this final commandment seeks to forestall the conspiracies that lead to illegal, ruthless seizure of persons and property. ***See also*** Law. W.S.T.

tent, a portable shelter made of cloth or skins, used by shepherds (Isa. 38:12), nomads, and soldiers. In Israel's experience it covered a shrine (2 Sam. 7:2) and served as storage space (1 Sam. 17:54, armor; 1 Kings 8:4, holy vessels), but it was primarily used as living quarters (Gen. 4:20, 25:27; 2 Sam. 20:1).

Dark in color (Song of Sol. 1:5), tents were likely woven of goat hair (Exod. 36:14) and required purification on occasion (Num. 31:20). Large tents could be constructed piecemeal and fastened by clasping loops at the edges (Exod. 36:15–18). Entrances could be covered by a screen (Exod. 36:37) or be arranged by simply raising the side or a flap of the side. The anchorage to the ground was by pegs (Judg. 4:21) or by tying the line to a large stable boulder when camped on rock. Unless supported by poles and raised by tightly anchoring the fabric over the poles on all sides, a tent would collapse and lie flat (Judg. 7:13). The stability of a tent depended on well-placed stakes or pegs (Isa. 33:20) and strong and durable cords or anchoring lines (Isa. 33:20). The work of raising a tent involved unpacking and unrolling the fabric, anchoring the corner lines, then raising the poles in place, work requiring the spreading of the fabric to place corners, anchorages, and poles (Jer. 10:20). Only when it was erected could the curtain(s) dividing the interior space be rigged (Jer. 10:20). Failure of the cords to hold provided a metaphor for death (Job 4:21).

As a Dwelling: Households might live in a single tent (Exod. 33:8) or have a group of tents for individuals and servants (Gen. 31:33) of the family. Because of the relatively expensive nature of tents and the need for several animals to transport a group of them, multiple tents signified wealth above average. Tents could also be used to store or hide precious or forbidden material (Josh. 7:21). Thus guards could be posted at tents (1 Chron. 9:23), but they could not stop the destruction of the tent of the wicked (Job 8:22). Like cities, tents could be besieged (Job 19:12). Care was needed in selecting sites to pitch one's tents (Deut. 1:33) because unwise selection would bring hazards (Hos. 9:6). Royal tents could be palatial (Dan. 11:45), but life in tents could also symbolize the purer style of a nomadic past (Jer. 35:6–10, the Rechabite ideal).

Contact with such a past is most vividly given in Genesis 18, describing Abraham's hosting some visitors at his tent camp at Hebron. Set in a grove of trees, the tent was used for shady rest in the hot part of the day. When the visitors approached, Abraham ran out to greet them and extended the hospitality of shade, food, drink, and conversation. Inquiry about Abraham's wife elicited the fact that she was "in the tent" (either her own nearby [Gen. 31:33] or in the divided portion of the tent reserved for women), close enough to overhear the conversation (Gen. 18:10). Implied in the actions of the hospitality was a variety of equipment normal to any household. Some kind of storage and carrying vessel for water to wash the feet of the travelers was available. Bread was provided, implying a facility to grind meal and bake over an open fire or in a small oven (possible in a long-term campsite). Meal storage, a kneading quern, and the necessary metal sheet or rock for baking the cakes was involved. There were tools for butchering the calf and vessels for the curds and milk, for cooking the meat, and for serving the food to the guests. Rest under the tree may have been on the ground, but it would not have been strange for relatively wealthy persons to provide reed mats or cloth pads for guests in that situation. In ad-

dition, a tent was normally furnished with some kind of oil lamp for night light.

Where Located and Situated: Tents, like houses, were preferably located close to a good supply of fresh water, on terrain that by being high and affording good visibility or by being hidden was secure from unexpected intrusion. The ground needed to be reasonably smooth and flat for comfort and stability. A small stone circle or depression in the earth could serve as the cookfire location. Given the prevailing wind and weather patterns, tents in Syro-Palestine are almost always set with one long side to the east, allowing early warmth from the morning sun. The opposite long side facing west could be kept anchored low to keep out the chilling wind or raised in the heat of the day to allow cooling breezes to enter. In modern bedouin practice, the women's side of the tent is for storage and cooking equipment, whereas the men's side is kept relatively free of gear for easy hospitality. Domestic animals would have been corralled nearby, but dogs, uncooped chickens, or other small livestock would be allowed to roam the tent and its environs at will.

Biblical usage includes metaphoric references to tents in addition to the long, detailed descriptions of the sacred tents (e.g., Exod. 26). God was portrayed as living in a tent (Ps. 15:1), as he had provided a tent for the sun (Ps. 19:4). God's tent provided secure hiding for his people (Ps. 27:5) and he stretched out the heavens like a tent (Ps. 104:2) when it is pitched. A tent is a metaphor for life for the righteous person (Prov. 14:11). The tent could figure the transitory nature of human life (2 Cor. 5:1, 4), and the writer of Hebrews could contrast the earthly shrine-tent with the "true tent" available in Christ (Heb. 8:1–6). Some tents could accommodate wickedness (Job 11:14; Ps. 84:10) and should in such cases be avoided.

The apostle Paul while in Corinth stayed with Aquila and Priscilla, recent victims of the Roman emperor Claudius' ban on Jews in Rome, because they, like he, were tentmakers. It is said that he worked at his trade while in Corinth, presumably engaging in missionary effort and pastoral work as time and opportunity afforded. As a native of Tarsus in Cilicia, he may have learned about *cilicium*, a goat's hair cloth used especially by seamen and soldiers, or he may have been a leatherworker, since in Hellenistic times many tents were constructed of leather.

Tent campsites are notoriously difficult to locate archaeologically because the occupants seldom stayed long in one place. The result is that little physical evidence remains from their occupation. A small area swept clear of pebbles and stones, a small hearth or fire pit, possibly a broken pot, a lost scraper blade or a broken grinding stone would be all that was left in archaeological terms. Recent studies have focused on the dimorphic communities where people used houses in settled towns for part of the year, moving into tents for wider pasturage or simply for cooler accommodation for the other part of the year. These studies may develop better techniques for learning the archaeology of tent sites. R.S.B.

tent of meeting. ***See*** Tabernacle.

Terah (tair´uh), a descendant of Shem, the son of Nahor, the father of Abraham, Haran, and Nahor. The name has alternatively been associated with Akkadian *turahu* ("ibex") and Aramaic *yerakh* ("moon"), but a final determination is not at hand. All three of Terah's sons were born when he was seventy (Gen. 12:26). The repeated formula "These are the generations of . . . " (Heb. *'eleh toledot*), which marks divisions between narrative cycles in Genesis (cf. 2:4; 5:1; 25:12, 19; 36:1; 37:2), is associated with Terah (11:27), thus commencing the Abraham cycle. Terah's son Haran died during his father's lifetime, having fathered one child, Lot. After Haran's surviving brothers married, Terah endeavored to move the entire clan from Ur-of-the-Chaldees to Canaan, but he got only as far as the north Syrian locale Haran (the name is unrelated to the person Haran), where he settled and died at the age of two hundred and five. Ancient rabbinic interpreters portrayed Terah as a manufacturer and worshiper of idols, in partial explanation of God's command to Abram in 12:1 to leave his father's house. ***See also*** Abraham; Ur. J.W.R.

teraphim (tair´uh-fim), statues or figurines representing household gods. They were common in Syria and Palestine, even among Israelites, throughout the pre-exilic period (to 586 B.C.). In Gen. 31:19, Rachel stole her father's teraphim. Laban's angry reaction suggests their importance. According to many ancient and modern interpreters, talismanic, cultic, and legal significance accrued to their possession. Their function as title to Laban's estate cannot be ruled out.

In Judg. 17:5 and 18:4, 17, 20, teraphim are cultic objects, mentioned as symbols of a private priesthood. The Ephraimite Micaiah had established his own shrine, furnished with a hired Levite, ephod, teraphim, and a silver statue donated by his mother (Micaiah had earlier robbed her but then confessed and repaid the theft). Some Danites migrating from Judah encountered the Levite and persuaded him to serve at their intended shrine in Laish, taking along Micaiah's teraphim. Micaiah's desolation over the loss (18:24) again shows the symbolic importance of teraphim.

In 1 Sam. 19:13–16, Michal aided David's escape from Saul by filling a bed with large teraphim, disguised as David bedridden. Prophets inveighed against teraphim as wanton superstition (1 Sam. 15:23; Zech. 10:2). Hos. 3:4 depicts them as integral to Israel's royal and priestly institutions. Josiah's reform banned them (2 Kings 23:23). Ezek. 21:21 portrays the

king of Babylon divining by them before his attack on Jerusalem. ***See also*** Idol; Jacob; Laban; Micaiah; Priests. J.W.R.

terebinth (tair´uh-binth; *Pistachia terebinthus*, variety *palaestina*), a tree common to the lower regions of the hills of the Holy Land. Its broad, spreading branches, great size, and long life make it a tree much venerated. The term for terebinth is often translated as oak, another sacred tree. The shade of the terebinth was a location preferred for burials (1 Chron. 10:12; RSV: "oak") and for the safe-keeping of treasured objects (Gen. 35:4). It is called the turpentine tree (Ecclus. 24:16; KJV) since turpentine is made from its resinous sap. In Isa. 6:13 (KJV) it is also called the teil tree.

Tertius (tuhr´shee-uhs), Paul's amanuensis or "secretary" who, in Rom. 16:22, sent his own greetings along with those of Paul. ***See also*** Epistle; Letter.

Tertullus (tuhr-tuhl´uhs), the prosecutor, according to Acts 24:1–8, who represented the Jewish leaders from Jerusalem before the Roman procurator Felix when charges were brought against Paul in Caesarea. The author of Acts, in good classical style, produces a speech in which Tertullus makes the charges. Tertullus may have been a Jew or he may have been a professional Roman advocate (the name is Roman). A reading in Codex Bezae (the important "Western" text of Acts) presumes that he was Jewish and that it was only the Romans who stood in the way of Paul getting what Tertullus regarded as his just deserts from the Jews (Acts 24:6b–7, which is missing from many ancient manuscripts and thus also from the RSV). The fact that Felix postponed Paul's trial suggests that Tertullus was not entirely successful in his plea (Acts 24:22–23). ***See also*** Felix, Antonius; Paul. A.J.M.

testament (Gk. *diathekē*), a will or an agreement. **1** The last will and testament of a person, disposing of the person's property. **2** A covenant in the sense of the Sinai covenant and of the OT and NT. Paul presumes meanings 1 and 2 in his discussion in Gal. 3:15–18. **3** A literary genre common in Jewish literature in the intertestamental period (ca. 200 B.C.–A.D. 50) and also found in the Bible. In a literary Testament a famous figure delivers a speech or gives a blessing to his descendants or followers. Usually the speech contains predictions of their future destiny, moral exhortations, or blessings. Jacob's blessing on his twelve sons (Gen. 49) is the model for many Testaments, especially *The Testament of the Twelve Patriarchs.* Moses' blessing on Israel (Deut. 33) and Jesus' last discourse (John 13–17) are other examples. Nonbiblical Testaments are the Aramaic *Testament of Levi* from Qumran, *The Testament of Abraham, The Testament of Moses,* and many others. ***See also*** Pseudepigrapha. A.J.S.

testimony, evidence recalling particular events or deeds. **1** The tablets containing the law given by God to Moses (Exod. 31:18; Num. 17:4). **2** The laws of God as a directive for one's life (1 Kings 2:13; Ps. 119:36, 88). **3** The statutes and ordinances received from Moses (Deut. 4:45; Rev. 15:5, RSV: "witness"). **4** The attestation of a contractual agreement (Ruth 4:7, RSV: "manner of attesting"). **5** In the NT God's activity through Jesus in word and deed (John 3:32; 5:32; Rev. 1:2), the presentation of God's revelation in Jesus Christ (Matt. 10:18; Luke 21:13; Acts 22:18; 2 Tim. 1:8) and a symbolic rebuff directed toward those who reject the disciple's witness (Mark 6:11).

testing. ***See*** Temptation.

teth (teth), the ninth letter of the Hebrew alphabet. It was early written as crossed lines within a circle, from which developed the Greek letter *theta.* Teth stands at the beginning of the ninth section of Psalm 119 and, in the Hebrew, is the first letter of each verse (Ps. 119:57–64).

Tetragrammaton (tet´ruh-gram´uh-ton; Gk., "four letters"), **the Sacred,** the designation for the four Hebrew consonants YHWH that comprise the name of Israel's God (Exod. 3:15; 7:2). The name itself was considered by the Hebrews as too holy to utter so the word "Lord" (Heb. *adonai*) was substituted when the text was read. The hybrid word "Jehovah" is a combination of the vowels of "Adonai" with the consonants of the tetragrammaton; its appearance in the KJV was the result of the translators' ignorance of the Hebrew language and customs.

tetrarch (tet´rahrk), originally the title for "a ruler of a fourth" or "one of four rulers." In Hellenistic and Roman times, however, it is applied somewhat loosely to petty rulers of dependent states; a tetrarch is lower in status than an ethnarch, who, in turn, is lower than a king. The term occurs seven times in the NT, with three of these occurrences in Luke 3:1, where not only Philip and Herod Antipas, sons of Herod the Great, are mentioned but also the problematic Lysanias, tetrarch of Abilene. The other four occurrences refer to Herod Antipas (Matt. 14:1; Luke 3:19; 9:7; Acts 13:1). On the other hand, Herod Antipas is called "king" in Mark 6:14, 26, suggesting that some equivalence may have existed between the two titles. ***See also*** Ethnarch; Governor. F.O.G.

Texts, Versions, Manuscripts, Editions

THE ORIGINALS of the books that comprise the Hebrew OT and the books of the Greek NT have not survived. We do, however, have very old copies of the original books, which are called "manuscripts" (MSS) because they were handwritten. Moreover, both OT and NT books were translated into other languages of the ancient Near East and copies of these early translations, called "versions" (VSS), are available to us. Through the science of textual criticism, biblical scholars have been able to establish rather accurate texts for both the OT and the NT books. These are available to us today in printed editions.

The Hebrew Text of the OT

The Writing of the OT Books: An example of how an OT book came to be written can be found in Jeremiah 36. Baruch, the scribe of Jeremiah, recorded the spoken messages of the prophet (v. 4). When the king destroyed the original scroll (vv. 20–23), Baruch produced another scroll and added other prophetic messages to the original (v. 32).

The language spoken in Judah at the time was Hebrew, and with the exception of portions of Daniel and Ezra, which are in Aramaic, the books of the OT were written in Hebrew.

Hebrew, together with Canaanite, Moabite, Phoenician, and Ugaritic, belongs to the Northwest Semitic family of languages. The Hebrew alphabet, consisting of twenty-two consonants, can be traced back to about 1000 B.C. The shape of the letters underwent a process of change from the earlier cursive form to the boxlike shape called the "square script," which is known from pre-Christian times. This Northwest Semitic alphabet was taken over from the Phoenicians by the Greeks and with some adaptations is the alphabet of the Greek NT. This Greek alphabet became the progenitor of all European alphabets, which have spread the world over.

Although other writing materials were known, parchment (made from the skins of sheep, antelopes, calves, and other animals) and papyrus (from the papyrus plant) were in wide use hundreds of years before the biblical books came to be written. Reed pens were used to write on these materials with ink made of soot mixed with a solution of water and gum.

The Transmission of the Hebrew Text: Until the discovery of the Dead Sea Scrolls (DSS) in 1947, the Hebrew MSS (other than the Nash Papyrus fragment) were dated no earlier than the ninth century A.D. The discoveries at Qumran, however, have pushed the MS tradition of the Hebrew Bible back a thousand years. One reason for the scarcity of early Hebrew MSS was the reverence with which the scrolls were held in Judaism. When MSS showed signs of wear and tear, they were disposed of. And since Jewish scribes exercised great care in copying the

An example of writing in Aramaic, a language spoken from the ninth century B.C. and in common use during the first century A.D.; in the mosaic floor at Naaran synagogue.

sacred books, they did not think that older copies had any advantage over new ones.

Variant readings, however, did creep into copies of the Hebrew books; this became a growing concern to Jewish rabbis, and by the end of the first century A.D. a kind of standard text emerged. At the end of the fifth century A.D., the scribal tradition, popularly traced back to Ezra, was continued by scholars known as Masoretes (literally Heb., "transmitters"), and because of their work on the text of the OT, our Hebrew Bible today is said to have the Masoretic Text (MT).

Scribes in the pre-Masoretic period had already made word and paragraph divisions in the Hebrew text (not to be confused with the chapter divisions of our Bible today, which were introduced as late as the thirteenth century A.D.). The Masoretes, whose centers of activity were Babylonia and Tiberias, were bent on preserving the most accurate consonantal text possible. To prevent the misreading of the original consonantal text, they introduced vowel signs into the Hebrew Bible and thereby fixed the pronunciation of words. They left the original consonantal text unchanged, except for corrections and improvements, which they placed in the margin. The textual notes supplied by the Masoretes are called Masorah. After the Masoretic schools of Babylonia became defunct (prior to the tenth century A.D.), the Tiberian school continued its textual studies. Two families, Ben Asher and Ben Naphthali, vied with each other in transcribing and preserving the best Hebrew text, on which printed editions of the Hebrew Bible were later based. The Ben Asher tradition has generally been preferred by scholars.

MSS of the Hebrew Bible: Before the discovery of the DSS, the chief extant MSS of the Hebrew OT were: the Cairo Codex of the Prophets (A.D. 896); the Aleppo Codex (ca. A.D. 925), of which about one-fourth has not survived; the Leningrad Codex (ca. A.D. 1009), which is the single most complete source of all of the Bible books; the British Museum Codex of the Pentateuch (first five books of the OT, the Torah; ca. A.D. 950); the Leningrad Codex of the Prophets (A.D. 1016); and the Reuchlin Codex of the Prophets (ca. A.D. 1105), which, unlike the others mentioned here, stands in the Ben Naphthali rather than the Ben Asher tradition. There are other MSS, some of them quite fragmentary, but these are the most important MSS of the OT in the Masoretic tradition. With the discovery of the DSS in the Judean desert in 1947 and the following years, we now have MSS a thousand years older than those just mentioned. The largest copies of OT books found in the caves at Qumran are two Isaiah scrolls (one complete, one incomplete). Fragments of about two hundred scrolls of OT books (except Esther) have been discovered at Qumran and Murabba'at on the western shore of the Dead Sea. The texts reflect some diversity of readings, but they also show a trend toward a standard Hebrew text.

The Printed Hebrew Bible: Jewish scholars faithfully transcribed the MT during the Middle Ages. With the invention of printing in the fifteenth century, however, Jewish printers in Italy began putting portions of the Hebrew OT into print. The entire OT was first published in Soncino in 1488. Rabbinic Bibles, which contained not only the biblical text but also Targums (translations of Hebrew OT books into Ara-

maic) and commentaries, were also put into print. The first such Bible was published by Daniel Bomberg of Venice, in 1416–17. This served as a base for the rabbinic Bible edited by Jacob ben Chayyim in 1524–25.

A page from one of the OT volumes of the Complutensian Polyglot, 1522.

About 1520, Christian scholars began to publish the so-called polyglot Bibles, in which the Hebrew text was included as one column beside others in other languages. The Complutensian Polyglot, published in 1522, was prepared by Cardinal Ximenes and published in Spain. Other polyglots followed. The most massive was the London Polyglot (1655–57), which had not only the Hebrew text but the Samaritan Pentateuch, a Targum (Aramaic), the Septuagint (LXX; Greek), the Vulgate (Latin), the Peshitta (Syriac), and other versions.

Bomberg's printed Bible enjoyed almost canonical status up to the twentieth century. Although other editions were published, it was only in 1937, when Rudolf Kittel published his third edition, that the Ben Chayyim tradition was abandoned. Kittel's *Biblia Hebraica,* which became a kind of international standard, was based on the Leningrad Codex. Subsequently, the *Biblia Hebraica Stuttgartensis* was published. It made few changes in the text itself as Kittel published it but improved the textual apparatus. Other printed editions of the Hebrew Bible are in the process of preparation, including the Hebrew University Bible, based on the Aleppo Codex.

The Versions of the OT

The Samaritan Pentateuch: This is, strictly speaking, not a version, but simply the Hebrew Pentateuch written in Samaritan letters. It arose out of the conflict between the Samaritan and the Jewish communities in the fifth century B.C. The Samaritans established their own place of worship at Shechem (now Nablus) and accepted the Pentateuch as their Bible. Since this Pentateuch was prepared long before the Hebrew text became standardized, it is an important witness to the early form of the OT text.

The Samaritan text differs from the MT in about six thousand places, but most of the variations are trifling, having to do with grammar and spelling. In some places it is closer to the DSS; in about sixteen hundred places it agrees with the Greek LXX. Although the Samaritan Pentateuch was known to some church fathers, it was not until A.D. 1616 that European scholars were able to obtain a copy of it. It was published for the first time in the Paris Polyglot Bible in 1632.

The most important copy of the Samaritan Pentateuch is the Nablus Scroll, still in the hands of the Samaritans. It probably dates from the early centuries of the Christian era. The standard printed edition of the Samaritan Pentateuch was published at Giessen, Germany, by A. von Gall in 1914–18 and is based on some eighty MSS. It was reprinted in Berlin in 1963. The Samaritan Pentateuch is an independent witness to the Hebrew text.

The Aramaic Targums: By the time the Jews returned from Babylon in the fifth century B.C., they had begun to use Aramaic instead of Hebrew as their spoken language. The ancient Hebrew, however, remained the language of the sacred books. It became necessary, therefore, to translate the biblical text into Aramaic for those who attended the synagogue. These oral paraphrases were eventually put into writing and are called Targums (*targum* means "translation" or

"paraphrase"). The Targums that have survived show either a Palestinian or a Babylonian provenance.

A complete MS of an Old Palestinian Targum of the Pentateuch (Codex Neofiti I) was discovered in the Vatican Library in 1957. In addition, there are the Jerusalem I and II Targums of the Pentateuch, wrongly ascribed to Jonathan and known, therefore, also as the Pseudo-Jonathan Targums. The official Targum of the Pentateuch took shape in Babylonia and is called Targum Onkelos. It dates from the second or third century A.D.

Several Targums of the Prophets are also available. The official Babylonian Targum of the Prophets is known as Targum Jonathan bar Uzziel. It was published in Leiden, the Netherlands, by A. Sperber (the Former Prophets, 1959; the Latter, 1962). The Targums of the third division of the Hebrew Bible, the Writings, reflect a greater diversity in style. There are Targums for most of the books in this division with the exception of Ezra, Nehemiah, and Daniel (parts of Ezra and Daniel are already in Aramaic). The DSS include substantial fragments of a Targum of the book of Job in a version significantly different from the previously known version. Some of the Targums of the Writings can hardly be called paraphrases, let alone translations; they are more like commentaries.

Some of the OT quotations in the NT are closer to the Targums than to the Hebrew original (see, e.g., Mark 4:12; Eph. 4:8).

The Greek Translations of the OT: *The Septuagint VS.* Greek-speaking Jews in the Diaspora (Dispersion) were in need of a Bible in Greek. In Alexandria, which had a large Jewish community, efforts were made to translate the Hebrew Scriptures into Greek. According to a tradition preserved in the *Letter of Aristeas,* the Egyptian Ptolemy Philadelphus, who ruled 285–246 B.C., sent a delegation to the high priest in Jerusalem who, in response, chose six men from each of the twelve tribes and sent them to Alexandria with a copy of the Hebrew Torah (the first five books of the OT). These men translated the Hebrew Pentateuch into Greek in seventy-two days. Other versions of this story add interesting details, but there is considerable doubt about the trustworthiness of some of these traditions. In any case, the translation got the name Septuagint, meaning "seventy." Perhaps because seventy elders accompanied Moses up the mountain to receive the law it was only appropriate that the number should be rounded off to seventy (the symbol for the Septuagint, LXX, is seventy in Latin numerals).

As time went on, the Prophets and also the Writings were translated into Greek, and since different translators were involved, the style of the LXX is not uniform. By the time of Jesus ben Sirach (late second century B.C.), the LXX was completed.

The LXX contains not only the books of the Hebrew Bible but also books of the Apocrypha. Also, there are a number of passages that have been transposed by the LXX translators. Job is considerably shorter in the LXX than in Hebrew. The unevenness of the style of the LXX may be due not only to the different translators but also to the fact that the Hebrew text they used differed somewhat from the later standardized text.

The LXX became the Bible not only of Greek-speaking Jews but also of the early Greek-speaking Christians. However, due to the controversies between church and synagogue and the emergence of a standard-

ized Hebrew text about A.D. 100, the LXX lost its popularity in the Jewish community. The preservation of the LXX must then be credited to the Christian church. It is available in the great codices from the fourth and fifth centuries A.D.—Sinaiticus, Vaticanus, Alexandrinus, and others (see below under NT). The first printed edition of the LXX was published in 1522 in the Complutensian Polyglot Bible. In the English-speaking world, the edition of H. B. Swete, published at Cambridge (1887–94) became popular. Alfred Rahlfs, who edited the LXX published by the Württemberg Bible Society in 1935, knew of fifteen hundred complete and fragmentary MSS of the LXX. Several more have been discovered since. At present, a new edition of the LXX is being published in stages, known as the Goettingen Septuagint.

Revisions and Rival Versions of the LXX. Once the LXX had been renounced by the Jewish community, other translations emerged. Aquila of Sinope produced a slavishly literal translation of the Hebrew text into Greek (ca. A.D. 130). At the end of the second century A.D., Theodotion produced a very free translation of the Hebrew books into Greek. It became so popular that the church preferred his version of Daniel to that of the LXX. About A.D. 170, Symmachus prepared a Greek version of the OT. He tried to produce an idiomatic and accurate translation.

A revision of the LXX was undertaken by the famous Christian scholar Origen at the beginning of the third century. His monumental work is known as the Hexapla—a sixfold version of the OT. It was completed about A.D. 245. This massive work had the Hebrew text in the first column, the Hebrew text written in Greek letters in the second, Aquila's Greek version in the third, Symmachus' version in the fourth, a revision of the LXX in the fifth, and the Greek translation of Theodotion in the sixth column. The whole work ran to nearly seven thousand pages. Only fragments of the entire work are available in MS form. Fortunately, Origen's fifth column (i.e., the LXX) was recopied several times and is available in extant MSS. Moreover, his revised LXX was translated into Syriac before the Hexapla was lost during the Moslem conquests of the seventh century.

In the century following Origen, three editions of the LXX were published. Eusebius of Caesarea supplied Constantine with copies of the Bible that contained the fifth column of Origen's Hexapla. Also, Lucian of Samosata, who died a martyr's death in A.D. 311, undertook a revision of the LXX. A third edition of the LXX was prepared by Hesychius of Egypt. These different versions of the LXX tended to intermingle, and so it is somewhat difficult to establish the original form of the LXX.

No version of the OT has been so significant in the history of Bible translation as the LXX. Also, it was the text from which the NT writers, who wrote in Greek, quoted most often. Moreover, the translation of Hebrew words into Greek resulted in Greek words taking on Hebraic meanings, a fact of great significance for the interpretation of the NT. Thus, for example, "grace" came to mean God's benevolence, not simply human charm or pleasantness.

Other Ancient MSS: The OT was translated into several other languages in the early centuries of the Christian era. Since most of these MSS contain both OT and NT, they are discussed under the NT section.

Papyrus fragment from Egypt containing verses from John 18, the oldest extant manuscript of any part of the NT; first half of second century A.D.

Suffice it to say here that the OT was translated into Latin, Syriac, Coptic, Ethiopic, Armenian, Georgian, and Gothic by the fifth century A.D. and into Slavonic and Arabic by the tenth.

The New Testament: Formation and Language

About the time when the text of the OT books was assuming standard form (first century A.D.), the books that were to constitute the NT were being written. Before the NT books were written, the teachings of Jesus circulated in oral form. It was standard practice in the ancient Near East to pass on traditions in oral form. With the expansion of the church into the Mediterranean world, the need for written material arose. By the end of the first century, most of the books of the NT had been written, and eventually twenty-seven such books comprised what Christians call the NT.

The copying of the original writings must have begun very early, for a fragment of John's Gospel circulated in Egypt during the first half of the second century (P^{52}). Copying was done for both private and public use. In the process, errors tended to slip in, as can be seen from extant MSS.

By the time the NT books came to be written, Greek was the principal language of the Mediterranean world, although Latin was the official language of the Roman government. Greek is one of a number of languages that constitute the Indo-European family. Different dialects had been absorbed into the Greek language spread by the conquests of Alexander, producing a widespread dialect called Koine (Gk., "common"). The NT books were written in Koine Greek, the language of that day. There are also a few Latinisms in the NT, since Latin was the official language of the government. Likewise, the vocabulary and style of the Greek NT have been strongly influenced by its Hebrew and Aramaic backgrounds.

The Character of the NT MSS

Scrolls and Codices: Some of our earliest copies of the NT are papyrus MSS. From the third century on, however, parchment became the standard writing material up to the age of printing (fifteenth century),

when paper replaced both papyrus and parchment. Writing on papyrus or parchment was done "with pen and ink" (3 John 13). The ink was normally black or brown, although deluxe codices were at times written in silver or gold on fine parchment, called vellum. Red ink was not uncommon for titles, headings, and initial letters.

The form of most NT books originally was that of a roll. The writing on these rolls was arranged in a series of columns. Finding passages in rolls was not very convenient, and so about the beginning of

Mark 5:18–24 from the fifth-century Gothic Codex Argentius ("the Silver Codex") written on purple vellum in large letters of silver ink.

the second century the codex (the leaf-form of a book) came into use in the church.

Styles of Writing: Two basic types of writing style were in use: the cursive or "running" hand, which could be written more rapidly, and the more formal style, somewhat resembling our capital letters. MSS written in this more literary style are called "uncials," those in the flowing hand are called "minuscules." NT MSS prior to the ninth century are generally uncial; the minuscules are generally from a later period.

Palimpsests: Since parchment was costly, the original writing was at times scraped and washed off, the surface resmoothed and then used again. Such copies are called palimpsests (from two Greek words meaning "rescraped"). Of the ca. 300 uncial MSS of the NT extant, 52 are palimpsests.

Helps for Readers: Some MSS of the NT provide helps for readers. There are, for example, chapter divisions (these divisions bear little relation to our present chapter divisions). These divisions often have headings (called *titloi* in Greek). Some scribes supplied information about the life of the author of the NT book or explained difficult words in the margins and between the lines. Some MSS are rich in Christian art. Since the NT books were read in worship, some have the beginning and end of the lessons clearly marked. In fact, a great many MSS belong to the category of "lectionaries," since they contain the lessons to be read during the church year.

Classification of NT MSS

Their Number: There are some five thousand complete or partial MSS of NT books available. To these must be added the thousands of copies of VSS of the Greek NT, which date from the early centuries of the Christian era. Also, there are numerous quotations of NT passages in the writings of the church fathers. Compared with the relatively small number of MSS of nonbiblical books from the ancient world, the NT is extremely well documented. The antiquity of some of the NT MSS is as impressive as the number of copies extant.

Listing NT MSS: Before standard lists were universally accepted, it was often difficult to know where some of the MSS were located. Different systems of labeling or numbering added to the confusion. The standard list of Greek NT MSS was begun by C. R. Gregory, 1908, and his work has been continued and superseded by the work of K. Aland, 1963.

MSS are classified on the basis of writing material. Papyrus MSS are listed separately from those made of parchment and are identified by a "P," followed by a superior number (P^{45}, for example, is a codex belonging to the Chester Beatty Papyri). Uncial MSS are commonly designated by the capital letters of the Latin and Greek alphabets. Since, however, the number of uncials exceeds the number of letters of the Latin and Greek alphabets, they also have an Arabic numeral assigned to them, preceded by a zero (the Vaticanus, e.g., has the designation "B, 03"). Several uncial MSS are so important they also have names (e.g., Vaticanus, Alexandrinus). The minuscule MSS are referred to simply by Arabic numerals. Lectionaries are designated by the letter "l," followed by an Arabic numeral.

Significant Uncial MSS: Heading the list is the *Sinaiticus*. This codex was discovered after other uncials had already been assigned their let-

John 5:37–6:23 from the late fourth- (or early fifth-) century Codex Sinaiticus, discovered at the Monastery of St. Catherine, Sinai, by Constantine von Tischendorf.

ters of the alphabet, and since it was thought unwise to renumber the MSS, the Sinaiticus received the first letter of the Hebrew alphabet (*aleph*). Where publishers do not use Hebrew characters, the letter "S" (Sinaiticus) is at times used to designate the MS. It was discovered by the German scholar Constantine von Tischendorf in the middle of the nineteenth century in the monastery of St. Catherine at Mount Sinai and was eventually given to the Russian Czar Alexander II, patron of the Greek Orthodox Church. The British Museum purchased the MS in 1933. It contains most of the OT and the entire NT in Greek. In addition to the twenty-seven books of the NT, it has two other early Christian writings, *The Shepherd of Hermas* and *The Epistle of Barnabas.* The text is written on vellum with four columns to the page. The date is about the middle of the fourth century.

The *Alexandrinus* dates from the middle of the fifth century. Evidently it came from Alexandria to Constantinople. In 1627, it came to England from Constantinople, and it lies next to the Sinaiticus in the British Library. Originally it contained all of the OT (in Greek) and the NT, together with *1–2 Clement* and the *Psalms of Solomon.* However, most of Matthew is missing. It has two columns per page and is written on vellum with black ink. It was the first great uncial made accessible to scholars and so was assigned the letter "A."

The *Vaticanus* comes from the fourth century, perhaps just slightly earlier than Codex Sinaiticus, and originally contained all the books of the Bible. Today some parts are missing. Missing are the NT books from Hebrews 9:14 onwards (including the Pastorals). Each page has three columns of text, written on fine vellum. Unfortunately, a corrector has spoiled it somewhat by tracing over the original writing. It is in the Vatican library.

Codex *Ephraemi* is a fifth-century palimpsest. Someone erased the text of the NT in the twelfth century and wrote the Greek translation of thirty-eight sermons of Ephraim, the Syrian church father, over it. Tischendorf

deciphered the biblical text underneath the sermons and published his findings in 1845. Only 64 leaves of the OT (in Greek) are left. Of the NT, there are 145 leaves, containing portions of every book of the NT except 2 Thessalonians and 2 John. The codex has only one column of text per page. It is in the National Library in Paris.

Codex *Bezae* is a bilingual MS of uncertain provenance, with the Greek page on the left facing the Latin page on the right. It contains only the Gospels (in the Western order: Matthew, John, Luke, Mark), the last five verses of 3 John in Latin, and Acts. The text is written in "sense lines," which means that some are short and others are long. The first three lines of each NT book are in red ink. It was presented to Cambridge University by Theodore Beza, successor of John Calvin at Geneva, and so it is also called "Codex Cantabrigiensis." It comes from the fifth century and has a remarkable number of unique readings.

Minuscules: The minuscules are generally of a later date, but the date alone does not determine the value of a MS. When a copy is made from an early parent MS, the date of the parent MS rather than the date of the copy is what counts. There are almost three thousand minuscules (complete or partial) known to scholars today. Whereas most of them reflect a kind of fourth-century standard text, called Byzantine, several minuscules are in the Western or the Alexandrian tradition.

Ancient Papyrus MSS: A great many secular papyri had been discovered in the sands of Egypt before any biblical texts on papyrus came to light. In 1932, Chester Beatty, an American who lived in Dublin, was able to purchase twelve MSS discovered in a graveyard in Egypt. These Chester Beatty Papyri, as they are now called, pushed the date of the earliest MS of the NT back to about A.D. 200 or 250.

Among the Chester Beatty papyri, P^{45} comprises portions of 30 leaves of a papyrus book that originally had about 220 leaves and contained all four Gospels and Acts. P^{46} comprises 86 leaves of the Pauline Letters. Portions of several Letters are lacking, and the Pastoral Letters apparently were not included in the first place. P^{47} comprises 10 leaves of the book of Revelation.

Portions of Romans 15 and 16 from the Chester Beatty Biblical Papyrus II, from ca. A.D. 200–250.

Since the purchase of the Chester Beatty Papyri, the most important addition to the collection of papyrus MSS was made by Martin Bodmer, of Geneva. In 1956, the discovery of Bodmer II, written about A.D. 200, was announced. This MS (P^{66}) contains a major portion of the Gospel of John. P^{72} was edited in 1959 and contains, among other things, the Letter of Jude and the two Letters of Peter, providing us with the oldest text of these writings. P^{75} is another early MS of Luke and John, dated between A.D. 175 and 225. This is our earliest copy of Luke's Gospel and one of the earliest of John.

Luke 16:9–21 from Bodmer Papyrus XIV (P^{75}), ca. A.D. 175–225.

Translations of the Greek NT

Early Eastern Versions: *The Syriac VSS.* One of the first efforts to render the Greek Gospels into Syriac was that of Tatian, who produced what has come to be called the *Diatessaron* (literally "through four," but in the sense of a "harmony of four parts"). Either before he left Rome, where he was a student of Justin Martyr, or after his return to his homeland in the Land of the Two Rivers (second century), he wove the four Gospels together into one continuous account. It came to be known in the East as the "mixed" Gospel. The whole work had some fifty-five chapters, and that suggests that the Diatessaron was designed to be read in the churches. The Diatessaron became very popular and was translated into a number of other languages (Persian, Arabic, Latin, Dutch, Medieval German, Old Italian, and Middle English). In 1933, a fragment of the Diatessaron in Greek was discovered and so there has been some debate on whether the "harmony" was made first in Greek and then translated into Syriac or whether it was made in Syriac to begin with.

For some time, the Diatessaron circulated side by side with other Syriac translations of the Gospels, known as the *Old Syriac VSS.* Little was known about ancient Syriac VSS until 1842, when a fragmentary codex of the four Gospels from the fifth century came to the British Museum with a mass of Syriac MS material. Dr. Cureton of the museum edited this codex and found it to be an Old Syriac VS of the Gospels. It is now called the "Curetonian Syriac." In 1892, a palimpsest MS of the four Gospels in Syriac was discovered in the Monastery of St. Catherine. It is now called the "Sinaitic Syriac." These Syriac texts take us back to the late second or early third century. Unfortunately, no MS of the Old Syriac VS for Acts and the Letters has yet been discovered, although we have quotations from these books in several Syriac church fathers. As time went on, the Old Syriac VS was superseded by the Peshitta.

The *Peshitta* (Syriac, "simple") was prepared in the early part of the fifth century and became the standard version of the Syriac church. It contains also the OT. The Pentateuch seems to have been translated in the second or third century A.D. Whether Jewish scholars were involved in the first attempts to translate the OT into Syriac is not altogether certain. In contrast to the LXX and the Latin Vulgate (Vg.), the Peshitta originally omitted the Apocrypha. These books were added later. In its official form, the Peshitta included only twenty-two books of the NT (2 Peter, 2 and 3 John, Jude, and Revelation are lacking). More than three hundred and fifty Peshitta MSS of the NT are available to scholars today.

In A.D. 509, Philoxenus, a bishop in eastern Syria, asked a certain Polycarp to revise the Peshitta. His effort was in turn revised again in

"Curetonian Syriac" version of John 6:30–41, fifth century A.D.

616 by Thomas of Harkel. These revised VSS include also the five books of the NT absent from the Peshitta. There is also the Palestinian Syriac VS in the Aramaic dialect of Christians in Palestine. It dates from the fifth century and is known chiefly from lectionaries of the Gospels, preserved in several MSS from the eleventh or twelfth centuries.

The Coptic VSS. Various dialects were spoken in Egypt in the early centuries of the Christian era. Outside of Greek-speaking Alexandria, Bohairic was the tongue of the common people. Farther up the Nile, Sahidic was spoken. Bohairic is the language of the Coptic church's liturgy to this day. About the beginning of the third century, portions of the NT were translated into Sahidic. The Bohairic VS appears to be somewhat later. Both VSS preserve some very interesting readings and are important witnesses to the NT text.

The Armenian VS. Since the Armenian VS is one of the most beautiful and accurate translations, it is sometimes called "the Queen of the Versions." With the exception of the Latin Vg., more MSS of this VS are extant than of any other early VS. Christianity came to Armenia in the third century and eventually the entire country became officially

Christian. In the early part of the fifth century, an Armenian alphabet was devised by St. Mesrop. Whether the translation was made from the Greek or from the Syriac is still a question of debate. The early Armenian VS seems to have undergone a revision in the eighth century.

The Georgian VS. Georgia lies between the Black Sea and the Caspian Sea, north of Armenia. Christianity came to it in the fourth century. Again, an alphabet had to be devised before the NT could be translated into Georgian. The Gospels at least were translated as early as the middle of the fifth century. The majority view seems to be that the translation was made from the Armenian VS. Later it was revised and brought into closer conformity with the Greek text. The oldest dated Gospel MS in Georgian is the Adysh MS of A.D. 897, though earlier fragments exist.

The Ethiopic VS. There is some debate among scholars whether the Ethiopic VS dates as early as the fourth century or whether it comes from the sixth or seventh. Ethiopia had an alphabet long before the time of Christ. Christianity came to Ethiopia by the end of the fourth century and eventually the entire country became officially Christian. Whether the Old Ethiopic (known as Ge'ez) VS was based on a Greek or a Syriac original is not clear. It was revised later in the light of the Greek. The earliest MS available is a codex of the four Gospels from the thirteenth century.

Other Eastern VSS. Portions of the Bible were also translated into Arabic, Persian, Nubian, and other Eastern languages, but they are too far removed from the first-century Greek NT to be of great help in establishing the text of the NT.

Early Western VSS: *Old Latin VSS.* As Latin came to be adopted as the language of the West, the need for a Latin Bible arose. It appears that the first attempts to render the Bible into Latin were made in the Roman province of Africa. During the third century, several Old Latin VSS circulated not only in North Africa but also in Europe. No codex of the entire Bible is extant, but a goodly number of MSS of the Gospels and Acts are available. The rest of the NT is not represented that well. Representing the African family, there is Codex Palatinus, a fifth-century MS of the Gospels, now at Trent. More important is Codex Bobiensis, now at Turin, containing about half of Matthew and Mark, representing a text that goes back to the second century.

Of the European family, the most outstanding MS is the fourth-century Codex Vercellensis, now at Vercelli in northern Italy. It is the most important MS of the Gospels in Old Latin next to Bobiensis. Codex Veronensis, stored at Verona, Italy, is a fifth-century codex, written in silver and occasionally gold letters on purple parchment. Codex Colbertinus comes from the twelfth century but has the Gospels in Old Latin. One of the largest MSS in the world is appropriately called "Gigas" (giant). Its pages are 20 × 36 inches. It was in Prague until it was taken as military booty to Stockholm in 1648. It contains the whole Bible in Latin, but only Acts and the book of Revelation are in Old Latin; the other books are from the Vg.

The Old Latin Bible was printed in several volumes at Oxford, beginning in 1883, and another series was begun in Rome in 1912. At the moment, an ambitious project is under way at the Monastery of Beuron in Württemberg, Germany, to publish the most trustworthy Old Latin Bible to date.

Jerome (ca. 331–420), translator of the Vulgate, leaves Rome for Jerusalem (top), works among scribes and students (middle), and distributes copies of his translation (bottom); from the ninth-century First Bible of Charles the Bald.

The Latin Vulgate. Several forms of the Old Latin VS were in circulation in the fourth century. In A.D. 382, Pope Damasus asked the scholar Jerome to make some order out of the chaos. Jerome began his work in Rome but later moved to Bethlehem. His revised Latin VS was not immediately accepted and for some time Old Latin and Vulgate VSS circulated side by side. Eventually, however, Jerome's version won out and got the name "Vulgate" (in the sense of "common" or "popular"). More than eight thousand MSS of the Vg. are extant today.

It was inevitable, in the course of time, that Jerome's original Vg. should be corrupted by errors in transmission. Several attempts were made, therefore, to purify the Vg. text. About A.D. 800, Charlemagne engaged the famous British monk Alcuin to carry out a revision. In the thirteenth century, scholars at the University of Paris revised it, and

this became the basis for the first printed Bible, produced by Gutenberg in 1456. When the Council of Trent decreed (1546) that the Latin Vg. was to be regarded as the authoritative version, it was quickly recognized that the Vg. had no one standard form and required a thorough revision once again. Out of such efforts emerged the Sixto-Clementine Vg. in 1592, which became a kind of "authorized version" of the Roman Catholic church. A critical edition of the NT was published at Oxford beginning in 1890. Since 1907, Benedictine scholars have been working on a comprehensive revision of the Latin Vg. A convenient two-volume edition, prepared by Robert Weber, was published at Stuttgart in 1969, with a third edition in 1983.

Among the most trustworthy MSS of the Vg. are Codex Amiatinus (Florence), Codex Cavensis (Salerno), Codex Dublinensis (Book of Armagh, at Dublin), Codex Fuldensis (Fulda), the Lindisfarne Gospels (British Museum), Codex Sangallensis (St. Gall), and others.

The Gothic VS. Shortly after the middle of the fourth century, Ulfilas (meaning "Little Wolf"), a missionary among the Goths of the lower Danube, translated the Bible from Greek into Gothic. For this purpose he had to create an alphabet—primarily from Greek and Latin characters but also from Gothic runes—and reduce the language to a written form. He translated the OT from the standard Greek VS; for the NT Ulfilas used the Greek text that had established itself at Byzantium. It was a rather literal translation and is the earliest known literary monument in a Germanic dialect. Several fragmentary MSS of the Gothic Bible are available. The most complete is Codex Argentius ("the Silver Codex") from the fifth century, which is now in Uppsala, Sweden.

The Old Slavonic VS. About the middle of the ninth century, a Moravian Empire was formed in eastern Europe that professed Christianity. King Rostislav, in order to check the growth of Frankish influence from the West, in 863 asked that Slavonic-speaking priests be sent from Byzantium. Two brothers, Constantine (who later assumed the name Cyril) and Methodius, responded to the invitation. They devised a Slavonic alphabet and translated the Scriptures from Greek into Slavonic.

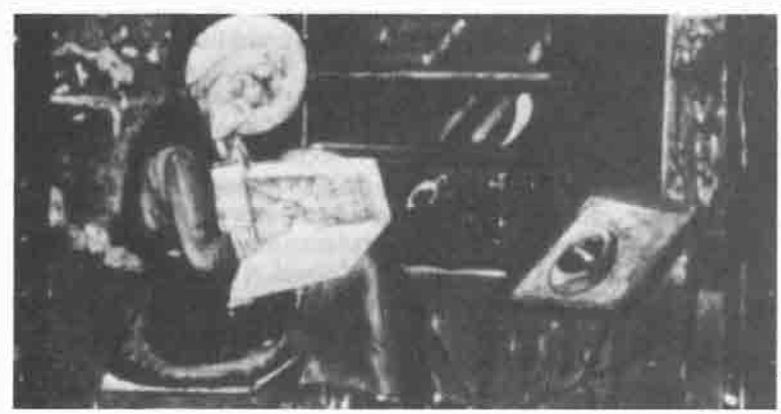
The Printed Greek NT

The First Printings: With the invention of printing, a new era dawned in the history of the transmission of the biblical text. The practice of copying MSS was discontinued and paper replaced parchment as writing and printing material. With the Renaissance and the Reformation, interest in the biblical languages was revived and this led to the printing of the Greek NT.

Cardinal Ximenes was the first to put the Greek NT into print in the Complutensian Polyglot Bible. This massive five-volume work began to come off the press in Spain in 1514, but ecclesiastical authorities delayed its publication. So it happened that Erasmus of Rotterdam was the first to publish, at Basel, a printed Greek NT in 1516. His first edition was a diglot, with the Greek column alongside his own translation of the Greek into Latin. Erasmus' Greek NT had a poor MS base, for he had only a few MSS at his disposal and most of them were of a late date. He published five editions of the Greek NT. With minor changes, this text was published again and again during the next three hundred years. It came to be known as the Textus Receptus be-

cause of the claim made in the preface of the Greek NT published by the Elzevir printers of Leiden in 1633 that this was the text received by all. It was essentially the text that had become a kind of standard in Antioch of Syria in the fourth century. For that reason, it is also known as the Anthiochian or Syrian text. And since this text became common in the Eastern church with its seat at Byzantium, it is also called the Byzantine text. It is this text that underlies the King James Version (KJV).

The Search for a More Trustworthy Text: For the next two centuries, scholars put forth serious efforts to collect variant readings from the Greek MSS, the VSS, and the church fathers. With the discovery of new MS material in the nineteenth century, it became obvious that the Byzantine text did not represent the best and earliest form of the Greek NT. Through hundreds of years of copying, a great many variant readings had crept in. Some of these errors were made unintentionally, but others were made deliberately. Fortunately, no major doctrine is affected by these variant readings.



Copyists at times made mistakes because they wrote from dictation and the ear could not always distinguish clearly between some of the vowels and diphthongs. Other mistakes were made because the eye did not clearly distinguish between letters that looked alike or because a word or line was missed. Sometimes errors were made when the scribes carried over words or phrases from parallel passages they had stored away in their memory.

Occasionally, scribes tried to improve upon the text and wrote comments in the margins and these were at times incorporated into the text at a later stage. Scholars call them "glosses." Some changes involved the spelling of words; others reflect the tendency to bring one Gospel in line with another, or to bring OT quotations in the NT in line with their OT form. At times, copyists wanted to clear up a difficulty in the text for the reader or even altered a reading out of doctrinal or liturgical considerations.

The science of textual criticism began when scholars became aware of the multitude of variant readings in the MSS of the Greek NT. A number of seventeenth-century scholars did the spade work in the field of textual criticism. Important names to be mentioned in connec-

The scribe Ezra copying into a codex; from the Codex Amiatinus, A.D. 716.

tion with this endeavor include John Fell (1625–86), John Mill (1645–1707), Edward Wells (1667–1727)—all of Oxford; Richard Bentley (1662–1742) of Cambridge; J. A. Bengel (1686–1752), of Tübingen; and Johann Jakob Wettstein (1693–1754), a native of Basel. The foundations of a more scientific approach in textual criticism were laid by J. J. Griesbach (1745–1812) who, on the basis of his study of the Greek MSS, the VSS, and the church fathers, isolated three larger families (i.e., texts related to one another) in the textual transmission of the NT: Alexandrian, Western, and Byzantine. Also, he laid down some fifteen rules of textual criticism, many of which hold even today.

In the nineteenth century, scholars such as Karl Lachmann (1793–1851), Constantine von Tischendorf (1815–74), and S. P. Tregelles (1813–75) helped to overthrow the rule of the Textus Receptus. The most noteworthy edition of the Greek NT at the end of the nineteenth century (1881) was published by the Cambridge scholars B. F. Westcott and F. J. A. Hort. One weakness in their approach was that they put too much stock in the Sinaiticus and Vaticanus, which they called the "neutral text" (in the sense of "uncontaminated by error"). As scholarly studies continued and new MS material came to light (even as late as the middle of the twentieth century), it became necessary to reevaluate Westcott and Hort's approach. Although some of their conclusions were modified, their principle of adopting the reading that best explains the origin of the other readings has been generally adopted.

Today, many scholars argue that one cannot simply follow the readings of those Greek MSS, VSS, and church fathers that belong to one or the other textual family, whether this be Alexandrian, Western, Byzantine, or Caesarean (not all accept the latter as a distinct family). Every reading has to be weighed and considered on its own merits. This is sometimes called the "eclectic" method. In studying variant readings, the age of the text is more important that the age of the MS. Readings supported by ancient witnesses, especially when these come from a wide geographical area, are generally preferred. The quality, not the quantity, of MSS is the determining factor in choosing a reading. Also, the shorter reading is usually preferred, for scribes tended to add or expand. Moreover, the more difficult reading is usually correct, since copyists tended to ease difficult readings. In parallel texts (i.e., the synoptic Gospels), differences in readings are generally preferred, for there was a tendency to harmonize parallel passages. The reading from which the other variant readings seem to be derived is likely to be correct. These rules (and others) help the textual critic to weigh the evidence and to determine what seems to be the correct reading.

In 1966, after a decade of work by an international committee, the United Bible Societies published an edition of the Greek NT for Bible translators and students. The fourth edition of this text was issued in 1993, and is widely regarded as the best text available; it has been adopted by the Nestle-Aland 27th edition.

Thaddaeus (thad´ee-uhs), one of the twelve apostles as identified in two of the apostolic lists (Matt. 10:3; Mark 3:18). In the other lists, however, "Judas, the son (or brother) of James," appears instead of "Thaddaeus" (Luke 6:16; Acts 1:13). Variant readings in Matthew have "Lebbaeus," and the KJV reads "Lebbaeus, whose surname was Thaddaeus." "Lebbaeus," however, does not appear in the best texts and is omitted in most translations. Resulting explanations include: (1) Thaddaeus, Judas, and Lebbaeus are the same person; (2) the lists in Luke and Acts reflect a change in the apostles; and (3) tradition has preserved the fact that Jesus had an inner group of trusted followers (the Twelve) and has retained the names of most of the members of this group but not without slight variations. The second explanation appears unlikely. The third is plausible in light of the fact that the Gospel traditions were transmitted within different communities, making some variation far from surprising. Those who argue that Thaddaeus and Judas are the same person still question his identification with the author of the Letter of Jude. Post-biblical traditions supply additional information about Thaddaeus, but this is of questionable value. ***See also*** Apostle; Disciple; Judas; Jude, The Letter of; Twelve, The. P.L.S.

theater (Gk. *theatron,* a "place for seeing"), an area suited to public presentations. The theater developed out of ancient Greek religious rituals involving song and dance. Its heart was a circular section of flat, hard earth, the orchestra, on which the dancing took place. The theater was located on a convenient hillside, in many Greek cities on the hill upon which the acropolis (Gk., "high city") was built. If necessary the flat space for the orchestra could be created by terracing into the hill. Sometimes the site was one traditionally sacred to the god Dionysus in whose honor the theatrical competitions were held.

Until Hellenistic times the scene building (Gk. *skēnē*) was a simple tent, booth, or hut that served as a background for the performance. If a stage was added it was a simple platform. The orchestra might be marked by stone slabs or a water channel. Seating, which went somewhat farther around the orchestra than a semicircle, was created by hollowing out the slope in the middle and banking it up at the ends, which widened out to give those seated there a better view and to make it easier to exit from the theater. The ends were held up by retaining walls above the passages on either side that led to the auditorium. The seating area was divided by one or two horizontal passages and cut by radiating stairways. Seats were cut out of native rock or made of stone slabs. One or two rows of specially ornamented and carved seats in the front of the theater were reserved for priests and public officials. The audience probably brought cushions to the theater to sit on.

Nothing separated the audience from the orchestra so that the audience might feel itself

The remains of the Greek theater at Gebal, modern Jebail, on the Mediterranean coast of Lebanon.

included in the action of the tragic drama. In comedy the actors or the chorus could approach the audience across the orchestra and speak directly to individuals.

In Hellenistic times more permanent scene buildings with a stage added were constructed. Pillars or columns and panels might be used in the front of the stage building. The Romans joined the ends of the auditorium to the scene building, which thereby reduced the shape of the auditorium to a semicircle. They also began to replace the hard, flat earth with ornamental stone paving. Having mastered the technique of vaults and arches, the Romans were able to build theaters just about anywhere.

Romans preferred gladiator shows, beast fights, and other spectacles to drama. They added walls around the orchestra in Greek theaters to accommodate such entertainments. Popular performances consisted of comedies or farces with stock characters and mimes or clown burlesques. The more serious comedies and tragedies written during the Roman period, such as those by Nero's mentor Seneca, were not written to be performed but to be read.

Theaters in Hellenistic cities also served as gathering places for political events or criminal prosecutions. In the riot in Ephesus caused by Paul's Christian preaching, two of his companions were dragged into the theater to be dealt with (Acts 19:28–41). P.P.

Thebes (theebz). ***See*** No.

Thebez (thee'biz), a city near Shechem, part of the sphere of control of Abimelech, the son of Gideon (Judg. 9). Like Shechem, Thebez had a *migdal,* often translated "strong tower," but better "fortress-temple of the Strong One" (i.e., the deity El). Here Abimelech met his death (Judg. 9:50–54, remembered in 2 Sam. 11:21). Thebez is often associated with modern Tubas, twelve miles by road north-northeast of Shechem; archaeological evidence would then commend Khirbet edh-Dhuq a mile north of Tubas. Also plausible is an identification with Tirsah, four miles nearer Shechem. Certainty about the location is not yet possible, however. ***See also*** Abimelech; Migdal; Shechem; Tirzah.

theology, New Testament, the study of the theological understanding expressed or presupposed in the various writings of the NT.

Early History of the Discipline: NT theology as a discipline originated in German Lutheranism, and NT theologies have been produced mainly in Germany. After the Reformation, Protestant dogmaticians had been accustomed to drawing up lists of proof-texts from Scripture to support their dogmatic statements. With the rise of Pietism toward the end of the seventeenth century and with the accompanying revolt against the use of nonbiblical and philosophical concepts in dogmatic theology, theologians began to produce theologies based directly and solely on Scripture ("biblical theology").

At first, biblical theologies were organized under doctrinal topics as in dogmatic theology (e.g., God, creation, incarnation, redemption, Holy Spirit, church, and last things). But the Enlightenment and the consequent rise of the historical-critical method in biblical scholarship had far-reaching consequences, both for the organization of NT theologies and for the conception of the task. First, biblical theology was divided into "biblical theology of the OT" and "biblical theology of the NT." Second, NT theologies came to be separated from OT theologies and were organized according to the historical development of NT thought, and in the (critically established) chronological order of the NT writings and groups of writings. Thus a NT theology would begin with Jesus, then go on to Paul, to John, and to the later NT writers. Third, a growing realization that the NT documents were conditioned by the times and circumstances of their writing led to an increasing historicization of the discipline. Instead of setting out the normative theology for contemporary preaching and faith, NT theologies became more and more historical descriptions of NT religion and thought. Fourth, this led to the inclusion of other early Christian writings outside the canon, such as those of the Apostolic Fathers. The full development of this process was reached in an essay on the task and methods of NT theology by William Wrede in 1897.

In 1909 Adolf Schlatter published a programmatic essay in which he sought to restore NT theology as a genuine theological discipline. Schlatter advocated the restoration of the link between thought and life. NT theology must be not merely descriptive, but must have a normative relation to the contemporary church's faith and proclamation.

The Bultmann Synthesis: Rudolf Bultmann published a monumental two-volume NT theology in 1948–53 (English translation 1951–55) in which he sought to combine the concerns of both Wrede and Schlatter. Bultmann presented parts of NT thought, as did Wrede, in a purely historical and descriptive manner. These parts were: Jesus' message, the earliest church, the Hellenistic community aside from Paul, and the later NT writings aside from John plus some of the extracanonical writings such as the *Didache, 1–2 Clement,* and the *Letters of Ignatius.* Then, like Schlatter, Bultmann presented the theologies of Paul and the Johannine writings as normative for faith, interpreting them anthropologically and existentially, i.e., as expressions of human self-understanding. This self-understanding of faith Bultmann intended

to be appropriated in contemporary proclamation of the Christian message.

The Post-Bultmannians: In the hands of Bultmann's pupils the Bultmannian synthesis progressively disintegrated. Dissatisfaction was felt with Bultmann's handling of the historical or earthly Jesus. In some thirty pages he had presented Jesus' message merely as one of the presuppositions of the NT proclamation rather than as a constitutive part of it. He had emphasized the discontinuity between Jesus and the post-Easter kerygma (proclamation). The Proclaimer became the Proclaimed. Jesus had preached the kingdom of God; the early church proclaimed him. This seemed to Bultmann's pupils to expose the early Christian message to the danger of becoming a mythology or at least a myth hung upon the "mathematical point" of the cross (Käsemann, 1953; Fuchs, 1956; Bornkamm, 1959).

What made the cross the saving event, it appeared to the post-Bultmannians, was the prior career and intention of Jesus himself, and therefore an inquiry into Jesus was seen to be crucial and integral to NT theology. That inquiry, of course, was to be critically conducted, using rigorously all the methods of source, form, and redaction criticism. But enough could be known of the historical Jesus (his preaching of the kingdom, his teaching about God's demand and about God as Father, his conduct in performing exorcisms, and his eating with the outcasts), to provide adequate continuity along with the discontinuity between Jesus and the post-Easter kerygmas. Only one member of the post-Bultmann school actually wrote a NT theology (Hans Conzelmann, English translation 1968). Conzelmann, however, went to the other extreme and subsumed the historical Jesus under the synoptic Gospels, as the first layer of the synoptic tradition.

Herbert Braun went to a different extreme in discussing the problem of a NT theology (1975). Starting from Bultmann's anthropological interpretation of Paul and John, Braun reduced the whole Christian message as given in the NT to a human sense of obligation and enablement ("I ought" and "I can"), a German version of the American "Death of God" theology. For Braun, the Christology of the NT was variable, the anthropology constant. This was a laudable attempt to secure the unity of the NT, but it eliminated the Christ event as the saving act of God from its central place in the NT and turned NT theology upside down.

Bultmann was also criticized by others within his own school and outside it for narrowing the scope of the Pauline message by exclusively emphasizing its anthropological-existential aspect. This ignored the apocalyptic framework of earliest Christianity, continued by Paul, which gives the early Christian message a social, historical, and cosmic dimension. Paul was not exclusively concerned with individual salvation (Käsemann, 1960). These insights provided contemporary relevance to the Pauline message in the theology of hope and liberation theology.

Yet another important issue in NT theology, first put forward by Bultmann and subsequently discussed within the post-Bultmann school, is the problem of "early Catholicism" in the NT. By this is meant the development of institutional features in the subapostolic NT writings (i.e., A.D. 70–125) such as an incipient canon of Scripture, creedal formulas, an ordained as opposed to charismatic form of ministry, and liturgical and catechetical forms. This institutionalization was both a response to the delay of the Parousia (i.e., Christ's second coming) and a consequent realization that the church was here to stay, and to the death of the original apostolic witnesses. Among the post-Bultmannians, Ernst Käsemann, in a series of essays (English translation 1964, 1967), offered a negative assessment of these institutional developments, thus posing the question of a "canon within the canon." This inner canon was the Pauline message of justification through faith alone. Judged by this, at least some of the early Catholic developments were seen to be questionable.

Alternatives to Bultmann: Outside the Bultmann school, one German Catholic scholar (Karl Schelkle, 1968–70) and one Anglican (Alan Richardson, 1958), published NT theologies organized on the old dogmatic principle. The dangers here were that the varieties of NT theology might be minimized and premature harmonization might occur. Richardson laid particular stress on church, ministry, and sacraments.

A more viable alternative to Bultmann was the "salvation history" approach. In a series of works (English translation 1946–65), Oscar Cullmann presented a salvation-historical interpretation of NT theology as a deliberate alternative to Bultmann's anthropological-existential interpretation. For Cullmann, Christ was the midpoint of time, here conceived as a linear process—a view characteristic of Luke-Acts and only questionably extended to the whole NT. Joachim Jeremias (English translation 1971) structured his NT theology in terms of call and response, the message of Jesus being the call, the kerygma (preaching) of the early church the response. Unfortunately, Jeremias lived to complete only the first volume, the call, and never completed the second volume, which was to have contained the response.

The difficulty with this organization is that it gave too much weight to the historical Jesus. In most of the NT writings, the message of Jesus plays only a minor role (cf. the small number of direct quotations of Jesus' sayings in the Pauline Letters). Rather, the NT writings are for the most part a response to the death and resurrection of Jesus. Werner Georg Kümmel (English translation 1973) dealt selectively with the

THEOLOGY, NEW TESTAMENT

"chief witnesses" of the NT theology, namely, Jesus, Paul, and John. It is curious to find Jesus included among the "witnesses" to NT theology. Jesus, at least his cross and resurrection, would seem to be rather its primary datum.

The fourth representative of the German-speaking salvation-historical school was Leonhard Goppelt, whose two-volume NT theology appeared posthumously (English translation 1981, 1982). Unlike Bultmann but like Jeremias, Goppelt devoted his first volume exclusively to the historical Jesus. Yet Jesus was treated not as one of the presuppositions, nor as the call, nor as one of the principal witnesses, but as *the essential* presupposition of NT theology; that theology came in Goppelt's second volume, which dealt with the variety and unity of the apostolic witness. Here the kerygma of the death and resurrection of Jesus was seen to be the central focus of NT theology.

In North America, NT theology was produced by George Eldon Ladd, a conservative evangelical (1974). This work was notable for its treatment of the Gospels (including the Fourth Gospel) as sources for the historical Jesus, with no section on the theology of the Evangelists—the opposite procedure to that of Conzelmann.

Since the mid-1980s Helmut Koester (cf. Heikki Räisänen) has proclaimed that Bultmann's kerygmatic theology was a detour occasioned by the German church struggle, and that NT scholarship can now return to the unfinished program of Wrede and the History of Religion School, i.e., to the history of early Christian literature as opposed to NT theology. The prospects for such a task are better today with our much greater knowledge of the NT world (Qumran, Nag Hammadi, etc.) and the advances in related disciplines (sociology, literary criticism, etc.). Koester's program has borne fruit in North America in Jesus and Pauline studies. A so-called third quest of the historical Jesus (which, unlike the post-Bultmannian second quest, seeks to place Jesus firmly in his historical context, sometimes using hypothetical precanonical traditions) shows little concern for the continuity between the historical Jesus and the post-Easter kerygma. In Pauline studies justification is seen as a temporary response to particular controversies in Paul's career, rather than as the permanent center of his theology (Krister Stendahl, E. P. Sanders). In Germany, however, NT theology continues to be a lively pursuit. NT theologies have been published by Hans Hübner (1990–93), Peter Stuhlmacher (vol. 1, 1992), and P. Pokorny (English translation 1993). These scholars are particularly concerned with the place of the OT in NT theology and are reverting to the designation "biblical theology of the NT," covering also the relation between biblical and systematic theology.

The Problems of NT Theology: Since the rise of the historical-critical method, NT theologies are best organized on historical rather than on dogmatic lines; otherwise the diversity of the NT is obscured. This, however, raises the problem of the unity behind the diversity: to find it, as Bultmann did, in the self-understanding of the believer is to subjectivize and individualize the NT message and to downplay its historical, social, and cosmic dimensions.

Rather, the center of unity must be found in the apostolic proclamation of the salvation-historical event of Jesus Christ, specifically his death and resurrection (Goppelt). The death and resurrection acquired their significance, however, from the message and intention of Jesus himself; thus a continuity between Jesus' preaching of the kingdom of God and the post-Easter kerygma has to be established—otherwise the kerygma is in danger of becoming mere myth.

The nature and role of the Easter event also requires thorough explanation. If it is merely the disciples' coming to faith in the redemptive significance of the past (Bultmann), or the continuation of the historical Jesus' offer of salvation (W. Marxsen, E. Schillebeeckx), it is in danger of being evacuated of its positive NT content, the proclamation that God raised Jesus from the dead. The synoptic, Pauline, and Johannine theologies all require separate treatment and have to be demonstrated as legitimate variations on the central kerygma. For this reason, it would seem inappropriate to designate the Pauline message of justification as the center of NT theology (Käsemann), for it is only one of the contingent expressions of the NT and even of Pauline theology, devised for the concrete situations that confronted Paul in Galatians, Romans, and Philippians 3. At the same time the Deutero-Pauline writers have extracted the Pauline message of justification from its polemical context and given it a more general application (Eph. 2:5–8; Titus 3:5). Yet justification remains only one of several images to explain the salvific effects of God's redemptive act in Christ.

The subapostolic writings of the NT (Deutero-Paulines, i.e., 2 Thessalonians, Colossians, Ephesians, Pastorals; plus 1 and 2 Peter, James, and Jude, and possibly, though debatably, Acts and Hebrews) require special handling as writings that in various degrees reflect features of early Catholicism. It must be asked: to what extent and in what way are these documents and their institutional features normative for the proclamation, confession, and practice of the contemporary church? Are we to postulate with Käsemann a canon within the canon, rejecting the later NT documents as degeneration from earlier NT and especially original Pauline Christianity? Another problem area with the canon is the restriction of NT theology to these particular books and the exclusion of other earlier Christian literature—a question posed with particular force by Koester. Some of these writings (e.g., *Didache, 1 Clement,* and the *Letters of Ignatius*) may be earlier than

THEOLOGY, OLD TESTAMENT

some of the later writings within the NT canon such as 2 Peter. How then can we claim that these and only these writings (i.e., the canon) enshrine the normative apostolic witness? Yet another question is posed by hypothetical precanonical traditions (early Q, primitive materials in *Gos. Thom.*, etc.). The answers to these very questions are determining the shape of NT theology today. ***See also*** Biblical Criticism; Church; Gospel, Gospels; Hermeneutics; Jesus Christ; John, The Gospel According to; Luke, The Gospel According to; Mark, The Gospel According to; Matthew, The Gospel According to; Paul; Resurrection.

theology, Old Testament.

Defining the Task of OT Theology: The rise of OT theology as a discipline distinct from dogmatic theology did not occur until the eighteenth century A.D. Until then, all theology was considered to be biblical, or, stated somewhat differently, the distinction between dogmatic theology and biblical theology was not grasped. The Bible was understood as the repository of the very truth that the theologians sought to delineate in a systematic manner. The Bible was thus the basis for the theological enterprise, and no tension was perceived between biblical faith and contemporary formulations.

The Enlightenment introduced an important change. In applying the same literary and historical tools that had been used since the Renaissance in the study of the ancient Greek and Latin classics, biblical scholars began to discover characteristics in the biblical writings that seemed distinct or even quite alien in relation to the doctrines of the church. Some of them began to insist on freedom from ecclesiastical authorities in their attempts to bring to light the true nature of the biblical writings. On the basis of this new perspective, most university-trained biblical scholars of the nineteenth century preferred to write histories of the religion of Israel rather than OT theologies. Adding further impetus to this development was a series of very important archaeological discoveries (e.g., Code of Hammurabi, the *Enuma elish,* and the Tell el-Amarna tablets) that drew attention to the place of Israelite religion within the cultural horizon of the ancient Near East.

The twentieth century has witnessed renewed interest in biblical theology and the concern to delineate the qualities that are unique to the faith of Israel, without denying, to be sure, the important connections established by the previous generations of scholars between Israelite religion and the religions of neighboring nations. What is most important to recognize, however, is that the legacy of the Enlightenment is evident in all contemporary endeavors to describe the theology of the OT: the OT does not present a systematic theology, but rather a rich diversity of writings addressing various historical, ethical, and social problems from theological perspectives often quite different from one another. These writings arose over a period of more than one thousand years, and in many cases subsequent generations altered and amplified the received material so as to apply it to their changed circumstances. The task of OT theology is to present the origin, nature, and history of transmission of these writings as accurately as possible so as to give a clear delineation of the beliefs to which they give witness and of the communities within which they arose.

Given the complexity of the data, it is not surprising to discover that unanimity does not prevail among OT theologians on the question of methodology. Some insist that it is the task of the biblical theologian to give as objective a description of the theological views of the biblical writings and the communities within which they were produced as possible, so as not to obscure the unique contribution of the Bible to contemporary faith. The task of translating those views into contemporary statements of faith is kept quite distinct and normally assigned to another discipline, carried on especially by the systematic theologian. Others protest that the theological meaning of the biblical writings cannot be grasped by such a dispassionate approach; the depths and subtleties of Israelite religion can be understood and represented only by one personally acquainted with the language of faith and involved in the decisions and actions arising out of faith. They accordingly do not distinguish as rigidly between "descriptive" and "constructive" or "normative" aspects of biblical study.

It is well and good that scholars differ in the extent to which they move in their theological treatment of the OT toward the task of translating the meaning of the ancient texts into contemporary language and concerns, for the task of elucidating the theological meaning of the biblical writings is multifaceted and complex. In fact, it is not unusual for the same scholar to weigh the descriptive and normative aspects of theological study differently in different works. While it would be counterproductive to try to define the extent to which contemporary concerns are legitimate in a work of OT theology, two lessons from past scholarship should not be forgotten.

The first lesson is that the deep grounding of Israelite faith in historical events establishes as an essential facet of OT theology a thorough delineation of the specific context within which each of those writings arose and the light shed by that context on its meaning. The contribution of this descriptive task to the meaning of biblical theology is too great to justify any tendency to move back to a preliterary critical or historical method of study. And it is a fallacy to assume that we are somehow immune to the type of prejudices that led previous generations of scholars to interpret Moses or Jesus in such a way as to produce a reflection of their own cultural values or political ideologies. Careful linguistic, historical, and comparative study must provide the foundation upon which all responsible biblical theology is built, for unless the biblical writings are appreciated in their cultural and historical specificity, no matter how alien that specificity strikes our modern senses, it is difficult to see how they will be freed to address us and to challenge our perception of reality.

The second lesson acts as a counterbalance for the first and arises from the justifiable criticism that the nineteenth-century works on the history of the religion of Israel, while contributing much to our understanding of the background of the Israelite cult, did not give an adequate picture of the theological beliefs of the communities and individual writers coming to expression in the OT. It seems fair to observe that a full treatment of the theology of the OT requires more than detached objectivity. While indeed requiring the restraints on subjectivity to which scientific methodology is dedicated, the very nature of the subject calls for the kind of in-depth understanding that is best fostered by personal theological concern and commitment. To this defense of commitment as compatible with honest scholarship may be added the now universally recognized fact that no scientific investigation is without presuppositions; indeed, investigations in every field are guided by assumptions and hypotheses that structure the inquiry or experiment. It therefore seems advisable to apply the term "history of the religion of Israel" to studies that are defined as strictly descriptive in nature, recognizing that studies falling under the rubric of biblical theology, while based upon careful description and critical assessment of all available data, will also be engaged in understanding the inner theological dynamics of the biblical writings, with an eye to their contemporary applications.

This distinction should not imply antagonism or competitiveness between the two disciplines but can be appreciated as a way of clarifying the specific tasks of each as well as of the nature of their interrelationship. While biblical theology will be guided by the kinds of criteria proper to any theological endeavor, it will draw deeply on the results of the history of the religion of Israel, especially in light of the fact that the attribution of religious significance to the historical realm is one of the hallmarks of biblical faith. In like manner, the primarily theological orientation of OT theology will not inhibit the utilization of yet other disciplines, such as the archaeology of the biblical lands, sociology, and anthropology. For example, valuable light has been shed on the earliest period of the Israelite religion by social anthropology, even as aspects of the prophetic and apocalyptic movements coming to expression in the Bible are now more clearly understood through the application of tools derived from the sociology of knowledge. The relation of biblical theology to such disciplines can be summed up thus: since it is a basic claim of biblical faith that God is known through the events of history and the experiences of the community of faith, any discipline capable of advancing our understanding of the historical and social contexts within which the writings of the Bible arose will be regarded as a valued ally.

The Starting Point of Biblical Theology: We have already observed that every scholarly endeavor inevitably is based upon presuppositions. This is already true on the level of the descriptive task with which OT theology begins. For example, a scholar who accepts Ernst Troeltsch's "analogy principle" (i.e., to be credible, a happening recorded in a historical source must have parallels in modern experience) will dismiss all reconstructions of the Exodus from Egypt or the resurrection of Jesus, which defy explanation within the nexus of cause and effect as understood by modern science, whereas others may not be thus bound. What is to be expected of every scholar, however, is that the presuppositions operative in his or her methodology be stated as honestly and as clearly as possible.

When the biblical theologian moves toward the exposition of the contemporary meaning of the biblical writings, the role of presuppositions takes on an even greater significance, determining both the questions brought to the text and to a large extent the nature of the answers found in the text. A contrast between two approaches will illustrate how determinative is the role of presuppositions in the interpretation of biblical texts.

On the one hand, there are some biblical theologians who insist that the basic data of biblical theology is what actually happened in antiquity, the so-called *bruta facta* observable to any witness, regardless of that witness's religion or world-view. They can be quite insistent that the special faith perspective of the biblical writers is to be set aside in the endeavor to establish the data base of biblical theology. On the other hand, many argue that the most significant history for the theologian is Israel's ac-

count of God's saving acts, that is to say, interpreted history, or history seen by the "eyes of faith." Clearly, the assessment of the biblical documents and the relative weight ascribed to disciplines like Near Eastern archaeology will differ on the two sides of this question. Once again, any biblical theologian should state clearly for her or his audience or readership the presuppositions guiding the particular study.

The study of the history of biblical theology readily illustrates how OT theologians, like their contemporaries in other fields of thought, have been influenced by the dominant ideas of their historical and cultural setting. Throughout the nineteenth century, for example, the imprint of Hegelian idealism can be seen on the pages of German biblical works. In our own century, the thought of the philosopher Martin Heidegger has been a strong factor in a whole school of NT scholarship. Foremost in that school is Rudolf Bultmann, who found in existential philosophy the means by which the essential message of the NT could be ascertained, namely, in terms of the self-understanding coming to expression in the Christ of faith and in human history. Because the basic this-worldly orientation of the OT did not seem to offer vivid illustrations of the turning away from the material world to the world of the spirit, Bultmann viewed the OT largely in a negative light as exemplifying a "miscarriage" of the divine promise. We can also detect here the influence of the law/gospel dichotomy that has played a major role in much Lutheran biblical theology.

What lessons can be learned from the history of the relationship between contemporary philosophy and the biblical theologian? Since presuppositions are inevitable and philosophy is in part the attempt to identify and describe presuppositions, it would be naive to claim that what may be perceived as excessive influence of certain philosophical movements upon theology could be corrected by an approach to biblical theology that rejects all input from philosophy. Rather, it seems that the proper attitude should be analogous to that described above in relation to historical criticism or the social sciences: philosophy should be regarded as a source of conceptual tools enabling the biblical theologian to gain a more adequate understanding of the meaning of the biblical writings. But again here a balance must be struck, lest the tools begin to generate their own meaning. The Bible, in other words, should not become a resource for illustrating the tenets of a given philosophical system. On the other hand, philosophical ideas may legitimately aid in the task of clarifying the intrinsic meaning of the biblical writings. This intricate balance can be illustrated in relation to the philosophical notions originating with Alfred North Whitehead. Especially as they have been developed by Charles Hartshorne, process ideas in many cases can be shown to have such close affinities with notions found at the center of OT thought that the former become a useful means of probing the theological meaning of the latter. On the other hand, when the primary commitment of a scholar is centered in process philosophy, the danger that biblical notions will be forced into an interpretation at the cost of their intrinsic meaning becomes so great as to disqualify the exercise from belonging to the discipline of OT theology.

The ideal relationship exists where philosophical and biblical theological studies develop in dialogue with one another, for then the chances are enhanced that tools and concepts can be developed that will be useful to both. Since it is a given that the various disciplines within a particular historical-cultural setting are inevitably under the influence of a broadly pervasive set of cultural influences, it seems highly desirable that the checks and balances contributed by such interdisciplinary dialogue be utilized. This is especially true in the case of disciplines like biblical theology and philosophy, which are dedicated to many of the same goals.

Recent Issues in OT Theology: One recent issue in OT theology is the canonical or final shape of the OT. In 1938 Gerhard von Rad argued that biblical scholars had become so preoccupied with small units of tradition within the OT as to neglect the significance of larger literary compositions such as the so-called Yahwistic document (one of the literary strata integrated into the present form of the first four books of the Bible). In the past decade this concern has been revived, enlarged, and connected explicitly to the area of OT theology by a number of scholars, preeminent among whom is Brevard Childs. In this case objections have been raised to the fascination of many biblical scholars with the earliest stages of biblical compositons, reconstructed often with the help of a high degree of speculation. Instead, they argue, the stage of the OT writings that must be regarded as authoritative is the final canonical stage, inasmuch as it alone represents the form of Scripture historically held as authoritative by both the synagogue and the church.

This emphasis on the canon has come as a necessary corrective to an atomizing tendency within biblical scholarship that has not paid sufficient attention to the larger theological themes that often come to expression most clearly in the final shape of the canon. But it should be noted that the problem has not arisen primarily as the result of preoccupation with earlier stages of the tradition per se, but as the result of an approach taken by many scholars that simply has been disinterested in theological questions. When guided by theological sensitivity, careful attention to all recoverable stages of a composition's history can contribute to an understanding of that composition's

theological significance that is not possible if attention is devoted exclusively to one stage, be it early or late.

It is necessary, of course, to recognize the bearing of theological presuppositions on this question. For those accepting a doctrine of verbal inspiration or infallibility as the starting point of biblical theology, the final form of the canon will be authoritative to the exclusion of earlier stages (of course, the existence of different canons within the various confessional groups complicates this position, as does the fact that the various ancient versions preserve text types that in many cases differ significantly from one another in length and readings). On the other hand, those recognizing God's word as arising within the relationship characterized by divine initiative and human response will seek to understand all stages of the biblical tradition for the light they shed on the divine-human relationship, for it is this relationship that supplies the essential ingredients of biblical theology.

Another recent concern has been the hermeneutics of liberation movements. The field of biblical hermeneutics, as the one that defines the presuppositions and the techniques of interpretation used in the theological study of the Bible, traditionally has been one addressed by church bodies. In recent decades, there has been a marked tendency for specific movements to define the hermeneutic appropriate to their perception of the Bible's relation to social change. Pioneering in this endeavor were black theologians like James Cone, who pointed to the experiences of blacks as an interpretative key to the meaning of central themes in the Bible, like the Exodus from Egypt. Impressive results also have been produced in Latin America by "liberation theologians" such as Gustavo Gutierrez. Their emphasis has been on the crucial importance of the disenfranchised and the poor in both the NT and the OT and on the mandate this holds before the contemporary church, given the growing gap between rich and poor and between oppressors and oppressed in our world. Feminist theologians in turn have produced various definitions of the hermeneutic appropriate for their concerns, a notable example being Elisabeth Schussler Fiorenza's *In Memory of Her*. These efforts have contributed significantly to the creativity of contemporary biblical theology by drawing attention to presuppositions uncritically accepted by generations of biblical scholars that were actually bound up with the interests of elitist groups, and by presenting the perspectives of excluded groups as a valuable point of entry into neglected aspects of the biblical message. Those not belonging to these movements can avail themselves of the contribution they make by scrutinizing their own presuppositions and methods of interpretation in the light of these new works, and by encouraging dialogue among the protagonists of various perspectives, old and new, motivated by commitment to a more inclusive and honest approach to biblical theology.

Another topic concerns the relation between the OT and the NT. Though some OT theologians continue to interpret the Hebrew Bible on the basis of a christological hermeneutic, an increasing number, while not questioning the central importance of the NT for Christian faith, feel that the integrity of both the OT and the NT is best respected by interpreting the OT first on its own terms. One of the major contributions OT theology can offer is a clear statement of the message of the OT that makes that message in its specificity and integrity available to people of all confessions. It thus stands guard against an overly hasty movement into the NT that overlooks the message of the Hebrew Bible, both in its own right witness to a foundational period in God's dealing with the human community of faith and as essential background for understanding the specific meaning of the NT writings. By following the development of the historical faith of Israel and by tracing the development of the different streams within Judaism in the Second Temple period, the theologian lays the basis for a far more adequate understanding of the circumstances that led to the rise of rabbinical Judaism and early Christianity than is possible by more hasty readings of the pre-Tannaitic and pre-Christian writings.

The Study of the Bible and Jewish-Christian Relations: As we look back on the previous generation of biblical scholarship, the revitalization of biblical studies within the Roman Catholic confession resulting in large part from the decisions of the Second Vatican Council stands out. It may be that one of the aspects of the present generation that will be remembered will be the increased cooperation between Jewish and Christian scholars in the study of both the Hebrew Bible (OT) and the NT. Among a significant number of Christian biblical scholars there has grown a keen sense of the indispensability of a thorough, historical understanding of Judaism for a proper understanding of the growth of biblical faith. This sense has grown in intimate connection with a renewed interest in the Jewish writing of the second and first centuries B.C. and of the first centuries A.D., a field badly neglected since the turn of the century.

Clarification of the Dynamic Historical Character of Biblical Theology: The contributions of biblical scholars utilizing historical, critical methods have often been judged by people of faith in largely negative terms. Often this response was justified, inasmuch as many biblical scholars defined their task in arrogant indifference to the theological concerns of communities of faith. Though many biblical scholars continue to define their tasks apart from com-

mitment to any religious group (and their many important contributions to the biblical field should not be overlooked), there is a growing number of critically trained biblical theologians who find their historical approach the most appropriate one for grasping the theological meaning of Scripture. Here we shall note several characteristics that can be observed among such OT theologians as Bernhard W. Anderson, Walter Brueggemann, and Paul D. Hanson.

The individuals and the communities that produced the writings of the OT are valued for the model of the faithful life that they hold up before contemporary individuals and communities. Basic to that model is the pattern of divine initiative and human response, with God's presence discerned as the creative and redemptive reality at the heart of human history and community experience to which the faithful seek to give their assent through confession and action. As God was present to heal and restore creation and the human family in biblical times, God is believed to be present now, and as an extension of the people of God in biblical times communities of faith today are called to participate in God's universal plan of justice, compassion, and peace.

Within this approach, the wide diversity of theological traditions found in the Bible and even the themes and practices that seem alien to modern sensitivities are regarded not as an embarrassment but as a challenge. The diversity represented by historical, prophetic, priestly, royal, sapiental, and apocalyptic traditions is assessed as perfectly appropriate within a historical process dedicated to understanding the mystery of God's purpose in human experience. And the alien elements, like mythological portraits of God as a divine warrior defeating the chaos dragon and the patriarchal bias found in language dealing both with the deity and with human society, are seen as evidence of the authentically historical character of God's relation to humans. Such elements are eliminated neither through tendentious translations nor by rationalizing arguments but are valued as indications of the specific historical setting within which God was active on behalf of the Jewish people and the many families of the earth, and as evidence of the dynamic ongoing character of biblical revelation.

The rich diversity of traditions found in the OT does not yield a chaotic theological picture, but one which is both dynamic and unified. The reason is that this approach goes beyond analysis of individual periods or traditions to grasp the overall development of biblical theology, by paying attention to all levels of tradition and all periods. The unifying factor is the divine-human relationship, which is traced throughout the span of biblical history, guided by the belief that God is true to God's purpose for creation and humanity and that a trustworthy human witness to that purpose is found in the confessions of God's people that arose over the centuries. The presence of diverse perspectives and of divergent theologies functions positively both in preserving the complexity of the issues addressed within the Bible and as an authentic basis for addressing equally complex issues in the modern world.

Refusing to reduce biblical theology to a strictly descriptive discipline or to an attempt to proceed in a positivistic manner does not preclude a deep appreciation for all that can be known of ancient Israel from such sources as archaeology and extrabiblical mythological and historical texts, for the historical nature of God's involvement with the human community underlines the significance of every detail that can be recovered from the concrete historical settings within which that involvement was experienced. In similar manner, the OT theologian is open to the contributions of contemporary philosophy and the social sciences, for they offer concepts and tools that both aid in interpreting the ancient events and in drawing out the contemporary significance of those events in a manner understandable to modern individuals and communities. The approach outlined here can make use, for example, of H. G. Gadamer's understanding of the key role played by tradition in a community's efforts to relate literary monuments of the past such as are found in Scripture to the life of religious communities today.

In this approach, it seems most natural to move dialectically between descriptive and normative aspects of interpretation. It does not seem advisable to leave the latter strictly to systematic theologians, for though the biblical theologian's task should not be construed as building complete theological systems for today's religious communities, it encompasses more than a disinterested description of an ancient religion. Indeed, the meaning that reaches out from the specific biblical writings in a way that spans bridges over diverse cultures and vast centuries is one the biblical theologians are able to grasp precisely because of their specialized knowledge of the concrete settings within which those writings originated. It has been the nature of biblical faith in all ages that a life-enhancing perspective has been gained through the remembrance of the sacred stories, a perspective that in turn gives the basis for an understanding of contemporary events as the setting of God's ongoing salvation drama. Though contemporary experiences and the insights of other disciplines will help shape the questions brought to the text and will contribute clarity to the conclusions drawn, the final contribution that the theology of the OT can make is an accurate and reflective understanding of the theological meaning of the biblical writings, a meaning that can help break old habits of mind and afford fresh angles of vision for modern communities and individuals. ***See***

theophany (thee-of´uh-nee), the manifestation of God. The OT contains a number of narratives of or poetic allusions to God revealing himself to men and women. Theophanies frequently are associated with particular holy places, representing the foundation legend of a sanctuary (Gen. 12:6–7; 13:18; 18:1; 28:1–17; Exod. 40:34–38) or the call of a prophet within it (Isa. 6:1–8). They tend to follow a literary pattern with Canaanite roots: God appears, frequently as divine warrior or king, surrounded by fire or in splendor (Deut. 33:2; Pss. 18:8; 104:2; Ezek. 1:27–28; Hab. 3:4), and sometimes riding like Baal upon the wind and clouds (Pss. 18:10; 68:33; 104:3); nature trembles (Exod. 19:18; Judg. 5:4–5; Pss. 18:7; 68:8; Hab. 3:6, 10) or the recipient responds with dread (Gen. 15:12; 28:17; Exod. 3:6; Job 42:5–6; Isa. 6:5; Hab. 3:16); and, as a result, nature becomes fertile (Pss. 68:8–10; 104:10–23; Isa. 35:2, 6–7), or God saves and rules (Deut. 33:5; Judges 5; Pss. 18:16–19; 29:10; 68:19–20; Isa. 35:4–6; Hab. 3:13), or the recipient is given a revelation or call (Gen. 15:12–16; Exod. 3; Isa. 6:8–13; Jer. 1:4–19; Ezek. 1:1–3:15). Elijah's encounter with God in a "still small voice" rather than in earthquake, wind, and fire (1 Kings 19:9–18) may represent a rejection of Canaanite imagery associating God with the forces of nature. Common to many of these passages is the combined experience of dread and fascination that is characteristic of awe before the holy. In the extreme, to see God's face brings death (Gen. 32:30; Exod. 33:20; Isa. 6:5).

Intertestamental usage stems from Ezekiel 1, a central text for the Jewish apocalyptic and mystical tradition, but now the manifestation of God takes place in heaven rather than upon earth, as the culmination of the seer's ascent to heaven (see *1 Enoch* 14:8–25). This is also the case in Rev. 4:1–11. Elsewhere in the NT, more traditional echoes of the language of theophany are heard in the narratives of Jesus' baptism (Matt. 3:17) and transfiguration (Matt. 17:1–8; cf. Exod. 34:35) and Paul's conversion (Acts 9:1–9). ***See also*** Apocalyptic Literature; Call; Holiness; Prophet; Sanctuary; Transfiguration, The.

D.W.S.

Theophilus (thee-of´uh-luhs; Gk., "lover of God" or "friend of God"), the person to whom the Gospel of Luke and the book of Acts are addressed (Luke 1:3; Acts 1:1). The common address supports the theory that both documents were written by the same author. Hellenistic authors sometimes dedicated their books to patrons, benefactors, or persons who had an interest in the subject matter, and it is probable that the author of Luke-Acts so dedicated his writings. In Luke 1:3, Theophilus is given an honorific title ("most excellent" or "your excellency") that would appear appropriate for a high-ranking government official but may also have been used for a benefactor or patron. Various suggestions have been made about the identity of Theophilus, but no information about him is available outside the prologues to Luke and Acts. J.B.T.

Thessalonians (thes´uh-loh´nee-uhnz), **the First Letter of Paul to the,** the thirteenth book of the NT. Most scholars agree that 1 Thessalonians is the earliest Pauline Letter and thus the oldest extant NT writing. Many hold that it was written ca. A.D. 50, although some suggest a date as early as 43. Although the literary unity and integrity of the Letter have been questioned from time to time, these proposals have not found scholarly consensus.

Paul, Timothy, and Silvanus are coauthors of this letter to the Christian community at Thessalonica, a fact indicated in the salutation and supported by the predominant use of the first-person plural ("we"). Paul and his co-workers arrived there after having experienced much conflict in Philippi (Acts 16:11–40; 1 Thess. 2:2). Thessalonica, so named by Cassander (one of the generals of Alexander the Great) after his wife, who was the daughter of Philip and the half-sister of Alexander the Great, was founded about 316 B.C. When Macedonia became a Roman province in 146 B.C., Thessalonica became the most important city of the province and the center of Roman administration.

Background: Both 1 Thessalonians (1:9–10; 2:13–16) and Acts (17:4) suggest that the Thessalonian church was composed of Jews and Gentiles. Further, according to the account in Acts, Paul and his co-workers (Timothy and Silas [Silvanus]) encountered sharp opposition instigated by Jews and were eventually forced to leave Thessalonica because of this conflict. This polemical situation between the Jews and Paul appears to be reflected in the pointed comments found in 1 Thess. 2:13–16.

In addition to a strong Jewish presence in Thessalonica, we know that several religious cults of the Greco-Roman world were active in this leading city of the province and seat of Roman administration, including the cult of Serapis and that of the Cabiri. Paul's description of his apostolic practice in 2:1–12, his ethical advice in 4:1–8, and his teachings about the

return of Christ (Gk. *parousia*) in 4:13–5:11 may be better understood with this background in mind. Paul's missionary style and teaching differed sharply from this pagan environment known for its ecstatic orgies and sharply divergent perceptions of the afterlife.

Content: Paul's affectionate Letter to the church of the Thessalonians begins with his remembering their "work of faith and labor of love and steadfastness of hope in our Lord Jesus Christ" (1:3). This same triadic formulation occurs again in 5:8: "put on the breastplate of faith and love, and for a helmet the hope of salvation." In chap. 3 we learn that Paul, who is probably writing the letter from Corinth, is anxious about the current status of the Thessalonian church. He hopes that they are not "moved by these afflictions" (3:3) and is apprehensive lest "somehow the tempter had tempted you and that our labor would be in vain" (3:5). As a result, he sent Timothy from Corinth both to inquire and to encourage. Upon his return to Paul, Timothy brought the "good news of your faith and love" (3:6). This section concludes with the apostle's prayer "that we may see you face to face and supply what is lacking in your faith" (3:10). The overall context of the Letter, as well as this specific section, suggests that hope is precisely the element that is deficient and needs to be strengthened. Once this is recognized, then the significance of the sustained eschatological emphasis of the Letter, especially at key transition points, becomes even more conspicuous. One should note especially 1:10; 2:19; 3:13; 4:13–18; and 5:1–10, 23.

Despite Paul's affection and high regard for these Christians whose faith served as "an example to all the believers in Macedonia and in Achaia" (1:7), he must correct and clarify one major area of misunderstanding: the status of those Christians who have already died since the end has not yet come. In 4:13 Paul shifts from the repetitious "you know" language (1:5; 2:1, 2, 5, 9, 10, 11; 3:3b–4; 4:1, 2, 6, 10, 11; 5:2) to the phrase "we would not have you ignorant." These "you know" phrases are not superfluous rehearsals, but Paul's method of reminding the Christian church that they are *already now* sharing in the new life in Christ, which has hope as an essential ingredient. Thus their past and present participation in hope, as well as the integrity of the apostolic office of Paul and his co-workers over against the spurious claims of Paul's real or potential antagonists, allows him to deal with the key issue in 4:13–18, namely, that the Thessalonian Christians should not grieve as others do who have no hope "concerning those who are asleep." This problem surfaced when some in the community died prior to the eagerly expected imminent Parousia, and this anxiety may well have been fueled by those outside the church who mocked what seemed to them the absurdity of Christian eschatological claims. Paul assures his audience that the dead in Christ will not suffer disadvantage, that they will not be overlooked, and that they "will rise first" (1:16) on the last day. Paul then reiterates the imminence of the Parousia (5:1–3) and then only in 5:10 does he give his final answer concerning the dead in Christ: "our Lord Jesus Christ . . . died for us so that whether we wake or sleep we might live with him."

Two final observations: First, it is noteworthy that "justification language," used predominately in Galatians and Romans, is absent in 1 Thessalonians, although Paul does use, as in Romans, the terms "sanctification" and "salvation." In 1 Thess. 4:4, 7, and 5:23, sanctification refers to the quality of new life in Christ, which will culminate in salvation (5:8, 9). Although specific use of justification language only appears at a later stage in Paul's thought, provoked by an intense battle with Judaizing opponents, as in Galatia, the theological substructure that this language represents may be implicit in the "election" language found in 1 Thessalonians (cf. 1:1; 2:12; 4:7; 5:24). Paul's teaching on justification is nothing other than his teaching on election, sharpened by his theology of the cross, and applied to a series of polemical situations, as, for example, can be observed already in 1 Cor. 1:18–31. Seen in this way, there is an amazing consistency between the emphasis on election and sanctification in 1 Thessalonians and that on justification and sanctification in Romans; between learning how to please God and to do his will in 1 Thess. 4:1–3 and the theme of obedience in Romans 6; between Paul's assertion in 1 Thess. 5:9 that "God has not destined us for wrath, but to obtain salvation through our Lord Jesus Christ," and his declaration in Rom. 5:9, "Since, therefore, we are now justified by his blood, much more shall we be saved by him from the wrath of God." When Paul speaks of the "activity of faith" in 1 Thess. 1:3, that description of faith in approximated by the formula "the obedience of faith" in Rom. 1:5 and 16:26. What is also constant from 1 Thessalonians through Romans, with different nuances, of

OUTLINE OF CONTENTS

course, is Paul's apocalyptic interpretation of the death and resurrection of Jesus in view of God's impending triumph. Second, it is significant for the study of the development of the ecclesiastical structure in the NT that already in 1 Thessalonians there is a reference to an organizational pattern: "But we beseech you, brethren, to respect those who labor among you and are over you in the Lord and admonish you, and to esteem them very highly in love because of their work" (5:12–13). ***See also*** Faith; Hope; Love; Paul; Silas, Silvanus; Thessalonica; Timothy.

Thessalonians, the Second Letter of Paul to the, the fourteenth book of the NT.

Content: Much of the content of 2 Thessalonians is similar to that of 1 Thessalonians. There are two occurrences of major new material. In 1:5–12 it is promised that those who are causing the suffering among the Thessalonian Christians will be punished at the last day and that the believers will be granted rest. This apocalyptic language is intensified in 2:1–12 in response to the basic issue confronting the author of 2 Thessalonians: "we beg you, brethren, not to be quickly shaken in mind or excited, either by spirit or by word, or by letter purporting to be from us, to the effect that the day of the Lord has come" (2:1–2). In order to persuade his readers that the day of the Lord has not yet come, the writer indicates that the "lawless one" (2:3) must first appear.

The prayer with which the Letter begins assures the readers that despite their present suffering, God will finally avenge them, and thus they are encouraged to hold fast to their faith (chap. 1). Chap. 2 warns them not to be overly enthusiastic in getting ready to meet Christ returning from heaven, since other events must occur before Christ will return, and they have not yet occurred. The Letter concludes (chap. 3) by refuting an economic elitism by a few based on their claim to charismatic authority: "Now such persons we command and exhort in the Lord Jesus Christ to attend quietly to their own work and to earn their own living" (3:12).

Authorship: The scholarly discussion concerning the authenticity of 2 Thessalonians as a genuine letter of Paul is intense. At least three specific facts require explanation: the extremely close literary relationship between 1 and 2 Thessalonians; the apparently non-Pauline character of the key text, 2 Thess. 2:1–12; and the unique characteristics of 2 Thessalonians. Many interpreters would include in this last category such phenomena as the transformation of thanksgiving in 1:3–12 into a didactic passage dealing with further judgment; the different nuance of the final greetings in 3:17–18, which no longer serve as a sign of intimacy but intend to demonstrate authenticity; the use of the term "hope" to mean simply "patience" in 1:3–4; the experience of salvation as primarily a future phenomenon in 1:7–12; the absence of the use of the terms "Jesus Christ" or "Jesus" without the consistent qualification of the title "Lord"; the non-Pauline use of "retribution" in 1:11–12; the fact that 2 Thess. 1:1–2a would be the only Pauline greeting that is statically repeated from 1 Thess. 1:1–2 without the variation we find in his other Letters; the term "calling" in 1:11, which is used in a non-Pauline manner, as is the term "possession" (Gk. *peripoiēsis*) in 2:14 (note how differently it is used in 1 Thess. 2:12b; 5:9); and the stress on the term "tradition" in 2:15 (an obvious reference to 2:2) and 3:6. The second use of the term "tradition" in this brief document is significant since Paul only uses the term twice elsewhere (1 Cor. 11:2; Gal. 1:14); here its use to introduce 3:6–12 is the clearest example of literary dependence in the form of the transformation of material from 1 Thessalonians (cf. 5:14).

OUTLINE OF CONTENTS

The Second Letter of Paul to the Thessalonians

I. Introduction (*exordium;* 1:1–12)
II. Statement of the Proposition (*partitio;* 2:1–2)
III. Proof (*probatio;* 2:3–15)
IV. Epilogue (*peroratio;* 2:16–18)
V. Exhortation (3:1–15)
VI. Epistolary postscript (3:16–18)

How are these and other factors evaluated? Some scholars continue to insist on Pauline authorship, while others would argue that 2 Thessalonians is a pseudepigraphic Letter. Still others are of the opinion that one of Paul's coworkers (both Letters claim to be written by Paul, Silvanus, and Timothy) wrote 2 Thessalonians. ***See also*** Man of Lawlessness; Paul; Pseudonym; Thessalonians, The First Letter of Paul to the.

Thessalonica (thes'uh-luh-ni'kuh), a city in Macedonia (modern Thessaloniki), located at the head of the Thermaic Gulf. In the NT, Thessalonica is referred to exclusively in connection with the missionary activities of the apostle Paul (cf. Acts 17:1–13; 20:4; 27:2; 1 Thess.; 2 Thess.; Phil. 4:16; 2 Tim. 4:10). The political and religious history of the city is important for a proper understanding of these NT references. The city was founded in 316 B.C. by Cassander, a general in the army of Alexander the Great, who gave the city its name in honor of his wife, Thessalonikeia, the daughter of Philip II and the half-sister of Alexander. The new city included the ancient Therme and some thirty-five other towns. When Macedonia became a Roman province in 146 B.C., Thessalonica was made the capital and thus the center of Roman administration. The city supported the victorious Antony and Octavian prior to the battle of Philippi in 42 B.C., an event that ushered in a prosperous new era for Thessalonica. Additionally, we know that the Roman statesman and orator Cicero spent part of his exile in Thessalonica in 58 B.C., that the Roman general Pompey took refuge from Julius Caesar in the city in 49 B.C., and also that such prominent literary figures as Lucian and Polyaenus visited the city. The extensive coinage of Thessalonica underscores its prosperity, certainly due to its status as a free city (i.e., one granted certain tax concessions and some other privileges) and its location as a main station on the famous Via Egnatia, which ran through the city on the east/west axis from the Balkans to Asia Minor.

Religious Life: The religious life of Thessalonica included a strong Jewish component. According to Acts 17 (cf. 1 Thess. 2:13–16), Paul encountered unusually bitter opposition from the Jews of the city. There is also evidence for the cult of Cabiri, the cult of the god Serapis, and the closely associated cult of the goddess Isis. Zeus (extensively represented in the city's coinage) was worshiped, as were Asclepius, Aphrodite, Dionysus, and Demeter. Many of the extant artifacts can be seen in the archaeological museum in Thessaloniki. A further word needs to be said about the presence of the Cabiri in Thessalonica, for which we have both literary and numismatic evidence. They are also given the name "great gods" (Gk. *megaloi theoi*), and it is possible that the archaeological results in Samothrace may shed new light on these perhaps originally Phrygian deities who promoted fertility and protected sailors, a not unimportant fact for a city located at the head of the Thermaic Gulf. The Cabiri are often confused with and identified with the Dioscuri (Castor and Pollux, sons of Zeus), who also appear on a coin of Thessalonica dated 89 B.C. So deeply revered were these Cabiri/Dioscuri in Thessalonica that they are portrayed on two pilaster reliefs on the face of the arched western gate (built no later than the first century B.C.) as armed guardians of that gate. The steady growth of their influence is evidenced by coins from the Flavian Age (last third of the first century A.D.), which depict them as the city's tutelary powers.

In addition to these religious expressions, there was also a very strong civic cult in the Roman period that regularly expressed gratitude to Roman patrons and Roman client rulers (such as, for example, a Thracian dynast) in recognition of the fact that the city's well-being was dependent on Roman benefaction. There is also evidence for the granting of divine honors to the goddess Roma in connection with honors bestowed on other Roman benefactors, for a temple dedicated to Julius Caesar, whom the Thessalonians acclaimed as a god (it appears that Augustus was also seen as divine by the Thessalonians), and for a group known as "priests of the gods." An interrelationship between the civic cult and the Cabiri/Dioscuri is probable.

Remains of the Ancient City: In the center of modern Thessaloniki one can see the ruins of the ancient Roman forum, which may have been adjacent to the site of the Hellenistic forum. It is possible that there was a second agora (marketplace) to the south and close to the harbor as, for example, in Pirene. It has been suggested that the Jewish synagogue may have been located in proximity to this agora. In the Hellenistic period there was a stadium, a gymnasium, and to the west a serapeum (i.e., a temple of Serapis), which was part of a larger sacred area. From the remains of the Vardar Arch at the western entrance to the city a broken inscription reading "in the time of the politarchs" has been found. This term is identical to the unusual description given in Acts 17:6 for the rulers (*politarchai*) of Thessalonica. ***See also*** Thessalonians, The First Letter of Paul to the; Thessalonians, The Second Letter of Paul to the. K.P.D.

Theudas (th*oo*´duhs), the leader of a messianic movement in Judah. According to the Jewish historian Josephus (born ca. A.D. 37), Theudas saw himself as a new Joshua figure who would lead his men by God's power across the Jordan and into the Holy Land to commence a new era for Israel. He was killed by the Romans ca. A.D. 44 (*Ant.* XX, 97–98). Theudas is also mentioned in the NT (Acts 5:36–37), but he is there placed prior to another revolutionary, one Judas, who led his doomed rebellion about A.D. 6 (both Acts and Josephus apparently agree on this date).

This discrepancy in the date for Theudas (NT: prior to A.D. 6; Josephus, A.D. 44) remains unresolved. Either Acts or Josephus had serious problems with sources at this point or, less likely, the references are to two different figures. ***See also*** Judas.

thickets of the Jordan. ***See*** Jungle of the Jordan.

thigh, the upper portion of the leg. **1** The right thigh of the animal that constituted the Israelites' well-being offerings given to priests as a stipend in addition to the animal's breast (Lev. 7:32–34). These portions could be eaten by both the priests and their households outside the sanctuary area (10:14). The custom of giving the thigh to a sacrificial officiant is quite ancient (cf. 1 Sam. 9:24). **2** Where one placed a hand during an oath. Oaths were made by placing one's hand "under the thigh" (probably euphemistically meaning on the reproductive organ) of another who makes a request (Gen. 24:2, 9; 47:29). Punishment from God for breaking such an oath might include the death of one's offspring or the fate of dying childless. ***See also*** Gestures; Heave Offering; Oath. D.P.W.

thistle. ***See*** Thorns.

Thomas (tom´uhs), one of the twelve disciples or apostles of Jesus, called "Didymus" ("twin") in the Gospel of John (John 11:16; 20:24; 21:2). He appears in each of the apostolic lists (Matt. 10:3; Mark 3:18; Luke 6:15; Acts 1:13). Receiving little mention in the synoptic Gospels, Thomas becomes important in the later portions of the Fourth Gospel. He alone appears to be a tower of strength when he encourages the disciples to accompany Jesus into a hostile Judea even if it means death (John 11:16). He appears to be without understanding when, in John 14:5, he confesses his ignorance about where Jesus is going and therefore finds it difficult to follow him. He is most commonly remembered as the "doubting Thomas" who refused to believe in Jesus' resurrection until he saw the scars and was invited to place his fingers where the nails were driven and his hand into Jesus' side (John 20:24–29). The story stands as a paradigm for all Christians who are called to believe in Christ without having seen him or having been granted tangible proof of his existence (v. 29). Thomas's response is that of all who later believe: "My Lord and my God!" (v. 28). In John 21:1–14, Thomas is one of the small group of disciples who go fishing and then see the risen Lord.

Little is known about Thomas's activities after the crucifixion of Jesus. He is recorded as among those gathered in the upper room after the ascension (Acts 1:13). Thereafter, tradition preserves only legendary stories of little apparent historical value. A Gnostic apocryphal gospel known as the *Gospel of Thomas* is attributed to this Thomas. ***See also*** Apostle; Disciple; Thomas, Gospel of; Twelve, The. P.L.S.

Thomas, Gospel of, a collection of 114 "secret" sayings purportedly dictated by the "living Jesus" to Judas Thomas, "the Twin," discovered in 1945 as part of the Nag Hammadi library. The work is not a Gospel in the genre of the canonical Gospels, since it contains no narrative about the birth, ministry, or Passion of Jesus. It resembles the probable form of the collection of sayings ("Q") generally presumed to be one of the sources of the Gospels of Matthew and Luke. The Nag Hammadi version is a Coptic translation of a Greek original. Three Greek fragments of the work were found at Oxyrhynchus in Egypt in 1898 and 1903 but were not identified as parts of the *Gospel of Thomas* until the Coptic version was discovered. Some scholars have argued that the Greek version was itself a translation from a text or oral tradition in Aramaic, but there is no conclusive evidence of that stage of the work. The earliest Greek fragment can be dated to the early third century. Hence, the Gospel must have been composed prior to A.D. 200. The date of the original composition is difficult to determine more precisely, and estimates have ranged from 50 to 180. Reliance on oral traditions of the sayings of Jesus and the use of the form of a collection of sayings point to a date in the last two decades of the first century. The place of composition was probably Syria, where traditions about the apostle Judas Thomas, identified as the twin brother of Jesus, were common and where the ascetic ("Encratite") and unconventional form of Christianity advocated in the Gospel was at home from an early period.

Content: Many of the sayings, parables, proverbs, and brief dialogues in the *Gospel of Thomas* parallel sayings attributed to Jesus in the synoptic Gospels but appear for the most part to be independent of the canonical versions. The parables, for example, lack the allegorical features found in the Synoptics, features generally recognized as secondary accretions. Thus, *Thomas* provides an important resource for investigating the earliest forms of

The closing page of the Coptic *Gospel of Thomas*, with title; second century A.D.

the sayings of Jesus. Among the sayings in the Gospel not paralleled in the Synoptics, some are found in the NT Apocrypha, such as the *Gospel of the Egyptians* (Saying 22), and others in patristic reports about Jesus. Many of the sayings, however, were unknown before the discovery of *Thomas*. Some are probably compositions by Christian circles developing traditions of Israel's wisdom literature, although some are as likely to be authentic sayings of Jesus as those in many of the canonical texts. The sayings of Jesus in the *Gospel of Thomas* that parallel the canonical tradition have little of the Gospel's distinctive theology. The sayings are not organized according to any clear thematic pattern but are loosely strung together with catch-word associations, a characteristic of oral transmission.

Gnostic Affiliations: Although lacking a myth of cosmic origins, the *Gospel of Thomas* displays features that distinguish it from traditional Jewish wisdom literature and indicate its grounding in a form of Gnostic theology. It claims to afford an esoteric *gnosis*, or knowledge, that guarantees immortality (Saying 1). The contents of this troubling yet marvelous knowledge (Saying 2) involve an understanding of one's true self, which is superior to any other knowledge (Saying 67). Through this knowledge, one recognizes the origin of the essential self in the world of light (Sayings 49, 50), where the self preexisted (Saying 19) and whither it is destined to return (Saying 18) to enjoy a state of final rest (Saying 60). Recipients of this knowledge thus realize that they are children of the Living Father (Sayings 4, 50).

A sharp dichotomy between flesh and spirit and a sense of alienation from "the world" characterize this Gospel. Without the saving *gnosis* provided by Jesus, people are in a state of drunken blindness (Saying 29), in a world that threatens to devour the true self (Sayings 7, 60). When one understands the world, it becomes clear that it is a corpse (Saying 56). The soul must be freed from bondage in this realm, and any soul content with a state of dependence on the body is wretched (Sayings 87, 112).

The disciple who achieves internal illumination (Saying 24) must reject the world. Most concretely, disciples must reject familial ties in favor of the "true Mother" (Sayings 55, 99, 101) and avoid the involvement in commerce with the "buyers and traders," who will not enter the Father's realm (Saying 64). The disciple must be a "passerby" (Saying 42), a wandering ascetic who will "fast from the world" (Saying 27). Such "fasting" is clearly metaphorical; conventional piety is not recommended (Sayings 14, 53). More positively, the illuminated disciple, who has "found the self" (Saying 111), enters the "bridal chamber" (Saying 75) and is able to achieve a unitary state (Saying 11), wherein the differentiations of inner and outer or male and female are overcome (Saying 22). Most dramatically, Jesus promises that Mary will be "made male" and thus be the equal of the male apostles (Saying 114). The ultimate goal of discipleship is to be a *monachos*, or "solitary one" (Sayings 4, 16, 23, 49). It is the solitary one, in a state of inner harmony, who enters into the kingdom of God. This realm is not an eschatological or heavenly manifestation of divine sovereignty, as it is in the synoptic Gospels or Paul (Saying 3). Rather, it is a spiritual reality from which the disciples have come, to which they return, and which is present on earth within them (Sayings 49, 113, 114).

The *Gospel of Thomas* is reticent about the Jesus who provides this illumination. It says nothing about his miracles, death, and resurrection, and these events apparently have no special significance. Only one remark (Saying 55) refers to the "cross" that a disciple must bear. Jesus is primarily a revealer, who has come into a hostile world (Saying 28) to set it ablaze (Say-

ing 10), presumably with his wisdom. It is his words, not his deeds, that are important (Saying 43). He imparts hidden mysteries (Saying 17), imaged as a "bubbling wellspring" (Saying 13). Those who drink from this spring become his equals (Saying 108).

Despite the Gnostic orientation of the work, *Thomas* incorporates materials that are not Gnostic in origin. The saying that exalts the importance of James the Just (Saying 12) suggests that the tradition emerged from early Jewish-Christian circles in Palestine. The collection probably developed through various editorial stages that introduced different nuances of interpretation. ***See also*** Apocryphal New Testament; Gnosticism; Nag Hammadi.

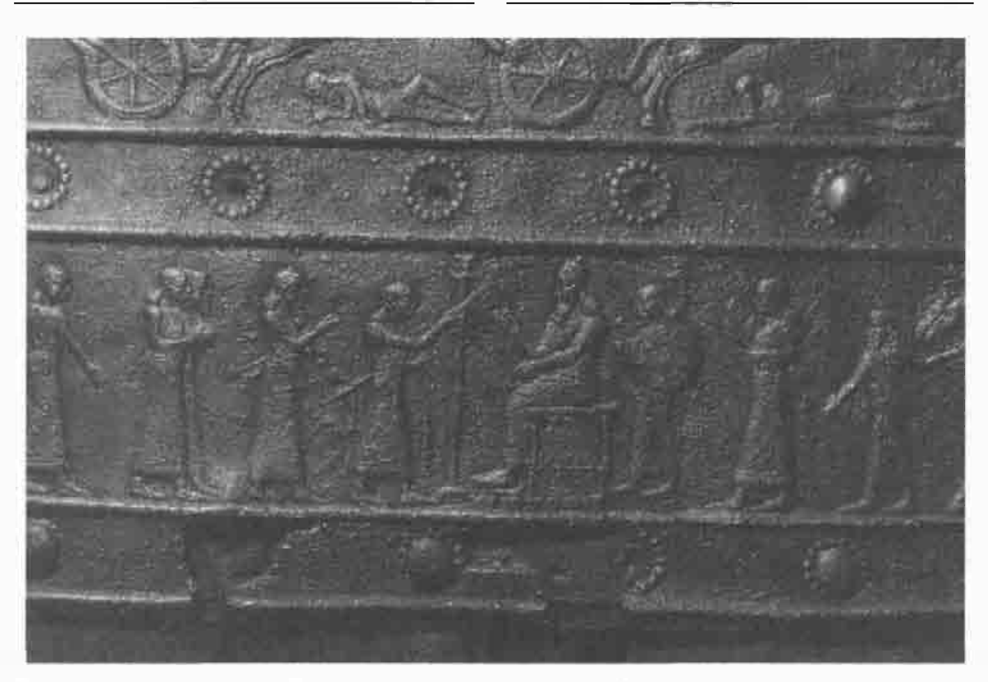
thorns, spiny plants normally of little economic or cultural value. Thorns are referred to in the Bible by several different terms such as brambles, briers, thistles, and nettles. They are usually mentioned in a negative sense as irritants, impediments, noxious plants, or indicators of desolate areas. Collectively, the term "thorns" refers to the spine-bearing plants that are especially common in the wastes and arid regions of the Near East. The prickly armor of these plants not only protects them from being destroyed by the indiscriminate grazing of goats, camels, and donkeys, but also reduces transpiration and loss of water during dry periods.

Thorns (*Zizyphus spina-cristi*).

The crown of thorns that was placed on Jesus' head (Matt. 27:29) has been variously identified as Christ thorn (*Zizyphus spina-cristi* or *Zizyphus lotus*), thorny burnet (*Poterium spinosum*), or paliurus (*Paliurus spina-cristi*), all of which are shrubs common in the plains and hill regions of the Levant. Brambles (Luke 6:44) may refer to the fruit-bearing blackberry or raspberry plants (genus *Rubus*) growing on moist stream banks or the spiny burnet dominating the limestone soils. Both plants form impenetrable thickets. Briers, like thorns and brambles, also form woody thickets and spiny hedges (Mic. 7:4; Ezek. 28:24). Many such woody, thorn-bearing shrubs are placed in piles as fencing to keep in animals and to keep out intruders or are used as fuel when dried (Prov.15:19; Hos. 2:6). ***See also*** Brambles. P.L.C.

thousand, in the OT a Hebrew word used in several related senses. **1** A literal number. This is the most frequent use of the noun in spite of scholars' reservations about the accuracy of such high numbers (e.g., 2 Kings 19:35; Jon. 4:11). **2** A noun referring to a clan or element of a tribe (Judg. 6:15; Num. 10:4). **3** Term used to express a long time or used figuratively (Ps. 90:4; Ps. 84:10; cf. 2 Pet 3:8; Rev. 20:3). **4** A noun used to refer to a military unit (1 Sam. 8:12; 1 Chron. 13:1).



Some scholars posit that in the OT some numbers now read as referring to individuals were originally references to tent or family groupings.

In the NT, one thousand years are reckoned in God's time as but a day (2 Pet. 3:8), and multiples of thousands are used to describe large numbers (e.g., Mark 6:44; 8:9; Acts 2:41; 4:4; Rev. 7:4–8; 21:16). J.A.D.

Thrace (thrays), the region east of Macedonia, west of the Black Sea, populated by independent tribes sometimes considered savage. The NT records no mission or church there, though Samothrace, Neapolis, and Philippi lay nearby.

three. ***See*** Numbers; Trinity, The.

threshing, the process by which the seed coverings of ripe cereals such as wheat and barley are removed. After the harvest, the cut grain is spread to dry on flat, open surfaces, or threshing floors (1 Chron. 21:20–23). The dried stalks are then either beaten with flails or crushed by a heavy board in which sharp stones have been imbedded. The board is dragged across the threshing floor by an ox or a donkey (Deut. 25:4; 1 Cor. 9:9). The husks may also be loosened from the grain by slow heating, or parching, in an oven. The loosened husks, or chaff, are then separated from the grain by winnowing before the grain is ground into flour or

The Assyrian king Shalmaneser III on his throne, receiving the spoils taken from one of the conquered cities; bronze decorations from the great door of the palace, ninth century B.C.

stored in jars or granaries (see Matt. 3:12). ***See also*** Granary; Winnowing. P.L.C.

threshold, the bottom part of a door frame, over which one steps in entering a building or the gateway to a city. Guards were posted at the threshold (i.e., the entrance) of the Temple; these were priests (2 Kings 12:10) or Levites (2 Chron. 34:9). One of their duties was to receive donations from the people entering the Temple (2 Kings 22:4). In Ezekiel's visionary temple, the laity were not permitted to enter the gates to the temple; even the lay ruler was allowed to come only as far as the inner threshold of the gate to worship (Ezek. 46:2). Zephaniah condemns those who jump over the threshold of the temple (Zeph. 1:9), possibly because it was an idolatrous practice. The priests of Dagon in Ashdod would not tread on the threshold to Dagon's temple, since the image of Dagon had fallen on it when the captured Ark of the Lord had been placed in the temple (see 1 Sam. 5:4–5). S.R.

throne, a word with a variety of meanings in the Bible. **1** The seat of an earthly king (Exod. 11:5). **2** A symbol of earthly royal power (2 Sam. 3:10). **3** A symbol of the seat of earthly judgment (1 Kings 7:7). **4** The seat of God as king over the earth (Ps. 47:8). **5** The seat of God as judge of the nations (Ps. 9:4). **6** The seats of those who sit with God in judgment (Dan. 7:9). **7** The Roman governor's seat of judgment or a temple dedicated to the worship of Rome and the emperor in Pergamum, a symbol of Satan's power (Rev. 2:13). **8** A symbol of Satan's power in which the Roman Empire shared (Rev. 13:2). **9** The seat of the Roman emperor or of the Antichrist (Rev. 16:10).

Prophets, visionaries, and Jewish mystics saw or ascended to God's throne, sometimes portrayed as a chariot (Isa. 6:1; Ezek. 1:26; Dan. 7:9; *1 Enoch* 14:18; DSS 4QS1; Rev. 4:2; *3 Enoch*).

Jesus as Messiah inherits the throne of David in a figurative sense (Luke 1:32). After the resurrection Jesus is seated at the right hand of God's throne (Heb. 8:1) or with God on the throne (Rev. 3:21). Final judgment will be carried out by God (Rev. 20:11) or by the Son of man with his disciples (Matt. 19:28). ***See also*** Antichrist; Judgment; Messiah; Pergamum; Vision. A.Y.C.

thumb, the large opposing digit on the hand. The right thumb, big toe, and right ear lobe were daubed with sacrificial blood in the priests' ordination (Exod. 29:20; Lev. 8:23, 24). The healed leper who is being cleansed was likewise daubed with blood and then oil on the same members (Lev. 14:14, 17, 25, 28). The purpose was primarily to provide protection from forces of evil on the most vulnerable parts of the body—its extremities. Loss of the toes and thumbs was humiliating and disabling. In the book of Judges, King Adonibezek thus mutilated some seventy defeated enemy rulers and was so treated himself by the conquering Israelites (Judg. 1:6–7). S.R.

thummim (thum´im). ***See*** Breastpiece; Urim and Thummim.

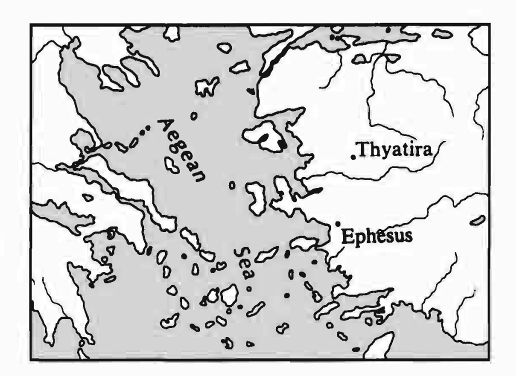
thunder, the noise of clashing air masses expanding from a lightning flash. In biblical perspectives it was most often associated with heights (2 Sam. 22:14; Ps. 18:13; Job 36:29), storms (Exod. 9:23; 1 Sam. 12:17; Job 38:25), and other violent natural phenomena (Isa. 29:6; Rev. 11:19). Used metaphorically it describes the sound of the sea (Isa. 17:12) or roaring streams (Ps. 42:7) and the power and authority of the voice of God (Job 37:2, 5; Ps. 29:3; Exod. 19:19; John 12:28–29). Prophets use it both to express the presence (Ezek. 1:24) and awesomeness of God (Isa. 33:3). In Canaanite religion it was the sign of Baal's presence. R.S.B.

Thunder, Sons of. *See* Boanerges.

Thutmose (thy*oot*´mohs; Gk. *Tuthmosis;* Egyptian, "Thoth [The moon god] is born"), the name held by four kings of the Egyptian eighteenth dynasty (1570–1293 B.C.). The time when these four pharaohs ruled, the late sixteenth and fifteenth centuries B.C., is sometimes referred to as the Thutmoside period. Some of the kings and major events of their individual reigns are listed below:

1 Thutmose I (1524–1518 B.C.), a military man of nonroyal birth who reached the throne by marrying the daughter of his predecessor (Amenhotep I). He conducted a raid deep into Syria, crossing the Euphrates River and setting up a victory stele on the river bank near Carchemish.

2 Thutmose II (1518–1504 B.C.), a son of Thutmose I, husband of Queen Hatshepsut. His only campaign into Palestine was a minor raid undertaken against a group of bedouins.



3 Thutmose III (1504–1450 B.C.), initially coruler of Egypt with his stepmother, Queen Hatshepsut, then sole ruler of Egypt from 1483 B.C. on. In the twenty-second year of his reign he led an Egyptian army up to Megiddo, where the prince of the Syrian city of Kadesh had brought together a large army of Syrians and Palestinians under his leadership. Thutmose III's capture of Megiddo in 1482 B.C. resulted in the establishment of the great Egyptian Empire in western Asia. This king conducted a total of seventeen campaigns in the Levant; his army reached the Euphrates River in the eighth campaign. Thutmose III is considered the greatest military leader in Egyptian history. Egypt became wealthy and prosperous as a result of all the tribute and trade that reached the Nile Valley from its empire in western Asia and Nubia.

4 Thutmose IV (1419–1386 B.C.), a son of Amenhotep II (who was in turn a son of Thutmose III); he sealed Egypt's diplomatic relations with the north Syrian kingdom of Mitanni by marrying the daughter of the Mitannian king. On a stele found in western Thebes, Thutmose II claims to have conquered the city of Gezer. ***See also*** Gezer; Megiddo.

Thyatira (thi´uh-t*i*´ruh), a city (modern Akhisar) about fifty-five miles northeast of Izmir (Smyrna), Turkey. It lay on the road between Pergamum and Sardis in Lydia (or at times in Mysia) on the Lycus River. Founded as a Hellenistic city by Seleucus I Nicator in 300 B.C., it had developed many industrial and commercial guilds by the first century A.D.

According to Acts 16:14–15, Paul's first convert at Philippi was Lydia, "a seller of purple goods" from Thyatira. She is described as a "worshiper of God," which may mean that she had come into contact with a community of Jews in Thyatira.

By the late first century, a sufficiently significant Christian community existed in Thyatira to merit the fourth and longest of the seven letters of Revelation (Rev. 2:18–29). The "eyes like a flame of fire" and "feet . . . like burnished bronze" (Rev. 2:18) may allude to attributes of the local god Tyrimnos, identified with the Greek sun gods Helios and Apollo. ***See also*** Lydia; Mysia. C.H.M.

thyine (th*i*´in), wood from the citron tree valued for its pleasant scent (Rev. 18:12).

Tiamat (tee-ah´maht), the watery source of life and, finally, Marduk's defeated opponent in *Enuma elish,* the Babylonian account of the emergence of the gods, the formation of the physical world, and the organization of the pantheon under the rulership of Marduk at Babylon. Tiamat is a form of the Akkadian word *tâmtu,* "sea," and is grammatically feminine. It is possible that she is the sea (Persian Gulf, Mediterranean Sea) in the *Enuma elish;* it is equally possible that she is the subterranean waters and is thus a variant of her spouse *apsû/abzu.* She is the mother who begot everything and is presented both sympathetically and hostilely in *Enuma elish.* She is imagined as a cow or goat, a human female, a dragon, and a sea-form. Her slayer, Marduk, divides her body and creates heaven and earth out of its two halves (cf. Gen. 1:6). Tiamat in the form *tehom* (Heb., "deeps") appears in Gen. 1:2; 7:11; and 8:2. ***See also*** Babylon. I.T.A.

Tiberias (ti-bihr'ee-uhs), a city named for Tiberius Caesar on the west shore of the Sea of Galilee. Herod Antipas, tetrarch of Galilee and Perea (Matt. 14:1–6; Luke 3:19), founded it (ca. A.D. 18) to replace Sepphoris as the capital of Galilee. Desirous of a site not full of those opposed to his rule or too close to the powerful cities of the Decapolis, he placed it on a major trade route linking Syria with Egypt. Administration, trade, and fishing became its major industries while nearby hot springs made Tiberias a popular health resort. Herod Antipas built a fortress around which a wall was later added. A stadium, forum, Hadrianem, and ancient synagogues have also been discovered.

Established upon a necropolis (possibly the cemetery for the ancient city of Hammoth [Josh. 19:35]), it was ritually unclean according to Jewish law. While pious Jews certainly refused to live there, well-to-do classes were drawn to the site because government offices and banks were located there. The promise of land and housing attracted the poorer classes. Jesus is not mentioned as having visited Tiberias although much of his ministry was spent in surrounding towns (John 6:23 records the only biblical reference to the city). Its influence is evident in that its name was transferred at an early date to the Sea of Galilee, which became the "Sea of Tiberias" (John 6:1; 21:1).

Tiberias was the first Jewish *polis* (Gk., "city"), making it sovereign in internal and external matters (e.g., waging war, negotiating treaties, establishing religious practices, taxation). It had an elected ruler (Gk. *archōn*), assisted by a committee of ten and a town council of six hundred. It was entitled to date its records from the day it was founded and to mint coins.

The Jewish historian Josephus led the forces that captured Tiberias during the Jewish revolt (A.D. 66–70) and destroyed the Herodian palace. Supported by the lower classes but opposed by the rich, he surrendered to Vespasian's forces in A.D. 67. This averted destruction of the city and was no doubt influential in the city remaining under Jewish rule until A.D. 100. Hadrian repopulated the city with a large number of non-Jewish settlers but it later became thoroughly Jewish in character.

By the second century A.D., it was recognized as one of four sacred Jewish sites (along with Jerusalem, Hebron, and Sepphoris). It was the seat of a rabbinical school influenced by Judah the Prince (Judah ha-Nasi, ca. A.D. 135–220) which was responsible for writing the Mishnah (a collection of oral laws). The Palestinian Talmud was completed around the fifth century A.D., shortly before the Tiberian Academy was closed. Tiberian vowel pointing (the preservation by means of vowel points of the pronunciation of Hebrew words) took place in Tiberias. Maimonides (A.D. 1135–1204), the famous Jewish philosopher and physician, who was born in Spain, is buried at Tiberias. D.R.E.

Tiberias, Sea of, better known as the Sea of Galilee (John 6:1; 21:1). ***See also*** Galilee, Sea of.

Tiberius (ti-bihr'ee-uhs), Claudius Caesar Augustus, Roman emperor from A.D. 14, when he succeeded Augustus, until A.D. 37, when he died in Capri, reportedly the victim of his many years of dissipation. He was the reigning emperor during Jesus' public ministry and thus (except in Luke 2:1) is the "Caesar" of the NT Gospels. Luke 3:1 uses his name in fixing the date for John's preaching and the baptism of

Remains of walls at Tiberias (founded ca. A.D. 18), on the west shore of the Sea of Galilee.

Silver denarius of Tiberius, Roman emperor from A.D. 14 to 37, during Jesus' public ministry.

Jesus ("in the fifteenth year of the reign of Tiberius Caesar," i.e., in A.D. 29). Matthew, Mark, and Luke contain the incident of the questioning of Jesus concerning the payment of taxes to Caesar (Matt. 22:15–23; Mark 12:13–17; Luke 20:20–26). Jesus' well-known answer centered on his display of a coin of Tiberius, bearing the emperor's portrait. In about A.D. 18, Herod Antipas, tetrarch of Galilee, founded the city of Tiberias, named in honor of the emperor, as his capital on the western shore of Lake Chinnereth (the Sea of Galilee). Ironically, Tiberias, whose namesake had once expelled Jews from Rome and had possessed anything but a saintly reputation, was, in time, to become one of the four holy cities of Israel and a center of Jewish learning. ***See also*** Tiberias. F.O.G.

Tibni (tib'n*i*), the son of Ginath and leader of a faction in the Northern Kingdom who struggled with Omri for control of the throne following the suicide of Zimri (ca. 876 B.C.). However, he was unsuccessful and died soon after, although the reason for his death is unknown (1 Kings 16:21–22). ***See also*** Omri.

Tidal (t*i*'duhl), the king of Goiim (some versions read "the nations") who, in alliance with the kings of Shinar, Ellasar, and Elam, raided the area around the Dead Sea, including Sodom and the Cities of the Plain, and took Lot prisoner. He and the other kings were defeated by Abram and his allies (Gen. 14:1–16).

Tiglath-pileser (tig'lath-pi-lee'zuhr) **III,** the king of Assyria from 745 to 727 B.C., also known as Pul. He reorganized and revitalized the Neo-Assyrian empire after decades of internal disintegration. He campaigned vigorously in the West, reaching as far as the Brook of Egypt in the northern Sinai peninsula. The hegemony of Tiglath-pileser was recognized by the kings of Israel and Judah. Menahem of Israel bought the political support of Assyria for his illegitimate rule with "a thousand talents of silver" (2 Kings 15:19); in

Tiglath-pileser III (king of Assyria, 745–727 B.C.) wearing his royal cap with a pointed top; from the palace at Nimrud.

Tiglath-pileser's annals at least two tribute payments by Menahem, in 740 and 738, are recorded. The rebellion of Tyre, Aram-Damascus, and Israel against Assyria was crushed during the three years of war, 734–732. Tiglath-pileser captured Galilee and Gilead, exiled its populace, and organized the areas as Assyrian provinces (2 Kings 15:29; 1 Chron. 5:26). He installed Hosea as vassal king of a greatly reduced Israel.

Ahaz of Judah came under attack for refusing to join the anti-Assyrian coalition; in order to save his kingdom, he turned to Tiglath-pileser and undertook the obligations of Assyrian vassaldom (2 Kings 16:5, 7–9). Ahaz is mentioned in an Assyrian list of tributaries dated to 734. His onerous tax payments required stripping the palace and the Temple of their treasures (2 Kings 16:17–18). The victorious Tiglath-pileser held court in Damascus in 732; Ahaz was in attendance as befitting a loyal vassal (2 Kings 16:10). ***See also*** Assyria, Empire of. M.C.

Tigris (t*i*'gris) **River,** one of the two major rivers (the other is the Euphrates) that nourished an extensive floodplain providing the physical basis for the rise of civilization in the ancient Near East. Its name is derived from Old Persian *Tigra.* In Assyrian-Babylonian it was known as *Idiglat,* and the Hebrew *Hiddekel* is preserved in Gen. 2:14 where it is identified as the third river "which flows east of Assyria" running out of Eden. It was designated also as the location in which Daniel perceived a major vision (Dan. 10:4).

The headwaters of the river lie in the mountains of southern Armenia, modern eastern Turkey and northern Iraq, just west and south of Lake Van. It runs generally southeastward along

the base of the western foothills of the Zagros Mountains. It is joined en route by three major tributaries and several minor ones draining the western slopes of the hills to the northeast. The main tributaries are the Upper Zab, the Lower Zab, and the Diyala.

Important ancient cities built on the Tigris include Assyria's Nineveh (opposite modern Mosul) and Asshur (the original Assyrian capital), modern Qal'at Shergat. Near modern Baghdad lay the Neo-Babylonian commercial center Opis, and farther south at modern Sulman Pak was the Parthian and Sassanian city named Ctesiphon. Its location is still marked by a most magnificent brick vaulted arch. Across the river on the west bank at modern Tell Umar are the ruins of the Seleucid capital Seleucia.

Physically the river is fast and rugged in the upper reaches, being navigable only from Mosul southward. Its 1,146-mile length was close enough to the Euphrates from about Baghdad south to allow canals to run irrigation water across from the higher western riverbed toward the Tigris. This 10,000-square-mile basin provided the agricultural sustenance for the earliest city-state and empire building of which we have record. The lower reaches of the river were slow flowing, meandering, and ended in salt marshes in antiquity. Now the bed joins that of the Euphrates to form the Shatt al-Arab before emptying into the Persian Gulf. This ancient setting provided the physical context for some of our most ancient literature, in which the survival of life depended on the constantly flexing battle between the forces of the fresh and salt waters. ***See also*** Assur; Euphrates River; Fertile Crescent; Nineveh. Tilgath-pilneser (til´gath-pil-nee´zuhr). ***See*** Tiglath-pileser III.

Timaeus (t*i*-mee´uhs). ***See*** Bartimaeus.

timbrel (tim´brel), a hand-carried percussion instrument, popularly used by women, and forbidden in the Temple. It was associated with religious hymns (Exod. 15:20 [Miriam]; Pss. 68:25 [maidens]; 89:2; 149:3; 150:4; Jer. 31:4 [virgin Israel]). Usually reflecting joyous occasions (Isa. 24:8; Judg. 11:34), it may have carried unfortunate connotations from its female symbolism at fertility rites. It is closely associated with the tambourine.

time. There is no general word for "time" in the OT, nor are there specific words for the categories of "past," "present," or "future." The Hebrew word most commonly translated as "time" is *ayt,* which really refers to the instant or duration of time during which something occurs (1 Sam. 9:16; Eccles. 3:1–8; Ezra 10:13; 2 Chron. 24:11). Another word, *'olam,* refers to immeasurable time, whether past (Eccles. 1:10) or future (Mic. 4:7). While it does not mean "eternal" in the sense of without end, it does point to a length of time beyond human comprehension. Another common word, *mo'ed,* means "fixed time," i.e., a time designated for a specific occurrence like a festival (Lev. 23:2, 4). In other words, time in ancient Israel was not conceived as an abstract dimension but primarily as related to specific happenings whether of short or long duration.

God is the creator and master of time (Gen. 1:14) and time begins at creation (v. 5), but there is a conception of eternity (Gen. 9:15–16; Isa. 34:10). The smallest amount of time is called a "moment" (Exod. 33:5; Isa. 54:7–8; Jer. 4:20).

The Hebrew Bible does use the terms "day," "week," "month," and "year." "Day" could either mean the term between sunrise and sunset or from sunset to sunset (Gen. 1:5). Ps. 55:17 speaks of three divisions of daylight, "evening, morning, and noon," while Neh. 9:3 refers to four parts of the daylight. The night was divided into three "watches" (Exod. 14:24; Judg. 7:19; Lam. 2:19). That the day started with sunset is probably due to Israel's calendrical system, which was based on the moon. Used loosely, "day" can mean "at the time" or "when" (Gen. 2:4; Jer. 31:32).

"Week" means literally in Hebrew "a seven" (*shevu'aḥ*). Ancient Israel is the first known society to have a seven-day week (Gen. 1:1–2:3). The days are not named, but numbered one through six, except for the seventh day, which is called the "Sabbath"—from the Hebrew meaning "rest" in reference to God's rest after creation (Gen. 2:2–3; Exod. 20:10–11).

Like English, the Hebrew name for "month" is related to the word for moon, *yereaḥ,* or the "new [moon]," *ḥodesh.* The lunar month had

The "Gezer Calendar," which describes the months by their particular harvests; cast from a tenth-century B.C. inscription.

thirty days (Gen. 7:11; 8:3–4; Num. 20:29; Deut. 21:13). The New Moon was a festival day (1 Sam. 20:5, 18, 24; 2 Kings 4:23; Isa. 1:13–14), and important holidays fell mid-month, on the full moon (Passover, the Feast of Tabernacles; Ps. 81:4). Four apparently Canaanite names for months are mentioned: Abib (Exod. 13:4); Ziv (1 Kings 6:1, 37), Ethanim (8:2), and Bul (6:38). Postexilic texts mention seven Babylonian-derived names: Nisan (Neh. 2:1; Esther 3:7), Sivan (Esther 8:9), Elul (Neh. 6:15), Chislev (Neh. 1:1; Zech. 7:1), Tebeth (Esther, 2:16), Shebat (Zech. 1:7), and Adar (Ezra 6:15; Esther 3:7, 13; 8:12; 9:1, 15, 17, 19, 21). These texts are the earliest evidence of the Jewish adoption of the twelve Babylonian names of the months.

Although 30 days are alluded to in the Bible as a month's duration, the lunar calendar averaged out to 29 1/2 days a month. Since the calendar was also tied to the agricultural-seasonal year, it also had a solar element. The Hebrews apparently had two New Year dates, one at the spring equinox and one at the autumnal equinox (Exod. 12:2, 18; 23:16; 34:22). The tenth-century B.C. inscription known as the Gezer Calendar describes the months by their particular harvests and also commences in the fall. The necessity of intercalating the lunar calendar of 354 1/2 days a year with the seasonal year resulted in the Babylonians' adding a month every two or three years. This system was eventually adopted in Judaism, also—seven out of every nineteen years included an additional month (a "second Adar").

In the NT, three words refer to time in its various dimensions. Two words, sometimes translated "times" (Gk. *chronos*) and "seasons" (Gk. *kairos;* Acts 1:7; 1 Thess. 5:1), can refer to time under two different aspects. The first word is used when time is thought of as a quantity (e.g., "a little time," John 7:33; cf. also 1 Cor. 7:39); the second when it is thought of in terms of its quality, i.e., as "time for" something (e.g., Mark 1:15; John 7:8). That distinction is not always maintained, however (e.g., *chronos* can mean a specific time, Luke 1:57; Acts 7:17; Gal. 4:4; *kairos* can refer broadly to "the present," Rom. 11:5). A third word, "eon" (Gk. *aion*), can refer to a broad sweep of time and is probably drawn from apocalyptic speculation that divided the world into the present, evil eon and the future eon when God would redeem and transform evil reality into good (Matt. 12:32; Eph. 1:21; cf. Luke 20:34; Rom. 12:2; 1 Cor. 2:6 for "present age"; Mark 10:30; Eph 2:7; Heb. 6:2 for "coming age"). The plural "eons" is often translated "forever," although as in the OT, there is a question whether that means unending time or rather time of unimaginable duration (e.g., Matt. 21:19; John 12:34; Rom. 16:27; Heb. 1:8).

The Gospels presume the Jewish reckoning of time in terms of a seven-day week, although Christians revered the first day in the week (modern Sunday) because it was the day of Christ's resurrection (Matt. 28:1; Mark 16:2; cf. Acts 20:7; 1 Cor. 16:2), rather than the last day of the week (Sabbath), when God rested from creation (Gen. 2:2–3; cf. Exod. 20:8–11). There are no names for months cited in the NT, and if, as seems likely, the figures in Revelation mentioning a specific duration of time refer to the same three and one-half years (Rev. 12:14; 1260 days, 11:3; 12:6; 42 months, 13:5), a year was generally thought to have twelve months of thirty days each. The Jewish practice of reckoning days as beginning with sunset is presumed in some places (e.g., Mark 1:32, where people waited until the Sabbath mentioned in v. 21 came to an end), but in other places the Roman method of dividing the night into four rather than three watches is assumed (e.g., Mark 6:48). A day divided into twelve hours, beginning at daybreak, and with the sixth hour as noon, is presumed in the Gospel accounts (e.g., John 11:9; Mark 15:35), but there is no scholarly consensus about how days were reckoned in the account of the last days of Jesus in Jerusalem (Mark 11–16): whether by the Jewish custom (sunset to sunset) or Roman practice (midnight to midnight). Since by the time of Paul the Julian calendar was in effect in the Roman Empire, one may assume that was the way he also reckoned time during his travels, but he gives no indication on that matter. ***See also*** Farming; Feasts, Festivals, and Fasts; New Year Festival; Sabbath. THE HEBREW LUNAR CALENDAR

Name of Month	*Approximate Gregorian Equivalent*
1. Nisan* (*Abib***)	March/April
2. Iyyar (*Ziv***)	April/May
3. Sivan*	May/June
4. Tammuz	June/July
5. Ab	July/August
6. Elul*	August/September
7. Tishri† (*Ethanim***)	September/October
8. Marchesvan (*Bul***)	October/November
9. Chislev*	November/December
10. Tebeth*	December/January
11. Shebat*	January/February
12. Adar*	February/March

**Babylonian-derived name used in the Bible*
***An apparently Canaanite name of the month also preserved in the Bible*
†First month of the "civil year"

Timna (tim´nuh; KJV: "Timnah"). **1** A sister of the Horite clan chief, Lotan (Gen. 36:22; 1 Chron. 1:39); she was given as concubine to Eliphaz and became mother of Amelek (Gen. 36:12). **2** A clan chief of Esau (Gen. 36:40). He is designated as a son of Eliphaz in 1 Chron. 1:36,

but the name may designate the Edomite territory inhabited by the clan.

Timnah (tim′nuh; alternately Timnath, Timnatha; Gk. *Thamnath*). **1** A town in the southern hill country where Judah pastured sheep (Gen. 38:12–14); perhaps to be identified with the Timnah in the seventh district of Judah (Josh. 15:57). **2** A town on the northern border of Judah, between Beth-shemesh and Ekron (Josh. 15:10), now generally identified with modern Tell-el-Batashi in the Sorek Valley in the western part of south central Palestine. Once assigned to Dan (Josh. 19:43), it was Philistine territory at the time Samson married a woman from there (Judg. 14:1–5). It fell again to the Philistines in the time of Ahaz (2 Chron. 28:18) and was captured by Sennacherib in 701 B.C. **3** A town in the hill country of Ephraim, fortified in 160 B.C. by the Seleucid general Bacchides (1 Macc. 9:50).

P.A.B.

Timnath-serah (tim′nuh-sihr′uh), Joshua's inherited city (Josh. 19:50) in which he was buried (Josh. 24:30). It is probably modern Khirbet Tibneh, about eleven miles southwest of Shiloh.

Timon (tī′muhn), one of the seven appointed by the apostles to help in the distribution of food to the poor and widows in the early Jerusalem church (Acts 6:1–6). ***See also*** Hellenists.

Timotheus (ti-moh′thee-uhs). ***See*** Timothy.

Timothy (tim′oh-thee). **1** A military officer of the Ammonites who joined forces with the Syrians to oppose Judas Maccabeus and Judea's freedom fighters (ca. 164 B.C.); the Ammonites were crushed in several battles and Timothy was slain (1 Macc. 5:6–8; 2 Macc. 8:30–33; 9:1–4; 10:24–38; 12:1–25, the last passage being misplaced in the narrative). **2** Paul's "beloved and faithful child in the Lord" (1 Cor. 4:17; cf. 1 Tim. 1:2). Timothy is associated with Paul in the prescripts of at least four of the apostle's Letters (1 Thess. 1:1; 2 Cor. 1:1; Phil. 1:1; Philem. 1; cf. Rom. 16:21; cf. also 2 Thess. 1:1; Col. 1:1), an indication of the extent of their joint endeavors. He is otherwise mentioned as an associate and helper of Paul in four of the Letters (1 Thess. 3:2, 6; 1 Cor. 4:17; 16:10; 2 Cor. 1:19; Phil. 2:19) and appears in the Acts of the Apostles, a narrative independent of Paul's Letters (Acts 16:1–3; 17:14–15; 18:5; 19:22; 20:4), in a similar role. Finally, he is the named addressee of two of the Pastoral Letters, 1 and 2 Timothy (1 Tim. 1:2, 18; 6:20; 2 Tim. 1:2).

According to Paul's earlier Letters, Timothy was a colleague with Paul and Silvanus (Silas) in missions to the Thessalonians and the Corinthians (1 Thess. 1:1; 3:2, 6; 1 Cor. 4:17; 16:10; 2 Cor. 1:1, 19). The ministries of these three in Macedonia are also reported in Acts (17:14–15; 18:5; cf. 19:22). From both sources, we learn that shortly after leaving Thessalonica Paul's anxiety concerning the effects of persecution led him to send emissaries to encourage the Macedonian church in its faith. Paul, himself, was left alone in Athens (1 Thess. 3:1–5; cf. Acts 17:13–16, a slightly more detailed account). From 1 Thess. 3:2–3 we learn that a special responsibility for ministry to the beleaguered Thessalonians was entrusted to Timothy, "our brother and God's servant in the gospel of Christ." When, with Silvanus (Silas), Timothy joined Paul in Corinth, he was the bearer of good news: the Thessalonians remained steadfast in "faith and love," and they longed to see Paul (1 Thess. 3:6).

According to Acts, Paul's next major campaign in the East was located at Ephesus (Acts 18:18–20:1). During the course of this ministry, several occasions arose in Paul's dealings with the Corinthian church that led him to send colleagues to act on his behalf. It is not clear that Timothy was the bearer of 1 Corinthians, or that a firm decision had been reached to send him to Corinth, but disturbances there made such a trip likely (1 Cor. 16:10: note NEB, which reads "if"—not "when"—Timothy comes; cf. 1 Cor. 4:17). Some have surmised that Paul's plea concerning the church's reception of Timothy, should he come, indicates that the apostle had some doubts regarding his young colleague's effectiveness in a leadership capacity (1 Cor. 16:10–11). More likely, Paul feared that the Corinthians would complain that they merited the attention of the apostle in person, not the ministrations of an "underling," and that their anger would lead them to slight Timothy. A picture of Timothy as Paul's inexperienced, youthful protégé, intimidated by an aggressive opposition and needing the encouragement of his battle-hardened mentor, has sometimes been drawn from hortatory passages in 1 and 2 Timothy (e.g., 1 Tim. 3:14–15; 4:12–16; 2 Tim. 1:8; 2:1–7). It is doubtful, however, that this image of Timothy is supported by references in the Letters generally acknowledged as authentically Pauline, and, in view of the probable origin and purpose of the Pastoral Letters (1, 2 Tim., Titus), it is unlikely that the material describing "Timothy" there is strictly biographical.

In the prescript to 2 Corinthians, Timothy is again included, as Paul's "brother" (1:1). It is therefore unlikely that Timothy's usefulness in dealing with the unruly Corinthians was at an end. It is true that it was Titus, not Timothy, who served as Paul's emissary when a serious crisis arose as a result of Paul's "painful visit" and his "severe letter" (2 Cor. 1:23–2:13;

7:5–16), but it is a dubious argument from silence to conclude, as some have done, that Timothy would have been unequal to the task. The frequent references to Titus in connection with the collection for the saints in Jerusalem may only mean that he had been given special responsibility for this project from the start and thus was assigned to deal with obstacles to its completion (2 Cor. 8:6).

The later Letters of Paul continue to portray Timothy as a trusted associate and useful emissary of the apostle (see Phil. 1:1; Philem. 1; cf. Col. 1:1). According to Phil. 2:19–24, Paul plans to send Timothy to Philippi and writes: "I have no one like him, who will be genuinely anxious for your welfare. . . . Timothy's worth you know, how as a son with a father he has served with me in the gospel."

In none of Paul's Letters does he refer to his first meeting with Timothy. Acts 16:1–3 reports that Timothy was already "a disciple" when Paul met him at Lystra (cf., however, 1 Cor. 4:17; 1 Tim. 1:2; 2 Tim. 2:2). According to Acts, Timothy's home life had been unlike that of the apostle (Phil. 3:4–6). Timothy's Jewish mother had married a Gentile, and their son had not been circumcised. This information would explain Paul's action in circumcising Timothy (Acts 16:3) after having so recently withstood the insistence of the Judaizers that Titus be circumcised (Gal. 2:1–5).

While the Pastoral Letters are of little help in reconstructing the personal history of Paul's younger colleague, there is no reason to doubt that their author knew the names of Timothy's mother and grandmother, Eunice and Lois (2 Tim. 1:5). ***See also*** Contribution for the Saints; Corinthians, The First Letter of Paul to the; Corinthians, The Second Letter of Paul to the; Eunice; Lois; Paul; Silas, Silvanus; Thessalonians, The First Letter of Paul to the; Timothy, The First and Second Letters of Paul to, and Titus, The Letter of Paul to; Titus. J.L.P.

Timothy, the First and Second Letters of Paul to, and Titus, the Letter of Paul to, three NT Letters purporting to have been written by the apostle Paul to two of his associates in Christian mission. Because of their common concerns with congregational matters, these writings have come to be known as the "Pastoral Letters" and are often studied together.

Origin and Authorship: Questions concerning the origin of the Pastorals remain in dispute. Are they to be ascribed directly to Paul, or were they perhaps written at his direction by a secretary? Alternatively, are they pseudonymous writings composed in the name of the great apostle and containing personal notes that either are fragments of genuine letters or are introduced to give the writer's communication a conventional "letter" form (and perhaps a ring of authenticity), naming persons known to have been related to Paul's missions in one way or another? External evidence from the early church is inconclusive. On the one hand, the Pastorals are not included in the earliest listing of Paul's Letters (Marcion in the mid-second century), and they appear also to be missing from the earliest extant manuscript containing Paul's Letters (late second or early third century). On the other hand, they were consistently included among the Pauline writings from the latter part of the second century onward, and Pauline authorship remained unquestioned until the nineteenth century. The decision regarding authorship must therefore be based primarily on internal evidence, which is, on no single point, decisive.

Two major approaches to the origin of the Pastorals proceed from different assumptions and lead to possibly different conclusions. As long as questions concerning Pauline authorship predominate, attention tends to focus upon the personal notes in the Pastorals, especially in 2 Timothy, and their relation to the course of the apostle's ministry as this is indicated in the undisputed Letters and in the book of Acts. Was Paul released from his Roman imprisonment and able to resume his missions in the provinces of Asia and Macedonia, perhaps to establish a Christian community on the island of Crete? Was he then arrested again, tried, and put to death? If the Pastorals are letters from Paul, then some such scenario would appear to be required. Moreover, it must then be argued that new and different circumstances led not only to a "development" in Paul's theology and ethical teaching but also to a vocabulary and literary style distinctively different from those in the undisputed Letters. Despite these difficulties, however, Pauline authorship of the Pastorals remains a possibility, either in whole or in part.

The alternative approach assumes at the outset that traditional views regarding Pauline authorship are so problematic as to require an initial clarification of the historical setting of the Pastorals, a determination of the nature of the "heresy" to which the author constantly alludes, and some understanding of the writer's theological emphases and of the situations prompting certain household and congregational rules urged upon the readers. Here, the conclusion reached by the great majority of scholars is that the Pastorals are to be ascribed to a pseudonymous Christian writer of the early second century, who was convinced that Paul's teaching was normative for the church, and that Paul would have addressed existing conditions in the same way, were he alive and able to guide the work of other apostolic delegates, the successors of Paul's own co-workers of an earlier period.

Major Concerns: The contents of the Pastoral Letters reveal two major concerns: the threat of serious heresy and the urgency of preventive measures that will give stability to the church and render effective its witness in the world. The author does not debate the heretics, but rather strongly criticizes their behavior. Neither

1 AND 2 TIMOTHY, AND TITUS

does he prescribe the content of the "sound doctrine" that officers of the church are to use in defense of "the faith"; rather, his concern is that these "apt teachers" of the church exhibit impeccable rectitude. A few features of the heresy are, however, noted. An asceticism was being taught that opposed marriage (1 Tim. 2:15; 4:3; 5:14) and prescribed abstinence from certain foods (1 Tim. 4:3; 5:23; Titus 1:15). Two heretics were teaching that "the resurrection is past already," which implies a spiritualism in which the heavenly life was experienced in the present (2 Tim. 2:18). References to "myths and genealogies" (1 Tim. 1:4; cf. Titus 3:9) may imply the influence of a gnosticizing Judaism (a view that is perhaps supported by references to Jewish elements in the heresy; 1 Tim. 1:7–11; Titus 3:9).

The writer's concern for the various ministries of the church appears to reflect a need to clarify their respective functions, a situation similar to that disclosed in early second-century texts, such as the *Didache* and the *Letters of Ignatius.*

These and other considerations support the widely held opinion that the Pastoral Letters belong to the postapostolic age and are addressed to the concerns of second- or third-generation Christianity. No longer were Christians convinced that the world order would soon pass away with the glorious return of the Christ. The spiritual vigor that characterized the Pauline missions had been replaced by an equally serious mandate: to establish the church as "the pillar and bulwark of the truth" (1 Tim. 3:15). To this end, true successors of Paul and his apostolic delegates had to be found who, by virtue of their of-

OUTLINE OF CONTENTS

The Pastoral Letters

1 Timothy

I. Introduction (1:1–20)
   A. Prescript (1:1–2)
   B. Purpose of Timothy's present ministry in Ephesus: to combat heretical teaching (1:3–11)
   C. Thanksgiving for God's mercy to Paul; an example (1:12–17)
   D. Timothy to maintain a good conscience, something rejected by others (1:18–20)
II. Charge to Timothy (2:1–6:19)
   A. Prayers for all, especially rulers (2:1–7)
   B. Man's worship and woman's (relating to her praiseworthy public image) (2:8–15)
   C. Qualifications for office of bishop (3:1–7)
   D. Qualifications for deacons (and deaconesses?) (3:8–13)
   E. Word to Timothy concerning church (3:14–16)
   F. Asceticism of heretics to be counteracted by Timothy's instruction, example, and care of special persons (4:1–5:2)
   G. Procedures for enrolling widows; how to deal with too many (5:3–16)
   H. Maintaining integrity of office of elder (5:17–25)
   I. Behavior of Christian slaves (6:1–2)
   J. Deplorable conduct of heretics; special warning against avarice (6:3–10)
   K. Exhortations to Timothy (6:11–16; see also 5:21–25)
   L. Word to the wealthy (6:17–19)
III. Conclusion: final warning against teachers of "false knowledge" (6:20–21)

2 Timothy

I. Introduction (1:1–7)
   A. Prescript (1:1–2)
   B. Thankful remembrance for Christian heritage of Paul and Timothy (1:3–7)
II. Exhortations (1:8–4:5)
   A. Experience of suffering as authentication of elect (1:8–2:26)
   B. Presence of heresy as authentication of prophecy; great value of tradition (3:1–4:5)
III. Conclusion (4:6–22)
   A. Personal notes concerning Paul's situation; final instructions (4:6–18)
   B. Greetings (4:19–21)
   C. Grace, offered on behalf of church (4:22)

Titus

I. Prescript, with summary of Paul's calling "to further the faith of the elect" (1:1–4)
II. Instructions (1:5–3:8a)
   A. Concerning elders, and office of bishop (1:5–9)
   B. Warning concerning "circumcision party"; comment on Cretans' celebrated notoriety (1:10–16)
   C. Rules for household: church members of both sexes and all ages, also slaves; example of Titus (2:1–10)
   D. Sanctions for instructions: God's grace manifested in salvation-history; former lives of many believers (2:11–3:8a)
III. Conclusion (3:8b–15)
   A. Titus to avoid "stupid controversies"; heretics to receive special treatment (3:8b–11)
   B. Assignments; greetings; grace (3:12–15)

fices, authority, and personal examples, would be able to defend "the deposit" of the faith of the apostle entrusted to them, and be ready like Paul to take their share of suffering for the gospel. ***See also*** Bishop; Church; Crete; Elders; Ephesus; Epistle; Gnosticism; Heresy; Law; Letter; Paul; Presbyter, Presbytery; Pseudonym; Timothy; Titus.

Tiphsah (tif´suh). **1** A city that marked a northern extremity of Solomon's kingdom (1 Kings 4:24). It is probably modern Dibseh on the west bank of the Euphrates River where it turns east after coming south from Carchemish. It was called Thapsacus by the fifth- and fourth-century B.C. Greek historian Xenophon (1.4.11) and was known as Amphipolis in the third century B.C. **2** A place the RSV translates "Tappuah," the site of a brutal destruction by Menahem (2 Kings 15:16). Modern Sheikh Abu Zarad about eight miles northwest of Shiloh is the likely identification.

Tiras (t*i*´ruhs), a son of Japheth (Gen. 10:2; 1 Chron. 1:5) whose clan name appears to be akin to both Egyptian and Greek references to a group of Aegean sea raiders. ***See also*** Sea Peoples.

Tirhakah (tuhr-hay´kuh; Taharka in the Egyptian records), a pharaoh of Egypt's twenty-fifth ("Ethiopian") dynasty, who reigned ca. 690–664 B.C. According to 2 Kings 19:9 (Isa. 37:9), Sennacherib received a report that the "Ethiopian king" Tirhakah was marching out against him. At that moment the Assyrian army was engaged in a military campaign against Judah and was attacking Libnah in the Judean Shephelah (lowlands). According to the Assyrian annals Sennacherib met and defeated the Egyptian force in the Plain of Eltekeh (modern Tell esh-Shallaf?). Some scholars have argued that Tirhakah would have been only nine years old at the time of this campaign (ca. 701 B.C.), and therefore portions of the biblical account must refer to an otherwise unattested second campaign of Sennacherib in ca. 688 B.C. Others maintain, perhaps more cogently, that Tirhakah was twenty years old or more in 701 B.C., and that he led Egypt's troops as army commander; the designation "Ethiopian king" in the Bible is based on a source dating from 690 B.C. or after. ***See also*** Egypt. D.A.D.

Tirzah (tihr´zuh; Heb., "pleasantness"), the name of a person (and clan), a region, and a city. **1** One of the five daughters of Zelophahad, descendants through Hepher of Manasseh, who appealed to Moses for adjustment of the inheritance custom. This incident gives a glimpse of Israelite attention to issues of justice and of land tenure (Num. 26:33; 27:1–11; 36:5–12; cf. Josh. 17:3–6). **2** The region belonging to the clan of Tirzah. The names of Zelophahad's five daughters also designated clan holdings as indicated by the Samaria ostraca, ceramic shards recording deliveries from estates within a ten-mile radius of Samaria which date ca. 775–750 B.C. Tirzah is not named, but two "sisters," Noah and Hoglah, are. Taking all the evidence together, the general region of these clan holdings was north and east of Samaria. **3** A city listed as one whose king was defeated by Joshua (Josh. 12:24), so it was probably a Canaanite city-state in the thirteenth century B.C. Three hundred years later, it emerged as Jeroboam's capital (1 Kings 14:17; cf. v. 12). Baasha, who usurped control from Jeroboam's family, reigned from Tirzah (1 Kings 15:21, 33; 16:6); when Zimri displaced Baasha's family, the coup occurred at Tirzah (16:8–9). When Omri besieged Zimri at Tirzah, Zimri burned its citadel and palace down upon himself; Omri then consolidated his reign at Tirzah before moving the capital to Samaria (16:15–23). All this took place within a half century (922–870 B.C.). Tirzah's brief life as Israel's capital apparently accounts for its appearance in a couplet in Song of Sol. 6:4, paired with Jerusalem. Around 745 B.C. Tirzah reappeared as the base of operations for Menahem, still another usurper of the throne (2 Kings 15:14, 16).

The extensive mound today called Tell el-Far'ah, seven miles northeast of Shechem, is almost certainly the site of Tirzah. It oversees the head of the Wadi Far'ah, a direct route to the Jordan. Travelers going east-west in the central hills would come north-northeast from the Shechem pass around Mount Ebal and turn southeast below Tell el-Far'ah. Between 1947 and 1960, Roland de Vaux and the École Biblique of Jerusalem excavated here. The city was at its largest dimensions in Early Bronze I–II (ca. 3150–2600 B.C.); its fortifications on the western, unprotected side became the foundations for all subsequent defenses, though succeeding towns were smaller in extent eastward and northward. Occupation resumed in Middle Bronze II (ca. 1900–1550), continuing into Late Bronze until roughly 1300. Evidence of destruction ending this period of the city's life is skimpy and of inconclusive date; correlation with a presumed destruction by Joshua is far from certain.

Correlation with biblical information is much firmer in the period 1000–600 B.C. There are four phases: the tenth century, ending with a destruction, probably that of Zimri; a partial rebuild, early ninth century; the eighth century, ending with destruction, probably by the Assyrians in 724–21; and a recovery, down to 600 B.C. Sturdy, roomy tenth-century housing of a uni-

form character is spread throughout a well-planned city layout. By contrast, the eighth century town had excellently constructed, spacious houses in one sector but makeshift homes in another, across a dividing wall. It suggests increasing social and economic stratification (cf. Amos 5:11). In the phase between these two well-preserved towns, set down into the destruction debris of the tenth century, were walls of unfinished buildings. De Vaux proposed that his interim phase represents Omri's short stay at Tirzah. Basins and a memorial stone, along with other evidence, suggest that there was a gateside sanctuary in continual use from Middle Bronze to the site's final destruction, perhaps attesting Israelite adoption of Canaanite religious equipment and practices. **4** The uppermost stratum reflects recovery after the Assyrian destruction. Distinctive Assyrian-style pottery indicates strong influence, perhaps even the presence of an Assyrian garrison. ***See also*** Baasha; Jeroboam I; Menahem; Omri; Samaria, City of; Samaria, District of; Zimri.

Tishbite (tish'b*i*t), an adjective applied six times in the Hebrew Bible to the prophet Elijah (1 Kings 17:1; 21:17, 28; 2 Kings 1:3, 8; 9:36). The Septuagint translators understood Tishbite as a reference to Elijah's home town of Tishbe. Tishbe was identified with the site of Listib in the mountains of north Gilead. Since this supposed site of Tishbe was not settled during the Israelite period, the modern biblical scholar N. Glueck changes 1 Kings 17:1 to read "Elijah the Jabeshite of Jabesh-gilead." Glueck supports his identification of Elijah as a Jabeshite by claiming that the brook Cherith, where Elijah lived for a time according to 1 Kings 17:3–7, might be a branch of the river Jabesh. ***See also*** Elijah. M.A.S.

Tishri (tish'ree), the postexilic Babylonian name for the seventh Hebrew month Ethanim (1 Kings 8:2), a thirty-day period roughly corresponding to the latter half of September and the first half of October. It marked the beginning of the religious year with the New Year Festival (Heb. *Rosh Hashanah*) celebrated on the first day of the month (originally on the tenth day; Lev. 23:23–25; Num. 29:1–6) followed by the Day of Atonement (Heb. *Yom Kippur*) on the tenth day (Lev. 16; 23:26–32; Num. 29:7–11) and the eight-day Feast of Tabernacles (or Booths; Heb. *Sukkoth*) beginning on the fifteenth day (Lev. 23:33–44). ***See also*** Atonement, Day of; Feasts, Festivals, and Fasts; New Year Festival; Tabernacles, Festival of; Time. D.R.B.

tithe, a tenth part of one's yearly income set aside for sacral purposes. Tithing was very common throughout the ancient Near East, especially in Mesopotamia where Neo-Babylonian texts from the sixth century B.C. discuss the collection of tithes as a means of supporting a sanctuary. Other documents indicate that tithing could serve nonsacral purposes as well. Fourteenth-century B.C. tablets from Ugarit portray the tithe as a royal tax the king collected and distributed to his officials. The Seleucid kings of Syria likewise viewed the tithe as a source for royal income (1 Macc. 10:31; 11:35), whereas Jews at that time viewed it as a sacral tax (1 Macc. 3:49).

Nature and Function: Reconstructing a clear picture of the nature and function of tithing in biblical times is extremely difficult due to the conflicting accounts concerning tithes in the biblical traditions and the problems in identifying the dates and provenance of the texts. Apparently, tithing was understood and practiced differently at different times and localities throughout the Biblical period. Most biblical texts concerning the tithe agree that it serves some sacral purpose and presuppose that it was mandatory, but they differ as to how it was expended and by whom.

In the time of Ezra and Nehemiah, the tithe was a tax collected at the Temple to support the priests and Levites (Neh. 10:37–38; 12:44; 13:5, 12), although the requirement was not always observed or enforced (Mal. 3:8, 10). Pentateuchal regulations likewise emphasize the sacral and mandatory character of the tithe. Lev. 27:30–33 states that all the tithe of the land, whether of the seed of the land or of the fruit of the trees, belongs to God and that one-tenth of all that passes under the herdsman's staff is also included. Num. 18:21–32 assigns the tithe offerings of the people as the inheritance of the Levites and they in turn must give one-tenth of what they receive to the priests. Deut. 14:22–29 states that the people shall tithe their grain, wine, and oil together with the firstlings of their herds and flocks and that they shall eat their tithe in the Temple. But every third year, the tithe shall go to the Levite, the sojourner, the orphan, and the widow, as these people have little means of support. In the case of the Levites, their poverty was due to Deuteronomy's requirement that all sanctuaries but one be closed, leaving the Levites who served in these sanctuaries unemployed (cf. Deut. 12). If one lived far from the Temple so that transporting the actual tithe was impractical, then it could be converted to cash and replacement food could be bought for consumption at the Temple, but the requirement to eat the tithe in the Temple still stood. Lev. 27:31 states, however, that if a man redeemed his tithe with cash, he should add one-fifth of the actual cash value of the tithe.

Tax or offering: Other texts raise questions about the sacral or obligatory nature of the tithe. When

the prophet Samuel warns the people about the dangers of appointing a king, he mentions that the king will exact a tithe from their grain, vineyards, and flocks to give to his officers and servants (1 Sam. 8:15, 17). Here, the tithe is a mandatory royal tax, but no mention of sacral use appears. In the patriarchal traditions, the tithe is freely given at the site of a sanctuary. Abraham gives a tenth of his war booty to Melchizedek, the priest-king of Salem (i.e., Jerusalem) after receiving his blessing (Gen. 14:20; cf. Heb. 7:1–10). Jacob vows to offer a tithe of all his income to God at Bethel after his dream of the ladder to heaven (Gen. 28:22). An interesting attempt to reconcile the conception of the tithe as a royal tax with that of a sacral offering notes that both Jerusalem and Bethel were the sites of royal sanctuaries founded by kings (2 Sam. 6; 1 Kings 6–8; Amos 7:13; 1 Kings 12:25–33). In this view, the patriarchal stories are etiological legends for the later practice of channeling sacral tithes for the Temple through the kings who maintained the Temple (Ezek. 45:17) and controlled its treasury. According to 2 Chron. 31:5, 6, 12, King Hezekiah collected and stored offerings for the Temple, including the tithe.

Later Judaism maintained the tithe, stipulating that all things used for food, which were watched and grew from the earth, were subject to tithing (*m. Ma'aś.* 1:1; cf. Luke 18:12). But discrepancies between the regulations on tithing in Lev. 27:30–33; Num. 18:21–32; and Deut. 14:22–29 resulted in the Mishnah's adopting two tithes. The first was for the Levites and the second was to be eaten by the people. The zeal of some who tithed even their spices was noted by Jesus, who criticized such people for also neglecting more important religious and ethical demands (Matt. 23:23). He did not condemn such tithing practices, however. ***See also*** Levites; Temple, The; Worship.

tittle. ***See*** Jot.

Titus (ti´tuhs). A Gentile "partner and fellow worker" with Paul (2 Cor. 8:23); the named addressee of a short letter in the NT. Information about Titus appears principally in Galatians and 2 Corinthians. The Pastoral Letters (1, 2 Tim., Titus), which refer to missions of Titus in Crete and Dalmatia, are likely pseudonymous writings of the postapostolic age; nevertheless, the references to Titus may reflect authentic traditions (2 Tim. 4:10; Titus 1:4–5). Titus is almost certainly not to be identified with Titius Justus (Acts 18:7); indeed, Titus is nowhere mentioned in Acts.

According to Gal. 2:1–10 (cf. 1:15–18), Paul was accompanied, on his second visit to Jerusalem following his call to be an apostle to the Gentiles, by Barnabas and by a Greek named Titus. Some Jewish Christians insisted that Titus be circumcised, but Paul, doubtless aware of the precedent this would set, refused to comply. An alternative reading supports an opposite result (see NEB marginal reading and cf. Acts 16:1–3), but the RSV translation of Gal. 2:5 is to be preferred as alone making sense in the context of the Letter's overall argument.

It is probable that Titus was Paul's associate throughout his extended ministry in Ephesus, although Acts does not report this (19:1–20:1). Possibly Titus was the bearer of 1 Corinthians for, in 2 Cor. 8:6, Paul notes that Titus is resuming work he began at Corinth, namely the collection for Jewish Christians in Jerusalem (cf. 1 Cor. 16:1–4; 16:10 suggests that Timothy was not the bearer of this letter). With greater probability, it was Titus who delivered to the Corinthians another letter, the so-called "severe" or "tearful letter" (cf. 2 Cor. 2:3–9). Personal attacks against Paul threatened the loss of his leadership in Corinth, but Paul, wishing to avoid "another painful visit" (2 Cor. 2:1), placed his fate in the hands of Titus. Paul would travel from Ephesus to Macedonia; Titus would report to him the situation in Corinth as soon as possible (2 Cor. 2:13; 7:5–16). The failure of Titus to meet him at Troas troubled Paul greatly, but a reunion in Macedonia greatly relieved the apostle. Taking advantage of the improved situation, Paul sent Titus back to Corinth. Perhaps not wishing to detract from the crucial role of Titus in the collection, Paul refers to two unnamed companions (2 Cor. 8:6, 16–24). Later in the same Letter, Paul expresses his confidence that Titus will take no advantage of the Corinthians—that, like Paul, he has their best interests at heart (2 Cor. 12:17–18).

The person instructed in the canonical Letter to Titus is sufficiently unlike the resourceful, competent person who commanded the respect of both Paul and the unruly Corinthians to support the view that the writer of the letter was less interested in Titus as a real person than as a type of leader needed in churches of the writer's own time and circumstances. ***See also*** Circumcision; Contribution for the Saints; Corinthians, The First Letter of Paul to the; Corinthians, The Second Letter of Paul to the; Galatians, The Letter of Paul to the; Timothy; Timothy, The First and Second Letters of Paul to, and Titus, The Letter of Paul to.

J.L.P.

Titus, the Letter of Paul to. ***See*** Timothy, The First and Second Letters of Paul to, and Titus, The Letter of Paul to.

Titus Flavius Sabinus Vespasianus (A.D. 39–81), the son of Vespasian and Roman emperor from A.D. 79 to 81. After serving in the army in Germany and Britain, he became the commander of a legion under his father in the Jewish war (66–70). When Vespasian was proclaimed emperor, Titus led the forces that captured Jerusalem and destroyed the Temple. The Arch of Titus, which still stands at the Roman Forum, commemorates this victory and displays treasures taken from the Temple. Titus shared Vespasian's rule until his father's death, whereupon Titus was declared emperor. The aid he provided to victims of the eruption of Mt. Vesuvius (79) and of a fire and plague that devastated part of Rome (80) contributed to his popularity. His long-standing affair with the Jewish princess Bernice (the daughter of Agrippa I, great-granddaughter of Herod the Great) was unpopular in Rome, and he ended it when he became emperor. Upon his death the Senate immediately deified him. D.R.E.

Tob (tob), the hometown of a group of "worthless fellows" who associated with Jephthah (Judg. 11:3–5) after he fled from his half-brothers. The town also supplied mercenaries to the Ammonites in their wars with David (2 Sam. 10:6–13). Jews who had settled there were rescued from neighbors' attacks by Judas Maccabeus (1 Macc. 5:13; 2 Macc. 12:17). The location is probably modern et-Taiyibeh, about twelve miles east and slightly north of Ramoth-gilead.

Tobiah (toh-b*i*ʹuh; Heb., "Yahweh is good"; cf. Tobijah, also Tobias in the book of Tobit, Tabeel, Tobiads). **1** The head of a priestly clan whose genealogy was in doubt (Ezra 2:60; Neh. 7:62). **2** An opponent of Nehemiah (Neh. 2:10, 19; 4:3, 7; 6:1–19; 13:4–8) with Sanballat and Geshem. He is described as "the Ammonite" and also (Neh. 2:10, 19) as "the servant." These descriptions suggest a derogatory attitude, but "servant," which has royal connotations in the OT, may indicate high office (i.e., "servant of the [Persian] king"; cf. 2 Kings 22:12). "Ammonite" may indicate his origin or be a nickname; more probably it indicates his responsibility for that area, placing him alongside Sanballat, who was governor of Samaria, and Geshem, who could have been the Arab ruler of Qedar. All three would then occupy important positions under Persian authority. They appear together (Neh. 2:19; 4:7) but there are indications of harmonization in the text, suggesting that they were not really so closely linked. They show general opposition to the restoration of Jerusalem in the late sixth–early fifth centuries B.C. (Neh. 2:10–20; 4:19). Tobiah and Sanballat are associated with an attempt to get Nehemiah to act sacrilegiously (Neh. 6:10–14); Tobiah is shown as in high favor with leading men in Jerusalem, bound to him by marriage relationships (Neh. 6:15–19). During Nehemiah's absence in Babylon, Eliashib the priest gave Tobiah a special room in the Temple, from which Nehemiah ejected him (Neh. 13:4–9). It is clear that Tobiah was a man of considerable influence. It is possible that he was of the same family as the later Tobiads, prominent in the second century B.C. (cf. 2 Macc. 5:10–13). ***See also*** Nehemiah, The Book of; Sanballat. P.R.A.

Tobijah (toh-b*i*ʹjuh). **1** A Levite sent by the pious and prosperous Judean king Jehoshaphat (874–850 B.C.) to teach the people of Judah from the "book of the Law of the Lord" (2 Chron. 17:8–9). **2** One of the men who was memorialized for bringing back gifts of gold from Babylon to Jerusalem (Zech. 6:10, 14).

Tobit (tohʹbit), a book found in the Apocrypha. Tobit is a tale of the tribulations of life in the Diaspora (i.e., non-Palestinian areas inhabited by Jews), with the message that God will protect and heal those who are pious and compassionate. The story is set in eighth-century B.C. Nineveh among the exiles from the destruction of the Northern Kingdom of Israel, although the numerous anachronisms make it clear that the narrative is intended as fiction. It revolves

OUTLINE OF CONTENTS

Tobit

I. Tobit loses his eyesight in his concern for the burial of Jewish victims of Assyrian oppression (1:1–3:6)
II. The story of Sarah and the demon-lover (3:7–17)
III. Tobit's moral instruction to his son, Tobias (chap. 4)
IV. Tobias and Raphael prepare to set out on a journey to recover Tobit's funds (chap. 5)
V. The journey: Tobias catches a fish whose liver, heart, and gall will be used to help Sarah and heal Tobit (chap. 6)
VI. The wedding (chap. 7)
VII. The defeat of the demon (chap. 8)
VIII. Raphael recovers the funds (chap. 9)
IX. The anxiety of Tobit and Anna, and the departure of the young couple from Sarah's home (chap. 10)
X. The return and restoration of Tobit's sight (chap. 11)
XI. Raphael's true identity revealed (chap. 12)
XII. Tobit's prayer (chap. 13)
XIII. The testament of Tobit (chap. 14).

around Tobit, an exile of the tribe of Naphtali, his wife Anna, their son Tobias, his bride and relative, Sarah, and the archangel Raphael, the angel of healing, who appears in disguise as Tobit's relative Azarias (Heb., "God helps").

Tobit has been blinded and reduced to poverty as a consequence of his efforts to bury Jews killed by the oppressive Assyrian king. Sarah is plagued by a demon-lover who has killed her seven grooms on their wedding nights. Both pray to God for death, but God responds by sending Raphael, an angel in disguise, who accompanies Tobias on the way to Rages in Media to recover funds Tobit has left in trust. In Ecbatana, they lodge with Sarah's family, and Tobias marries her. The bridal couple defeat the demon with Raphael's aid and return to Tobit and Anna in Nineveh, where the angel helps Tobias restore his father's sight. In addition to a good bit of sound moral instruction derived from the wisdom tradition, the tale advocates the marriage of relatives to preserve Jewish identity in the Diaspora, and it anticipates the end of the Diaspora and the restoration of the full Israelite community in Jerusalem.

The story is one of the two apocryphal books with sufficient popularity in the West to have convinced Jerome to include it in his Vulgate translation of the Bible. The motifs of the demon-lover and the angel in disguise are common in folklore. Tobit may predate the second century B.C. and is probably contemporary with the stories in Daniel 1–6, which are also concerned with the problems of maintaining Jewish identity and integrity in the Diaspora. The original language was probably Aramaic, although both Aramaic and Hebrew versions are found in the Dead Sea Scrolls. Protestants include it among the Apocrypha, while for Catholics it is one of the deuterocanonical books. ***See also*** Angel; Apocrypha, Old Testament; Demons; Dispersion; Testament. D.W.S.

Togarmah (toh-gahr´muh), the third son of Gomer and brother of Ashkenaz and Riphath (Gen. 10:3; 1 Chron. 1:6). (Beth-)togarmah is mentioned in Ezek. 27:14 as a city that traded horses and mules to Tyre. This city was called Til-Garimmu in Assyrian texts. It may be the classical Gauraena, modern Gürün, located about seventy miles west of Malatya in Asia Minor.

Toi (toi). ***See*** Tou.

Tola (toh´luh; Heb., "crimson worm"). **1** The first of the four sons of Issachar (Gen. 46:13; Num. 26:23; 1 Chron. 7:1–2; *Jub.* 44:16) and the chief of the clans of Tolaites, Punites, Jashubites, and Shimronites. Nothing further is known of the four sons of Tola listed in 1 Chron. 7:2. **2** A judge (Judg. 10:1) described as a son of Puah.

tomb, Jesus', the place where Jesus was buried after his crucifixion. Although many Babylonians, Greeks, and Romans burned the bodies of their dead during the funeral services, Hebrews, Israelites, and later Jews, following the customs of Canaanites, Moabites, and other Near Eastern peoples, buried their dead in the ground. For some this was probably just a hole with no markings. Others, like those buried at Qumran, were placed in shallow graves and marked by piles of rocks, with no inscriptions to indicate the inhabitants of the graves. Wealthier people expanded caves and dug into the soft limestone rock to make shelves to hold stone coffins together with their contents. A few built large monuments, like those attributed to the Absalom family and to St. James on the eastern bank of the Kidron Valley.

Many of the tombs that were carved into the limestone hills were closed by doors that looked like stone wheels. Each wheel fit into a groove or track to keep it in place. When the tomb was opened, the wheel was rolled up a sloping track and held in place with some object. To close the door, it was necessary only to remove the block and let the wheel roll downhill in front of the opening of the tomb. This was evidently the kind of tomb in which Jesus was buried, because the Gospel writers tell about a stone that needed to be rolled away from the opening before one could enter the tomb (Mark 16:3; Matt. 28:2; Luke 24:2; John 20:1).

Christians have tried for centuries to find and identify the tomb into which the body of Jesus was laid. One of the conjectured places is The Church of the Holy Sepulchre in Jerusalem. Another place is a white cliff that looks something like a skull (John 19:17), just outside the walls of Jerusalem north of the city, but there is no specific tomb there.

Even if the tomb in which Jesus was placed were discovered, however, there would be no way to identify it. It would contain no stone coffin with his name carved in it; there would be no identifying seals, vessels, or jewelry. His body was hastily placed in a tomb that was not originally prepared for it (Matt. 27:57–60). Furthermore, it could not even be identified as a tomb belonging to the Arimathea family, because it was reportedly new and therefore would not have had the identifying marks of an ancient tomb where many family bodies had been laid (Matt. 27:60). The tomb remains unidentified. ***See also*** Sepulchre, Church of the Holy. G.W.B.

tongue, a word that often has a biological meaning as a part of the body, namely, the organ of taste and speech. It may become parched and

cleave to the roof of the mouth, thus leaving one mute (Ps. 137:6). As the organ of speech, it can produce words of praise (cf. Pss. 51:14; 119:172), deceit (cf. Pss. 10:7; 78:36; Prov. 21:6; Mic. 6:12; Jer. 9:3, 5, 8), or mischief (cf. Prov. 17:4). The Letter of James condemns the tongue as unrighteous, untamable, and evil (James 3:6–12). The word "tongue" also frequently designates language (cf. Isa. 45:23; Phil. 2:11; Rom. 14:11), especially a foreign or incomprehensible language, as in the phrases "alien tongue" (Isa. 28:11; cf. 33:19) and "other tongues" (Acts 2:4). ***See also*** Tongues as of Fire; Tongues, Speaking with. J.B.T.

tongues, speaking with, "glossolalia," the act of speaking in a language either unknown to the speaker or incomprehensible (in both OT and NT, the word "tongue" sometimes refers to a language, frequently an alien or incomprehensible language). Apparently, the phenomenon of glossolalia played a prominent role in the life of at least some early Christian communities.

Paul addresses the matter of "speaking in tongues" as a possible problem in the church at Corinth. Although he acknowledges that the ability to speak in "various kinds of tongues" and the ability to interpret these tongues are "spiritual gifts" (1 Cor. 12:10), he is aware not all are to speak in tongues (1 Cor. 12:30), and advises his readers to seek "the higher gifts" (1 Cor. 12:31). In 1 Corinthians 13, he makes it clear that he thinks of love as the greatest spiritual gift. Love is contrasted with speaking "in the tongues of men and of angels" (1 Cor. 13:1); love endures, while tongues will cease (v. 8). Thus, in 1 Cor. 14:1, Paul directs that his readers make love their aim "and earnestly desire the spiritual gifts, especially that you may prophesy." In 1 Corinthians 14, Paul gives a number of directions about the use of glossolalia. Speaking in tongues is not helpful to the community, he says, because it is incomprehensible (14:2). Only when there is interpretation is there edification (v. 5). When the community convenes, no more than three should speak in tongues, each in turn, and there must be an interpretation (v. 27). Paul feels that uncontrolled and uninterpreted speaking in tongues does not edify the community and that it gives outsiders the impression that believers are mad (v. 23). Yet, he allows this activity to take place, so long as it is done in orderly fashion and is accompanied by interpretation. In 1 Corinthians, it seems clear that "speaking in a tongue" means speaking an incomprehensible language, a language that probably was thought of as the language of angels (1 Cor. 13:1).

Acts 2 contains a narrative about the events of the first Pentecost after Easter. On that day, the apostles gathered together, and, after hearing a sound like wind and seeing tongues like fire, they began "to speak in other tongues, as the Spirit gave them utterance" (Acts 2:4). The author of Acts goes on to list various nationalities of persons who heard the apostles speak, all hearing in their own languages. Although the story may suggest that the apostles spoke an incomprehensible language (v. 13), the dominant idea is that they were speaking known foreign languages. In this respect, the phenomenon described here differs from the glossolalia known to Paul and practiced in Corinth.

The phenomenon of speaking with tongues is mentioned twice more in Acts. After Peter preached in the house of Cornelius, the Gentiles there began to speak in tongues (Acts 10:46). This was taken as a sign that the Holy Spirit had been poured out among Gentiles and that they should be baptized. In Acts 19, Paul met some disciples of Apollos at Ephesus. These disciples, who had been baptized "into John's baptism" (Acts 19:3), had never heard of the Holy Spirit. Paul instructed them, baptized them in the name of Jesus, and laid his hands on them. Then, "the Holy Spirit came on them; and they spoke with tongues and prophesied" (v. 6). The author of Acts probably thought of these two incidents as similar to the one described in chap. 2.

Both in 1 Corinthians and in Acts, the gift of glossolalia is associated with the Spirit. Paul's treatment of it as ecstatic, incomprehensible speech probably reflects actual practices in his churches. In Acts, the phenomenon is treated as a dramatic sign authenticating various communities of Christian believers: the original Jerusalem Christians in Acts 2; Gentile Christians in Acts 10; and the disciples of Apollos in Acts 19. ***See also*** Acts of the Apostles, The; Pentecost; Tongue; Tongues as of Fire. J.B.T.

tongues as of fire, a phrase used in Acts 2:3 to designate one of the dramatic events of the first Pentecost after Jesus' death and resurrection. The author says that tongues as of fire appeared and rested on each of the apostles. As a result, the apostles began to speak in other tongues (Acts 2:4, 8). The description brings together the association of fire with divine power and the imagery of tongues as languages. ***See also*** Acts of the Apostles, The; Pentecost; Tongue; Tongues, Speaking with.

tools, implements used by humans in crafting something. Use of this generic term in the Bible is sparse, writers preferring to designate specific tools, such as ax, pick, or saw (1 Chron. 20:3).

In Exod. 20:25 the use of tools on the stones for the altar to be built for the worship of God was expressly forbidden, since such use caused profanation of the stones. Aaron used a "graving tool" to fashion the calf from the contributed gold, possibly some sort of stylus or engraving device used on the rough molded form (Exod. 31:4). The same prohibition on working stones for the altar is found in

Deuteronomy, reflecting a clear date within the Iron Age by its reference to "iron tool" use (Deut. 27:5). That traditional qualification was recalled when Joshua built an altar on Mount Ebal, just north of Shechem (Josh. 8:31). In the construction of the Temple by Solomon, construction materials were to be prepared and finished at the quarry site so that neither "hammer nor axe nor any tool of iron was heard in the temple" (1 Kings 6:7).

Archaeological evidence shows that tool technology followed the course of improvement in material procurement and processing. Thus from prehistoric stone, bone, and shell tools one moves through the successive developments of copper, bronze, and iron, while earlier materials continued to be used where suited or more cheaply available. Flint continues to be used for scrapers and some knives to this day.

Each craft developed specialized tools for its work. Jewelers' drills, farmers' compound sickles, carpenters' adzes, housewives' saddle querns and hand grinders, stonecutters' hammers and chisels, bronze workers' molds, millers' millstones, olive presses, wine vats, scholars' inkwells, priests' incense burners, and butchers' knives are just the beginning of a list of tools found from the biblical period. R.S.B.

Topheth (toh´fith), a location in the Valley of the Son of Hinnom south of Jerusalem. The name was derived from an Aramaic word meaning "hearth" or "fireplace" but was pronounced by the Masoretes with the vowels of the Hebrew word for "shame." This was due to the practice there of sacrificing children as burnt offerings to Baal and Molech in the times of Isaiah and Jeremiah (Isa. 30:33; Jer. 7:31, 32; 19:6, 11–14; cf. 32:35). Kings Ahaz and Manasseh of Judah are reported to have offered their sons in the Valley of the Son of Hinnom (2 Chron. 28:3; 33:6; cf. 2 Kings 16:3; 21:6). King Josiah attempted to put a stop to the practice by defiling the altar at Topheth (2 Kings 23:10) but it was revived after his death. ***See also*** Hinnom, Valley of; Masorah; Molech. M.A.S.

Torah (toh´ruh; Heb., "instruction" or "teaching"), God's instructions to Israel. *Torah* has been commonly translated as "law" following the Greek translation in the Septuagint as *nomos* (Gk., "law") and the subsequent Latin *lex* ("law"). However, even *nomos* in the context of the Hellenistic period (333–63 B.C.) revealed divine legal and doctrinal elements. Thus, to identify torah with some sort of legalism is a complete misunderstanding of the term.

In the Hebrew Bible: In the context of the Hebrew Bible, torah is defined in several ways. In the Pentateuch, in Genesis and Exodus, torah refers to God's instruction (Exod. 13:9; 16:4) and parallels "commandment" and "statute" (Gen. 26:5; Exod. 18:16). In Leviticus and Numbers, torah defines cultic instructions: as an introduction (Lev. 6:14; 7:1; 14:2) and as a summary of previous rules (7:37; 14:54; Num. 5:29–30). The phrase "this is the statute of the Torah" (Num. 19:2; 31:21; cf. 35:29) emphasizes the reference to such cultic instruction. In Lev. 10:11 the causal form of the verbal root *yrh* ("to instruct," "to teach") is used to define the main priestly duties, "to teach the people of Israel all the statutes which the Lord has spoken to them by Moses." This teaching includes sacrificial laws, ethical behavior, holidays, and regulations concerning purity and impurity (10:10; 14:57; chaps. 4–7, 11–15, 23).

In Deuteronomy, the priestly teaching function of Torah is also underscored in 17:8–11 and 33:8–10. Deut. 17:8–9, 11 is particularly noteworthy: "If any case arises requiring decision . . . which is too difficult for you . . . you shall [come] to the Levitical priests, and to the judge . . . according to the Torah which they shall pronounce to you, you shall do." However, in most of the occurrences in Deuteronomy, "this Torah" refers to the composite literary elements of the book—speeches, laws, blessings and curses, etc. (1:5; 4:44; 27:3, 26; 28:58; and see "This book of the Torah," 28:61; 29:20; 30:10; 31:26). The Torah in Deuteronomy is perceived as Israel's cultural and national identity: 4:5, 6, 8: "Behold I have taught you statutes and ordinances . . . keep them and do them; for that will be your wisdom and your understanding in the sight of the peoples . . . for what great nation is there that has statutes and ordinances so righteous as all this Torah . . . ?" These verses and other elements have given rise to the theory that the instructive style and the understanding of Torah in Deuteronomy were influenced by the wisdom traditions of Israel.

The Former Prophets (Joshua through 2 Kings), which are perceived by modern scholarship as having undergone a systematic editing by adherents to the school of Deuteronomy, follow the predominant usage of torah in Deuteronomy as referring to the comprehensive nature of that book (Josh. 1:7–8; 8:31–34; 22:5; 23:6; 1 Kings 2:3; 2 Kings 10:31; 14:6; 17:13, 34; 21:8). It appears that "The book of the Torah" found in the Temple (2 Kings 22:8; 23:25) was a version of Deuteronomy. The only references to torah which are un-Deuteronomistic are "The book of the Torah of God" in Josh. 24:26 in which Joshua records the Shechem covenant and the difficult "This is the Torah of man, Lord God" of 2 Sam. 7:19.

In the Latter Prophets Hosea, Amos, Isaiah son of Amoz, and Micah (eighth century B.C.) torah is used in differing contexts. Torah appears in the sense of cultic rules (Hos. 4:6), as parallel to covenant (8:1), and as written divine instructions known to the northern tribes (8:12). Amos (2:4) and Isaiah (5:24; 30:9) see Torah as including God's moral commands (cf. Amos 2:6–12). Isaiah, also, gives the sense of di-

vine teachings through the prophet (Isa. 1:10; 8:16). In Isaiah (2:3), too, and Micah (4:2), the Torah will be taught by God to all nations in the final times.

Habakkuk (1:4) uses torah in terms of ethics. Criticism of the teaching of the Torah by the priests appears in Micah (3:11), Zephaniah (3:4), Ezekiel (22:26), and Malachi (2:6–9). Jeremiah (2:8; 8:8) may also be criticizing the wisdom groups for their failure to promulgate the Torah correctly.

Jeremiah uses torah in a comprehensive sense (6:19; 9:12; 16:11; 26:4) similar to Deuteronomy (of which he was a student). In the New Covenant to be given at the time of redemption (31:33), the Torah remains the content (only the method of transmission has changed) and all will be naturally obedient to it.

Isaiah also uses the word "torah" in the comprehensive sense (Isa. 42:21, 24, as does Malachi in 3:22) and eschatologically (42:4; 51:4). Ezekiel shows the influence of the Priestly sections of the Pentateuch in his use of torah (43:11; 44:23–24), and also eschatologically in reference to the Temple (43:12). In sum, the prophets use the word "torah" in a broad sense. Even the priestly instruction was not limited to cultic issues as was illustrated by the example of a request for priestly torah given in Haggai 2:11–13, which has a precise structural and linguistic parallel in Jer. 3:10.

In the book of Psalms, there is a tendency to praise the Torah and the righteous who cleave to it, so that it is viewed as the purpose and motivation of existence (Pss. 1:2; 19:8; 37:31; 40:9; 94:12; 112:1; 119:97). These Psalms seem to be influenced by the wisdom traditions, perhaps in conjunction with Deuteronomy (see also Ps. 78). Other Deuteronomistic influence may be found in Ps. 89:31–33 (cf. 2 Sam. 7:14), while Ps. 105:45 may reflect Priestly writings (which elevate the Sinai covenant above that of Abraham).

Proverbs knows of torah as advice of a parent (1:8; 3:1) or a sage (13:14). Torah is paralleled to reproof (1:8), command (3:1), and a good lesson (4:2). Although many of the occurrences of torah here are in the sense of general wisdom, the specific use of torah as religious instruction appears also (28:9; 29:18).

The Chronicler depicts the kings as subservient to God's Torah (1 Chron. 16:40; 22:12–13; 2 Chron. 14:3; 23:18; 30:16; 31:3–4, 21; 34:14–15, 19), which is perceived as a specific book (2 Chron. 12:1; 25:4; 33:2–9; but see the Priestly rule mentioned in 2 Chron. 15:3). In Ezra (3:2; 7:6, 10) and Nehemiah (8:1, 8, 18; 9:3; 10:30; 13:1, 3) a fixed written torah is assumed.

Conclusions: The vast majority of the occurrences of the word "torah" in the Bible refer to God's instructions to Moses at Sinai that were transmitted to Israel. These instructions or commandments (in a narrower or wider sense) became Israelite law and the stipulations of the covenant. They were all-important, since they were the specific manifestations of God's will. Since they were God-given, they were obviously good, and obedience would result in long life, prosperity, health, and happiness. Disobedience would be punished with harm, barrenness, exile, destruction, and death. The Torah is the great democratizing influence on Israelite society—all must obey, especially the kings (Deut. 17:18–20). This teaching was permanent, even if the covenant would be broken (Jer. 31:33). The teaching of the Torah was an essential priestly function, but the greatest joy was to have God answer one's prayers and teach it directly to the individual (Pss. 94:12; 119:33–34, 72–73).

Proverbs, which uses torah in the sense of providing parental guidance for a child, may provide the reason why this term was used in the religious sphere. The Israelites as God's children is a well-known metaphor in the Bible (Exod. 4:22; Deut. 14:1; 32:10–12; Hos. 11:1; Jer. 31:9, 20; Isa. 66:13). Thus, torah in the religious sense may have originally connoted the teachings imparted by God the parent to the child Israel. As such, the giving of the Torah is an act of supreme love.

In later Judaism, torah came to mean not only the Pentateuch (known as the written Torah), but also the Talmud (the oral Torah). Indeed, all of Jewish tradition is referred to as Torah. ***See also*** Covenant; Pentateuch. J.U.

Tosephta (toh-sef′tuh; Aramaic, "addition"), a collection of Hebrew laws and comments arranged in tractates that parallel the sixty-three tractates of the Mishnah. The materials in the Tosephta expand upon or comment on the laws in the Mishnah, present other traditions parallel to and/or contradictory to the Mishnah, or gather stories and scriptural interpretations relevant to the themes of the Mishnah. The Tosephta was probably collected in the third century A.D. as a commentary on and complement to the Mishnah, though some date it in the fourth century. Traditions found in the Tosephta are often found also in one of the Talmuds, but the literary relationship is not always clear. In the Talmudic tradition authorship is attributed to Rabbi Hiyya and Rabbi Oshaia (early third century), but this attribution has not been historically verified. ***See also*** Mishnah; Talmud. A.J.S.

Tou (*too*; also Toi), the king of Hamath who negotiated with David after his defeat of the Ammonites and their allies, some of whom had been enemies of Tou (2 Sam. 8:9–10; 1 Chron. 18:9–10).

tow (toh), the short broken fibers of flax or hemp. In the biblical view it is relatively useless and easily flammable (Judg. 16:9; Isa. 1:31; 43:17 [RSV: "wick"]).

tower (translation of a variety of Hebrew words, most often *migdal*), a tall stone or mud-brick structure, which was either round, semicircular, square, or rectangular in shape. Towers constructed for military purposes included free-standing outposts that were located in strategic positions (2 Chron. 20:24; 26:10; 2 Kings 17:9; 18:8) and projecting bastions that were part of a city's defense system (2 Chron. 14:7; 26:9; 32:5; Neh. 3:25–27); depending on their purpose and building materials, the dimensions of towers varied. Towers provided elevated positions for sentries or for soldiers repelling enemy attacks (2 Chron. 26:15), and some towers were so massively built that they provided refuge for the population in time of attack (Judg. 9:46–52). Reference to the destruction of a city's towers symbolized its fall (Ezek. 26:4, 9), and Isaiah (13:22) depicted Babylon's demise by predicting that hyenas would inhabit its towers (cf. Isa. 32:14). Siege towers were often used in attacks on cities (Isa. 23:13; 29:3; Ezek. 21:22).

In addition to the military function of towers, farmers built small watchtowers in fields and vineyards (Isa. 5:2; Matt. 21:33). These towers provided elevated positions from which fields were guarded; the ground floor of such structures served as living quarters for fieldworkers or guards, since ripening crops had to be guarded day and night.

In addition to the general references to Jerusalem's defensive towers, the Bible also mentions a number of this city's towers by name: the Tower of the Hundred (Neh. 3:1; 12:39), the Tower of Hananel (Neh. 3:1; 12:39; Jer. 31:38; Zech. 14:10), the Tower of the Ovens (Neh. 3:11; 12:38), and the tower of David (Song of Sol. 4:4). The biblical writers also referred to other famous towers: the tower of Eder (Gen. 35:21), the tower of Penuel (Judg. 8:17), the Tower of Schechem (Judg. 9:46), and the tower of the flock (Mic. 4:8, where *migdal ēder* refers to Jerusalem). Specific reference is also made to a tower in Thebez (Judg. 9:50–51) and a tower in Siloam (Luke 13:4).

An archer shooting from a tower; engraving on an eighth-century B.C. quiver.

Because of the tower's defensive significance, it symbolized security (Pss. 48:12; 61:3; 122:7; Prov. 18:10), but the towers of God's enemies could not protect them from judgment (Isa. 2:15; 30:25; cf. Prov. 12:12, where the Hebrew is obscure). In the Song of Solomon, the maiden's neck is compared to the tower of David (4:4) and an ivory tower (7:4), and her breasts are compared to towers (8:10).

The tower of Babel (Gen. 11:4–5) is normally understood as a Babylonian temple tower or *ziggurat*. In Ezek. 29:10 and 30:6, the RSV translates *migdal* as a place name, Migdol. ***See also*** Forts; Migdol; Watchtower. G.L.M.

town clerk (lit. "scribe," as the Greek term is translated everywhere in the NT except at Acts 19:35), an official in the Greco-Roman world who had significant authority and responsibility under the Roman system of government. These officials were responsible for the proper form and wording for decrees that were presented to assemblies of the people, and they appear to have been responsible for keeping order and preventing illegal assemblies. Such a person was one of the chief characters in an account of a riot at Ephesus in which Paul was involved (Acts 19:35–41). ***See also*** Cities; Ephesus; Scribe.

towns, settlements of small but indeterminate size. It is practically impossible to distinguish between town and village as biblical usage treats them. They could be walled with gates, as a city (1 Sam. 23:7; Prov. 8:3) but are spoken of in parallel with villages (Mat. 10:11). Named towns, like Tappuah (Josh. 17:8), Bethlehem (Judg. 17:8), Arimithea (Luke 23:50), or Ephraim (John 11:54), were sometimes called cities (KJV) in earlier translations, and no clues are given as to size or condition to distinguish them from villages or cities. It is probable that cities were larger, more frequently fortified, and more often the location of important government facilities. It appears that "town" is closer to village than to city in meaning.

Towns had officials, as a clerk (Acts 19:35) quieted a crowd in Ephesus, but the men of a town could act for its security (Judg. 6:27) and serve as inhibitors to troublemakers. Towns could be identified with populations or sects (Matt. 10:5) as well as symbolize evil and de-

struction (note Sodom and Gomorrah as models, Matt. 10:15; Luke 10:12). Cities were frequently identified with their surrounding towns and villages (note Ashdod and Gaza, Josh. 15:47; and numerous references in 1 Chron. 7:28). Deuteronomic law made special provision for the protection of the helpless, such as strangers, widows, and orphans, in the population of the towns (e.g., see Deut. 14:29). The public ministry of Jesus was carried out in towns (Luke 13:22) and early missionary work of the church usually began in synagogues or other public places in towns (Acts 8:40; 14:1, 6).

R.S.B.

Trachonitis (trak′uh-n*i*′tis), a Greek name in the NT for a 370-square-mile rocky, yet potentially fertile, lava plateau located northeast of Palestine between Galilee and Damascus (referred to in the OT as the land of Bashan). Originally a part of Herod's kingdom, it became the territory of Philip (Luke 3:1) and later was governed by Herod Agrippa I. Two NT cities in the region were Caesarea Philippi and Bethsaida. ***See also*** Agrippa I; Bashan; Philip.

trade and transportation, the movement and exchange of goods and services that make up commerce. This article will first treat the biblical occurrences of the two terms, and then summarize some major features of trade and transportation in the biblical world.

Biblical References: While the term "trade" is used in a few instances to designate one's occupation in general (Acts 18:3, referring in that context to the trade of tentmakers), or to particular occupations (prophet and priest, Jer. 14:18; silversmiths, Acts 19:27), or to groups of occupations ("all whose trade is on the sea," i.e., shipmasters, sailors, and seafaring men, Rev. 18:17), the major use of the term is for people in commercial trading, either foreign or domestic. It is viewed as a normal part of domestic activity by citizens in pursuit of prosperity (Gen. 34:10, 21) or by visitors to a land not formally their own, but seeking normal relations in it (Gen. 42:34, where Joseph invites his family to Egypt, and trading is invited). Trade could be a means of survival for desperate prisoners or refugees (Lam. 1:11), and it could characterize a place (Ezek. 17:4). Successful trade brought wealth (Ezek. 28:5), but it could breed violence and corruption (Ezek. 28:16) leading to destruction (Ezek. 28:18). It was normal to invest resources (Luke 19:13), but traffic in sacrifice materials was considered by Jesus to be an inappropriate use of the Jerusalem Temple precincts, as John's Gospel reports (John 2:16; see also Zech. 14:21). Trade could be planned in advance (James 4:13), but merchants could use dishonest devices for excessive profit (Hos. 12:7), and it could be done without satisfaction (Job. 20:18). Nevertheless, trade was ignored only at one's own peril (Luke 19:20–26).

Trade was an international matter, and the references include mention of a variety of the trading partners of the biblical world. So one finds, for example, Midianites (Gen. 37:28), Arabians (1 Kings 10:15), Tyre (Isa. 23:8), Sheba, Raamah, Haran, Canneh, Eden, Asshur, Chilmad, Javan, Tarshish, Tubal, Meshech, Beth-togarmah, Rhodes, Edom, Judah, Israel, Damascus, Helbon, Uzal, Dedan, Arabia, Kedar, Cyprus, and Elishah (all in Ezek. 27), as well as Chaldea (Babylon, Ezek. 1:29), Ophir (1 Kings 10:11), Egypt, Kue, Syria, and the Hittite royal house (1 Kings 10:28–29), some of which remain imprecisely identified. At times trading was a royal enterprise for official purposes of diplomacy (1 Kings 10:1–13) or profit (1 Kings 10:14–29), a matter in which Solomon was the traditional success model (2 Chron. 1:16; 9:14). But some things were beyond trade, such as mythic demons (Leviathan in Job 41:6) or faithfulness (Zech. 11:4–17).

References to travelers and travel are the simplest index to biblical views of transportation other than the specific terms for devices used to move people or goods. Travel could occur either by day or night (Exod. 13:21), and there were advantages to each. Daytime travel over land reduced the dangers of being waylaid by bandits but subjected one to the worst heat in summer unless one took time out. Night travel over land needed moonlight for safest progress, but eliminated the heat problem both for the humans and the animals involved. Sea travel was limited to daytime voyaging within sight of land until use of celestial navigation allowed direct crossings. In the biblical period sea traffic consisted predominantly of coastal routes, and safe havens at intervals of a day's sail were a hallmark of the Phoenician sea travel development. Land travel used what roads were available (Job 21:29), and the word of travelers was a major link in communications (Job 21:29). In times of stress roads might be avoided, and travelers would take to roundabout routes for safety while commercial transport might suspend operations (Judg. 5:6). International travel was commonplace but was judiciously watched for danger (Job 6:19). Its nature could be trade (Ezek. 27:25), legal business (Acts 9:1–7), casual encounter (2 Sam. 12:4), a deliberate group activity planned (Acts 19:29; 2 Cor. 8:19), or the result of a crisis (Acts 11:19). For a person or place to be forgotten by travelers was a distinctive form of oblivion (Job. 28:4), and it could symbolize an extreme of future desolation (Ezek. 39:11) in a prophet's oracle.

Transportation and Trade: It is likely but unprovable that transportation preceded trade as a human achievement. People probably moved to follow food supplies as hunters and gatherers or moved to safe quarters or to a more dependable water supply before they had the means of accumulating surplus goods with which to begin trade. In the remote reaches of Paleolithic and

TRADE AND TRANSPORTATION

Mesolithic human life (ca. 250,000–8000 B.C.), transportation is likely to have been overland by foot, although the earliest settlements in Egypt and elsewhere allow the possibility of rivers being used for transport in some locations. Absence of clear archaeological evidence is insufficient grounds to declare that no early ancestors moved by crude rafts, long since decayed and unrecoverable as evidence. Late Pleistocene stone tools (from about forty thousand years ago) illustrate that their makers knew variations in raw materials and traveled or traded to get them. "Luxury" goods such as amber or sea shells have been found dozens and even hundreds of miles from their sources. Surely throughout the entire biblical period, trade and transportation were mutually nourishing endeavors. With the Neolithic period (from about 10,000 B.C.) and developments in the domestication of plants and animals, the beginnings of true agriculture, and the economic foundations making cities possible, trade and transportation began to grow in a series of technological developments that continue to this day.

Rivers: There is little doubt that early settlement patterns reflect transportation by river craft in both Egypt and Mesopotamia. The central role of the Nile was its proximity to all cultivatable land, aided by a dominant northwest wind which allowed early sailing craft to maneuver upstream as easily as the current allowed raft and barge traffic to move northward downstream. The long stretch below the cataract at Aswan gave an untrammeled waterway to the Mediterranean Sea that served the entire population of Egypt throughout antiquity.

The same importance of rivers is evident in the earliest settlement patterns of Sumer in lower Mesopotamia. The Tigris and Euphrates were far riskier flood hazards than the Nile, but the city-states of Lagash, Kish, Eridu, and Uruk all grew in proximity to river sources both for ease of moving people and goods and for the water available (as in Egypt) for agricultural development. The earliest literary materials from the region reflect a situation where life's survival was dependent on the successful victory of the river's fresh water over the salty demon of the sea (*Enuma Elish,* Tablet 1). Travel on rivers required some sort of stable vehicles to move goods, however, and the history of water transport devices indicates developments from crude rafts to sailing vessels with sufficient cargo capacity to handle large quantities of timber, copper, and other "heavy freight."

Seas: The use of open salt water for transportation is documented at least by Old Kingdom times in Egypt (2700–2200 B.C.) when transportation and trade were carried out with Byblos on the coast of modern Lebanon. Such travel involved craft called "Byblites" for moving both goods and passengers. It was the Phoenicians who developed maritime trade into substantial proportions, colonizing for their purposes the entire north coast of Africa beyond the Strait of Gibraltar to the western coast of modern Morocco, as well as Cyprus, Greece, Italy, Mediterranean islands such as Sardinia, and even the Spanish coast, Malta, and Crete. Subsequent great seapowers like Persia, Greece, and Rome first absorbed and then followed and expanded the trading routes developed by Phoenicia's maritime transportation network.

It was also to the experts of Tyre that Solomon turned not only for his construction projects, but for his maritime development (1 Kings 9:26–28), both shipbuilding and shiphandling being new skills to the Israelites of the monarchy. Seaworthy craft allowed travel from the upper reaches of the Gulf of Aqaba (Solomon's port there was Ezion-geber) into the Red Sea and from there either up the Gulf of Suez or down the coast of Arabia round the tip of the Arabian peninsula and across the east coast of Africa; or they could sail eastward along the south coast of Arabia to touch points east along the Persian Gulf or the centers of life in India on the Indus River.

Sail power was employable in all of this, although the Greeks and Persians, followed by the Romans, developed human-powered rowing ships that reached their maximum development in triremes (three tiers of rowers on each side of a vessel) used by Persia in unsuccessful attempts to subdue Greece (as at the battle of Salamis, 480 B.C.). Roman ships of course reached north Atlantic points in Britain and the continent as well as dominated the Mediterranean by NT times.

It is in such a maritime network that the report of Paul's journey by ship from Caesarea on the Palestine coast to Italy is set, giving some idea of both the normal routing and the hazards of such transportation. The route taken by the ship of Adramyttium (a port in Mysia, in what is modern northwest Turkey) was north up the coast to Sidon, then across the south coast of Cyprus to Myra in Lycia (in modern southwest Turkey). There Paul and his guards transferred to a ship from Alexandria, Egypt, bound for Italy and headed west along the south shore of Crete. Despite seasonal hazards of storms in winter weather, they struck out from Phoenix on the southwest coast of Crete, running into stormy troubles when they hit the open water exposed to western windy seas. Managing only a temporary relief at an island called Cauda (Acts 27:16–17), they took drastic measures with cargo and gear and managed to drift to shore at Malta, remaining there for the duration of the winter. From Malta they set out for Syracuse on Sicily and Rhegium at the toe of Italy's "boot" and made landfall at Puteoli two-thirds of the way up the Italian west coast, from which point the journey proceeded overland. Acts re-

ports a roster of 276 people aboard that ship with a staff of soldiers under a centurion in charge of the prisoners. Wheat is mentioned as cargo, which would be quite normal inasmuch as Egypt served as the "breadbasket" for Rome. Sea connections with points east continued to bring to the Mediterranean world the more esoteric spices, precious stones, and precious metal throughout the biblical period.

Archaeological investigations now include several ship ruins in underwater locations. These have been found off the north coast of Cyprus, along the south coast of Turkey, and in the fresh-water Sea of Galilee, among other locations. Current plans are to use high-technology deep-diving submarine exploration of the sea route from Carthage to Ostia, Rome's seaport, to locate and allow recovery of lost ships on that route. Analyses of such evidence include ship design, types of timber and other products used in shipbuilding, cargos transported, crew sizes, defense arrangements on board, and the usual archaeological remnants of human equipment, both personal and trade-related.

Land Transport: Limited water supplies first determined that land travel could not cross the major stretches of desert in the biblical world, the Sahara and the Arabian desert. It funneled land travel around the quarter-moon-shaped arc of land from the Mesopotamian valley, across northern Syria south of the major mountain ranges of eastern Turkey, and down the Syro-Palestine corridor five hundred miles to the eastern Nile delta in Egypt (the "Fertile Crescent"), from where one could go by land or river craft to the upper reaches of southern Egypt.

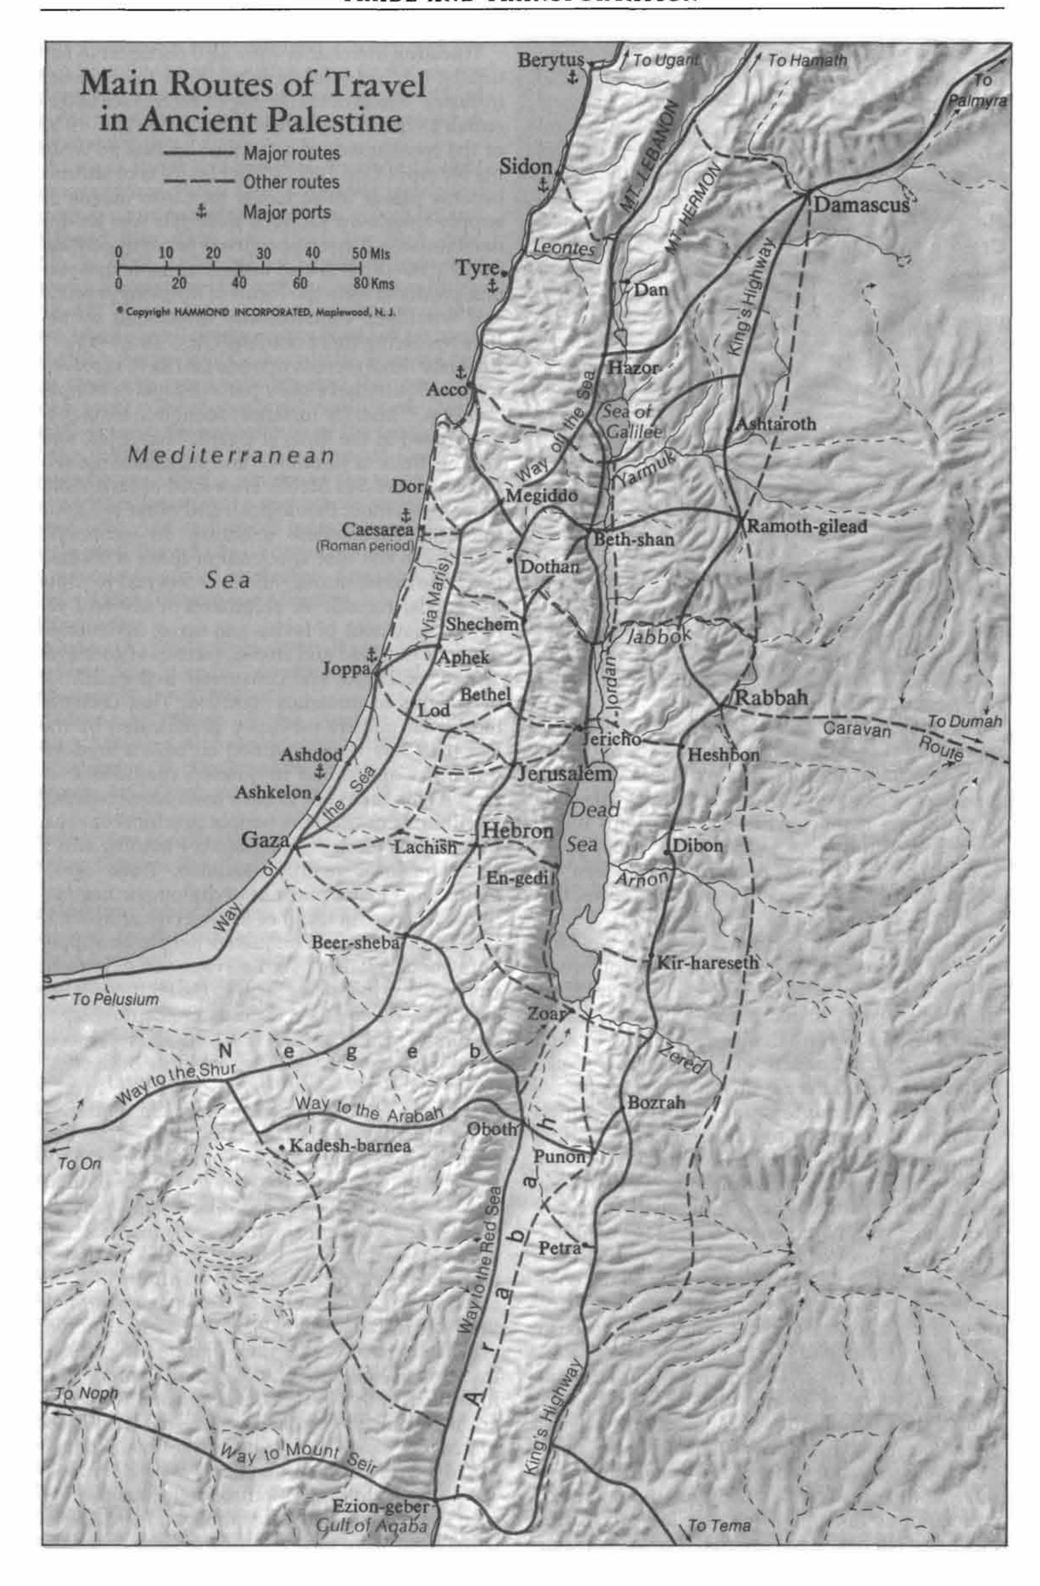
Foot travel was common in all biblical periods, walking being cheap, convenient, and free of other people's timetables. Walking was made easier with a staff or walking stick, especially when moving through the hilly regions of Syro-Palestine. Animals, after they had been domesticated, were used, especially the ass or donkey, which is still a major vehicle for local rural travel. Oxen provided good draft strength for pulling carts, but required more water and forage than many of the zones afforded. Horses were faster and more maneuverable and were traded extensively by Solomon (1 Kings 10:28–29) together with chariots, making both civilian and military transport more efficient. Horses had been used for cavalry presumably since the time of the Hyksos, but again they required more extensive forage, water, and care than the ubiquitous donkey. Presumably the expense of purchase as well as maintenance of horses kept the ass popular. As a cargo carrier it could be fitted with a carrier saddle, and its capacity was enormous for its size. Its sure-footedness added to its value when covering rocky terrain, and its capacity to survive on seemingly inedible plant life allowed it to thrive where other beasts could not. Only the domestication of the camel about 1200 B.C. brought a serious challenge to the dominant role of the ass. The capacity of the camel for cargo was also enormous for its size, and its ability to go for long desert treks without water for days opened up new routes of both freight and passenger traffic that had previously been impossible. That one still sees camel caravans is testimony to the economic advantages they allow for local delivery to remote regions unblessed by highways or airports.

The use of wheeled vehicles is attested in lower Mesopotamia in the third millennium B.C. The early models were made with solid wheels rigidly attached to their axles, which then were mounted to turn under the bed of the cart. Such carts provided noisy, rough transport, but with the invention of a lighter wheel with spokes to a rim from a hub that would rotate on the axle, major improvement in load capacity, maneuverability, and consequent range was achieved. Pictorial representations in Egypt indicate that such chariots were used with teams of four horses for sport or military purposes. For efficiency of wheeled traffic road development from previous tracks of mounted animals or footpaths was essential.

Certain basic routes were developed prior to roads, some of which were followed when roads were built. Within Palestine there were three major north-south routes as well as commonly used transverse or east-west crossings. Because of the lay of the land and Palestine's location in relation to the "great powers" of the time (Egypt, the Hittites, Mesopotamia) the north-south routes were primarily used for both commercial and military traffic over the centuries. Of first importance was the coastal route. Coming up from the eastern Nile delta in Egypt, it followed the curve of the Mediterranean shore, branching inland at the Mount Carmel mountain range to cross the Esdraelon Plain at Megiddo. This "way of the sea" (Isa. 9:1) was fortified by the Egyptians during their control, thus discouraging the Israelite migrants from using it after the Exodus. North of Megiddo the route went along the west side of the Sea of Galilee to Hazor and Damascus, from where connections north through Syria to both the Hittite and Ugaritic centers and, crossing the arc of the crescent, to Mesopotamia were available. From Megiddo there were also transverse connections north of the Carmel ridge to coastal towns like Acco and points north as well as eastward along the plain to Beth-shan and the Jordan Valley, from which routes continued eastward across the Jordan and southward to Jericho.

The other major north-south route ran from the port on the Gulf of Aqaba up the Transjordan hills of Edom, Moab, and Ammon, continuing northward to Damascus. It was part of the great overland route from Damascus to Arabia but allowed land-sea connections from Damascus to points east as well. An intermediate

TRADE AND TRANSPORTATION



north-south route serving Israel was that in the hills running southward from Jerusalem to Bethlehem, Hebron, and points south. North of Jerusalem it connected with Shechem and the Esdraelon Plain, allowing both north and transverse connections at Beth-shan.

Additional crossings from east to west were possible through the pass between Mounts Ebal and Gerizim at Shechem, the Valley of Achor and Jerusalem down to Jericho, and across the southern reaches of the Shephelah from Beersheba to the Edomite heights. This was especially prominent during Edomite domination of southern Judah and during the Nabataean ascendance. In Hellenistic and Roman times, travel across the eastern Syrian desert used Palmyra as a major center on the way to the Euphrates.

While the Persians constructed a major new facility for traveling with their development of the route from Susa (in western Persia) to Ephesus (on the southwest coast of Turkey), other remains indicate the supremacy of Rome in building enduring roads for public and military use. By means of carefully spaced stations for fresh mounts and overnight rest stops, Persia cut the travel time from Susa to Ephesus from three months to a week. Its couriers on royal business would move a message day and night on a road that included ferries and bridges for hazardous terrain or river crossings. Rome built its roads straight and to last. Having seen the legacy from northern Scotland to the eastern Jordanian desert, one cannot help but admire the engineering consistency not only in road plotting and construction, but in tight controls. The writer has only seen one piece of genuinely crooked Roman roadbed. It lies just north of Umm al-Jimal in the eastern Jordan desert. It suggests that the crew was either ill or drunk during construction of that stretch unless the damage has been due to earthquake, evidence of which is not readily apparent. It is unique. Romans marked their roads with milestones, an immense help to archaeologists despite numerous reuses of the stones for other construction. Stone was the primary construction material in Roman road preparation, as well as its paving. The same materials being used for bridge construction has contributed to the longevity of the remains. Biblical stories (such as the parable of the good Samaritan, Luke 10:29–37) indicate both that travel on roads could be dangerous from thieves in ambush and that normal travel facilities in the form of inns were found on most routes. Some of these facilities were extensive in order to accommodate large caravans, both animals and drivers, or at major intersectons, to handle groups of caravans, giving rise to the term "caravanserai" for such installations.

Trade: Trade occurred first whenever a person had an object desired by another person and was willing to exchange it for either some goods or service. As noted above, the evidences of such commerce are rooted in Paleolithic times, given the patterns of raw materials for tools and even luxury goods occurring far from their sources in various locations. That barter moved to formal markets, shops, and government or religious institutions is evident by the dawn of urban civilization in both Mesopotamia and Egypt by 3000 B.C. The earliest forms of writing in Mesopotamia were apparently crude pictographs recording materials contributed to the temples of the city gods. Subsequent cuneiform texts in Sumerian, Akkadian, Eblaite, Hittite, and Ugaritic attest in sheer volume that the economics of life took the lion's share of recordkeeping in all these ancient societies. Similarly in Egypt, the royal records of the dynasties are full of such economic data as the gifts buried with the pharaoh, division of labor for food procurement, records of laborers assigned to projects, and other matters falling in the general category of commerce. While primarily tied to the religious consciousness, whether through temple or the divine pharaoh, ancient Egyptian concerns show abundant interest in the movement of goods and the accounting of such matters.

Goods and Services Exchanged: One might rightly assert that any form of necessary good was subject to trade in circumstances where some were deprived of it but had means of exchange. It is also true that as any society becomes prosperous, it looks on certain goods as desirable, even though they are not "necessary," and develops means of acquiring such goods through trade if they are not immediately accessible in one's property. This is vividly evident both in the story of Solomon's dealings for construction goods, services, and luxury materials (1 Kings 5–10) and in a marvelous vignette on trade in Ezekiel's oracles against Tyre (Ezek. 27–28). Tyre is described as "merchant of the peoples on many coastlands" with good reason, it would seem. In Tyre one found fir from Senir; cedar from Lebanon; oaks from Bashan; pine from Cyprus; ivory; linen from Egypt; blue and purple (cloth) from Elishah; rowers from Sidon and Arvad; pilots from Zemer; caulkers from Gebal (Byblos); soldiers from Persia, Lud, Put, Arvad, Helech, and Gamad; silver, tin, iron, and lead from Tarshish; bronze vessels and manpower from Javan, Tubal, and Meshech; horses, war horses (specially trained?), and mules from Beth-togarmah; ivory tusks and ebony from Rhodes and other ports; emeralds, purple, embroidered work, fine linen, coral, and agate from Edom; wheat, olives, figs, honey, oil, and balm from Israel and Judah; unspecified goods from Damascus; wine from Helbon; white wool and wine from Uzal along with wrought iron, cassia, and calamus; saddlecloths from Dedan; lambs, goats, and rams from Arabia and Kedar; spices,

precious stones, and gold from Sheba and Raamah; and choice garments, clothes of blue and embroidered work, and colored carpets from Haran, Canneh, Eden, Asshur, and Chilmad. Among the precious stones specified are carnelian, topaz, jasper, chrysolite, beryl, onyx, sapphire (probably lapis lazuli), carbuncle and emeralds, with worked gold settings. Granting a number of errors in both the items and the ascriptions, it is an impressive index of what crossed as merchandise at a major seventh-century B.C. Mediterranean port, presumably by common knowledge, since Ezekiel was no merchant himself with insider information.

Marketing: From the earliest individual bartering, the steps toward formal market days or market areas in campsites or small village settlements are not clear. What is obvious is that in the earliest city-states of Sumer in Mesopotamia the temple served as a major gathering point for goods if not services. The huge ziggurat and temple constructions, to say nothing of the walls, palaces, canals, and dikes that mark these cities, required extensive acquisition of construction materials and manpower. The democratic nature of earliest Sumerian society suggests that such arrangements required elaborate negotiations and records.

For most of the biblical period in Palestine, marketing was done through small shops where each specialty product was available from the producer or processor. Even in NT times this style of marketing is reflected in rows of shops lining the edges of the more public Greek agora (as at Corinth) or streets (as at Ephesus). In modern villages and even in sectors of some large cities, this is still the primary mode of selling goods.

The arrangement of market shops was frequently by product; hence there were gold quarters and carpentry rows; shoe shops, bedding shops, metalsmiths, and others with identical or similar products were in close proximity to each other on a particular street or byway. This seems to have been a matter of convenience for producers by giving them proximity to the competition and thus the capacity to adjust prices according to market changes, as well as mutual assistance in production crises, e.g., quick access to borrow a replacement for a broken tool, or the quickest access to a supply of materials in case one unexpectedly ran out of an item. It also served as a convenience for shoppers by putting all the competitors producing a given product within easy reach for "comparison shopping," still as basic as bargaining in many local markets.

It was also typical of such local markets that the "producers" were also the "sellers." In such shops, the manufacture of the goods proceeded as the basic occupation, while selling the product, taking special orders, and repairing previously sold items were all conducted by the shop craftsman as integrated parts of his production business. No neat lines seperated producer, supplier, and seller in such situations.

Traveling merchants were also common in antiquity. Biblical references reinforce the "cottage industry" mode of marketing in such cases as Jeremiah's visit to the house of the potter (Jer. 18:3) or the recruitment of a "scribe" by Paul to write his letters (1 Cor. 16:21). That temples or shrines became places of exchange for those unable to supply their own sacrifice materials was an understandable if not appropriate accommodation (John 2:14–16). It is also understandable that certain products were the result of religious practice and would be economically threatened by beliefs rendering them obsolete (Acts 19:23–41).

Records: Most records of trade that have survived from antiquity have been parts of royal or temple archives. Thus, for instance, economic texts predominated in the finds at Ugarit, Mari, Ebla, and various finds of Sumerian and Akkadian materials. The Dead Sea Scrolls are a kind of exception, where the ritual, theological, and other religious interests superseded attention to economic records. In the vast spectrum of these economic texts one finds, among others, orders and receipts for goods; records of shipments made and received; payment of levies and taxes; inventories of goods received and stored; records of goods required, procured, and consumed; and quantities or weights of materials received. That societies took such matters seriously is indicated by the fact that they were recorded on tablets fired for durability and stored in quarters considered secure. There seem not to have been major banking institutions outside the temple precincts or royal houses, but money changing and lending was a street business readily available. Trade agreements were major portions of diplomatic negotiations, whether in tribal or settled city or national life. Obligations of conquered people to supply both goods, quarters, and services were frequent components in treaties such as the Hittite and Assyrian vassal treaties. Records concerning trade in human resources included bills and receipts of slave purchases, as well as manifests of freedom for slaves.

Means of Exchange: The use of weights and measures fluctuated from country to country and from time to time. The movement from simple trading of goods to the use of some indirect means of exchange is also obscure in many respects. The frequent occurrence of small ceramic disks, sometimes punctured in the center to allow stringing or hanging on a spindle of some sort, has led some archaeologists to suggest their probable use as local tokens of exchange, a sort of voucher system. The introduction of coinage, traditionally regarded as a sixth-century B.C. invention of the Lydians, was made official government practice by the Persians and continues to this day. Coins were usually a government monopoly, with mints sometimes scattered throughout political holdings. Control of the metal value, coin size, design and decoration, and varieties of coins used were thus a means of both economic and political control. The propaganda value of

coins should not be underrated. Greeks and Romans brought the art to a high state, and coins are among the most helpful archaeological articles for dating purposes when they are recovered in legible condition.

As in all times and societies, incurring a debt was a common social fact. It appears in biblical stories as an undesirable condition in both OT and NT (see 1 Sam. 22:2; Neh. 10:31; Isa. 24:2; Prov. 22:7, 26; Matt. 18:23–34), and delivery from debt became a metaphor for genuine salvation (Rom. 8:12–17). The value system of exchange of precious goods or monetary equivalents left no mark by which the grace of God could be assessed, yet that grace was more valuable than the most precious pearl a jewel merchant could own (Matt. 14:45–46), and the expectation of the completion of the fulfillment of the Kingdom of God was drawn by apocalyptic writers as the most lavish conceivable Jerusalem, a city whose streets were paved with gold and whose gates were made of a single pearl (Rev. 21:21). For such there could be no adequate rate of exchange. ***See also*** Boats; Money; Ophir; Weights and Measures.

Trajan (tray´juhn), Roman emperor A.D. 98–117. Adopted by the emperor Nerva, Trajan came from a family of Roman settlers in Spain. His father had been a senator, and Trajan was the first emperor from outside Italy. Trajan made his reputation as a soldier first under Domitian (A.D. 81–96) when he was commanding a legion in Spain and then under Nerva (96–98) who made him governor of Germanica Superior (part of modern Germany). After a threat against Nerva's life among the praetorian guard, Nerva adopted Trajan as his heir in A.D. 96.

Trajan reduced and annexed Dacia (modern Rumania) as a province in two campaigns. The province provided mineral wealth and a more secure frontier. He campaigned in a large part of Mesopotamia and Assyria, which were proclaimed provinces in A.D. 114 but proved impossible to hold after Trajan's death. Parthia, always troublesome, was made a client kingdom.

In Rome Trajan improved relations with the Senate and drew upon it for administrative talent. He built public baths and the largest of the imperial forums and erected a huge column celebrating the Dacian campaigns.

While Trajan is not mentioned in the NT, since most if not all of its books had been written by the time he became emperor, we do have some correspondence between him and Pliny the Younger, his ambassador to Asia Minor. Pliny reports some people have been denounced to him as Christians, and he asks Trajan if the accusation is sufficient grounds for execution. Trajan says it is not; only if it can be proved, and the Christians refuse to recant, can they be punished. This correspondence from the first decade of the second century shows that Christians had become numerous enough in Asia Minor to be perceived as a possible threat to local religious belief and Roman administration of the provinces there. ***See also*** Roman Empire; Rome. Transfiguration (trans-fig´yuh-ray´shuhn), **the,** the title given to an event in Jesus' life in which he was "transfigured" (Gk. *metamorphoō*), Moses and Elijah appeared to him, and a Voice spoke from heaven. (See Mark 9:2–8; Matt. 17:1–8; Luke 9:28–36; 2 Pet. 1:16–18.)

The transfiguration is one of the few accounts in Jesus' life outside of the passion narrative that contains a chronological tie—"after six days" (Mark 9:2). The incident is tied both in time and meaning to the preceding account of Peter's confession (Mark 8:27–33). The divine Voice "This is my beloved Son" (Mark 9:7) is both a rebuke of Peter's equation of Jesus with Moses and Elijah (Mark 9:5) and a confirmation of his confession. The words "listen to him" recall Peter's unwillingness to accept Jesus' pas-

sion prediction (Mark 8:31–33). The purpose of the transfiguration is primarily for the three disciples. This is clear from the Voice, which is directed to them, and the frequent use of the pronoun "them." What the Voice was for Jesus at his baptism, "Thou art" (Mark 1:11), the Voice at the transfiguration was for Peter, James, and John, "This is" (Mark 9:7).

What actually happened in Jesus' transfiguration has been understood primarily in two ways. The first understands it as a breaking through his humanity of the true form (Gk. *morphē*) of the Son of God (cf. John 1:14); the second as a glimpse of the glory of the Son of God at his Parousia (2 Pet. 1:16–18). Perhaps both are involved. Compare Phil. 2:6–11 where both the preexistent glory of the Son and the glory resulting from his resurrection/exaltation are mentioned.

The place where this took place is described as a "high mounain." Suggested sites are Mt. Tabor (the traditional site but not a high mountain), Mt. Carmel (out of the way), and Mt. Hermon (a high mountain), but the lack of specificity indicates that what was important for the church was not *where* but *what* occurred. R.H.S.

transgression. ***See*** Evil; Forgiveness; Human Being; Pardon; Repentance; Salvation; Sin.

Transjordan (trans-jor´duhn), strictly speaking the area directly east of the Jordan River, but a term normally used today for the high plateau area from the Yarmuq River in the north to the head of the Gulf of Aqabah in the south. The present Kingdom of Jordan represents the first time in history that the area has formed a single united and independent state. Previously it was always either a group of separate states or part of a foreign empire.

The edge of the plateau, overlooking the north-south rift valley of the Ghor, is everywhere higher than its counterpart in the west and consequently receives heavier winter rainfall, which decreases rapidly as the plateau slopes downward toward the Wadi Sirhan and the great basalt barrier in the east. Throughout history, from the pre-pottery Neolithic period (ca. 7000 B.C.) to the present, Transjordan has provided a relatively easy north-south route from Syria to the Red Sea and Midian in northwest Arabia, and vice-versa. There have been two roads, the so-called King's Highway on the plateau edge and the Pilgrim Route along the edge of the desert. The first has the problem of crossing deep and steep-sided valleys, while the second is more level but less well supplied with food and water. Four major valleys cleave the plateau edge: the Yarmuq in the north, the Zerqa (biblical Jabbok), the Mojjib (Arnon), and the Hesa (Zered). These have often served as administrative boundaries, but only the Hesa is a true cultural division. Culturally, and until the Assyrian conquests (ninth–eighth centuries B.C.), tribally and politically, the areas were as follows:

1 Havvoth-jair (Num. 32:41; Deut. 3:14; 1 Kings 4:13), an extension of the Bashan plateau (Josh. 13:30), and a disputed zone between Aram and Israel. In NT times it was part of the Decapolis, including Gadara (Umm Qeis) and Abila (Tell Abil).

2 Gilead, the uplifted highland region of Ajlun, divided by the Zerqa. Still retaining today remnants of its earlier thick forest, this area was incorporated into the tribal lands of Manasseh, being the only area east of the Jordan where the three Israelite crops of grain (wheat or barley), grapes, and olives could be cultivated together. A medicinal balm from this region was proverbial (Jer. 8:22; 46:11) and was exported to Phoenicia (Ezek. 27:17) and to Egypt (Gen. 37:25). The plateau to the east, merging rapidly into semidesert, was Ammonite territory, centering on the upper Jabbok, which rises at Amman (Rabboth Ammon). Gerasa (Jerash) in Gilead and Philadelphia (Amman) were the southernmost Decapolis cities.

3 Moab, east of the Dead Sea; it is divided into two parts by the canyon of the Mojjib. The first, the level tableland of the Mishor to the north (Deut. 3:10; Josh. 13:9), was traditionally the territory of Reuben and Gad (Judg. 5:16; 1 Sam. 13:7). It was famous for its sheep and was essentially Moabite. The second part is the Moabite heartland between the Mojjib and Hesa. Increasingly pastoral and rising steadily southward, this area was controlled from the great stronghold of Kir-hareseth (Kerak) on the King's Highway (2 Kings 3:21–27).

4 Edom, the high plateau rim south of the Hesa, everywhere well above 4,000 feet (1,220 m.) and touching 5,704 feet (1,738 m.) a little north of Petra. Cultivation is confined to a narrow strip along the plateau edge, and the chief source of wealth was trade with Arabia, perhaps as early as 6000 B.C., and with Anatolia as early as 7000. The region reached its zenith under the Nabateans.

5 The Dissected Plateau in the extreme south, a complicated network of hills and gorges. The entry to the Red Sea and to Midian and Arabia, this may have been the Teman of the OT, though the name (lit. "south") may perhaps signify either southern Edom or northwestern Arabia. ***See also*** Ammonites; Arabia; Arnon, The River; Cities; Gadara; Gilead; Jabbok; Midianites; Moab; Petra; Zered, The Brook. travail, the pangs of childbirth (Gen. 35:16; 38:27; Ps. 48:6; Jer. 4:31; Mic. 4:9; John 16:21). "Travail" is also used metaphorically of Zion bringing forth the new people of God (Isa. 66:7–9; Mic. 4:10). This metaphor may also be

applied to the woman clothed with the sun in Rev. 12:2. Paul speaks of the "labor pains" by which he has brought forth the new Christian converts in Gal. 4:19.

travel. *See* Trade and Transportation.

treasures, wealth accumulated and kept primarily in palaces and temples in the ancient world. Treasures were acquired by royal conquest (e.g., 1 Kings 14:25–26; 2 Kings 14:13–14), by trade or taxes on trade (1 Kings 10:11, 15, 22; Ezek. 27:12–27; 28:4–5), or in the form of gifts (e.g., 1 Kings 10:10, 13–15; cf. Matt. 2:2, 11) or tribute (1 Kings 10:14–15). The monarch's treasures would be used to adorn the palace and to purchase military resources (1 Kings 10:16–21, 26–29). Some would be dedicated to the deity for the adornment of the temple (Josh. 6:19). A monarch might use palace or temple treasures to buy off an invader (2 Kings 12:17–18; 18:13–16) or to purchase the assistance of a third party to harass an invader (1 Kings 15:17–21; 2 Kings 16:5, 7–9). A wealthy individual might buy special favors from a king by a contribution to his treasury (Esther 3:8–11; 4:7). Legendary wealth was attributed to Solomon (1 Kings 10; cf. Eccles. 2:8) and to Hezekiah (2 Chron. 32:27–29), who, by showing his treasures to Babylonian envoys (2 Kings 20:13; Isa. 39:2), prompted Isaiah's prophecy that they would be carried off to Babylon (2 Kings 20:17; Isa. 39:6). The regular contributions of worshipers also benefitted the temple treasury, and might be designated by the monarch for the materials and labor needed to repair and maintain the temple (2 Kings 12:4–14; 22:3–7, 9).

The looting of the treasures of Nineveh (Nah. 2:9) is less prominent in the Bible than the despoiling of Jerusalem (Jer. 20:5). Nebuchadnezzar took the treasures of the Jerusalem temple (2 Kings 25:13–17) and palace (2 Kings 24:13; 2 Chron. 36:18; 1 Esd. 1:54) to Babylon where he deposited them in his god's temple treasury (Dan. 1:2). Later Cyrus restored them to the Jewish leaders to be returned to Jerusalem (Ezra 1:8–11), where the leaders volunteered special contributions to fund the rebuilding of the Temple (Ezra 2:68–69). A model for such special contributions appears in the account in Chronicles of the building of the first Temple (1 Chron. 29:2–8). Artaxerxes authorized Ezra to charge further rebuilding expenses to the Persian imperial treasury (Ezra 7:20–21). Later the treasures of the second Jerusalem Temple were plundered by Antiochus Epiphanes (1 Macc. 1:21–24), who tried unsuccessfully to gain possession of the treasures of another temple by marrying its goddess (2 Macc. 1:11–17).

Moral reflections on wealth are frequent in the OT and subsequent wisdom literature. Treasures accumulate for the wise (Prov. 21:20) and the righteous (Prov. 15:6), those who honor their mothers (Ecclus. 13:4) and those who give alms (Tob. 4:7–9). Wisdom is the source of treasures (Prov. 8:18–21). However, treasures do not last (Prov. 27:24) and may be troublesome (Prov. 15:16). Ill-gotten wealth makes one vulnerable (Prov. 21:6; 10:2; Tob. 12:8–10). Hidden treasure is useless (Ecclus. 20:30; 41:14), but a treasure trove is better than an income (Ecclus. 40:18). Treasure is a metaphor for wisdom (Prov. 2:4; Wisd. of Sol. 7:14), almsgiving (Ecclus. 29:12), a faithful friend (Ecclus. 6:14), and immortality (2 Esd. 8:54). Faithfulness and good works may be accumulated as a treasure deposited with God (2 Esd. 6:5; 7:77).

The NT recognizes the vanity of earthly treasures, the permanence of heavenly treasure, and the way one's life is shaped by what one treasures (Matt. 6:19–21; Luke 12:33–34, cf. 20–21). James 5:1–5 denounces those who live for earthly treasures, while Heb. 11:26 presents Moses, who preferred suffering to the treasures of Egypt, as a model of faith in God's future reward. In the Gospels almsgiving is the way to convert earthly into heavenly treasure (Matt. 19:21–22; Mark 10:21–22; Luke 18:22–23). Buried treasure is an image of the kingdom of heaven (Matt. 13:44); treasure in earthen vessels represents the gospel in Christians (2 Cor. 4:7); and wisdom and knowledge are treasures hidden in Christ (Col. 2:3). S.B.P.

tree of life, the, a well-known image deeply rooted in the mythological and iconographic traditions of the ancient Near East. Widely depicted on seals, reliefs, and other artistic forms, the sacred tree represented fertility, or ongoing life, as well as immortality, or eternal life (Gen. 3:9, 22, 24; cf. Ezek. 31:8).

The biblical usage of this motif gives the contemporary imagery another focus, however. The emphasis of the Eden story is not so much on the life-tree, though that motif is present, as it is on the rather different aspect of the knowledge-tree.

Although trees in general play a prominent role in the metaphoric vocabulary of the Bible, the phrase "the tree of life" appears in the OT only in Genesis 3. Proverbs (3:18; 11:30; 13:12; 15:4) does refer metaphorically to *a* tree of life; however, such usage lacks the vividness and potency of the life-tree symbolism. Only in noncanonical Jewish literature (1 Enoch 24:4–6; 2 Enoch 8:3–5; 2 Esdras 8:52) and the NT (Rev. 2:7; 22:2, 14, 19) is the richness of the Edenic life-tree imagery utilized by the ancient authors.

Although the verbal designation "tree of life" has an understandably restricted place in biblical tradition, a plastic representation of the life-tree, in the form of the sacred lampstand (*menorah*) described in the tabernacle texts, played a central role in the repertoire of ritual appurtenances of ancient Israel. Its stylized tree shape and the vocabulary of botanical terms that describe it suggest that the cultic lampstand symbolized the fructifying powers of the eternal, unseen God. ***See also*** Lampstand. C.L.M.

trees, prized and sometimes venerated in ancient Palestine. Scrub forests of oak and terebinth covered portions of the central hill country, Galilee and Gilead, while solitary specimens or groves dotted the hills and valleys. Willows formed thickets along the Jordan (Jer. 12:5) and flourished by perennial streams. Tamarisks marked the Negeb and palms the oases. The prized cedar and firs grew only in Lebanon.

Trees were valued for their shade, making them an attractive place to pitch a tent (Gen. 13:18), build a shrine (Gen. 12:6–7), or judge disputes (Judg. 4:4). The ability of the deep-rooted tree to maintain its green foliage through summer heat and drought made it a symbol of life and endurance (Ps. 1:3; Isa. 65:22). The tree was also a symbol of might, especially the towering cedar (Ezek. 31:3; Dan. 4:10–12).

Trees had sacred associations in both Israelite and Canaanite religion, serving as memorial objects (Gen. 21:33) and as symbols of the Canaanite fertility goddess Asherah. They marked the open-air sanctuaries ("high places") honored by the patriarchs (Gen. 12:6–7) but condemned by the prophets for the illegitimate rites held there ("how she [Israel] went up on every high hill and under every green tree, and there played the harlot," Jer. 3:6).

Trees were especially esteemed for their fruit (including olives). The Garden of Eden was stocked with trees for food (Gen. 2:16), and only fruit-bearing trees are mentioned in Gen. 1:11 (cf. v. 29). When the trees seek a ruler, in Jotham's fable, they turn to the fruit trees (Judg. 9:8–13). And Jesus teaches that "the tree is known by its fruit" (Matt. 12:33; cf. 3:10).

Palestinian trees were not suitable for lumber, but they were used for roof beams, furniture, and implements. Large branches also served as gallows or for public display of executed criminals or enemies. Five NT passages use "tree" to designate the cross (Acts 5:30; 10:39; 13:29; Gal. 3:13; 1 Pet. 2:24). ***See also*** Cedar; Fig; Fir Tree; Forest; Olive; Tamarisk; Tree of Life, The; Willow; Woods. trial. ***See*** Temptation; Trial of Jesus, The.

trial of Jesus, the, the trial of Jesus before the Roman prefect Pontius Pilate (Matt. 27:11–14; Mark 15:2–5; Luke 23:17–25; John 18:28–38). This trial culminated in a sentence of death by crucifixion on the charge of activity that would subvert Roman rule, namely, claiming to be "king of the Jews" (Matt. 27:15–26; Mark 15:6–15; Luke 23:17–25; John 18:38–19:16). The accounts in the four Gospels are not identical, since each has been shaped by its author to instruct the readers about the true significance of Jesus' crucifixion. The accounts show a tendency to shift responsibility for Jesus' death away from Pilate onto the Jews, who are presented as rejecting God's Messiah (e.g., Matt. 27:23–25; Mark 15:14; Luke 23:22–25; John 19:12).

Before Pilate: The basic outline of the trial before Pilate suits known Roman procedures for the trial of a noncitizen, although it is evident that the Gospel accounts are not intended to be court records. A private accuser could charge someone with a misdeed, and the Roman prefect then had considerable freedom in deciding how to treat the charge. In accord with this procedure, Jesus is brought before Pilate's tribunal (Matt. 27:19 mentions the seat on which the judge sat [Gk. *bema*]) by accusers from among the chief priests and elders (Matt. 27:12; Mark 15:3; Luke 23:1, 4). Mark 15:2 suggests that the fundamental charge against Jesus was that of sedition: "Are you the king of the Jews?" Although the Gospels do not present Jesus as making such an explicit claim, it is not unlikely that popular estimation of him as a messianic figure would be so interpreted by the authorities. (For use of the term "king" as an indication of seditious activity, see Josephus *Antiquities* 17.10.8). The synoptic accounts suggest that Jesus refused to defend himself against the accusations. This motif also fits the early Christian understanding of Jesus as the suffering servant of Isaiah 53, since the servant remains silent before his accusers (Isa. 53:7); in John's account, however, Jesus does challenge his accusers. It was also characteristic of Roman court proceedings to subject both innocent and guilty defendants to beating. The severe flogging, which Jesus received, was frequently combined with some other form of punishment. John 19:12 suggests that Jesus' accusers threatened to denounce Pilate to Rome under the law of treason (as not being a "friend of Caesar") if he failed to condemn Jesus to death. Whatever the pressures brought to bear by those who handed Jesus over to Pilate to be tried, the final responsibility for the sentence in such a case belonged to the Roman governor alone.

Before the Sanhedrin: The Gospels of Matthew and Mark, and to a lesser extent Luke, appear to conceive of Jesus' appearance before the Sanhedrin as a formal trial, casting this event in parallel fashion to the trial before Pilate. Matt. 26:59–66 and Mark 15:55–64 present a night meeting of the Sanhedrin that culminates in the verdict of guilty on the grounds of blasphemy (Matt. 27:1; Mark 14:64) and hence deserving of death. Although there is no evidence that Jesus could be accused of blasphemy in the strictest sense (derogatory use of the divine name), his claims to religious authority and perhaps his prophecies against the Temple may have been interpreted as infringements against divine prerogatives. The precise nature of the proceedings before the Sanhedrin is much debated. Detailed sources for the legal requirements of a Jewish

trial are known to us only from second-century A.D. material and reflect Pharisaic or rabbinic traditions that may not have been in force at the time of Jesus. Before A.D. 70, the Pharisees probably played a minor role in the Sanhedrin, which was made up primarily of Sadducees and aristocratic elders from Jerusalem (the Gospels, in fact, do not assign a significant role to the Pharisees in the Sanhedrin proceedings). We also cannot be certain of the Sanhedrin's legal authority under the Roman prefects of Judea at this period. It is likely, however, that the Sanhedrin retained authority over religious and some civil matters as it had under the Herodians (i.e., prior to the deposition of Archelaus and the advent of direct Roman rule of Judea in A.D. 6). Particularly difficult to determine is whether the Sanhedrin retained the power of capital punishment. Most probably, the Sanhedrin's authority to decide capital cases was restricted to specific religious violations (e.g., cases of adultery), while other instances of capital punishment had to be at least confirmed by the Roman prefect. In the case of Jesus, the procedure before the Sanhedrin was most likely not a trial but a formal or informal hearing in preparation for bringing Jesus before Pilate. This is similar to what is presented in Luke 22:66–71, which has accusations against Jesus occurring during a morning meeting of the council (mentioned in Mark 15:1), which preceded handing Jesus over to Pilate. John 11:45–53 presumes that the decision to remove Jesus from the scene was taken on political grounds during an earlier meeting of the Sanhedrin before he was arrested. In John 18:19–24, Jesus is interrogated only by the high priests Annas and Caiaphas after his arrest and prior to being turned over to Pilate. Our sources do not permit us to know with historical certitude the nature of the events surrounding Jesus' arrest and trial. It is quite probable that the Jewish authorities in Jerusalem considered Jesus a troublesome, even dangerous, religious figure. Some sort of public, symbolic action of Jesus attacking the practices surrounding the Temple and perhaps predicting its purification or destruction in the end time finally triggered the decision to move against him. The chief priests and elders gathered, perhaps in a formal session, to determine the charges against Jesus and to decide on a strategy of handing him over to Roman authority for punishment. While the Romans would have little interest in religious debates among the Jews, they would be concerned if a religious claim threatened public order or imperial authority. While many recent scholars recognize that some responsibility for the death of Jesus should probably be assigned to the Jewish authorities, this is not the same as assigning guilt to them, much less to the people as a whole. Christian interpreters of the trial narratives must be aware of their potential for being misconstrued as anti-Jewish.

Before Herod: Luke 23:6–16 contains a notice that Pilate sent Jesus' case to Herod. The scene itself is modeled on elements of the trial before Pilate, with a parallel mocking of the victim by soldiers. There is no historical, legal reason for such a move. Offenders were tried where their crime occurred. Josephus (*War* 1.24.2) reports that Herod had an extraordinary privilege of extraditing offenders who had fled his realm for other parts of the empire. Some scholars suggest that memory of this tradition lies behind the Lucan incident. Others think that it may have been a gesture of courtesy on Pilate's part so as not to offend further the Jewish ruler with whom his relationships were already strained. Or Luke may have in mind the parallel with Paul's trial in Acts, where Festus refers Paul's case to Agrippa (Acts 25:13–27). In any case, Luke's account does not portray Herod as taking any action against Jesus. Therefore, the trial before Pilate is likely to have been the only legal trial of Jesus that resulted in the death sentence.

tribes, the, territorial groups and primary social organizational units in Israel's social structure before the establishment of the monarchy (pre-late eleventh century B.C.). The tribes can be viewed as distributive parts of one larger entity, Israel, whose identity is traced to an eponymous ancestor, Jacob (Israel; Gen. 33:28; 35:10). The tribe was a kind of corporate personality, a grouping of a varying number of protective associations or "clans," which in turn were associations of extended families. Israel did not have clans, properly speaking, if clans are defined as exogamous; in other words, the Israelite did not have to marry outside his or her "clan." The members of the Israelite "clan" or protective association typically lived in the same or nearby villages, rural neighborhoods, or sections of a larger settlement, provided mutual aid to all the extended families constituting the "clan," and provided troop quotas to the tribal levy. The extended family (which in the OT is called a "father's house"), clusters of which made up the clans, was the primary residential and productive unit in the social structure.

While each tribe had its own proper name, it was a tribe, properly speaking, only by virtue of the fact that it was one of the tribes of Israel. By

THE TRIBES OF ISRAEL

being a part of Israel, the individual tribe had a place as one of the primary segments of the whole people, and shared in that status equally with all other tribes. Thus it is only in terms of their structure and function within the larger whole that tribes can be understood. The particular identity of a tribe derived from such things as its migration experience, military struggles, and the ways in which it worked out a mixed agricultural and pastoral subsistence strategy dependent upon such things as the rainfall, soil fertility, and other natural resources of its tribal territory, which itself was not fixed either in scope or location but developed over time. A tribe was thus the part of the social structure that dealt with regional needs, provided for its own military self-defense through a tribal militia, and performed religious and legal functions.

The Lists of Tribes: The lists of tribes in the OT, of which there are more than twenty, differ from one another in several respects, notably in the position of the names of tribes and their number. The Song of Deborah (Judg. 5), which is probably the oldest listing (twelfth century B.C.), lists but ten tribes, omitting Judah, Simeon, and Levi. It separates Ephraim and Machir (Manasseh) into two tribes. The Blessing of Moses (Deut. 33) lists eleven tribes, omitting Simeon, but arrives at the number twelve by separating Joseph into Ephraim and Manasseh. The Blessing of Jacob (Gen. 49) lists twelve tribes and does not separate Joseph into two. Even though it lists Reuben as the firstborn of Jacob (by Leah), Reuben is removed from the place of preeminence among the tribes because of his indiscretion with his father's concubine (Gen. 35:22), and that place is assigned to Judah. This list also links Simeon and Levi together in disgrace because of the incident in connection with their sister Dinah (Gen. 34). The two census lists in Numbers (1:20–43; 26:5–50) include twelve tribes, arriving at that number by omitting Levi and listing Ephraim and Manasseh separately. The listing in Genesis 49 is the one maintained in most of the other lists in the OT (Gen. 35:22–26; Deut. 27:12–13; 1 Chron. 2:1–2; Ezek. 48:1–7).

The Ideal of Twelve: The ideal of twelve remained long after the tribal organization disappeared, even into the NT. Ezekiel, in his ideal state, redistributed the land among twelve tribes. A number of individuals in the NT retain their tribal identifications: Jesus from Judah (Matt. 12:6; Heb. 7:14; Rev. 5:5); Paul from Benjamin (Rom. 11:1); and Barnabas from Levi (Acts 4:36). Jesus promised the twelve apostles that they would judge the twelve tribes of Israel (Matt. 19:28; Luke 22:30), Paul refers to the twelve tribes (Acts 26:7), and the book of James is addressed to the twelve tribes in the Dispersion (James 1:1). Thus the number twelve seems to have been settled upon at some time in Israel's history, probably early in the monarchy, and the tribal nomenclature deriving from the names of Jacob's sons by his two wives, Leah and Rachel, and his two concubines, Zilpah and Bilhah, became a part of Jewish traditions. The tribes understood in this way can be charted according to the accompanying diagram.

The variations in the tribal listings, both in the number and position of individual tribes, reflect the fact that the tribes themselves were changing entities when seen in light of the whole of which they were considered to be a part, subject to both increase and decrease with changing situations. Sometimes fusion of formerly separate tribes would take place, as is apparently the case with Caleb, which became part of Judah. Simeon was similarly apparently absorbed into Judah. Sometimes tribes divided,

as did Joseph into Ephraim and Manasseh. Reuben apparently lost strength over time and disappeared. Levi seems to have changed its status and become a lineally determined group of priestly specialists rather than a discrete tribe.

Variations in the listings may also derive from the changing nature of tribal confederations and the leadership within those confederations. The Song of Deborah (Judg. 5) suggests an early voluntary coalition of ten tribes. The six sons of Leah may, at one time, have constituted an early tribal confederation. But Reuben and Zebulun, although both from Leah, show no geographical, historical, or religious affinities as tribes beyond that of any other pair of Jacob's sons. The concubine tribes, those from Bilhah and Zilpah, are sometimes considered as originally non-Israelite, and thus later additions to the confederation.

Several models of Israel's twelve-tribe confederacy or league have been presented. One such model is that of a religious confederacy called an amphictyony, which has analogues among the Greeks, Old Latins, and Etruscans. An Israelite amphictyony would have been a twelve-tribe confederacy organized around a covenant with God in support of a central shrine, with each member of the confederacy maintaining the shrine one month of the year. Other models suggest that the Israelite confederation was a protective association of autonomous political units, bonded together on the specifically religious grounds of a covenant with God but with many shrines rather than one central sanctuary. This confederacy functioned as the primary legal community and coordinated the national military organization, in such a way that the confederate organization encompassed and subsumed all members of the society and all subgroups within the society. ***See also*** Family, The; Government.

tribunal, one translation of the Greek word referring to the civil court rostrum or judge's bench in cities of the Roman Empire. According to Acts 18:12–17, Paul was brought by the Jews before the proconsul Gallio at the tribunal in Corinth, but the case was thrown out by the Roman official. Excavations at the site of Corinth in the earlier part of this century turned up, beneath a fourth- or fifth-century Christian church, a large platform in the center of the middle row of shops of the ancient forum or agora. Passages on either side connected the lower and upper areas of the forum. There are benches at the back and sides of the platform, which itself was originally faced with marble. Constructed perhaps ca. A.D. 44, this was probably the site of the trial of Paul and of the subsequent beating of Sosthenes, the ruler of the local synagogue.

According to Acts 25:6–21, Paul was also put on trial before the tribunal in Caesarea after Porcius Festus became governor. The site of this tribunal has not been found.

In Philippi, however, four steps at the north end of the forum have been discovered which are thought to have led up to the local tribunal, perhaps where Paul and Silas were accused by the owners of a slave girl exorcised by Paul (Acts 16:16–24). Similar steps have been found at Veroia, ancient Beroea.

The Greek term is translated "platform" in 1 Esd. 9:42, "public platform" in 2 Macc. 13:26, "throne" in Acts 12:21, and "judgment seat" in Matt. 27:19; John 19:13; Rom. 14:10; and 2 Cor. 5:10 (cf. also Acts 7:5, "a foot's length," literally, "a platform for the foot"). ***See also*** Corinth; Festus, Porcius; Gallio; Judgment Seat; Paul; Philippi; Throne. C.H.M.

tribute, tax, toll, payment of taxes or of tribute, as a sign of submission or noncitizenship. The conquered or noncitizens could be conscripted for purposes of labor (Exod. 5; Matt. 5:41; Josh. 16:10; 2 Chron. 8:7–8). Conquered peoples might also be compelled to pay tribute to the foreign ruler. Royal palaces are regularly decorated with reliefs showing the conquered peoples bringing their tribute to the king (1 Kings 20:1–7; 2 Kings 17:1–6; Neh. 5:4; Esther 10:1).

The most common form of direct taxation throughout antiquity is in the form of direct taxes on agricultural produce (Gen. 41:25–57). Josephus (*Antiquities* 14.203) reports that this tax amounted to 12.5 percent of the crop except in the Sabbatical Year. Increasing independence and political power might enable people to gain a reduction in taxes. Jonathan was able to gain sizable reduction in the land taxes for Judea, Samaria, and Galilee in exchange for his support of the Seleucid kings Demetrius I and II (1 Macc. 10:30–38; 11:28, 34).

Rulers might also derive income from royal estates, interests in other business ventures, and from confiscating the property of those executed as enemies. Herod may have sold or leased the lands of such persons to finance his building projects (Josephus, *Antiquities* 15.5–6). Taxation and confiscation led to the consolidation of landholdings in the hands of the rich, who then leased the land and employed stewards (often slaves) to supervise their property. This division between the wealthy landowner and the peasant is reflected in a number of the parables (Luke 16:1–6; Matt. 28:23–34; Matt. 20:1–16; Matt. 21:33–41; Luke 12:13–21; Luke 14:11–27; Luke 12:42–46).

We have little information about other forms of property taxation such as that on slaves, cat-

tle, and the "house tax" (Cicero, *Ad Familiaresi* 3.8.5; Josephus, *Antiquities* 19.299).

Unlike tribute, which was to be paid by the whole community, a poll tax might be imposed on individuals. This may have been the purpose of the census attempted by David (2 Sam. 24). Solomon succeeded in imposing taxes (1 Kings 4; 2 Chron. 9:13–28; 1 Kings 12:1–3). Quirinius took a census for this purpose in Syria, which apparently also included a census of the newly created province of Judea (Luke 2:1–2). Creation of the new province is also reported to have been the occasion for an outbreak of resistance to Rome led by Judas the Galilean (Acts 5:37; Josephus, *War* 2.118; *Antiquities* 18.23). Such an ideology of resistance apparently underlies the question about taxation posed to Jesus (Mark 12:13–17), who rejects such violence. Mark 12:15 may indicate that the amount of the imposed tax was a denarius (RSV: "coin").

Indirect taxes were imposed on economic activity. These included market taxes and port fees as well as customs duties (tolls) collected at ports and inland boundaries. While direct taxes were collected by local leaders, the indirect taxes were collected by tax collectors or publicans. Josephus reports that the wealth of one of the Jewish leaders at Caesarea, John, came from taxes collected on business at the port (*War* 2.287). Luke 19:1–10 refers to a wealthy Zacchaeus, collecting taxes at Jericho on the border between Perea and Judea. Tolls had to be paid on the transport of goods from one district to another (Matt. 9:9; Luke 5:27). These taxes appear to have been auctioned to the highest bidder, the "chief toll collector" for a region (Luke 19:2), whose agents manned the toll stations. There is evidence of tariffs as high as 25 percent of value on some items.

Every Israelite male was to pay an annual half-shekel offering toward the costs of the Temple (Matt. 17:24; Josephus, *War* 7.218; *Antiquities* 3.194–6; Philo, *Special Laws* 1.78), though the Essenes appear to have refused to make such an offering (4Q *Ordinances* 11.6–7). After the revolt in A.D. 70, Vespasian imposed the "Jewish tax" on Jews up to age sixty-two. This tax was paid by Jews whether or not they lived in Palestine. It is not clear whether this new tax led Jews outside the Empire to stop paying the half-shekel tax that had gone to the Temple and thus affected the balance of trade or not. The Jewish Tax was paid to the temple of Jupiter Capitolinus in Rome (Josephus, *War* 7.218; Suetonius, *Domitian* 12). ***See also*** Tithe.

trigon (tri′gon; KJV: sackbut), a small three-cornered, four-stringed musical instrument mentioned only in Daniel (3:5, 7, 10, 15). ***See also*** Sackbut.

Trinity, the, a term denoting the specifically Christian doctrine that God is a unity of three persons: Father, Son, and Holy Spirit. The word itself does not occur in the Bible. It is generally acknowledged that the church father Tertullian (ca. A.D. 145–220) either coined the term or was the first to use it with reference to God. The explicit doctrine was thus formulated in the postbiblical period, although the early stages of its development can be seen in the NT. Attempts to trace the origins still earlier (to the OT literature) cannot be supported by historical-critical scholarship, and these attempts must be understood as retrospective interpretations of this earlier corpus of Scripture in the light of later theological developments.

For the purpose of analysis, three relevant categories of NT texts may be distinguished (although such sharp lines of demarcation should not be attributed to first-century Christianity): first are references to the incarnation, describing a particularly close relationship between Jesus and God. Although a number of passages make clear distinctions between God and Christ and therefore suggest the subordination of the Son to the Father (e.g., Rom. 8:31–34; 1 Cor. 11:3; 15:20–28; 2 Cor. 4:4–6), there are other texts in which the unity of the Father and the Son is stressed (e.g., Matt. 11:27; John 10:30; 14:9–11; 20:28; Col. 2:9; 1 John 5:20). This emphasis on the unity of the Father and the Son may be understood as a first step in the development of trinitarian thought.

Second are passages in which a similarly close relationship between Jesus and the Holy Spirit is depicted. In the OT, the Holy Spirit (i.e., the Spirit of God) is understood to be the agency of God's power and presence with individuals and communities. In the NT, Jesus is understood to be the recipient of this Spirit in a unique manner (see esp. Luke 3:22, where the Holy Spirit descends in bodily form upon Jesus after his baptism), to be a mediator of the activity of the Spirit (Acts 2:33 and elsewhere), and even to be identified with the Spirit (Rom. 8:26–27, 34; John 14; cf. expressions such as "the Spirit of Christ," "the Spirit of the Lord," "the Spirit of Jesus," and Gal. 4:6, where God sends "the Spirit of his Son"). While one cannot use the creedal formulation that the Holy Spirit "proceeds from the Father and the Son" in its later dogmatic sense, in the NT the Holy Spirit comes to represent both the presence and activity of God and the continuing presence of Jesus Christ in the church.

Finally there are passages in which all three persons of the Trinity are mentioned in the same context. The most important of these are the "Apostolic Benediction" of 2 Cor. 13:13 (the

earliest trinitarian formula known) and the baptismal formula of Matt. 28:19 (perhaps a development from the simpler formula reflected in Acts 2:38; 8:16; and elsewhere; see also 1 Cor. 12:4–6; Eph. 4:4–6; 1 Pet. 1:2; Jude 20–21).

The formal doctrine of the Trinity as it was defined by the great church councils of the fourth and fifth centuries is not to be found in the NT. Nevertheless, the discussion above and especially the presence of trinitarian formulas in 2 Cor. 13:13 (which is strikingly early) and Matt. 28:19 indicate that the origin of this mode of thought may be found very early in Christian history. ***See also*** Baptism; Father; God; Holy Spirit, The; Incarnation; Jesus Christ; Monotheism; Son of God; Worship. T.R.W.L.

triumphal arch, a stone monument constructed to commemorate a signal event or achievement. Their mastery of the arch enabled the Romans to construct large freestanding arches for ceremonial purposes. The triumphal arch was built to honor the emperor and carried a dedicatory inscription. It was built with one or three openings and decorated with statuary or bas-reliefs relating the victorious campaigns of the emperor.

The arch of Titus stands near the entrance to the forum in the city of Rome. It combines the traditional Italian style of arch with decorative columns of the post-and-lintel Greek style. The arch includes reliefs celebrating Titus's sack of Jerusalem and destruction of its Temple in A.D. 70, an event that had enormous consequences for both Jews and early Christians. P.P.

Troas, Alexandria (troh´az, al´ig-zan´dree-uh), an important seaport city in Mysia on the northwest coast of Asia Minor. Built in 310 B.C. by Antigonus and named Antigonia, its name was changed to Alexandria by Lysimachus, who added Troas, derived from the nearby ancient city of Troy, to distinguish it from other cities named in honor of Alexander the Great. During the NT period, it was referred to simply as Troas. The city became a Roman possession by 133 B.C. Augustus gave it the status of a Roman colony, probably because of its importance as the nearest seaport for travel from Europe into the northwestern area of the Roman province of Asia. In Troas, during his second journey, Paul had a vision of a man from Macedonia inviting him to come to Europe (Acts 16:8–10). Paul and his companions revisited Troas on their final trip to Jerusalem, and Paul raised Eutychus, who had dozed and fallen from a third-story window while Paul was speaking (Acts 20:5–12). ***See also*** Eutychus. M.K.M.

Trogyllium (troh-jil´ee-uhm), a small peninsula jutting out from the west coast of Asia Minor just north of the east end of Samos. The strait thus formed is less than a mile across. Some ancient manuscripts include it in Acts' account of Paul's third missionary journey as a stopover; Acts locates it between Samos and Miletus (Acts 20:15; only in the margin in the RSV).

Trophimus (trof´uh-muhs), a Christian from Ephesus who, with Tychicus, joined Paul and others for the apostle's final visit to Jerusalem (Acts 20:4–5). Asian Jews mistakenly accused Paul of taking Trophimus, a Gentile, into the Temple's Court of Israel (Acts 21:29), thus provoking a mob disturbance that led to Paul's arrest. According to 2 Tim. 4:20, Trophimus (the same man?) remained at Miletus because of illness. Since Paul did not sail past Miletus en route to Rome, this note, if historical, may imply Paul's release from Roman imprisonment, further activity in the East, and a second imprisonment. ***See also*** Temple, The; Tychicus.

trumpet. ***See*** Music; Shophar.

Trumpets, Feast of, a celebration on the first day of the seventh month (Tishri) of the Hebrew religious year. Its name comes from its designation as a "day of (horn-)blasts" (Num. 29:1; cf. Lev. 23:24; Num. 10:10). It was a day of rest. An extra set of new-moon offerings was brought (except for one bull as a burnt offering) because it was the foremost of the new-moon celebrations (Num. 29:2–6; cf. 28:11–15). In the Bible, this day does not appear to have the character of a New Year's celebration. ***See also*** Feasts, Festivals, and Fasts.

trust. ***See*** Faith.

truth, a concept for which the OT has no distinct word. The word generally used means "constant, permanent, faithful, reliable." God above all is true, that is, real and reliable (Isa. 65:16; Jer. 10:10); people are to seek God's truth (Pss. 25:5; 51:6; 86:11). People are admonished to judge truly, and the lack of truth is lamented (Zech. 8:16; Isa. 59:14–15). Reports and prophecies may be true or false (1 Kings 10:6–7). In all these instances, the emphasis is upon reliability; something or someone true will stand up under testing. For the Hebrews, truth was moral and relational, not intellectual.

The Greek word for truth is primarily intellectual: truth is known, not trusted or relied on. NT usage draws on both Greek and OT understandings. The word is found mainly in the Pauline writings and especially the Gospel and Letters of John.

Paul can use the word in the Greek sense (Rom. 1:18), but more often he uses it with OT meanings: truth is to be obeyed (Rom. 2:8; Gal. 5:7); truth proves reliable (2 Cor. 7:14; 11:10); its opposite is malice and evil (1 Cor. 5:8). The Greek idea of truth as correct knowledge appears most clearly in the deutero-Pauline Pastoral Letters. One is to know the truth (1 Tim.

4:3; 2 Tim. 2:25) and avoid false beliefs (2 Tim. 2:18; 4:4).

The Gospel of John builds on the OT understanding that God is true or real (John 3:33; 7:28). Christ reveals God and thus reveals truth (John 8:26, 40; 18:37). Since Christ shares in God's truth, he is himself full of grace and truth (John 1:14, 17). Indeed, he is "the way, and the truth, and the life" (John 14:6); he is the true light and the true vine (John 1:9; 15:1). Christ sends the Counselor, the Spirit of truth (John 15:26). Thus, the OT understanding of God as truth extends to Christ and the Holy Spirit. The believer is guided into truth (John 16:13), to worship God in spirit and truth (John 4:23–24). Doing Christ's word enables one to know the truth and so be free (John 8:32). This Christian freedom is not due to possession of correct knowledge but rather comes from relationship to that which is truly real, namely, God. J.D.

Tryphaena (tr*i*-fee´nuh), a Christian who, with Tryphosa, receives greetings from Paul in Rom. 16:12. Perhaps the two were sisters; the designation "workers in the Lord," however, allows the possibility that Paul associates them because of their common activity in the church. Evidence from inscriptions indicates that both Tryphaena and Tryphosa were common names in that period.

Tryphosa (tr*i*-foh´suh). ***See*** Tryphaena.

tsade (tsah´deh), the eighteenth letter of the Hebrew alphabet. It stands at the beginning of the eighteenth section of Psalm 119 and, in the Hebrew, is the first letter in each verse (Ps. 119:137–144).

Tubal (t*oo*´buhl), one of the sons of Japheth (Gen. 10:2; 1 Chron. 1:5). He is paired most often with Meshech and/or Javan (Isa. 66:19; Ezek. 27:13) in biblical references, usually in regard to trade or to their chief, Gog (Ezek. 32:26; 38:2–3; 39:1). The geographic reference for the sons of Japheth is roughly Asia Minor and adjacent European land. Based on Assyrian records about "Tabal" in later history, Tubal lay in eastern Asia Minor.

Tubal-cain (t*oo*´buhl-kayn´), the son of Lamech and Zillah, brother of Naamah, half-brother and near-namesake of the herdsman Jabal and the musician Jubal (Gen. 4:22). The Semitic root (*wbl*) suggests "craftsman, forger" (lit., "bringer-forth"), thus the suffix "-cain" (Heb., "-smith") may be a gloss (an early explanatory comment later incorporated into the biblical text). Tubal-cain is known as a forger of all implements of copper and iron. As descendants of the fugitive-wanderer Cain, Tubal-cain and his relatives, and later the Kenites (Cainites), typify nomadic tradesmen associated with the rise of urban life and commerce and with the sin and violence it occasioned (Gen. 4:21–24). Gen. 4:25–26 records the contrasting birth of Adam's third son Seth, a distant ancestor of Israel, who "replaced" the slain Abel and in whose era was begun the custom of calling on Yahweh's name (cf. Gen. 4:26b). *1 Enoch* 6–9 recounts a similar association of civilized arts with sin, by way of amplification on Gen. 6:1–6. Kenites, paradoxically, were associated with the rise of Israel and Yahwism (Judg. 1:13; 4:11; 1 Sam. 15:6). ***See also*** Cain; Kenites. J.W.R.

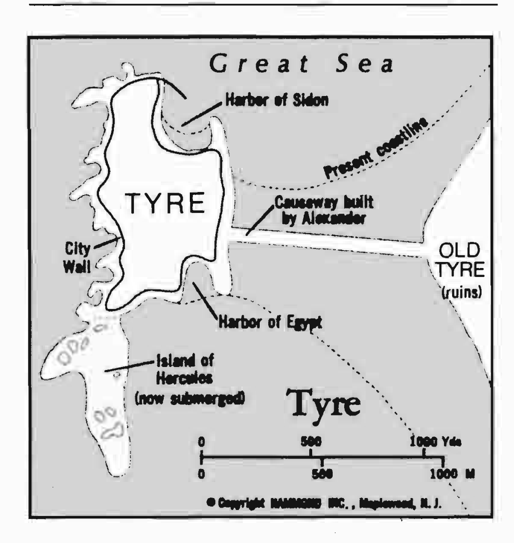
tumors, an affliction, similar to boils, with which the Philistines were afflicted while they held the Ark of the Covenant (1 Sam. 5:6–6:17).

tunic, loose-fitting, knee-length garment worn next to the skin by both men and women (Matt. 10:10; Mark 6:9). Another tunic or garment would be worn over the first. ***See also*** Dress.

turban, a cloth draped, wrapped, or wound around the head to give protection or distinctive appearance. The turban functioned as a priestly garment (Exod. 28:4, 37, 39; 29:6; 39:28, 31; Lev. 8:9; 16:4) for Aaron and carried the golden plaque inscribed "Holy to the Lord" (Exod. 28:36–37). Job saw his justice as being "like a robe and turban" (Job 29:14), but Isaiah's indictment of Jerusalem's women included removal of their turbans (Isa. 3:23). Ezekiel saw the humiliation of Judah in similar terms (defiant Jerusalem doting on Babylonians with flowing turbans, 23:15) or bypassing normal mourning by wearing the turbans as usual (Ezek. 24:17, 23). In his vision of the Temple, turbans were part of levitical garb (Ezek. 44:18). Zechariah's vision saw the priestly Joshua fitted with a clean turban in preparation for high-priestly duty (Zech. 3:5). R.S.B.

turtledove, a small wild pigeon (*Streptopelia turtur*). This bird migrates through Israel in the spring on the way from its winter quarters in Africa to its breeding areas in Europe. The Hebrew name (*tōr*) reflects its typical "tur-tur-tur" call.

The turtledove is mentioned in the Bible mainly as a sacrifice (Gen. 15:9; Lev. 1:14; 5:7), although Jer. 8:7 alludes to its seasonal appearance (see also Song of Sol. 2:12). In Luke 2:24 Mary sacrifices a turtledove after the birth of Jesus.



Twelve, the, a group chosen by Jesus to accompany him and share his ministry (Matt. 10:1–4; Mark 3:13–19; Luke 6:13–16; cf. John 6:70; Acts 1:13). The number apparently refers to the twelve tribes of Israel (Matt. 19:28) and symbolizes the restoration of Israel. As witnesses to his ministry and resurrection, the Twelve authenticate the church's postresurrection proclamation of the traditions about Jesus (cf. the selection of Matthias to replace Judas, Acts 1:15–26). ***See also*** Apostle; Disciple; Matthias.

twin, the. *See* Didymus.

Twin Brothers, the, in Greek mythology Castor and Pollux, twin sons of Zeus and Leda. Made into a constellation (Gemini) and thus considered gods, their chief interest was in the safety of mariners (they had been granted power over wind and waves). Many ships of that era had ensigns (or figureheads) on their bows. The ship that brought Paul from Malta to Italy (after the first ship had been wrecked, Acts 27) had as its ensign a replica of the Twin Brothers (Acts 28:11; KJV: "Castor and Pollux"). ***See also*** Boats; Zeus.

Tychicus (tik´uh-kuhs), an Asian Christian who, with Trophimus, joined Paul and others on the apostle's final visit to Jerusalem (Acts 20:4–5). Tychicus (the same man?) is apparently the bearer of Colossians and Ephesians (Col. 4:7–9; Eph. 6:21–22) and possibly of 2 Timothy (4:12). According to Titus 3:12, Paul planned to send either Tychicus or Artemas to Crete, thus freeing Titus to join Paul at Nicopolis. Possibly, Paul sent Artemas to Crete and Tychicus to Ephesus (2 Tim. 4:12). The actual movements of these co-workers of Paul are uncertain. ***See also*** Nicopolis; Trophimus.

Tyrannus (t*i*-ran´uhs), **hall of,** place mentioned in Acts 19:9, where it is asserted that Paul withdrew from the synagogue in Ephesus and began instruction in "the hall [Gk., "school"] of Tyrannus." Codex Bezae (the important "Western" text of Acts) adds that Paul taught from the fifth to the tenth hour (11:00 A.M. to 4:00 P.M.), a time not usually utilized by teachers of morality of this era for systematic instruction. It is not clear whether the hall of Tyrannus was a recognized center for moral instruction by philosophers or some sort of local trade union or guild center. It is highly unlikely that Paul's activity in the hall was systematic enough to be called a "school" in any recognizable sense. ***See also*** Ephesus; Paul. A.J.M.

Tyre (t*i*r), the leading city of Phoenicia during much of the first millennium B.C. Tyre is located off the coast of southern Lebanon on a small island that has been connected to the mainland since the construction of a siege ramp to it by Alexander the Great (late fourth century B.C.). Of its two harbors the northern (Sidonian) is an excellent natural anchorage while the southern (Egyptian) one was protected by jetties constructed in antiquity. Its mainland settlement, called Ushu by Egyptians and Assyrians, and Old Tyre in classical times, was probably located at Tell Rashidiyeh or Tell Mashouk opposite the island. Fresh water is found in springs on the island and additional water was ferried to it from the mainland in boats.

Sources for Tyre's history are varied; the most reliable are the OT and other contemporary Near Eastern records. Detailed information about the kings of Tyre comes in the first century A.D. from the Jewish historian Josephus who utilized the lost works of the Hellenistic historians Menander of Ephesus and Dius. They claimed access to Tyrian annals. Excavations by M. Chehab have concentrated on the Hellenistic and Roman ruins while a small but important deep sounding in the 1970s by P. Bikai revealed Phoenician layers. The city has been almost continuously occupied from the third millennium B.C. until the present, except for a major gap from 2000 to 1600 B.C. From the late Bronze Age there are Egyptian, Ugaritic, and Hittite references to Tyre, particularly during the Amarna Age when the Tyrian king Abi-Milki sent ten letters to the pharaoh Akhenaton requesting supplies and military assistance. A classical tradition states that Tyre was refounded by Sidonians around 1200 B.C., possibly in the wake of disturbances by the Sea Peoples, although archaeology shows there was no gap in the occupation of the city at this time.

Tyre emerges as an important Phoenician city in the tenth century B.C. when we learn that King Hiram supplied David with cedars and craftsmen (2 Sam. 5:11; 1 Chron. 14:1; 22:4). Tyre's relations with Israel became much closer when King Solomon turned to Hiram for assistance in building the Temple in Jerusalem. In a trade agreement Hiram responded by felling and transporting cedars and pine wood. Solomon, in return, sent wheat and olive oil to Tyre (1 Kings 5; 2 Chron. 2:3–16). Tyrian craftsmen assisted in the construction of the Temple (1 Kings 7:13–46; 2 Chron. 2:13–15; 4:11–18).

In Tyre Hiram renovated its temples. He also sent his experienced seafarers to join Solomon's fleet at Ezion-geber on the Gulf of Aqaba, whence they sailed to Ophir (1 Kings 9:26–28; 10:11–12; 2 Chron. 8:17–18; 9:10–11). Elsewhere Solomon's "ships of Tarshish" (Tartessos in Iberia?) sailed with Hiram's fleet (1 Kings 10:22; 2 Chron.

9:21–22). Tyre began its sustained program of colonization when it gained control of Kition on Cyprus sometime in the eleventh and tenth centuries B.C.; Hiram may have campaigned there. Ethbaal, a priest of the goddess Astarte, took the throne in the ninth century B.C. after a period of unrest. His daughter Jezebel married King Ahab, ruler of the Northern Kingdom, leading to an increase of Baal worship in Samaria. Tyre's close relations with Samaria, which are also seen in Israel's material culture, continued until Jehu put Jezebel to death (2 Kings 9:30–37).

In North Africa Carthage was founded by Tyre thirty-eight years before the first Olympiad (814 B.C.), an event stemming from a rift between King Pygmalion of Tyre and his sister Elissa (Dido) who led colonists there. In another story the ancient Greek historian Herodotus describes how Cadmus of Tyre led Phoenician colonists to Boeotia where they introduced the alphabet to the Greeks.

Assyrians received tribute in the ninth to seventh centuries B.C. from Tyre. In the campaign of 701 B.C. Sennacherib captured most of the cities of the Phoenician mainland, forcing Luli, king of Sidon, to flee Tyre to Cyprus. The Greek poet Menander (342–291 B.C.) gives a fuller account of the journey of Elulaeus (Luli), king of Tyre, to Cyprus and an unsuccessful five-year siege of the city by the Assyrians. The title "king of Sidon," or "king of the Sidonians," reflects Tyre's control of Sidon and other Phoenician cities. The Assyrian king Esarhaddon (681–668 B.C.) concluded a vassal treaty with King Baal of Tyre stipulating that Tyrian shipwrecks on the coast belonged to Esarhaddon and that an Assyrian official was to advise Baal. In return Esarhaddon granted Tyre trade in most Phoenician ports. The full extent of Tyrian commerce is described in the oracles of the prophets (Ezek. 27; Isa. 23; Amos 1:9–10; Joel 4:4–8; Zech. 9:2–4).

A thirteen-year siege of Tyre (586–573 B.C.) by the Chaldean (Babylonian) monarch Nebuchadnezzar commenced after his destruction of Jerusalem. The siege failed but Tyre submitted to Nebuchadnezzar. Later in the Chaldean period (626–539 B.C.) judges ruled Tyre briefly. In the Persian period (539–333 B.C.) Tyre was surpassed by Sidon as the leading Phoenician city, due to Tyre's loss of its commercial empire in the west to its former colony Carthage and to Persia's preference for Sidon. Tyre's last major act was in 332 B.C. when it impeded Alexander's route to Egypt, forcing him to besiege it seven months. In an epic battle he was the first to conquer the island city.

Although Tyre is mentioned in the NT, it did not play a significant role in the events reported there. The Gospels record that Jesus attracted followers from as far away as Tyre and Sidon (Mark 3:8), and once visited that area (7:24). A saying of Jesus which used Tyre as an example of a Gentile city that will fare better in the last judgment than Palestinian cities that rejected him is also recorded (Matt. 11:21–22). According to Acts, Herod (Herod Agrippa I, king of Judea A.D. 41–44) was struck dead because of blasphemous speech after winning a victory over Tyre (12:20–23), and the apostle Paul landed at Tyre on one of his sea voyages (21:3). *See also* Jezebel; Phoenicia; Sidon; Solomon; Temple, The.

Opposite: Casemate walls—two parallel walls divided by partitions—were widely used in Palestine beginning in the eleventh century B.C. Buildings, such as this synagogue at Masada (aerial view), could be built directly into the wall; in times of war the partitioned areas in the wall could be filled with rubble for reinforcement. In the Bible, Rahab's house was set in the city wall (cf. Josh 2:15).

U V W

Ucal (yoo'kuhl), a word understood by many scholars to be a proper name, the pupil or son of the sage Agur (Prov. 30:1). However, the Hebrew of the verse is obscure and some scholars follow the Greek version (Septuagint) and regard the word as a verb meaning "I languish" or something similar.

Uel (yoo'uhl; Heb., "will of El [God]"), a postexilic member of the clan of Bani who took a foreign wife (Ezra 10:34).

Ugarit (yoo'gahr-it). ***See*** Ras-Shamra.

Ulai (yoo'li), a river in the Babylonian province of Elam beside which Daniel saw himself in a vision (Dan. 8:2). Of the three streams near Susa (Shushan), the capital city of Babylonia, the Eulaeus is probably the one referred to. It flows near Susa before joining the Chospes River. ***See also*** Shushan.

Ulam (yoo'luhm). **1** A descendant of Manasseh of the clan of Gilead (1 Chron. 7:16, 17). **2** The son of Eshek; he was a Benjaminite descendant of King Saul and head of a family of archers (1 Chron. 8:39–40).

unbeliever, a term found almost exclusively in the Letters of Paul, where it apparently denotes any person who is not a member of the Christian community (cf. 1 Cor. 6:6; 7:12–15; 10:27; 14:22–24; 2 Cor. 4:4; 6:14–15; also Rom. 15:31, where a different Greek word is thus translated). ***See also*** Faith.

uncle, generally the father's brother. There are various persons in Scripture who are obviously uncles, but the term "uncle" (Heb. *dod*) is used rarely. In Leviticus (10:4; 20:20; 25:49) it is used to mean a close kinsman who could function as the "redeemer" (Heb. *go'el*). If an Israelite was forced to sell part of his patrimony, the redeemer purchased it in order to prevent the family's property from being alienated. In Amos 6:10 the reference is to one (KJV: "uncle"; RSV: "kinsman") who must perform the burial of a near kinsman. Elsewhere the term refers to Saul's uncle, Abner (1 Sam. 10:14–16; 14:50); David's uncle, Jonathan (1 Chron. 27:32); Mattaniah, Jechoiachin's uncle (2 Kings 24:17); Abihail, father of Esther and uncle of Mordecai (Esther 2:7, 15); and Shallum, uncle of Jeremiah (Jer. 32:7–12). F.S.F.

unclean. ***See*** Animals; Purity.

unction, the act of anointing with oil; one of the seven sacraments of the Roman Catholic Church. ***See also*** Anoint.

United Monarchy, the period when the twelve tribes of Israel were under one king. David's becoming king over Judah (2 Sam. 2:1–7) was largely on the same basis as Saul's kingship; both were military heroes rising to kingship. However, when David became king over Israel (2 Sam. 5:1–5) and then conquered Jerusalem (2 Sam. 5:6–12), he initiated the United Monarchy. As suddenly as the United Monarchy arose around 1000 B.C., it ended with the death of David's son and successor, Solomon, in 922 B.C. Despite all the personal brilliance of David and Solomon, the longstanding traditions of premonarchical tribal alliances continued to haunt the monarchical traditions in succeeding centuries. Nevertheless the power of diverse ideologies and theologies that arose around the house of David persisted in both Judaism and Christianity, serving as a reminder of the period of the United Monarchy. ***See also*** David; Saul; Solomon. K.H.R.

unknown god, an, a designation referred to in an inscription on an altar seen by Paul in Athens (Acts 17:23), which he then used as the basis for his famous Areopagus (or Mars Hill) sermon (Acts 17:22–31). It was apparently a custom in the ancient world for altars to be dedicated to "unknown gods," lest one be forgotten and thus insulted. Such inscriptions have been found, but only in the plural, "gods." ***See also*** Areopagus; Athens.

unleavened, an adjective describing something made without yeast, usually bread (Heb. *matzah*). While unleavened bread could be used for ordinary meals (1 Sam. 28:24–25), it appears most frequently in religious contexts. Lev. 2:4, 11 stipulate that cereal offerings made at the Temple must be unleavened. Both leaven and honey were forbidden due to their association with fermentation and thus, corruption (cf. 1 Cor. 5:8). The unleavened bread not consumed on the sacrificial altar was eaten by the priests (Lev. 10:12–13).

Unleavened bread was also eaten during the Festival of Unleavened Bread, a seven-day festival that originally followed the one-day Passover celebration (Lev. 23:5–8; Num. 28:16–25; cf. Exod. 23:15; 34:18; Deut. 16:1–8; Ezek. 45:21–25; Mark 14:1; Matt. 26:17; Luke 22:1; Acts 12:3; 20:6). Leavened bread was forbidden during this festival to mark the beginning of the grain harvest which concluded at the Feast of Weeks (Lev. 23:15–21; Num. 28:26–31; Deut. 16:9–12). The eating of unleavened bread at this festival was also linked to the Exodus from Egypt when, according to the narrative tradition, the Israelites could not wait for

The baking of unleavened bread (*matzah*) illustrated in a fourteenth-century Vogel Kopfhaggada. The artist portrayed humans with birds' heads to "comply" with the second commandment's prohibition against graven images (Deut. 5:8).

the dough to rise because of their haste to escape from Egyptian bondage (Exod. 12:14–20, 34–39). ***See also*** Passover, The. M.A.S.

Unleavened Bread, Feast of the (also called "The Feast of Mazzoth," from Heb. *matsōt,* "unleavened bread"), originally an agricultural festival marking the beginning of harvest; it was celebrated for seven days beginning on the fifteenth day of the month Abib (Nisan, the period March–April; Exod. 23:15; 34:18–20). It was later combined with the Passover (Exod. 12:1–20; Ezek. 45:21–24; Matt. 26:17; Luke 22:1). ***See also*** Feasts, Festivals, and Fasts; Passover, The; Time.

Unni (uhn´*i*). **1** A Levite musician who was appointed to help celebrate the transfer of the Ark of the Covenant to Jerusalem (1 Chron. 15:18, 20). **2** A scribal marginal correction ("Qere") for the name Unno, a Levite who returned with Zerubbabel from the Babylonian captivity (Neh. 12:9); some versions retain the name Unno.

unpardonable sin, an idea based on Mark 3:28–30. To blaspheme is to slander, defame, revile. The verses must be understood in their context: Jesus healed the sick, evil spirits recognizing him as the Son of God. Yet he was accused of being possessed by Beelzebul and casting out demons "by the prince of demons" (Mark 3:22). But Jesus' power comes from the Holy Spirit. Those who identify the beneficent works of the Holy Spirit with Beelzebul are thus committing an unpardonable sin: they attribute Jesus' power to the devil and thereby deny the saving work of God. S.B.

upharsin (y*oo*-fahr´sin). ***See*** Mene, Mene, Tekel, Upharsin.

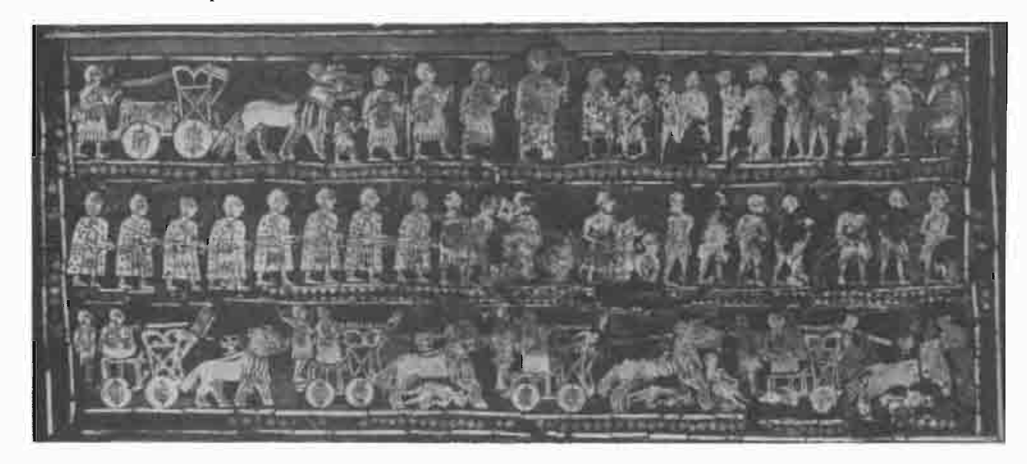
Uphaz (y*oo*´faz), a word usually understood as a proper noun; it is an otherwise unknown location where gold was obtained (Jer. 10:9; Dan. 10:5). However, the Hebrew text is uncertain in both references. Many scholars, following some ancient versions (Targums, Syriac, Heb. manuscripts), take Uphaz as a scribal error for Ophir, a near legendary source of gold (cf. 1 Kings 9:28). Other scholars have suggested that Uphaz is a misspelled form of the word "refine" (Heb. *mūphāz*) and should be translated "pure" or "finest" (cf. 1 Kings 10:18; Song of Sol. 5:11). Various English versions translate the word in different ways. ***See also*** Ophir. D.R.B.

upper room, the room in which Jesus is said to have celebrated his last meal with the disciples (Mark 14:15). According to Acts 1:13, the disciples continued to gather there in the days before Pentecost. The much later story of the pilgrimage of the Spanish nun Egeria to the Holy Land (A.D. 384) also claims that Pentecost took place in a building. The present site identified as the Upper Room is in a building that is also claimed to be the tomb of David (though David is buried in his city on the hill, 1 Kings 2:10). The identification of that building as the site of the Upper Room was made no earlier than the tenth century A.D., however. P.P.

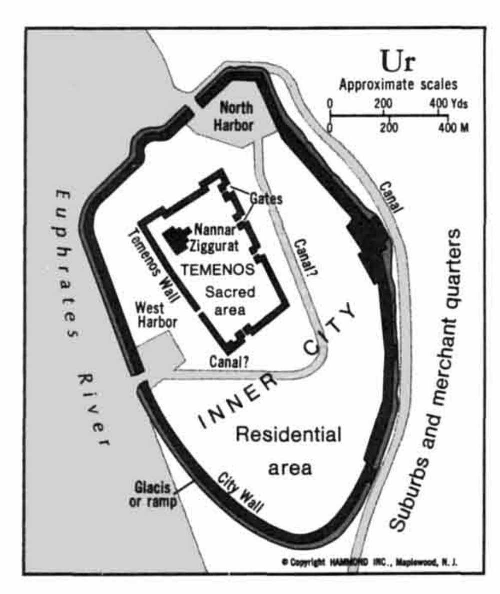
Ur (oor), one of the oldest cities of southern Mesopotamia. Ur, modern Tell el-Muqayyar, lies ten miles west of the Euphrates, on whose bank it stood in antiquity, before the river changed course. The site is an oval, about a half-mile at its greatest extent, dominated by an oblong sacred enclosure.

Modern exploration of Ur began in the nineteenth century and resumed at the end of World

War I. The most important work was Leonard Woolley's systematic excavations of 1922–1934, and since then there has been little, apart from some restoration. Woolley's work revealed that Ur was occupied already in the latter phases of the Ubaid period (ca. 5000–4000 B.C.), the earliest known period of settlement in southern Mesopotamia. From there, it continued for five thousand years, through all the subsequent periods of Mesopotamian history. So in the Uruk and Jamdat Nasr periods (ca. 4000–2900 B.C.), the beginnings of writing and monumental architecture marked the emergence at Ur, as elsewhere in southern Mesopotamia, of complex urban society. In the Early Dynastic period (ca. 2900–2350 B.C.), Ur held a key position in what by then had become a thriving network of southern city-states. During the Akkadian period (2350–2154 B.C.), Ur and the rest of that network fell under the control of the Sargonic dynasty of Agade, with Ur receiving particular attention for the cult of the moon god, its patron deity. In the Post-Akkadian and Ur III periods (2154–2004 B.C.), Ur resumed its independence and then became the focus of a Mesopotamian empire of its own. Most of that political power was lost in the following Isin-Larsa and Old Babylonian periods (2004–1740 B.C.), but Ur managed to retain its importance as a center of international trade and of scribal and religious activity.



Devastated in 1740 B.C., Ur entered a millennium of modest existence (1740–ca. 600 B.C.), as a relatively unimportant city controlled by a succession of Babylonian and Assyrian overlords. This political subservience remained, but was offset by a major rebuilding program under the Neo-Babylonian/Chaldean Empire (ca. 600–539 B.C.). When the Neo-Babylonian Empire fell to Cyrus the Persian (539 B.C.), the new construction was maintained and even furthered. By the late fourth century B.C., however, as Persian rule gave way to Greek, Ur was fading fast—its decline due especially, it appears, to the beginning of a shift in the Euphrates River bed, which had been so important for the city's transportation and agriculture. By the following century, the end seems to have come, as all evidence for the city ceases.



For this long history, several discoveries of the Woolley expedition have proven especially illuminating or controversial. Thus, in the Ubaid period, a thick layer of clear silt was found, separating occupational levels of the later two phases. Woolley's ascription of the silt, however, to the primeval Flood has not won serious support; and most prefer to understand it as the product of local flooding, which was a frequent occurrence in the Euphrates region.

The prize discovery of the Early Dynastic period was the royal cemetery of phase IIIA (ca. 2600–2450 B.C.). Its sixteen large, vaulted shaft tombs yielded a wide array of treasures—a gold dagger and helmet, lyres, he-goat statues, etc.—and the bodies not only of the principal personages, but, in the major tombs, also of male and female attendants and animals, along with wheeled vehicles. The principals seem to have been Ur's rulers; the animals and other humans were perhaps killed on the rulers' deaths to accompany them to the netherworld. Burial of high persons with retainers is also found contemporaneously at the Mesopotamian city of Kish; whether it is alluded to in any Mesopotamian texts is problematic.

In the Ur III period, the kings sought to make the city as imposing physically as it was politically. Among their achievements that Woolley's team excavated were a massive brick city wall; a large complex dubbed the "Mausolea," containing burials of apparently prominent persons; a number of buildings in the sacred enclosure, including the three-storied ziggurat, the giparu-complex, which contained a shrine

Standard of Ur shows a king at war and triumphant at the defeat of his enemies; Sumerian enameled panel, first half of the third millennium B.C.

Plan of the site of ancient Ur.

and rooms for the high priestess of the moon god, and a royal palace. Many of these buildings were enlarged and others added in the Neo-Babylonian/Chaldean revival. For example, a new wall was constructed around the sacred enclosure, the ziggurat was increased from three stories to seven, a new temple and palace were built, the latter (the so-called Palace of Bel-shalti-Nannar) possibly for the Babylonian king or his local governor of Ur. Finally, Woolley was able to illumine the private citizen's life at Ur by excavating several private housing quarters, both from the Isin-Larsa/Old Babylonian periods and from the Neo-Babylonian.

In the Bible: In the OT, Ur is mentioned four times (Gen. 11:28, 31; 15:7; Neh. 9:7), in each instance as the home of the patriarch Abraham before his migration to Harran and Canaan, and in each instance the Hebrew phrase *Ur Kasdim* is used. *Kasdim* here almost certainly indicates the "Chaldeans" (cf. already the Septuagint), which suggests that the phrase as a whole refers to the southern Mesopotamian Ur of the period of the Neo-Babylonian/Chaldean Empire. To be sure, this period is much too late for Abraham, and so most modern scholars suppose that the use of the term *Kasdim* here is an anachronism of the biblical editors, who would have worked during the Babylonian exile, precisely the heyday of Chaldean Ur. C. H. Gordon has offered another solution. Prompted especially by the fact that elsewhere in the OT the lineage to which Abraham belongs is located only in northern Syria (e.g., Gen. 24), he has suggested that Ur Kasdim is not the southern Ur, but a northern Syrian one, which he has identified with Ura, north-northeast of Harran. His identification recalls some earlier traditions that equate Abraham's Ur with Urfa (Edessa), northwest of Harran. Both identifications, however, are largely rejected today in favor of the southern Ur, which better suits the epithet Kasdim—the Chaldeans were never centered in northern Syria—and which was by far the best known Ur in antiquity. ***See also*** Abraham; Babylon; Chaldea; Flood, The; Sargon II. P.B.M.

Uri (yoor'*i*, a shortened form of Uriah, Heb., "Yah [God] is my light"). **1** A Judahite; the father of Bezalel, the craftsman who supervised the construction of the tabernacle (Exod. 31:2; 2 Chron. 1:5). **2** The father of Geber, a district administrator under King Solomon (1 Kings 4:19). **3** A postexilic levitical gatekeeper who took a foreign wife (Ezra 10:24).

Uriah (yoo-r*i*'uh; Heb., "God is light [or fire]"). **1** A Hittite who was one of David's "heroes" (2 Sam. 23:39; 1 Chron. 11:41). His house was in Jerusalem (2 Sam. 11:9–11). While he was on the battlefield David took Uriah's wife, Bathsheba, ordering him to such an exposed position during the siege of Rabbath-ammon (the present Amman, capital of Jordan) that his death was inevitable (2 Sam. 11:12–17). His name indicates a foreign ancestry. In Hurrian Ariya means "king" or "ruler." It has been suggested that the Hurrian element later received the present Israelite form. **2** The high priest in the reign of Ahar of Judah (ca. 735–715 B.C.). He carried out innovations for his king, like the installation of an altar similar to one seen by Ahaz in Damascus (2 Kings 16:10–16). Apparently he is the priest who was taken by Isaiah (8:2–4) as his witness for the fulfillment of his prophecy against Samaria. **3** A son of Shemaiah, a prophet of Kiriath-jearim. His rebuke of King Jehoiakim (ca. 609–598 B.C.) and prophecies of destruction like those of Jeremiah had necessitated his flight to Egypt, whence he was brought back, slain, and interred in a common grave (Jer. 26:20–23). Over a generation ago, one scholar considered this Uriah to be "the prophet" of the Lachish Letters. Lachish Letter IV seems to have been addressed to a person of this name, though it was never received since the crisis of Babylonian intervention in 598 B.C. prevented its being forwarded. **4** A priest, father of Meremoth, contemporary of Nehemiah (Ezra 8:33; Neh. 3:4, 21). **5** A priest who stood beside Ezra in Jerusalem when he read the Law to the returned exiles (Neh. 8:4). Y.G.

Uriel (yoor'ee-uhl). **1** A prominent Kohathite Levite who helped bring the Ark from the home of Obed-edom to Jerusalem (1 Chron. 6:24; 15:5, 11). **2** A man of Gibeah whose daughter, Michaiah, became the mother of King Abijah of Judah (2 Chron. 13:2). **3** An angel (2 Esd. 4:1–11). Uriel served as a guide to Enoch in the upper heavens (*1 Enoch* 19–22) and was one of the four angels of the Presence (cf. *1 Enoch* 9:1).

Urijah (yoo-r*i*′juh; Heb., "my light is Yah [God]" or "Light of Yah"), a variant spelling of Uriah, the chief priest in Jerusalem during the reign of King Ahaz (ca. 735–715 B.C.). He built a new altar at the king's order patterned after an Assyrian altar that Ahaz had seen in Damascus. He apparently did not object to other Assyrian-influenced innovations introduced by Ahaz (2 Kings 16:10–16; note also vv. 17–18). He is called by Isaiah as a witness of the prophecy of the Assyrian invasion (Isa. 8:2, here called Uriah). The more proper spelling of the name is Uriah, which some versions use. ***See also*** Uriah. D.R.B.

Urim (yoor′im) **and Thummim** (thum′im), a device consulted by the chief priest (in an unexplained manner) to determine God's response to "yes" or "no" questions asked by the leader of the people (Num. 27:21; 1 Sam. 14:41; 28:6). It was borne in a pouch worn by the priest, over the heart, on the ephod garment (Exod. 28:30). Apparently, the use of the Urim and Thummim is sometimes indicated by the term ephod (1 Sam. 23:9–12; 30:7–8), by reference to the Ark of the Covenant (Judg. 20:27; 1 Sam. 14:18), and by the phrase "ask of God" (1 Sam. 23:2, 4).

The Urim and Thummim may have been superseded by prophetic oracles after the time of David, and by the period of the return of the Babylonian exiles they were just a memory transmuted into an indefinite future (Ezra 2:63; Neh. 7:65). ***See also*** Ephod. J.U.

Uruk (oor′uhk). ***See*** Erech.

usury. ***See*** Loan.

Uthai (y*oo*′th*i*). **1** A postexilic inhabitant of Jerusalem, a Judahite of the clan of Perez (1 Chron. 9:4). **2** A member of the clan of Bigvai who returned from the Babylonian captivity with Ezra (Ezra 8:14). The name may be a variant of Athaiah, which, following an Arabic etymology, would mean "pride of Yahweh" or "Yahweh is my pride."

Uz (uhz). **1** The son of Aram and grandson of Shem (Gen. 10:23; see 1 Chron. 1:17, where Uz is listed as a "son" of Shem). **2** The son (RSV: "Huz") of Nahor and Milcah and brother of Buz (Gen. 22:21). **3** The son of Dishan and brother of Aran the Horite (Gen. 36:28; 1 Chron. 1:42). **4** The homeland of the "daughter of Edom" (Lam. 4:21). **5** The homeland of Job (Job 1:1). The location of Uz is uncertain. In Job 1:19 this land is described as a desert area. In Jer. 25:20 Uz is linked inexplicably with the land of the Philistines. In Job 1:15 and 1:17, respectively, Uz is said to have been attacked by Sabeans (from Arabia) and Chaldeans (from Mesopotamia). As noted above, Lam. 4:21 says that Uz was the homeland of the "daughter of Edom." The mention of Job's three friends, Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite (Job 2:11), also points toward Edom; e.g., in Gen. 36:4 Eliphaz is listed as a descendant of Esau, i.e., Edom (see Gen. 36:1). Overall the evidence indicates that Uz was a desert region east of Palestine, either in Edom or, perhaps, northern Transjordan. ***See also*** Edom; Job, The Book of. J.M.W.

Uzal (y*oo*′zuhl), a son of Joktan (Gen. 10:27; 1 Chron. 1:21) and a clan name whose association with other names and locations south of Moab suggests an Arabian location. In Ezek. 27:17 the association of Uzal with other Arabian locations suggests modern San'a in the southwest corner of the peninsula about seventy miles west of Marib.

Uzza (uhz′uh). **1** The burial garden of Manasseh (2 Kings 21:18) and Amon (21:26), kings of Judah. **2** A Benjaminite son of Gera (1 Chron. 8:7). **3** In postexilic Jerusalem a family of Temple servants (Ezra 2:49; Neh. 7:51).

Uzzah (uhz′uh). **1** A son of Abinadab, who assisted in moving the Ark from his father's house. He was killed when the Ark threatened to tip, and Uzzah broke the taboo against handling sacred objects by touching it (2 Sam. 6:3–8; 1 Chron. 13:7–11). **2** A Merarite son of Mahli (1 Chron. 6:29).

Uzzen-sheerah (uhz′uhn-shee′uh-ruh; Heb., "ear of Sheerah"; KJV: "Uzzen-sherah"), a village built by the Ephraimite daughter Sheerah (1 Chron. 7:24). While it is presumably near the other villages she is credited with having built, namely, Upper and Lower Beth-horon, the site remains unidentified.

Uzzi (uhz′*i*; Heb., "strength"). **1** An Aaronite priest descended from Eleazar (1 Chron. 6:5–6). **2** A clan chief of Issachar, and the son of Tola (1 Chron. 7:2–3). **3** A group of Benjaminite families (1 Chron. 9:8). **4** A postexile Benjaminite family (1 Chron. 9:8). **5** A Levite descendant of Asaph (Neh. 11:22). **6** The head of a priestly family of Jedaiah under Joiakim (Neh. 12:19). **7** A Levite musician who participated in dedicating the restored walls of Jerusalem (Neh. 12:41).

Uzziah (uh-z*i*′uh; Heb., "Yah [God] is strong"), the name of several people mentioned in the Hebrew Bible. **1** The son of Amaziah and the father of Jotham. All three of these men reigned as kings in Jerusalem during the eighth century B.C. Uzziah (called Azariah in 2 Kings 14:21; 15:1–8, 17–27; 1 Chron. 3:12) ascended the throne at the tender age of sixteen; his father was driven from office, and the son enjoyed popular support. Uzziah had some military success over local enemies, particularly the Philistines, Ammonites, and Meunites (2 Chron. 26:6–8). During his long reign, he seems to have devoted considerable attention to agriculture. To improve the land's yield, Uzziah

built towers in the wilderness and dug wells in the Shephelah and in the plain. On his behalf loyal subjects engaged in viticulture and agriculture. Uzziah also paid close attention to equipping an army, according to 2 Chron. 26:11–15. In later life the king was stricken with leprosy. This illness was interpreted as divine punishment for pride, and the occasion for that pride was the king's attempt to usurp priestly prerogative. Because of this physical defect, Uzziah was forced to abdicate in favor of his son Jotham, who became acting ruler. Perhaps Uzziah's reign was best remembered for something over which he had no control, a devastating earthquake (Amos 1:1; Zech. 14:5). At least two prophets, Amos and Hosea, were active in his time, and Isaiah's well-known vision in 6:1–13 occurred in the year of Uzziah's death. **2** A Levite descended from Kohath (1 Chron. 6:24). **3** The father of Jonathan, an official over the royal treasuries in David's time (1 Chron. 27:25). J.L.C.

Uzziel (uhz´ee-uhl; Heb., "God is strong"). **1** The grandson of Levi, son of Kohath, and founder of the Kohathite levitical clan called Uzzielites (Exod. 6:18, 22; Lev. 10:4; Num. 3:19, 30; 1 Chron. 6:2, 18; 23:12, 20; 24:24; cf. Num. 3:27; 1 Chron. 26:23). David appointed Uzzielites to assist in bringing the Ark to Jerusalem (1 Chron. 15:10) and to serve among the Levites in the Temple (1 Chron. 23:12, 20; 24:24). **2** A man of Simeon who settled at Mt. Seir after destroying the Amalekites there (1 Chron. 4:42). **3** The founder of a Benjaminite family (1 Chron. 7:7). **4** One of the sons of Heman, a clan of musicians appointed for Temple service by David (1 Chron. 25:4). **5** A Levite son of Jeduthun who helped cleanse the Temple under Hezekiah (2 Chron. 29:14). **6** A goldsmith, son of Harhaiah, who helped rebuild the wall of Jerusalem under Nehemiah (Neh. 3:8) M.A.S.

V

vagabond, one who wanders without a fixed place of residence. It is a symbol in the OT for the sudden and unexpected appearance of poverty to the indolent person (Prov. 6:11). The term is also used in the KJV in other places: Gen. 4:12, 14; Ps. 109:10 (RSV: "wanderer"); Acts 19:13 (RSV: "itinerant").

vail. ***See*** Veil.

vale, valley, a depression in the earth's surface. The land of Palestine features a wide variety of valleys, ravines, and gorges due to the presence of the Carmel and Central mountain

Animals grazing in the lower Jordan Valley of modern Israel.

ranges. The Hebrews used five different words to describe these valleys. In the north (Jezreel) and west there are many wide, fertile valleys or plains. The territory between the central ridge and the Jordan Valley is marked by numerous narrow gorges or precipitous canyons called *wadis* by the Arabs. Valleys served as the location for military battles (Gen. 14:8), cities (Gen. 19:29), crops (1 Sam. 6:13), springs (1 Kings 18:5), and grazing lands (1 Chron. 27:29).

valley, cities of the, the traditional title for the five cities of the Jordan Valley mentioned in Gen. 14:8 (cf. 13:12; 19:29): Admah, Gomorrah, Sodom, Zeboiim, and Zoar (Bela). ***See also*** Cities.

vanity, the English translation of various Hebrew and Greek words, particularly in the KJV. The basic idea appears to have been "that which is empty of meaning, purpose, or content." For example, one of the Hebrew words thus translated means "vapor" or "breath," that is, something devoid of substance or permanence. The worship of idols is vanity (cf.

Jer. 10:15; 16:19; Isa. 57:13; Acts 14:15). According to Ecclesiastes, the search for meaning in life is "vanity," that is, elusive and without definite substance. It should be noted that "vanity" is not used in the biblical writings to mean conceit or preoccupation with self. The meanings in the OT and the NT range from "nothingness" to "purposelessness" to "emptiness" to "chaos." J.M.E.

Vashni (vash´nī), in some translations (e.g., the KJV), the eldest son of Samuel according to 1 Chron. 6:28. Although the present Hebrew text of this verse reads "the firstborn [was] Vashni and Abijah," a parallel passage in 1 Sam. (8:2) reads: "the name of his firstborn was Joel and the name of his second, Abijah" (cf. 1 Chron. 6:33). Apparently, in the Chronicles passage the name "Joel" was inadvertently omitted and the Hebrew word meaning "and the second" (Heb. *veshēnî* or *vehashēnî*) was corrupted into a proper name.

Vashti (vash´tī), the queen of the Persian king Ahasuerus (Xerxes I); her royal position was taken from her because she refused to obey a summons from the king (Esther 1:9–22). ***See also*** Ahasuerus; Esther.

Vaticanus, Codex (vat´i-kan´uhs, ko´deks). ***See*** B.

vau (vou), the sixth letter of the Hebrew alphabet; its numerical value is six. In proto-Sinaitic inscriptions it is represented by a pictograph of a peg; later the circular top was open, so that the letter took on a Y-shape. The Aramaic cursive script has a variant of this form, as does the classical Hebrew square script. The old Phoenician *vau* seems to be the prototype of Greek upsilon, which the Romans turned into "U" and "V." ***See also*** Writing.

Veadar (vay´ah-dahr; Heb., "and Adar," also called *Adar Sheni,* "the second Adar"), a thirteenth month that was inserted into the Jewish calendar between the months Adar and Nisan; it is added seven times in a cycle of nineteen years to correlate the Jewish lunar-based calendar, composed of twelve lunar months of $29\frac{1}{2}$ days (a 354-day year), with the solar year (365 days). It falls in late March and early April. ***See also*** Time.

vegetables. ***See*** Food.

veil, a covering, usually of some type of cloth. **1** A piece of fabric worn by a woman to conceal her face or cover her head (Song of Sol. 4:1, 3; 6:7; Isa. 47:2). Apparently, an Israelite woman wore a veil at the time of her wedding. When Rebekah first saw Isaac, she put on her veil and, afterwards, they were married (Gen. 24:65–67). Jacob's inability to recognize that Leah had been substituted for Rachel on his first wedding

Women covering their faces with veils; first-century A.D. relief from Palmyra.

night can be explained if Leah was veiled. On the other hand, Tamar wore a veil to trick Judah into thinking that she was a prostitute so that he would lie with her and fulfill the levirite duty (Gen. 38:14, 19). According to Paul, women should wear veils when praying or prophesying (1 Cor. 11:4–16). **2** A covering Moses wore to conceal his face after he received the second set of tablets of the testimony at Mt. Sinai (Exod. 34:29–35). At that time, his face shone, which made the people afraid. Consequently he wore the veil except when he went in to speak with God. Paul claimed that this was to conceal the temporary nature of the old covenant (2 Cor. 3:13). **3** The covering over the entrance to the Holy of Holies in the Temple (2 Chron. 3:14), which also hung before the Ark in the wilderness tabernacle (Exod. 26:33; 35:12; 39:34; Lev. 24:3). Only Aaron and his sons were permitted to pass beyond the veil (Num. 18:7). At a later time, only the high priest could enter the Holy of Holies and only on the Day of Atonement (Lev. 6:2). According to the Gospels, the veil of the Temple tore at Jesus' death, exposing the Holy of Holies (Matt. 27:51; Mark 15:38; Luke 23:45). M.A.S.

vengeance, punishment in retribution for injury. God appears as a God of vengeance, particularly in the OT, exacting punishment both upon Israel for infidelity to the Covenant (Lev. 26:25; cf. Luke 21:22) and upon other nations for their treatment of Israel (Deut. 32:35; Isa. 61:2).

In Israelite society, private vengeance by the "avenger of blood" of the injured family was the

rule in cases of injury and death (Num. 35:9–28; cf. Gen. 4:23–24). A tendency to mitigate this practice (cf. Gen. 4:15; 2 Sam. 14:1–24) appears in the institutions of sanctuary (Exod. 21:12–14) and cities of refuge (Num. 35:9–28), which provided some legal protection for one accused of murder, and in "an eye for an eye" (Exod. 21:23–25), which limited retribution to the extent of the original injury. Lev. 19:18 enjoins one to "love your neighbor as yourself" rather than to seek revenge (cf. Prov. 25:21), while Jesus, in commenting upon "an eye for an eye" (Matt. 5:38–42), and Paul, in appealing to God as a God of vengeance (Rom. 12:19), both eliminate vengeance as a legitimate motive for human behavior. ***See also*** Avenger; Blood; Cities; Judgment, Day of; Law; Murder; Pardon; Punishment, Everlasting; Reconciliation; Retribution. D.W.S.

vermilion, a bright red pigment comprised of mercuric sulphide and varying in color from crimson to nearly orange. It was the color of Jehoiakim's house which was condemned by the prophet Jeremiah (Jer. 14:22). Ezekiel declared it the color of images of Chaldeans in the condemned city of Oholibah (Jerusalem; Ezek. 23:14). In the Wis. of Sol. 13:14 wooden idols were painted this color (RSV: "red paint").

Vespasian (ves-pay´zhuhn), a Roman general who began the siege of Jerusalem in the first Jewish war of rebellion against Rome (A.D. 66–70). In the midst of the siege, he was named Roman emperor, and he ruled from 69 to 79. His son Titus, who took over the siege in Jerusalem and pursued it to its conclusion, also succeeded him as emperor (79–81). ***See also*** Titus.

vessel, a container, often for liquids. "Vessel" is the usual KJV translation for terms designating a wide variety of containers and implements (Heb. *keli;* Gk. *skeuos*); the RSV translates them "vessel," "bag," "bowl," "utensil" and "instrument." The most common vessels were of earthenware (Jer. 18:4; Rom. 9:21; figuratively, 2 Cor. 4:7), followed by baskets, and vessels of metal, skin, stone, and wood. Pottery vessels included bowls, basins, jars, flasks, pots, and goblets. They were used for storage and transportation (of water, oil, grain, and olives), cooking, eating, drinking, and presenting offerings. They are found in every domestic excavation site and in graves, where they accompanied the deceased with provisions. Skin vessels were used for drawing and carrying water, storing wine, and churning milk. Vessels

Iron Age Philistine vessel decorated with geometric patterns and stylized bird.

of gold, silver, copper, and bronze were employed in the tabernacle and Temple service (Exod. 37:16; Num. 7:85; 2 Kings 25:14; see Mark 11:16; the RSV translates *skeuos* as "anything"), while alabaster vessels held fine perfumes and ointments (e.g., Mark 14:3). ***See also*** Pottery. P.A.B.

vestibule. ***See*** Porch.

vesture, an archaic word for garments or clothes. Garments were made of wool, leather, or linen and were worn for protection and for reasons of modesty (Gen. 3:7, 21; 9:23). Special occasions, such as weddings or funerals, were marked by the wearing of special garments (Gen. 37:34; 38:14; Matt. 22:11). Special vestments were also used to distinguish people in their official functions, such as rulers, priests, and prophets (Gen. 41:42; Exod. 35:19; 2 Kings 2:13–14). ***See also*** Dress.

Via Dolorosa (vee´uh doh-luh-roh´suh; Lat., "way of pain"), the traditional pilgrimage route in Jerusalem commemorating Christ's journey to the cross (Mark 15:20–23). The traditional route is not likely to have been historical, since Pilate probably condemned Jesus at the Herodian palace on the opposite side of the city (Matt. 27:19; Luke 23:4; John 18:28; Philo *Delegation to Gaius* 38; Josephus *War* 2.301). A route from there through the city to Golgotha would have led east on David street and then west on Triple Suk to Golgotha.

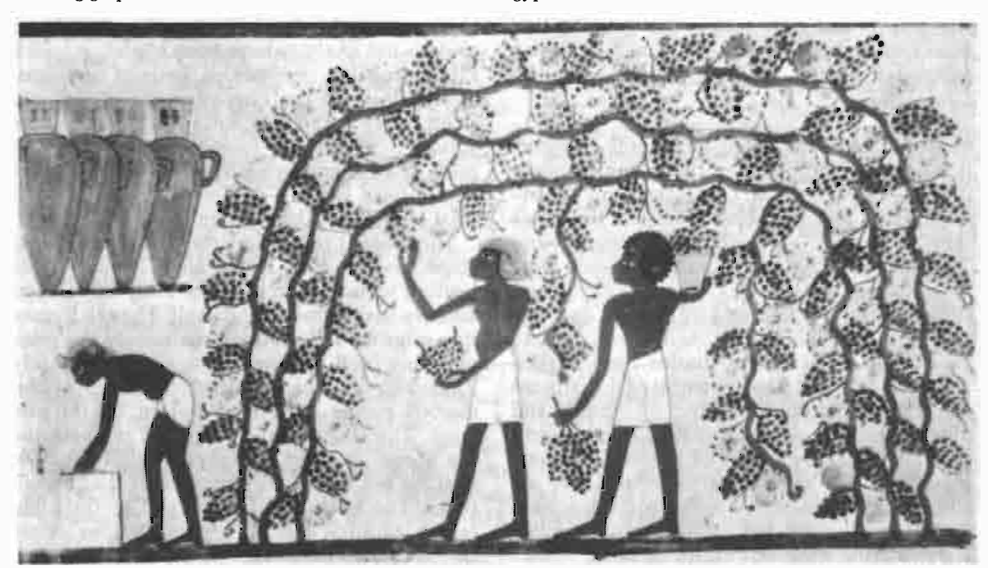
The present route consists of two devotional stops near the Ecce Homo arch, seven outside leading to the Church of the Holy Sepulchre, and five inside the church itself. Though Byzantine pilgrims followed approximately the present route from Gethsemane to Calvary on Holy Thursday, they made no devotional stops. Numerous routes developed during the Middle Ages. The devotional practice of representing the gospel story in churches around fourteen stations led to the development of the present route. The route itself was fixed in the eighteenth century and all of the stations established in the nineteenth. P.P.

vial, a small container used to hold oil or perfume. A vial was used by Samuel to anoint Saul as king (1 Sam. 10:1). The KJV uses the term in a number of passages in the book of Revelation (5:8; 15:7; 16:1–3, 17; 17:1; 21:9; RSV: "bowl"). Most commonly found in archaeological excavations are globular, piriform, or cylindrical vials in the shape of juglets, generally with a single vertical loop handle, an everted rim, and a button or round base.

villages. *See* Towns.

vine, a plant whose long trunk grows along the ground or fastens itself to other objects by means of tendrils. In biblical usage (Heb. *gefen,* Gk. *ampelos*) "vine" is almost always the grapevine (*Vitis vinifera*). Other vining plants are specifically named (melons, Num. 11:5; cucumbers, Isa. 1:8), while the "wild" vine of 2 Kings 4:39 was probably a type of gourd. The "choice vine" (Heb. *soreq,* Jer. 2:21) was a particular grape variety producing a rich red wine.

The vine was noted for its luxuriant foliage, intertwining branches, and trailing or climbing shoots (Ps. 80:11; Ezek. 19:10–11). Its fragrant blossoms are recalled in love poetry (Song of Sol. 2:13), but it was its fruit, and especially the "wine . . . in the cluster" (Isa. 65:8; cf. Matt. 26:29) that gave it place of honor among the "trees." Its wood, in contrast, was useless, fit only for burning (Ezek. 15:2–8).



Grapes were eaten fresh (Jer. 31:29) and dried into raisin clusters (1 Sam. 25:18), and the juice was boiled down into a thick syrup ("honey"). But wine, or "new wine," was the chief product. The climate and terrain of Syro-Palestine especially favored viticulture, and its wines were renowned from Egypt to Babylon. Biblical tradition associates vine growing with the beginnings of agriculture and civilization, making Noah the first vinedresser and the first drunkard (Gen. 9:20–21). But it identifies the debauchery that accompanied the use of wine more specifically with Canaanite culture (Gen. 9:22–27).

Terms for vine, vineyard, or wine are commonly paired with terms for fields or grain, representing the two main types of agricultural production (Exod. 22:5; Num. 16:14; Deut. 33:28; cf. plows and pruning hooks, Isa. 2:4; threshing floor and winevat, Hos. 9:2, 4). Olives or oil extended the basic pair (1 Sam. 8:14; Deut. 6:11), while vine and fig together described the main fruiting plants.

A vine was a common sight in a Palestinian courtyard, climbing a tree or (in Roman times) a trellis. A peasant ideal of peace and prosperity is expressed in the repeated phrase, everyone "under his vine and under his fig tree" (1 Kings 4:25; Mic. 4:4). Vineyards were commonly planted on hillsides (Isa. 5:1), which were less suitable for grain cultivation, though they were also established in the major valleys and plains. The Hebron area was especially noted for its grapes (Num. 13:22–24; Gen. 49:11–12), as was Sibmah in Transjordan (Isa. 16:8). An annual vintage festival was held at Shiloh (Judg. 21:19–21).

Vineyards required long-term intensive care (Isa. 5:1–7; Mark 12:1). The soil was first dug and cleared of stones and a wall (or hedge) erected to discourage predators (Ps. 80:12–13; Song of Sol. 2:15). A watchtower and winevat completed the installation, with a booth for lodging during the harvest (Isa. 1:18). Vines required heavy annual

Picking grapes from the vine; tomb of Mennah, Thebes, Egypt, ca. 1400 B.C.

pruning (Lev. 25:4; John 15:2), hoeing (Isa. 5:6), thinning and support of fruit clusters, and sometimes irrigation (Isa. 27:3). Intensive labor heightened expectations of the harvest and made loss of the vintage a bitter disappointment (Isa. 5:2; Deut. 28:39). Deuteronomic law exempted from military service the man who had planted a vineyard but not enjoyed its fruit (Deut. 20:6). Flourishing vineyards meant peacetime; war's devastation was represented by a ravaged vineyard: walls broken, vines choked by thorns, branches trampled by wild beasts (Isa. 5:5–6; Ps. 80:12–13). Restoration would be a time of planting vineyards and drinking their wine (Isa. 65:21), a time when the mountains would "drip sweet wine" (Amos 9:13).

Production and Use of Wine: Wine ranked with oil as an important commercial crop, and the royal house played a major role in its production and trade. A large cellar was required to maintain the rich consumption of the court (Esther 1:1–9; Neh. 5:18), but wine was also an important commodity of exchange; Solomon paid Hiram of Tyre for timber and artisans with provisions of grain, wine, and oil (2 Chron. 2:10, 15). The king's storehouses and winepress (Zech. 14:10) were supplied from the produce of royal lands (1 Chron. 27:27) and from taxes in kind. Eighth-century B.C. inscribed potsherds (Gk. *ostraca*) from Samaria record palace receipts of wine and oil from landowners in the region.

Wine was produced by treading the grapes in a large vat connected to a smaller, lower vat by a channel. Fermentation began in the lower vat, where the juice was collected, and continued in jars or skins (Matt. 9:17). The grape harvest was a time of special joy (Isa. 16:10). Singing and shouting accompanied the work (Jer. 48:33), and dancing and feasting celebrated the vintage (Judg. 21:20–21). Worship of the god(s) of the land and sexual rites marked the Canaanite feast of ingathering (Judg. 9:27), later replaced by Israel's Feast of Tabernacles (Deut. 16:13).

Bread and wine represented the basic elements of food and drink (Judg. 19:19; Lam. 2:12), giving rise to metaphorical and symbolical uses (Prov. 4:17), as in the Eucharist (1 Cor. 11:23–26). But wine was especially identified with court dining and feasts (Heb. *mishteh*, from *shatah*, "to drink"; Esther 1:1–9; Dan. 1:5, 8, 16; 1 Sam. 25:36; John 2:1–10), where it was frequently mixed with spices (Song of Sol. 8:2; Prov. 9:5). A special kind of drinking feast was the Canaanite mourning feast (*mirzēah*), characterized by ritual drunkenness and sexual intercourse, which persisted in Israel despite prophetic condemnation (Amos. 6:4–7; Isa. 28:7–8; see "house of mourning," Jer. 16:5, and "house of banqueting," Song of Sol. 2:4).

Wine was generally viewed as a blessing (Gen. 27:28; Deut. 7:13) that "gladdens the heart" (Ps. 104:15; cf. Eccles. 10:19), suppresses pain, and banishes misery in forgetfulness (1 Tim. 5:23; Prov. 31:6). Its absence on special occasions such as weddings was a misfortune, and on one occasion Jesus remedied such a lack by miraculous means (John 2:1–10). Wine was offered to God in Israelite worship (Lev. 23:13; Num. 28:14) and was employed medicinally to administer drugs (Matt. 27:34), to treat wounds (Luke 10:34), and to cure digestive ailments (1 Tim. 5:23). But a glad heart meant a dull mind (Hos. 4:11), making one irresponsible (Prov. 31:4), unwary of danger (2 Sam. 13:28), and easily manipulated (Gen. 19:32–35; Esther 5:4–10; 7:2). The drunkard is depicted as foolish or mad (Jer. 51:7), reeling and vomiting (Isa. 28:7–8), licentious (Rev. 18:3), sprawling in senseless stupor, and babbling incoherently (Acts 2:13). The wise are counseled to avoid strong drink (Prov. 23:29–31). Kings should abstain lest they pervert justice (Prov. 31:4–5); bishops and deacons should be temperate (1 Tim. 3:3, 8). Priests were prohibited from drinking on duty (Lev. 10:9), and Nazirites pledged abstinence for the duration of their vows (Num. 6:3–4, 20; cf. Luke 1:15). The itinerant Rechabites rejected all fruits of the vine as expressions of sedentary life (Jer. 35:7–9).

The vine was a rich source of symbolism in ancient Near Eastern literature, ritual, and art. The twining branch signified life and the grape cluster, or vineyard, fertility (Song of Sol. 7:12). Raisins pressed into cakes were used in the cult of the goddess of love (Hos. 3:1; cf. Song of Sol. 2:5). Wine was the "blood of the grape" (Gen. 49:11; Deut. 32:14), an image recalled in Jesus' words over the cup of the Last Supper (Matt. 26:28). God's judgment of the wicked is like the treading of a winepress (Isa. 63:1–3; Rev. 14:18–20). The Lord's vintage is wine of wrath (Jer. 25:15; Rev. 14:19) and a cup of staggering (Isa. 51:22).

Israel accepted the vine and its fruit as gifts of the Lord, not the land (Hos. 2:8–9, 15). Israel itself was likened to a vine, planted and tended by God (Jer. 2:21; Ps. 80:8–9). The NT applies the image to Jesus and the church: "I am the vine, you are the branches. He who abides in me . . . bears much fruit" (John 15:5). ***See also*** Banquet; Cucumber; Drunkenness; Mourning Rites; Raisins; Rechab. P.A.B.

vinegar, sour wine or wine vinegar, a common drink among the poorer classes (Ruth 2:14). It was forbidden to Nazirites (Num. 6:3). The offer of "vinegar" to Jesus on the cross could be understood as a compassionate gesture in Mark 15:36 and Matt. 27:48. However, Ps. 69:21 speaks of "poison and vinegar" given to the suffering righteous by enemies. Both the mocking offer of vinegar in Luke 23:36 and the reference to fulfillment of Scripture in John 19:28 suggest this latter context.

vine of Sodom, a plant whose fruit appears tempting yet is inedible (Deut. 32:32). Often identified as the apple of Sodom (*Calotropis*

procera), it is a plant of the Dead Sea area that bears a greenish-yellow applelike fruit filled with dry white fibers resembling those of the milkweed.

vineyard, the plot in which grapes are raised. Vineyards are one of the standard signs of agricultural wealth in Palestine in biblical times. While the proper handling of such property was extensively defined in various law codes (Exod. 22:5; 23:11; Lev. 19:10; 25:3, 4; Deut. 20:6; 22:9; 23:24; 24:21; 28:30), breaches of treatment were found even in royalty (1 Kings 21:1–18). Isaiah's "Song of the Vineyard" is a masterful review of standard viticulture applied to the life of a people (Isa. 5:1–7). As vineyards were a sign of divine blessing, their absence was a metaphor of divine judgment (Jer. 35:7, 9). The vineyard as a common scene of labor was used in a parable of Jesus found in all three synoptic Gospels (Mark 12:1–9; Matt. 20:1–41; Luke 20:9–16). ***See also*** Vine. R.S.B.

viol. ***See*** Music.

viper, a genus of snakes prevalent in the ancient world, some of which were poisonous and some not. Because the bite of the poisonous viper could be fatal, people naturally wanted to avoid any contact with any type. Consequently, the term viper came to be used figuratively as a designation for evil (cf. Isa. 30:6; 59:5; Job 20:16) or for people who were evil (cf. Matt. 3:7; 12:34; 23:33; Luke 3:7).

Paul's encounter with a viper (Acts 28:3–6) caused people to think of him as a god. Some have argued that there were no poisonous snakes on Malta at that period of history and that the snake that attached itself to Paul's hand may have been a type from the constrictor family. ***See also*** Serpent. J.M.E.

virgin (Heb. *bethulah,* lit. "separated"; Gk. *parthenos*), in the OT a woman who has not had sexual intercourse with a man, although the word translated "virgin" (*bethulah*) may also mean simply a young woman of marriageable age, as does the word *almah* (incorrectly translated "virgin" in the RSV). *Bethulah* is also used of Israel in the OT (e.g., Jer. 18:15), and frequently in a figurative way when the fate of cities is at issue (e.g., Isa. 23:10, 12).

The Greek word *parthenos,* used to translate both Hebrew words in the LXX, does not necessarily mean "virgin," but it is so used in the NT. Paul encourages virgins, both male and female, not to marry, but he does permit it (1 Cor. 7:25–38). The four virgin daughters of Philip who prophesied (Acts 21:9) may be related to the origin of the later order of virgins. Ignatius's letter to the Smyrneans refers to women in the order of widows (see 1 Tim. 5:9) as virgins. The word is also used metaphorically of the church (2 Cor. 11:2–3) and of the morally faithful (Rev. 14:4). ***See also*** Virgin Birth. W.M.

virgin birth, the tradition of Mary's conception of Jesus by the Holy Spirit apart from sexual intercourse, explicitly mentioned in the NT only in the birth stories of Matthew and Luke. In Matt. 1:18–25 it appears as the fulfillment of Isa. 7:14 that a virgin (Gk. *parthenos,* used in the LXX to translate the Heb. *almah,* a young woman of marriageable age) would conceive and bear a son. In Luke 1:26–38 miraculous conception (vv. 34, 37) is linked with the title Son of God applied to Jesus, a title formerly used of Davidic kings (cf. vv. 32, 35 with 2 Sam. 7:12–14, Ps. 2:6–7).

Suggested allusions to the tradition elsewhere in the NT (e.g., Matt. 13:55; Mark 6:3; Luke 4:22; John 1:13, 14; Gal. 4:4–5; Heb. 7:3) are generally regarded by scholars as uncertain or implausible. The genealogies in Matt. 1:1–16 and Luke 3:28–38 assume Joseph's paternity, as do Luke 2:41–51 and John 1:45, 6:42.

Mary's virginal conception is mentioned in early post-NT writings, some of which show it was contested (see *The Gospel of Philip* 55:23–25). ***See also*** Virgin. W.M.

virtue, the English translation of a Greek term pointing, in the Greek philosophical tradition, to excellence of moral character. OT and NT writers speak more often of righteousness than of virtue because the former points less to human achievement and merits than to God's acts. Paul may have had a list of virtues typical of the late Stoic school of philosophy in mind when he wrote: "whatever is true, whatever is honorable, whatever is just, whatever is pure, whatever is lovely, whatever is gracious, if there is any virtue [RSV: 'excellence'], if there is anything worthy of praise, think about these things" (Phil. 4:8). Yet here Paul links virtue and praise within a Christian context of hope and prayer and example. Similarly, 2 Pet. 1:5–7 includes virtue in a list beginning with faith and culminating with love, prefacing this with an appeal to the God who has called us to God's own glory and virtue (2 Pet. 1:3; cf. 1 Pet. 2:9, which also speaks of God's "virtues" [RSV: "wonderful deeds"; TEV: "wonderful acts"]). J.F.J.

vision, the sight of things normally hidden from human eyes. Visions, dreams, and heavenly journeys are closely related phenomena through which secrets are thought to be revealed. These media of revelation are especially characteristic of apocalyptic literature. Visions can be distinguished from theophanies and epiphanies of angels or of Jesus. In theophanies and epiphanies the emphasis is on the appearance or presence of a heavenly being and often on the message conveyed by that being. In visions the emphasis is on an object, a scene, or a sequence of events that is enacted.

Accounts of visions have certain typical formal features. They are usually in the first person: the visionary describes his or her experience. The setting is often given near the beginning: the date, place, and time at which the vision occurred. Then follows the content of the vision, usually introduced by the words "I saw." Sometimes the account concludes with remarks about how the visionary reacted to the vision or what he or she did immediately afterward.

Ancient Jewish and Christian visions may be grouped into five types: **1** Visions of the enthroned deity or the divine council (Exod. 24:9–11; 1 Kings 22:19–23; Isa. 6; Ezek. 1:1–3:15; Rev. 4:2–11). **2** Visions of some other heavenly reality or of an earthly reality: present, threatened, or to come (1 Kings 22:17; Amos 7:1–3, 4–6; Jer. 4:23–26; Ezek. 8–11; 40–48; Zech. 1:7–17; 3; 6:1–8; *1 Enoch* 57, 66; *T. Levi* 8; *2 Bar.* 6–8; 2 Esd. 13; Luke 1:11, 21). **3** Visions based on a play on words or a symbol (Amos 7:7–9; 8:1–3; Jer. 1:11–12, 13–14; Jer. 24; Ezek. 37:1–14; Zech. 2:5–9; 5:1–4; *1 Enoch* 61:1–5). **4** Allegorical visions, that is, visions in which each object, being, or event represents in a figurative or pictorial way a corresponding entity in reality (Zech. 1:18–21; 4; 5:5–11; Dan. 8; *1 Enoch* 85–90; *2 Bar.* 36–37; 53; Rev. 12, 13, 17; 2 Esd. 9:38–10:59; 11–12). **5** Visions that combine two or more of the above types (Dan. 7; *1 Enoch* 14:8–36:4; 40:1–41:7 plus 43–44; 46; 52; 53:1–54:6; 60:1–6; 71; *T. Levi* 2:5–5:7; *2 Bar.* 22–30).

Vision accounts, especially the symbolic and allegorical types, grasp the imagination and evoke feelings in ways that ordinary language cannot. Like poetry they present an interpretation of reality and invite the reader or listener to share it. They combine cognitive insight with emotional response. Although they were originally experienced and recorded to address a particular historical situation of the past, their symbolic character gives them meaning and application beyond their original contexts. ***See also*** Apocalyptic Literature; Dreams; Epiphany; Symbol; Theophany; Throne. A.Y.C.

vow, a promise to abstain from something not ordinarily prohibited (e.g., the vow of the Nazirite, Num. 6), or, more commonly, an offer to pay God for help he gives. The first vow mentioned in the OT is Jacob's, who promised God worship and tithing in return for his protection (Gen. 28:20; 31:13). Similar vows are the vow of Israel to "devote" (i.e., sacrifice) all of Arad to God (Num. 21:1–3), Jephthah's vow of a living being (Judg. 11:30), Hannah's vow of Samuel's service (1 Sam. 1:11), Absalom's of worship (2 Sam. 15:7–8), and the unspecified vow of sailors for safety from shipwreck (Jon. 1:6). Apostate Israel is said to have vowed to offer incense to the queen of heaven (Jer. 44:25).

Animals sacrificed in payment of vows must be without blemish (Lev. 22:17–25; Mal. 1:14), must not be firstlings (who already belong to God; Lev. 27:16–28), and are a communion sacrifice that must be eaten in two days (Lev. 7:16–17; see the sacrificial specifications in Num. 15:1–16). Payment can be made in money with set values for each animal (Lev. 27), with adjustments made for the poor. Payment of vows was ultimately centralized (Deut. 12). Vows did not have to be made (Deut. 23:22), but once made, they had to be paid (Num. 30; Deut. 21:21–23). A woman's vow could be cancelled by her husband or, if she lived in her father's house, by her father, if the man acted the same day (Num. 30). Psalms such as 56:12–13 and 66:13–15 mention the individual offering and payment of vows (cf. Pss. 22:26; 61:9; 116:14, 18). In the NT, Acts records that the apostle Paul, to fulfill a vow, cut his hair (18:18), but we are given no details about the nature or purpose of that vow. T.S.F.

Vulgate, the authorized Latin version of the Bible. In the late fourth century, Pope Damasus commissioned Jerome to bring order to the existing Latin versions. The resulting translation was called the Vulgate ("common text"). ***See also*** Texts, Versions, Manuscripts, Editions.

vulture, a large carrion-eating bird. The vulture was considered "king of birds" by the Hebrews (see Lam. 4:19), but it was also regarded as unclean (Lev. 11:13). Four species occur in Israel: **1** The griffon vulture (*Gyps fulvus*), which is probably the biblical *nesher* (Deut. 32:11; Ps. 103:5; Prov. 30:17). **2** The bearded vulture (*Gypatus barbatus*), which is likely the Ossifrage (Lev. 11:13). **3** The Egyptian eagle (*Neophroon percnopterus*), probably corresponding to the carrion vulture (Deut. 4:17). **4** The black vulture (*Aegypius monachus*), which some have correlated with the osprey, although the suggestion is doubtful (see Deut. 14:12).

W

wadi (wah´dee), an Arabic word for stream or stream bed. Many streams in the area inhabited by ancient Israel flow only seasonally. During the dry seasons occasional pools of water may have collected in the stream beds or the beds may have been completely dry. The wadis could be used to advantage in military matters ("ravine," Josh. 8:10–23). They were undependable water sources and could symbolize deceit (Jer. 15:18).

wafers, thin cakes, somewhat like tortillas, made of wheat flour (semolina), baked unleavened and spread with oil. Along with other kinds of bread, wafers had to accompany the thank-offering of the worshiper, the priests' ordination offering, and the Nazirite's peace offering (cf. Lev. 7:12; Num. 6:15; 8:26). They could also be offered independently as a cereal offering.

wages, the compensation paid to a free laborer hired for a fixed period of time or for a specific service. It was apparently common to hire a laborer in ancient Israel for a day's work, for the Torah requires payment of wages at the end of the day (Lev. 19:13; Deut. 24:14; Job 14:6; cf. Matt. 20:1–2, 8). However, there are also references to yearly (Lev. 25:53; Isa. 21:16) and triennial hire (Deut. 15:18; Isa. 16:14; 1 QIsa[a] 21:16).

The Hebrew Bible contains scattered examples of wages paid to laborers: to Jacob when he worked as a shepherd for Laban (Gen. 29:15; 30:32–33; 31:8); to Moses' mother as a nurse, by Pharaoh's daughter (Exod. 2:9); to Tamar for harlotry, by Judah (Gen. 38; cf. Deut. 23:18; Isa. 23:17; Ezek. 16:31; Hos. 9:1; Mic. 1:7); the levitical portion (Num. 18:31); the hiring of Balaam to curse Israel (Deut. 23:5; Neh. 13:2); the hiring of mercenaries (Judg. 9:4; 2 Sam. 10:6; Jer. 46:21; 2 Kings 7:6; 2 Chron. 24:6); the hiring of Shemaiah to prophesy falsely (Neh. 6:10–13); the hiring of counselors (Ezra 4:5); the hiring of a priest (Judg. 18:4); the hiring of a seer (1 Sam. 9:6–9); the hiring of skilled craftsmen (Isa. 46:6; 2 Chron. 24:12); and the wages to be paid to elders (1 Tim. 5:17–18; cf. Luke 10:7).

Specified fixed wages are not mentioned, although occasionally the Bible relates the price in a given situation (Gen. 30:32–33; 1 Sam. 9:8; 2 Chron. 25:6; Matt. 20:1). This indicates that the wage was agreed upon by the employer and employee. Nonetheless, it appears that hired workers were often either not paid or not paid sufficiently, resulting in a poor labor class who come under the concern of the Torah and Prophets (Deut. 24:14–15; Jer. 22:13; Mal. 3:5; cf. Gen. 31:7, 41; 1 Sam. 2:5; Job 7:2–3; James 5:4).

The term "wage" is also used metaphorically in the religious sense as reward given by God for the "labor" of loyalty, suffering, or right action (Gen. 15:1; Ezek. 29:18–19; Isa. 40:10; 61:8; 62:11; 1 Cor. 3:8; of children, Gen. 30:18; Jer. 31:16; Ps. 127:3) or as the just recompense of sin (Rom. 6:23). *See also* Slavery. wallet, the bag a shepherd carried. David reportedly carried the pebbles for his sling in a wallet on his way to meet the Philistine champion Goliath (1 Sam. 17:40; KJV: "skrip").

walls, structures that limit areas, whether in building or for defense. This term is used in the

Assyrians lay siege to an unidentified town. To the right a siege machine batters the walls, protected by archers, while left and center the Assyrians try to break down the foundations with spikes and tunnel underneath; ninth-century B.C. reliefs.

Bible to translate a number of Hebrew and Greek words representing various kinds of structures. Ancient literature, art, and archaeological remains provide detailed information on the techniques of wall construction used in the biblical world.

Like their modern counterparts, ancient farmers built low walls around fields and vineyards (Gen. 49:22; Num. 22:24–25; Isa. 5:5). Since these walls were made of unhewn stones, they often called for repair (Prov. 24:31). Vineyards and orchards were frequently planted on terraced slopes (see Jer. 31:5); these stone-walled terraces are still a common sight in the Middle East. The stones used in these agricultural walls were sometimes set in mud or mortar, though they were often simply stacked on top of each other. All of these simple structures increased the productivity of arable land by helping to prevent soil erosion, discouraging poachers, and preventing animals from grazing in crops; at the same time, the construction of walls aided in the age-old task of clearing the fields of undesirable stones.

House walls were usually built of unhewn or rough-cut stones or mudbricks usually set on stone foundations. These walls were sometimes covered with a thin coating of plaster. Naturally, this plaster improved the appearance of walls, but it also played a significant role in the treatment of houses with "leprosy" (Lev. 14:37–45). More important buildings were normally built of large, hammer-dressed stones. Courses of stone or mudbrick were sometimes separated by a course of wooden beams, a technique that was used in the construction of the Temple (1 Kings 6:36; 7:12).

City Walls: Throughout most of the biblical period, cities were surrounded by a system of fortifications that consisted of walls, towers, and gates; populations that lived in unwalled settlements were exposed to great risks (Ezek. 38:11; Zech. 2:4). City walls had to be high enough and thick enough and be constructed on such solid foundations that the fortifications and their defenders could deter enemy attacks. There was, in fact, a constant effort made by attackers and defenders to surpass the ingenuity of their opponents; siege warfare was the outgrowth of this competitive effort. The famous bas-reliefs from the Assyrian ruler Sennacherib's (705–681 B.C.) palace at Nineveh graphically portray some of the techniques used in attacking and defending a walled city (see Isa. 36:1–2; 37:33). Indeed, the Bible has frequent references to various aspects of siege warfare (Deut. 20:20; 2 Sam. 20:15; Ps. 89:40; Jer. 6:6; Ezek. 4:1–3; 26:7–10; Joel 2:7–9; see also Luke 19:43; 21:20). This list, which is by no means exhaustive, points to the defensive significance of walls and indicates that large amounts of energy and expertise were poured into the task of destroying the barrier (i.e., the city wall) that separated attackers from defenders. Surprisingly enough, some cities were able to resist besieging forces for a long time (2 Kings 17:5). Perhaps the most efficient way of attacking a city was to trick its defenders into leaving the safety of their walls (Josh. 8:10–17).

Although cities varied in size, the average area enclosed by a city wall in ancient Palestine ranged between 5 and 10 acres. The walls that surrounded these settlements varied in height, width, and design from period to period. The oldest known fortified town in Palestine is Jericho; its earliest walls, which date to ca. 7000 B.C., were made of solid stone and were over 6 feet thick. Between Neolithic Jericho and the next oldest fortifications, there is a gap of about four thousand years, since fortified cities do not appear again until ca. 3000 B.C. The walls of cities like Megiddo and Gezer were erected in this era, and subsequent periods witnessed the modification or rebuilding of the earlier defenses.

From early in the third millennium B.C. until the Roman period (beginning in 63 B.C.), cities in the Middle East were nearly always surrounded by a stone wall. Some of the earliest city walls were over 15 feet thick and were built of solid stone; other walls had stone facings, but wall cores were filled with rubble. These massive walls were frequently reinforced with earthen buttresses and sloping ramparts. Much attention was given to the construction of deep and wide foundations; this protected the walls from undermining and breaching operations. Foundation trenches were dug into the rubble of earlier walls, and some walls were built on bedrock. In most instances, only the walls' lower courses were constructed of stone; most of these massive walls had mudbrick superstructures. The stone courses protected the base of the wall from moisture and enemy attack and made the wall far less costly to build. Until well-dressed (i.e., carefully shaped) masonry was introduced in the Solomonic period (tenth century B.C.), most of the stone used in city defenses was rough-hewn. The building of fortifications flourished during the second quarter of the second millennium B.C. and many city walls that protected Palestine's population during the next five centuries were reused remainders from the earlier period.

During the eleventh century B.C., a type of wall known as the casemate began to be used in Palestine on a regular basis. This construction style consisted of two parallel walls that were separated by five or six feet of open space; these outer walls were joined by short cross walls at regular intervals, thereby creating a series of small rooms within the wall. These chambers were usually filled with rubble to give added strength. Thus, it was possible to build a wall that possessed great strength and required far less labor than would have been necessary for a solid stone wall of comparable width (i.e., ca. 15 feet). The casemate wall is particularly well known because of its appearance at the Solomonic cities of Hazor, Megiddo, and Gezer (see 1 Kings 9:15),

where it was found in association with a sophisticated gate complex. Although the casemate wall did not disappear altogether, the methods of siege warfare that were developed by the Assyrians in the ninth century B.C. led to a preference for solid walls with salients and recesses (i.e., offset-inset walls).

Importance in the Bible: Because of the cities they protected or because of a particularly memorable event, the walls of some cities became famous: Jericho (Josh. 6:20), Beth-shan (1 Sam. 31:10, 12), Babylon (Jer. 51:44), Damascus (Jer. 49:27), and Tyre (Ezek. 26:4). Especially frequent are references to Jerusalem's walls (e.g., 2 Sam. 5:9; 1 Kings 3:1; 2 Chron. 36:19; Neh. 1:3; 2:17).

The preceding survey of ancient city walls places a number of biblical passages in sharper focus. For example, the OT agrees with the other sources by acknowledging that city walls were wide enough to serve as elevated platforms for defensive activities (2 Sam. 11:20–21, 24; Isa. 36:11–12). Indeed, Josh. 2:15 notes that Rahab helped the Hebrew spies to escape from Jericho by letting "them down by a rope through the window, for her house was built into the city wall, so that she dwelt in the wall."

Walls were so important in the ancient world that the biblical writers referred to city defenses in some of their most potent figurative expressions. For example, if city walls averaged between 20 and 30 feet in height, David's metaphor in 2 Sam. 22:30 is all the more striking (see Ps. 18:29), and the exaggeration of the Hebrew spies becomes understandable (Num. 13:28; see Deut. 1:28). Other passages that use the imagery of walls to convey their message include Prov. 18:11; 25:28; Isa. 2:15; 22:5; 26:1; 30:13; 60:10, 18; Ezek. 38:20; and Mic. 7:11. Likewise, most of the NT references to walls are figurative. In Acts 23:3, Paul compares Ananias to a "whitewashed wall," while in Eph. 2:14 the hostility between Jew and Gentile is compared to a "dividing wall." Cities in NT times continued to be walled, since the apostle Paul was lowered to safety through a window in the Damascus city wall (Acts 9:25). The most extensive discussion of walls in the NT is found in Rev. 21:12–19, where the seer describes the walls of the heavenly Jerusalem. ***See also*** Defense; House.

war, armed conflict between two or more opposing peoples. War was so common in the biblical period that the OT makes specific reference to times of peace (Judg. 3:11; 1 Kings 5:4; 2 Chron. 14:1, 5–7). As in modern times, the wars of antiquity were fought for political, economic, and religious reasons, and Palestine's position near the landbridge between Africa and Asia greatly multiplied the number of wars in which the inhabitants were involved.

The weapons, strategies, and tactics used for war in the ancient Near East and the Greco-Roman world were highly diversified, and the methodology of war varied from people to people and from period to period. Nevertheless, some aspects of warfare were universal. For example, battles were fought on land and/or sea, with land encounters being subdivided into two basic categories: battles in open terrain (1 Sam. 14) and attacks on fortified cities (2 Kings 17:5; 25:1). While only a few ancient peoples developed significant naval forces (e.g., Phoenicians, Greeks, Persians, Romans), most ancient Near Eastern and Greco-Roman armies included two major divisions, foot soldiers and horsemen, and many armies made effective use of chariots (e.g., the Egyptians and Assyrians). Infantrymen were divided into various contingents that specialized in the use of particular weapons (e.g., bows and arrows, slings and slingstones). Although some field campaigns were provisioned "off the land," the great imperial armies counted auxiliary troops within their ranks whose responsibility it was to provision the troops (e.g., the sophisticated logistical system that contributed to the success of Alexander the Great).

Ancient cavalryman carrying a shield and weapon; from a ninth- or tenth-century relief discovered at Tell Halaf (Gozen).

Like their modern counterparts, ancient armies poured much human energy and technical skill into the preparation for and waging of war. The number of soldiers involved in a single battle varied from a handful to many thousands, and the death and devastation caused by war was often enormous (2 Kings 8:12; 25:9–10). Finally, students of ancient warfare cannot help but be impressed by the technical skills that were employed in the production of weaponry. A careful examination of the archaeological evidence and artistic representations that relate to military activity allows one to understand that even ancient warfare was an art and a science that involved great learning (see Isa. 2:4; Mic. 4:3).

Since the Hebrew conquest and settlement of Canaan was partly accomplished by means of armed conflict with a number of people, Israel's early history (ca. 1225–1025 B.C.) is, to some degree, a history of the wars of Israel. Following these early phases of Israel's history, the Hebrew monarchy (ca. 1025–586 B.C.) was established and maintained by means of war. The biblical literature that describes the period between the Exile and the end of the NT era does not mention war as much as the narratives relating to the earlier history. Nevertheless, the events and thoughts of the later centuries were molded by the wars that brought Israel under the dominion of Egyptian, Assyrian, Babylonian, Persian, Hellenistic, and Roman conquerors. Throughout this history, many of Israel's outstanding leaders were known for their military achievements (e.g., Joshua, Deborah, Gideon, Saul, David, and Uzziah). Special attention should be drawn to the popular revolts led by Judas Maccabeus (ca. 167 B.C.) and Simon Bar-Kochba (A.D. 132).

This emphasis upon war may be seen as a natural development, since one of the fundamental images of God in the OT is that of a warrior (Exod. 15:3; Ps. 24:8; Isa. 42:13). Israel's wars were often based upon an ideology that emerged from this understanding of God's nature—Israel's enemies are the Lord's enemies (Judg. 5:31; 1 Sam. 30:26), and the Lord assists Israel in times of war (Exod. 14:13–14; Josh. 10:11; 24:12; 1 Sam. 17:45). Although "holy war" in the proper sense is not mentioned in the OT, divinely sanctioned wars are mentioned quite frequently (Josh. 8:1; Judg. 4:14–15; 1 Sam. 23:4; 2 Kings 3:18), but this ideology was not unique to Israel (see the Mesha Inscription set up about the middle of the ninth century B.C. to commemorate the victory of Mesha, king of Moab, over Israel). While this so-called divine war creates numerous problems for theologians and ethicists, it must be recognized that war was a common phenomenon, almost a necessary evil, in the ancient world.

Although religion was not called upon to explain every war in which Israel engaged, it is obvious that the disastrous defeat that led to the Exile in 586 BC was understood as a withdrawal of God's assistance and the resultant failure of Israel's army to withstand the Babylonian invasion. In fact, the idea that God "used" war to punish an apostate Israel appears again and again in the OT (Isa. 5:26–28; Jer. 5:15–17; Ezek. 21:1–32; 23:22–28). The belief that God disciplined other nations by means of war was also widespread (Isa. 13; Jer. 46:1–10; Nah. 2:1–9); once again, this theological interpretation of history was common in other parts of the ancient Near East. Ultimately, the language of war was employed by the biblical writers to depict judgment (Joel 2:1–11; 3:9–12; Zeph. 1:14–18; Rev. 12:7–8; 17:14; 19:11). Because war was such a well-known phenomenon and such a serious matter, whether in reality or in its literary analogies (Pss. 18:34–42; 55:21; Eccles. 3:8; 9:18), it was also used as an appropriate symbol for the Christian life (2 Cor. 10:3–4; Eph. 6:11–17; 1 Tim. 1:18; 2 Tim. 2:3–4; James 4:1–2; 1 Pet. 2:11). ***See also*** Weapons.

Wars of the Lord, the Book of the, an otherwise unknown and lost work quoted in Num. 21:14–15. From the context in which the quotation is made, it would seem that the book probably contained poems celebrating the victories of the Israelites over their enemies during the period of the conquest (twelfth century B.C.). It is possible that vv. 17–18 and 27–30 are also quotations from the book. The title emphasizes God's actions in fighting for Israel (cf. 1 Sam. 17:47).

watch. ***See*** Time.

watchman, a sentry stationed on a wall (2 Sam. 18:24; Song of Sol. 5:7) or in a watchtower (2 Chron. 20:24) whose task it was to warn of approaching danger (Ezek. 33:2–6; cf. Ps. 127:1). Watchmen also guarded the fields and vineyards, especially during harvest season (Isa. 5:2; cf. Job 27:18). The term is often used in a figurative or symbolic sense (Isa. 62:6; Ezek. 3:17; 33:7–9; Mic. 7:4). ***See also*** Tower; Vine; Watchtower.

watchtower, a high fortified tower located either within a town (Judg. 9:51; 2 Chron. 26:9) or elsewhere (2 Chron. 26:10), presumably at a strategic location. The obvious purpose was military: it was either a position to defend or a location from which to assess enemy troop movements. When erected in fortified towns watchtowers were probably attached to and built into

walls of the city and had a separate entrance (Judg. 9:52). In fields towers could serve both as a lookout and as a fieldhouse for owners of large properties. The upper story or roof was utilized for work or sleeping and the lower portion for storage of agricultural tools. E.M.M.

water, a critical factor in the life of ancient Palestine. Rainfall was its primary source, and on it both crops and springs depended. Perennial streams were few and located mostly in the highland east of the Jordan, while the wadis (dry stream beds) of western Palestine flowed only with the run-off of winter rains ("freshets that pass away," Job 6:15; cf. Jer. 15:18). Mountainous terrain and lack of dependable streams made irrigation unfeasible in most of the area—in contrast to the alluvial plains of Egypt and Mesopotamia—though Roman engineers built impressive water systems on the coastal plain and Transjordanian plateau (e.g., the aqueduct at Caesarea). Deuteronomy marked the contrast between Canaanite and Egyptian water sources by describing the promised land as a "land . . . which drinks water by the rain from heaven" (11:11).

Rain determined settlement patterns as well as modes and patterns of cultivation. The earliest towns were established near permanent springs, and elaborate tunnels and conduits were constructed in some cities (Gezer, Jerusalem, Megiddo) to ensure continuous and safe access to the water supply within the city walls. The increased use of plaster-lined cisterns at the beginning of the Iron Age (ca. 1200 B.C.) permitted settlement in previously unoccupied areas of the hill country where springs were lacking or inadequate. Fluctuation in the amount and timing of the annual rains affected life in the whole land, but especially in the zone of marginal rainfall between the hill country and the desert. In wet years the area under cultivation might be extended well into the wilderness, but a few successive years of light or erratic rainfall would make agriculture impossible, forcing migration to more fertile areas, such as the Nile delta (Gen. 41:57), or conversion to pastoral nomadism.

Water was essential to both human and animal life and was especially critical in the wilderness, where wells and springs were few and often unreliable (Gen. 21:14–19; Exod. 17:1–7). Migrating groups had to purchase water (Deut. 2:28). A cup of water offered to a guest or stranger was a simple, and expected, sign of hospitality (Job 22:7; Matt. 10:42).

Water was also used for washing and bathing, serving the needs of hygiene, refreshment, and ritual purification. Jews of Jesus' time washed their hands before meals in accordance with religious prescription (Mark 7:3), and guests were offered water for footwashing (Luke 7:44)—a service commonly performed by a servant (cf. John 13:5). OT laws prescribe ablutions for various types of contaminating conditions, including various skin diseases (Lev. 14:8), bodily emissions (Lev.

Aerial view of the water system at Hazor. It allowed safe access to the water supply even in times of siege; ninth century B.C.

15:1–21), and contact with dead or "unclean" animals (11:1–39). Pilate declared his innocence through a symbolic act of handwashing (Matt. 27:24).

Some waters were thought to have curative properties (John 5:1–7). Others were "bitter" (Exod. 15:23) or "poisoned" (Jer. 8:14), making them undrinkable or bringing illness to those who drank them (2 Kings 2:19–21).

Water as Symbol: According to ancient Egyptian and Mesopotamian thought, water was the primary cosmic element from which all life emerged. The OT reflects something of this view when it speaks of the "deep" (Heb. tehom) as the primeval ocean, divided at creation into upper and lower waters (Gen. 1:2, 6–9). The waters above the firmament are the source of rain, while the waters below form seas, lakes, and underground streams. Babylonian religion deified the power in the sweet- and salt-water sources; the subterranean sweet waters were identified with wisdom, fertility, and life, while the restless, raging sea represented chaotic and destructive power. Creation in Mesopotamian and Canaanite myth involved the subduing (or slaying) of the waters of chaos, often personified as a serpent. Elements of this mythic conception persist in poetic images of the OT, apocalyptic visions, and religious symbolism: God slew the dragon Rahab or Leviathan (Isa. 51:9; Ps. 89:9–10; Ps. 74:12–14; cf. the "ancient serpent" identified with Satan in Rev. 12:9), founded the earth upon the seas (Pss. 24:1; 136:6), and sits enthroned over the flood (Ps. 29:10). God's voice thunders over "many waters," sometimes identified as "many peoples" or hostile nations (Isa. 17:13; cf. Luke 21:25; Rev. 17:15). The power of the sea is reasserted in apocalyptic writings, but in the final day the beast from the sea will be vanquished and the sea itself will be no more (Rev. 21:1).

Water is employed in numerous biblical similes and metaphors describing instability (Gen. 49:4), loss of strength (being "poured out," Job 3:24; Ps. 22:14), and melting away in fear (Josh. 7:5). It vanishes (Ps. 58:7) and cannot be gathered again when spilled (2 Sam. 14:14). But water also conveys ideas of refreshment and power. Good news from afar is "like cold water to a thirsty soul" (Prov. 25:25). God is the "fountain of living [i.e., everflowing] waters" for Israel (Jer. 2:13), and Jesus offers water of eternal life (John 4:10–15). Amos calls for justice to "roll down like [the] waters" of a perennial stream (5:24). A person in dire distress feels engulfed by waters, submerged in the deep (Ps. 69:1–2; Lam. 3:54). Salvation is experienced as being drawn up from the waters of death (Ps. 18:16).

Baptism recalls this symbolism of salvation as well as cleansing; those "born of water" (John 3:5) are likened to those whom God saved through the Flood (1 Pet. 3:20; cf. 1 Cor. 10:1–5). God's cosmic rule was symbolized in Solomon's Temple by the great model of the cosmic sea (1 Kings 7:23–26). Ancient Near Eastern tradition located the source of the great rivers of the world, or the life-giving springs, at the mountain or garden of God (cf. Gen. 2:10–14). Ezekiel envisions water flowing from the threshold of the restored Temple, bringing life to the whole land (47:1–2), and the author of Revelation depicts the river of the water of life flowing from the throne of God (Rev. 22:1–2). ***See also*** Baptism; Cisterns; Leviathan; Rahab; Rivers; Sea; Wadi; Well. P.A.B.

watercourse (Heb. *aphiq*), a term for a stream bed or channel that is employed in poetic metaphors. Ps. 126:4 likens the restoration of Israel's fortunes to watercourses in the dry Negeb. Ezekiel depicts Pharaoh as a great cedar, felled to earth, its boughs broken in the watercourses (Ezek. 31:12), and as a dragon, whom God will slay, drenching the land with his blood and filling the watercourses with it (Ezek. 32:6).

Water for impurity. ***See*** Water of Purification.

water hen (KJV: "swan"), an unclean fowl, probably an omnivorous water bird (Lev. 11:18; Deut. 14:16). It may refer to a member of the *Rallus* genus, although that is not certain.

water of bitterness, a specially prepared potion given by a priest to a woman whose husband suspects her of committing adultery but can offer no adequate proof (Num. 5:11–31). The potion would distort the womb or cause a miscarriage in a guilty woman but would allow an innocent wife to conceive. The expression "water of bitterness" is derived from one of the two components of the phrase "the water of bitterness" and the "water that brings the curse" (Num. 5:22–24). Because the Semitic root *mr(r)* ("bitter") can also mean "to bless," it is likely that "water of bitterness" is better rendered "water of blessing," with the full phrase regarded as being "water of judgment." J.M.S.

water of purification, the liquid used in an ancient purification ritual to cleanse one from the defilement incurred by coming into close contact with human death, either by touching a human bone, a grave, or a corpse, or by entering a tent where someone had died. An unblemished red heifer that had never been put under the yoke was sacrificed and the blood sprinkled toward the sanctuary. The heifer's body was then burned with cedar wood along with hyssop and scarlet (wool?) and the ashes collected and preserved. They were to be mixed with living (running) water and sprinkled upon the defiled person, using a branch of hyssop, on the third and seventh day after the defilement. After

bathing and washing their clothes the individuals would then be considered clean and acceptable in the community again. The mixture of water and ashes would also be sprinkled on the tent and its furnishings if a death had occurred within the tent (Num. 19:1–22; 31:21–24). ***See also*** Heifer; Hyssop; Purity. D.R.B.

water of separation. ***See*** Water of Purification.

waterpot, a container for water. Several types of clay pots were used for water during biblical times. The largest (Heb. *kad*) was used for storage or carrying a supply of water from the community source, as did Rebekah (Gen. 24:14) and Elijah (1 Kings 18:33). The Samaritan woman carried a water jar (Gk. *hydria,* John 4:28), and those at the Cana wedding feast were made of stone (John 2:6, 7). The pitcher (Heb. *gābî'a*) held water or wine (Jer. 35:5); the disciples searched for a man with a water pitcher (Gk. *keramos,* Mark 14:13; Luke 22:10). The finer decanter (Heb. *baqbûq*) was what Jeremiah symbolically smashed (19:1–13), and the pilgrim's flask (Heb. *ṣappaḥat*) was used by soldiers (1 Sam. 26:11) or travelers (1 Kings 19:6). ***See also*** Pottery. N.L.L.

wave offering. ***See*** Worship.

waw (wou). ***See*** Vau.

way, the English translation of various Hebrew and Greek words, used with several different meanings in the OT and the NT. The literal meaning of "path," "road," or "journey" evolved into more figurative usages to describe "natural" patterns of behavior observed in the world (e.g., Prov. 30:19), God's patterns of activity (e.g., Ps. 18:30; Isa. 55:8–9), or human lifestyles (e.g., Ps. 1:6). The most important usage centered in the meaning that related to human behavior and whether this behavior was in agreement with God's plans and purposes.

In the NT writings, however, the term took on an even more specific meaning. Jesus was identified as the Way to a new relationship with God (John 14:4–6), which issued in a new quality of life, a new way of living (cf. Heb. 10:20). One of the earliest designations for the emerging Christian community appears to have been that of followers of "the Way" (Acts 9:2; 19:9, 23; 24:22; cf. Mark 10:52). ***See also*** Christian. J.M.E.

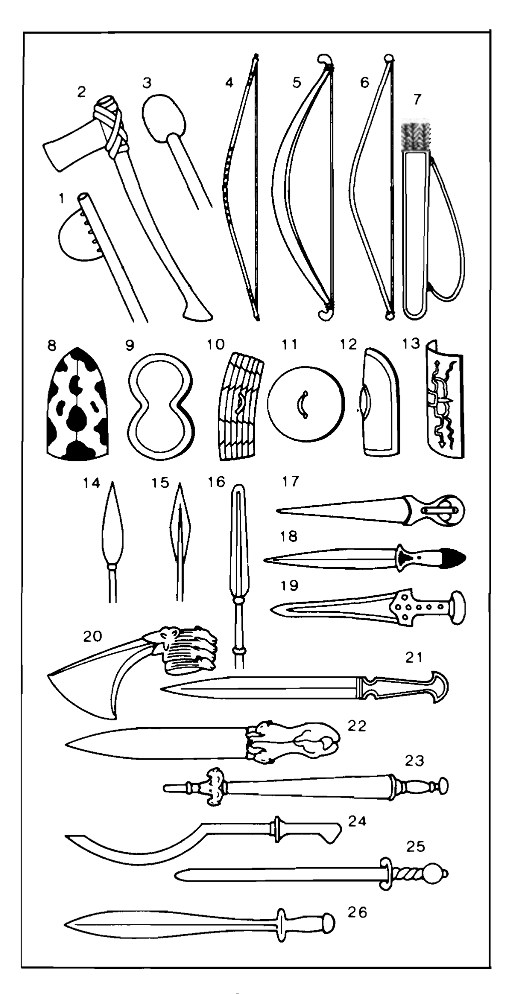
wayfarer (KJV: "wayfaring man"), any one of a variety of craftsmen and merchants who traveled regularly for work (smiths), as a mode of life (beggars, musicians), or by historical necessities (exiles, slaves; Judg. 19:17; 2 Sam. 12:4; Jer. 9:2; 14:8). In wartime they disappeared (Judg. 5:6), presumably for safety.

wealth, the abundant possession of various forms of property. In the early period of Middle East culture, wealth consisted of the possession of large and small cattle and slaves, as well as silver and gold (Gen. 24:35). Material goods are esteemed because they are created and ultimately owned by God (Ps. 50:10; Eccles. 3:10–13; 1 Tim. 4:3–5). Likewise, they are received through God's blessing (Deut. 28:1–14). Wealth is attributed to the patriarchs (Gen. 13:2), godly kings (2 Chron. 32:27–29), and Job (Job 42:10–17). They were leaders with significant responsibilities. Some in the early church were also rich (Matt. 27:57; 1 Tim. 6:17–19; but cf. 1 Cor. 1:26–27; James 2:5–7).

In the biblical view, wealth is given by God for definite purposes. God abundantly bestows material blessings for the purpose of meeting the needs of the poor (Deut. 15:10; 2 Cor. 9:8–10). Job defended his integrity with the claim that he had given to them open-handedly (Job 31:16–20). Sodom was condemned for failing to do so (Ezek. 16:49). John the Baptist makes sharing part of the demands of the inbreaking Kingdom of God (Luke 3:11). Provision for the poor is the purpose of work (Eph. 4:28), not the accumulation of wealth (Prov. 23:4), which is not to be sought for its own sake (Prov. 28:20, 22).

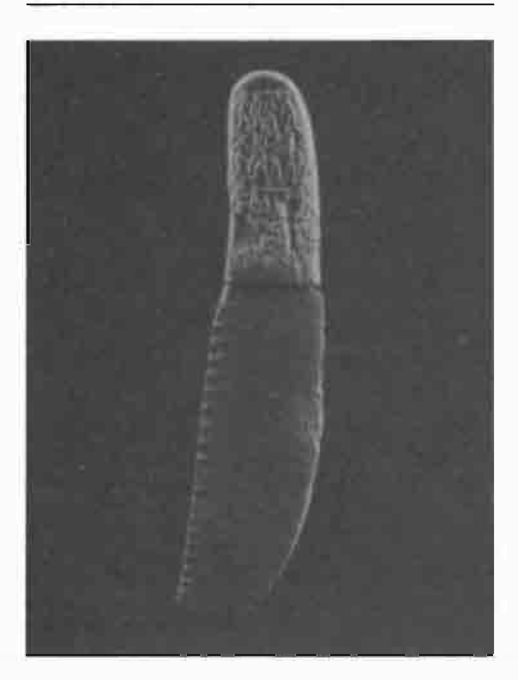
Wealth came to be viewed more negatively later in the biblical period. There was a shift in the understanding of the way God's rewards would be received so that God's blessings were increasingly seen as coming at the end of history. Wealth in the present was therefore less likely to be viewed as a divine reward (Mark 10:23–26). There also arose a growing consciousness of massive poverty, and wealth was viewed in relationship to it. In this context the rich could be categorically condemned (Luke 6:20–21, 24–25). When judgments on society were made, wealth was a chief focus of attack. The connotation of wealth tended to change from abundance to excess (Luke 12:15–21). Luxury is described in biting detail and condemned because of the failure of compassion (Amos 6:4–7; Luke 16:19–31) or because of the presence of injustice (Isa. 3:13–26; James 5:1–6). In the teaching of Jesus there is an incompatibility between riches and salvation (Luke 6:24; 16:19–31; 18:18–30), but repentance is possible for the rich (Luke 18:27; 19:1–10). One chooses between a present material reward and a future heavenly reward (Luke 6:24; 14:14; 16:25; Matt. 6:19–21).

Warnings also are made regarding the danger of wealth to spiritual and moral health (Ezek. 7:19–20). Wealth is a contrary force competing with God, drawing away one's basic affections (Matt. 6:21, 24; cf. Job 22:23–26). A desire to be wealthy can destroy saving faith itself (1 Tim. 6:9–10). It can lead to trusting oneself rather than God (Prov. 30:8–9). In contrast to poverty or wealth, the ideal is material sufficiency (Prov. 30:8–9; Eccles. 3:12–13 [cf. 2:1–11]; Matt.



6:11, 25–33; 1 Cor. 7:30c–31a; 1 Tim. 6:8). ***See also*** Mammon; Ownership; Poor. S.C.M.

weaning, the practice of training a child to eat food other than his or her mother's milk. In biblical times it was an occasion to celebrate when a child was weaned (Gen. 21:8). It marked Samuel's departure for special training (1 Sam. 1:21–28). A weaned child symbolized the peaceable kingdom of the Messiah (Isa. 11:8) or the helpless result of a delinquent leadership (Isa. 28:9).



weapons, offensive and defensive instruments and equipment used by soldiers in combat. Weapons used for hunting and fighting were among humankind's earliest inventions. The extant literature, archaeological remains, and artistic representations from the ancient Near East and Greco-Roman world demonstrate that weaponry in the biblical period was highly diversified and amazingly sophisticated. Not only was the effective use of certain weapons dependent upon training and skill, but the technical production of such instruments was an art, a science, and an industry. Generally speaking, weapons used in field combat and siege warfare were modified and improved over time. Changes in the arsenal of one people necessitated alterations in the weapons among neighboring peoples. In other words, competition to obtain an advantage over one's enemy has always been a significant factor in the evolution of weaponry.

As in the modern world, advancements in ancient technology were quickly adapted for use in instruments of war. One of the most important steps in the history of weapons was the development of carburized iron, a phenomenon that occurred in the eastern Mediterranean toward the end of the second millennium B.C., but earlier improvements in metallurgy (i.e., the production of copper and bronze) had been applied to arms production for nearly two thousand years before the Iron Age. Naturally, the shape, size, and overall durability of dagger and sword blades and spearheads and arrowheads were affected by such improvements in copper, bronze, and iron technology. Another important weapon that improved over time was the chariot, whose speed and maneuverability were increased by changes in design and construction materials, including metals. Other major steps in the development of ancient weaponry include the invention of the composite bow, piercing battle-ax, "Corinthian" helmet, and siege engines.

Although the Bible does not provide the detailed description of weapons that one finds in the ancient Greek authors Homer and Polybius, 1 Sam. 17:5–7 and Eph. 6:11–17 do list some of the weapons used in the OT and NT periods (see 2 Chron. 26:14–15; Jer. 46:3–4). Moreover, the Bible is replete with references to virtually every offensive and defensive instrument of war used in antiquity. Given the geographical location of the biblical lands and the frequency of war in the biblical period, this is to be ex-

Weapons: 1. Egyptian poleax (ca. 2700 B.C.); 2. Egyptian ax (1580 B.C.); 3. Type of ancient stone mace; 4. Type of Egyptian bow (1430 B.C.); 5. Assyrian bow (1200 B.C.); 6, 7. Assyrian bow and quiver with arrows (850 B.C.); *Ancient shields:* 8. Egyptian (2000 B.C.); 9. Late Minoan (1580–1100 B.C.); 10. Assyrian (700 B.C.); 11. Assyrian (650 B.C.); 12. Roman (100 B.C.); 13. Roman (300 B.C.); 14. Assyrian spear; 15. Syrian spear; 16. Egyptian spear (1600 B.C.); 17. Egyptian dagger (2000 B.C.); 18. Sumerian dagger; 19. Late Minoan dagger (1600–1100 B.C.); 20. Weapon with curved blade coming from mouth of animal (ca. 3000 B.C.); 21. Sword of Marduk-shapik-zeri (1250 B.C.); 22. Sword with straight blade, two lions forming hilt (ca. 3000 B.C.); 23. Assyrian sword (900 B.C.); 24. Ancient sickle sword; 25. Type of Roman sword; 26. Type of Greek sword.

pected. Offensive weapons may be divided into categories that correspond to the range at which the weapons were typically used against an enemy (i.e., short-, medium-, and long-range weapons).

Short-range weapons were normally used in hand-to-hand combat; this category has more members than the other two combined. Although the battle-ax was an important short-range weapon in the ancient Near East, it is not mentioned in the Bible. The war club (Prov. 25:18) and hammer (Jer. 51:20) were probably akin to the mace, another important weapon in antiquity. Frequently mentioned in the Bible are the rod and staff (Ps. 2:9; Isa. 10:5, 15), sword or dagger (Judg. 3:16–22; 1 Sam. 17:51), and spear (Num. 25:7–8; 1 Sam. 17:7).

Medium-range weapons were designed for throwing at enemies who were a fairly short distance away. Although some spears were light enough to be included in this category (1 Sam. 18:11; 19:10; 20:33), the lighter and shorter javelin was more suited for this purpose (1 Sam. 17:6).

Long-range weapons could be fired at enemies some distance away, enemies on a battlefield or on a city's ramparts. Basically, the ancients had two long-range weapons in their arsenals, the sling (1 Sam. 17:40, 50; 2 Kings 3:25) and bow (Isa. 21:17; Jer. 50:14).

The relationship between offensive and defensive weapons is obvious, so the latter were also well known in the biblical period. Included in the Bible's references to pieces of armor are the shield and buckler (1 Chron. 12:24; Ps. 35:2; Eph. 6:16), helmet (1 Sam. 17:38; 2 Chron. 26:14; Eph. 6:17), scale armor and coats of mail (1 Kings 22:34; Neh. 4:16), breastplate (1 Kings 22:34; Eph. 6:14), and greaves (1 Sam. 17:6).

Although it was a mobile fighting platform, the chariot should be included in a discussion of ancient weapons; indeed, it was frequently mentioned by the biblical writers (e.g., Exod. 14:17–18; 1 Kings 10:26). Note should also be made of the unclear but intriguing reference to Uzziah's "engines" (2 Chron. 26:15).

The military hardware of foot soldiers, horsemen, and charioteers was so well known in the ancient world that the biblical writers referred to most of the aforementioned weapons in figurative speech. Even the terms "weapon" and "weapons" assumed symbolic meaning in a number of passages (e.g., Ps. 7:12–13; Eccles. 9:18; Isa. 54:16–17; 2 Cor. 10:4). ***See also*** Chariots; Sling; Spear; Sword; War.

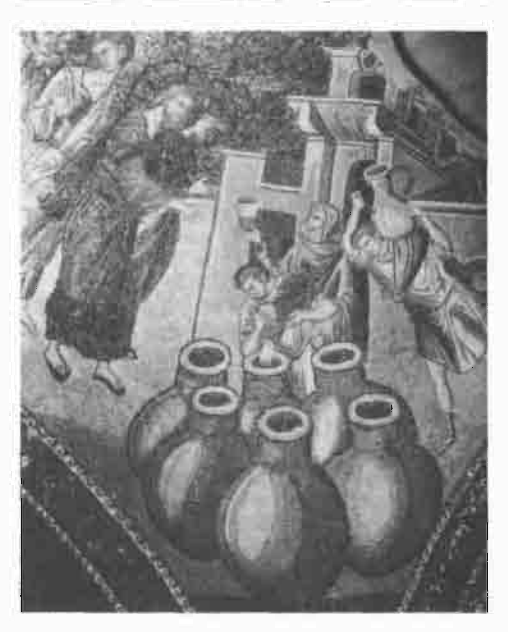
weasel, any small carnivore of the genus *Mustela.* Certain members of this genus were considered unclean (Lev. 11:29).

weather, climatic conditions, which for Palestine (approximately the same latitude as the state of Georgia or southern Spain) are also influenced by the formation of the land and its nearness to the desert and sea.

There are generally two seasons, a rainy season, which is winter, and the dry and bright summer. The early or "former" rains (cf. Jer. 5:24, KJV) come in the autumn, usually October or November. The heaviest rains are in December through March, while the "latter" rains are in April or May.

The rains come from the sea, watering mainly the western slopes of the central highlands. In general the rain decreases the closer one comes to the Transjordan desert, increasing only on the mountain slopes. Rainfall also tends to decrease as one moves from north (the Lebanon mountains and the hills of Galilee) to south (the Negeb and Sinai deserts). Rainfall is about the same in the coastal towns in the west as Jerusalem in the highlands, i.e., 20–24 inches a year. In the western hills of Galilee the 35–40 inches a year is

close to that of New York City, while the deserts of Transjordan, the Negeb, and Sinai, as well as the Jordan Valley, may have 8 or less.



The seasonal variations in temperature are relative to the amount of rainfall and the altitude. January is usually the coolest month, with temperatures averaging 45 degrees Fahrenheit in the hills of Galilee, 48 degrees in Jerusalem, 56 degrees at Acco and Gaza on the coast, and 59 degrees at Jericho in the Jordan Valley. In the summer months Jerusalem and towns on the central ridge have some of the most pleasant weather, averaging only about 74 degrees. In the Jordan Valley the temperature reaches unbearable levels, with average temperatures in the upper 80s.

The Bible has no word for weather; rather it speaks of the state and signs of the heavens (Job 37:21, 22; Matt. 16:2, 3), the growing conditions for the crops (Deut. 11:14; Isa. 30:23), and the signs of the seasons (Deut. 28:12; Prov. 26:1; Song of Sol. 2:11). ***See also*** Season. N.L.L.

weaving. ***See*** Spinning and Weaving.

wedding, a ceremony by which a man and a woman enter into matrimony. Within the larger communal transaction known as marriage, a wedding was in biblical times, as it is today, the occasion upon which a woman and a man formally initiated a new household with the blessing of their families. The term itself occurs only once in the OT (Song of Sol. 3:11) and rarely in the NT (Matt. 9:15; Mark 2:19; Luke 5:34; Matt. 22:8–12). Furthermore, wedding customs evolved over the millennium embraced by the biblical witness, and it is therefore impossible to give a definitive description of how a wedding was done in ancient Israel at any specific point in time. However, the evidence warrants certain observations.

No hint is preserved, either in the OT or the NT, that a religious ceremony accompanied the wedding. The occasion was a legal one, and perhaps written contracts were signed, just as written bills of divorce could also be signed (cf. Deut. 24:1–3; Jer. 3:8; Mark 10:4). The still-practiced Jewish custom of beginning a wedding with the writing of a marriage contract can be traced back to the first century B.C. The nuptial celebrations consisted of a procession from the house of the bride to the bridegroom's home (cf. Matt. 25:6; the latter may have been symbolized by a tent; cf. Num. 25:8; 2 Sam. 16:22; Ps. 19:6; Song of Sol. 1:16. The tent is preserved in Judaism and in modern Arab marriage customs in the symbolic canopy of *khuppah* under which the bride and groom conclude their vows.) Both parties were beautifully dressed and ornamented (Isa. 49:18; Jer. 2:32; Ps. 45:14–15), and the bride wore a veil (Song of Sol. 6:7) which she took off only in

The wedding feast at Cana, where Jesus, according to John 2:1–11, turned water into wine; fourteenth-century mosaic at the Kariye Church, Istanbul.

the nuptial chamber, a custom that may make intelligible Leah's mistaken identity in Gen. 29:21–25.

"The voice of mirth and the voice of gladness" (Jer. 16:9), dancing, the pronouncing of blessings (Ruth 4:11–12), and the recitation of love poetry were contributed by the accompanying villagers, family, and friends. The great nuptial poem celebrating erotic love, the Song of Solomon, identified with the occasion of one of his own royal weddings (cf. 3:6–11), is a lovely and extended example of the lush poetry of such occasions. Psalm 45 is another wedding poem in which all of the above-mentioned steps are followed by a royal couple. After the procession, a week-long feast took place at the bridegroom's house (Matt. 22:2), or in special cases, even at the bride's house (Gen. 29:27; Judg. 14:10–12).

The sexual relationship was consummated on the first night (Gen. 29:23), in the "tent" (Gen. 24:67) or some other bridal chamber. If the mores of Near Eastern villagers down to the present day are admissible evidence, they support the importance that Deut. 22:13–21 places upon the "tokens of virginity." These blood-stained garments of the wedding bed were preserved by the bride's parents as evidence should the groom elect later to slander his wife as having "played the harlot" prior to their marriage. So joyous for the entire community was a wedding and the inauguration of a new family that a newly married groom was

free from conscription into the army for one year, "to be happy with his wife whom he has taken" (Deut. 24:5).

Although Jesus' parable of the marriage feast in Matt. 22:1–14 (simply a banquet in Luke 14:16–24) provides hints about Jewish wedding customs late in the biblical period, its real intention is to teach that "many are called, but few are chosen." Like the wedding guests who refused to come or who came disrespectfully attired, the kingdom of heaven will exclude those who do not accept and prepare for it. Similarly, the reference to the wedding in Matt. 9:14 (and its parallels in Mark 2:19; Luke 5:34) is used to teach that joy and feasting like that of a wedding would be better responses than fasting to the presence of the Lord in the midst of the human community. A similar affirmation of joy in community is present in the account of Jesus' first manifestation of his divine power, at the wedding feast in Cana (John 2:1–11). Finally, in the apocalyptic vision of Rev. 19:6–21, the heavenly banquet set forth for the birds of prey on the day of God's victory over the powers of evil is described metaphorically as the "marriage supper of the Lamb" (v. 9). ***See also*** Marriage.

weeds (KJV: "tares"), probably darnel (*Lolium tremulentum*), a somewhat poisonous weed looking very much like wheat during its earliest stages. As a result of the resemblance, early separation from wheat is nearly impossible. This is further complicated by the fact that the roots of the two intertwine (Matt. 13:29).

In the interpretation of the parable of the "tares" (Matt. 13:36–43) the weeds represent unbelievers intermixed with believers either within the church (cf. "kingdom" in v. 41) or among the nations of the world (cf. v. 38). The parable teaches that ultimately judgment is a divine prerogative alone. The parable of the net makes the same point (Matt. 13:47–50; cf. also Luke 9:51–56; 1 Cor. 4:5; Rom. 12:19).

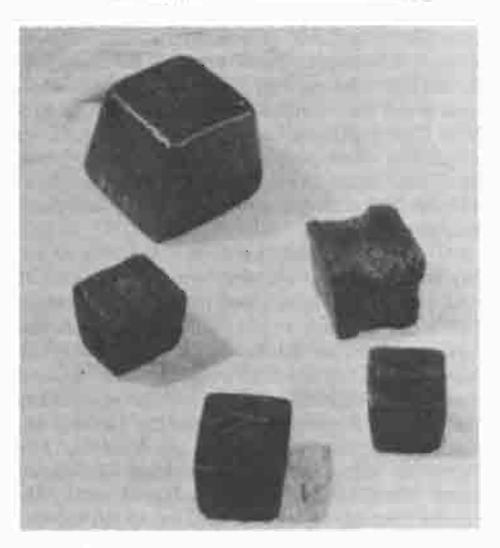
weights and measures, methods of determining and providing consistent amounts of mass or distance. The biblical system of weights and measures can be reconstructed, at least tentatively, from three sources: from references in the surviving literature of Egypt and Mesopotamia, from which civilizations the Palestinian systems were borrowed; from scattered references in the OT and NT to local practice; and from archaeological discoveries, whether of actual weights, vessels of measurable capacity, or architectural remains whose dimensions may reveal standard modules.

Weights: All reconstructions of the monetary system in ancient Israel, as well as in NT times, presuppose the use of balances to weigh out fragments of precious metal, principally silver, in payment. The Hebrew word for the basic unit of currency in the OT, the *shekel,* comes from the root *skl,* "to weigh," i.e., to pay. Balances, probably consisting simply of two metal pans suspended from a hand-held beam, are mentioned in several OT passages (Job. 6:2; Ps. 62:9; Isa. 40:12; Ezek. 5:1; Dan. 5:27). Accurate or "just balances" are commended (Lev. 19:36; Job 31:6; Prov. 16:11; Ezek. 45:10), but several references to "false balances" show that dishonest manipulation was easy and common (Prov. 11:1; 20:23; Hos. 12:7; Amos 8:5; Mic. 6:11, "wicked scales"). Several of the stone balance weights found show clear signs of having been chiseled on the bottom so as to correct or otherwise alter their weight—an ancient practice from which may derive our modern word to "chisel," i.e., to cheat.



Beam balances are pictured in Egyptian reliefs from the second millennium B.C. Several fragments of bronze beams, chains, and pans have

Table A

APPROXIMATE EQUIVALENT VALUES OF ANCIENT ASSYRIAN AND BABYLONIAN WEIGHTS

	Heavy Standard			
	Royal Weight		*Common Weight*	
Talent	61.2 kg.	134.6 lb.	60 kg.	132 lb.
Mina	1.05 kg.	2.32 lb.	1 kg.	2.2 lb.
Shekel	16.74 g.	.62 oz.	16.667 g.	.59 oz.
	Light Standard			
	Royal Weight		*Common Weight*	
Talent	30.6 kg.	67.3 lb.	30 kg.	66 lb.
Mina	525 g.	1.16 lb.	500 g.	1.1 lb.
Shekel	8.75 g.	.31 oz.	8.33 g.	.293 oz.

In every case, 1 talent equals 60 minas; 1 mina equals 60 shekels.

Israelite bronze weights from the ninth–eighth century B.C.

been found in second- and first-millennium B.C. sites in Palestine, sometimes with stone weights, and often in the area of the city gate, where biblical references indicate that much commerce was carried out (as in the later Roman *agora*, i.e., marketplace; cf. 2 Kings 7:1, 18).

Many small worked stones recovered in excavations may have been used commonly in ancient Israel as ad hoc balance weights; but many others so employed may have been overlooked by archaeologists. For our knowledge of the "official" system, however, we are dependent on stone weights marked with specific symbols or values that allow us to reconstruct the accepted standard with reasonable assurance.

First of all, it is evident that the Israelite system was largely borrowed from that of greater Canaan, which in turn derived it from Mesopotamia. The names of three of the four principal units are the same in all three languages—*mina, shekel,* and *gerah*—and the ratios are similar. The largest unit, the talent, was known to the Babylonians as *biltu* and to the Israelites as *kikkār,* "a round thing" (or standard weight). (Our translation of the latter as "talent" comes from the Greek *talanton,* "weight.") However, there were several systems of weights and measures used in ancient Assyria and Babylonia, including those based on a "light" and a "heavy" standard. Thus, despite the discovery of many actual weights, we can give only an approximation of the system (Table A). Nonetheless, for our purposes it is clear that the Assyrian-Babylonian system was sexagesimal (using the number 60 as a base in computation) instead of decimal (using the number 10), as in the Egyptian and most modern systems. Thus 1 talent equaled 60 minas, and 1 mina equaled 60 shekels; but 1 shekel equaled 24 gerahs.

However, although the Israelite system borrowed the basic Mesopotamian units as noted above, it gave them different values, both in ratios to each other and in absolute weights. It was quinquagesimal, i.e., divisible by 5 or 50, rather than 6 or 60. A number of biblical references (Exod. 38:25–26; cf. Gen. 23:15; Exod. 30:24; 38:29; Num. 31:52; 1 Sam. 17:5) suggest that the talent equaled only 50 shekels. Again, according to the sole helpful biblical passage (Ezek. 45:12), the mina was only 50 shekels. Other passages (Exod. 30:13; Lev. 27:25; Num. 3:47; 18:16; Ezek. 45:12) state that the shekel was reckoned at only 20 gerahs. To calculate the exact weights of each of these units, we must turn now to the only external evidence we have, actual weights that have come to light in chance finds or in controlled excavation.

No inscribed talent or mina weights have been found in Palestine, and very few unin-

Table B
SHEKEL AND FRACTION WEIGHTS

*"Light" or Common System Shekel Weights**		*Fractions*	*"Heavy" System Fractions***		*Hieratic Symbols*	*Egyptian Equivalent deben*	*qedet*
		2–10 Gerahs	Beq'a	6.019 g.			
		(= 565 g.)	Pim	7.825 g.

7	= 7	1	3.61
8	= 8	11	4.2875
(9)			
10	= 10	5	5.303

The same Egyptian hieratic scripts used on the larger shekel weights are used on these fraction weights but are read instead at face value. One shekel equals 20 gerahs. (Atter G. Barkay, 1981.)

scribed weights have been recognized (except for a probable 8-mina weight from Tell Beit Mirsim). It is likely that the larger weights were rarely in use. We do have, however, a growing number of the smaller shekel and fraction-of-a-shekel weights, so that now for the first time we can reconstruct the Israelite system fully. It appears, however, that there were at least two systems in operation simultaneously (as in Mesopotamia); that there were discrepancies among individual weights even within the same system; and that matters were further complicated late in the OT period, when Egyptian hieratic signs (simplified forms of earlier hieroglyphic pictograms) for numerals were grafted to the Mesopotamian framework. Let us summarize the biblical and archaeological data for each system.

The first we call the "light" or *common shekel* system. Numerous biblical passages refer to the shekel (e.g., Exod. 38:29; Num. 3:47; 1 Sam. 17:5, 7), making it clear that this was the basic, most commonly used measure of weight and payment. Several dozen inscribed shekel weights have been found from the eighth and seventh centuries B.C., all but one from Judaean sites (a 16-shekel weight is known from Shechem). All bear an open loop sign resembling a "figure 8," which the OT scholar R. B. Y. Scott has convincingly interpreted as meaning "shekel," claiming it is a stylized representation of the small leather pouch (Heb. *ṣerōr*) in which lump silver, the common medium of exchange, was carried. Among the shekel weights known thus far, we have denominations of 1, 2, 4, 8, 16, and 24. As has long been recognized, however (R. B. Y. Scott, Y. Aharoni, and others), these shekel weights are marked with the Egyptian hieratic symbols for 1, 2—and then for 5, 10, 20, and 30. It seems that late in the monarchical period, probably to facilitate international trade, the Israelites borrowed the convenient Egyptian numerical signs but gave them their own values in part. The Israelites also equated their weights to the Egyptian *deben* (equivalent to 8 shekels), and *qedet* (one-tenth of a *deben*). Thus by this time (late eighth and seventh centuries B.C.), an originally Mesopotamian *sexagesimal* system had been transformed into a *quinquagesimal* system, but with the addition of Egyptian decimal markings!

Although this may be quite confusing to us, the overall shekel system "worked" because it was consistent. It utilized the 8-shekel weight (with the hieratic symbol of the latter) as the basic module, so that below that you had what were essentially fraction weights (the 4-, 2-, and 1-shekel weights), and above it each next weight was larger by 8 shekels (the 16- and 24-shekel weights; none larger are known). The Egyptian signs constituted a kind of "shorthand" that could easily be adapted to the Israelite system, regardless of the original values. Whether the average citizen or merchant read the signs at face value and made the recalculation, or simply understood them as Hebrew symbols, we do not know, but the latter seems more likely.

The chart in Table B lists the denominations and average weights of the shekel weights thus far known, together with the hieratic symbols on them and their equivalencies to the Egyptian system. It will be seen that the average weight of the shekel in this system can be computed as ca. 11.40 grams, probably the "light" shekel.

Recently the discovery of the "missing links" in a series of smaller weights, similarly inscribed, has enabled us to reconstruct the fraction weights, or weights of less than 1 shekel, of this "light" shekel system. Assuming that the shekel contained 20 gerahs, the scholar G. Barkay assembled some thirty-five known examples of smaller weights, many of them heretofore enigmatic, and showed that we can now recognize gerah weights in denominations of 2 through 8, plus 10 (and the others will likely be found in time). Furthermore Barkay's scheme demonstrates that these weights were also marked with Egyptian hieratic symbols, but here they must be read at face value (i.e., not 5=4, 10=8, as on the shekel weights). There was apparently no confusion, since the obvious difference in size kept the two systems distinct.

Table C outlines the gerah system as it presently appears. This table also makes clear that the average gerah was ca. 0.565 gram, which would yield a shekel of ca. 11.30 grams. This is strikingly close to our previous calculation of 11.40 grams—especially considering that any balances, where tested, have a margin of error of 5 percent or more.

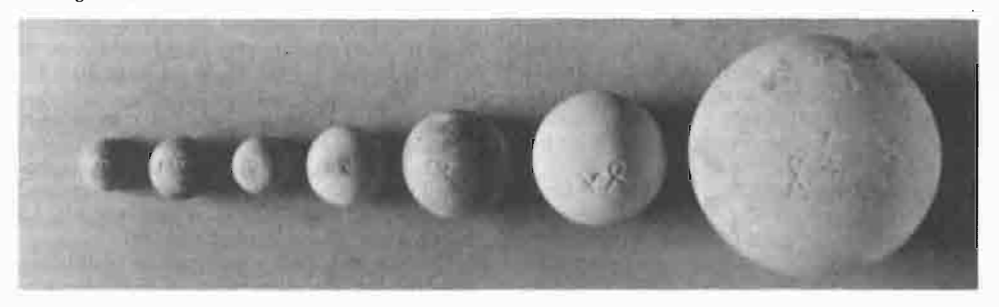
A second, or "heavy," shekel system can be reconstructed from another series of fraction weights, these bearing not numerical signs but Hebrew terms instead, some of them mentioned also in the Bible. The letters are always in-

scribed in a beautiful lapidary Paleo-Hebrew script of the late eighth and seventh centuries B.C., which may date most of these weights to the time of King Josiah (ca. 639–609 B.C.).

"Beq'a" weights. The Hebrew verbal root *baq'a* means "to cleave, split," from which it is assumed that the *beq'a* was approximately half a shekel. The term appears in Gen. 24:22; Exod. 30:13, 15; and 38:26, where indeed it can be so understood. The dozen or so weights published thus far inscribed *beq'a* average ca. 6.2 grams; if these are actually half-shekels, we may then have a "heavy" shekel of ca. 12.50 grams alongside the "light" shekel of 11.40 grams.

The word *netseph,* found on some twenty inscribed weights thus far, is obviously Hebrew, but it does not appear in the OT. The Arabic cognate *nusf,* "half," suggests that it may have been approximately a half-shekel, but the average of the known examples, ca. 9.8 grams, comes out nearer to four-fifths of the "heavy" shekel (ca. nine-tenths of the "light" shekel). At present we have no solution for this anomaly.

"Pim" weights. This Hebrew word appears in a famous but long obscure passage in 1 Sam. 13:19–21, which states that the price the Philistines charged the Israelites for sharpening iron implements was "one *pim.*" Earlier commentators and translators had tried to relate this term—occurring only here in the Hebrew Bible—to *pê,* "mouth," but the discovery of the first of some dozen or more actual *pim* weights resolved the difficulty. The average of the known examples is ca. 7.8 grams, or a little over three-fifths of the "heavy" shekel (ca. seven-tenths of the "light" shekel).



The discrepancies noted above are really not surprising. The variance within each series (as much as 10 percent or more) can easily be accounted for by the difficulty of shaping these small weights exactly, and also by the fact that the soft limestone wore away slightly with long use. The existence of at least two systems is already hinted at in the Bible, such as in descriptions of "the shekel of the sanctuary" (Exod. 38:25–26; 30:24), shekels "by the king's weight" (2 Sam. 14:26), and shekels of "the weights current among the merchants" (Gen. 23:15). It may be that the "heavy" shekel, possibly following the older Mesopotamian system of a shekel containing 24 (slightly smaller) gerahs, remained the official standard of the royal court and priesthood, while the "light" or 20-gerah shekel was in more common use.

In any case, these discrepancies were not only confusing but invited corrupt practices, calling for frequent rectification. We have already noted the biblical condemnation of "false balances." False weights are also condemned—specifically the practice of switching weights on an unsuspecting customer. Deut. 25:13 states expressly: "You shall not have in your bag two kinds of weights, a large and a small." Among the economic reforms carried out by King Hezekiah (ca. 727–698 B.C.) and King Josiah (ca. 639–609 B.C.) there were probably regulations designed to standardize weights and measures. It is perhaps no coincidence that nearly all of our inscribed weights come from the eighth and seventh centuries B.C., to judge from archaeological context where known, or from paleography (the science of dating scripts) in other examples.

In the NT there are fewer references to weights, but in compensation we have abundant other information on Roman period practices from classical sources. The "talent" (Matt. 18:24; 25:15–28) was probably equivalent to 6,000 drachmas. The "mina" of Luke 19:13–25 is uncertain. The "pound" of ointment (Gk. *litra,* Lat. *libra,* John 12:3; 19:39) was probably equivalent to 12 ounces.

Measuring Area: There is no special terminology for measures of area in the OT. A "yoke" (Heb. *tsemed;* 1 Sam. 14:14) is presumably what a pair of oxen could plow a day, possibly about an acre. The Latin Vulgate, however, translates "yoke" by *jugerum* (related to *jugis,* "yoke"), about five-eighths of an acre. Isa. 5:10 is the only other reference to a "yoke" of land. Another OT term for land area is *ma'ana* (Heb., "ploughing ground"?; only Ps. 129:3), translated by the KJV as "acre" but by the RSV simply as "furrow." Finally, *seah* in the story of Elijah's digging a trench around his altar on Mt. Carmel (1 Kings 18:32; "measure") denotes the area that "two measures of seed" would plant, but we are uncertain what that is. Later Talmudic

Top view of dome-shaped weights inscribed with their values. Some of the values, from right to left, are: 18, 8, 4, and 2 shekels.

sources confirm that land area was ordinarily estimated by the amount of seed required to sow it.

Measuring Length: As it was in Mesopotamia and Egypt, the "cubit" (Heb. *'ammah*, "elbow") was the standard of linear measure in ancient Israel. Like the subordinate measures, the "span" and the "finger," it derived from a natural, convenient point of reference, the approximate length of a man's forearm. The word occurs in the OT more than a hundred times, in descriptions of distances, buildings, furnishings, and the like. No actual cubit measures have been found by archaeologists, doubtless because they were of perishable wood, but Hezekiah's famous water tunnel inscription in Jerusalem, discovered in A.D. 1880, giving the length of the tunnel as "1,200 cubits," may be compared with the actual measured length of 1,749 feet. This would yield a cubit of about 17.5 inches—very close to the average length of a man's forearm from elbow to finger tips. Solomon's Temple would thus have been 90 feet (60 cubits) long, 30 feet (20 cubits) wide, and 45 feet (30 cubits) high (1 Kings 6:2).

There were, however, several cubits in use in ancient Israel, just as there were shekels. In addition to the usual or "short" cubit, there was the "long" cubit implied in Ezekiel's vision of the restored temple (Ezek. 40:5), possibly equivalent to the Egyptian cubit of ca. 20.6 inches. A third cubit may be referred to in the description of the bed of Og, King of Bashan, the "common cubit" (Deut. 3:11).

Smaller units of linear measure were the "span" (Heb. *zeret*), or distance between extended fingertips, about one-half a cubit, or 9 inches on the shorter scale, a little over 10 inches on the longer scale of Ezekiel. A "handsbreadth" (Heb. *ṭepaḥ*), about one-sixth a cubit, would be ca. 3 inches. A "finger" (Heb. *'esba'*) designates one-fourth of a handsbreadth, about three-quarters of an inch.

In the NT the word "cubit" (Gk. *pēchys*) seems to be merely a popular estimate of both length and time. Jesus says to his disciples "Which of you by being anxious can add a cubit to his life?" (Matt. 6:27); and the disciples on the Sea of Galilee started to bring in their boat when they were about "two hundred cubits" off shore (John 21:8). The Greek *stadion* (pl. *stadia;* Luke 24:13; John 6:19; 11:18; Rev. 14:20; 21:16) contained 400 cubits, about 200 yards in either Greek or Roman usage (the KJV regularly translates "furlong"). The "mile" (Matt. 5:41) was probably the standard Roman mile of 1,000 double paces, 5,000 Roman feet, or 1,618 yards.

Measuring Capacity: There are many units of capacity measure in the OT. They are related mostly to the Assyrian-Babylonian rather than the Egyptian system, but they were never finally fixed.

Cattle of Punt (lower left) being weighed against gold weights on a balance; fifteenth-century B.C. reliefs at Thebes.

The homer (Heb. *ḥōmer*) was a standard dry measure, the term being derived from the word for "ass" and referring (as the Assyrian *imeru*) to the load of grain a donkey might normally carry. On the basis of Assyrian texts it would have been about 14 bushels, but some calculations make it more like 6.5 bushels. The homer, equal to the cor, contained 10 baths or ephahs (Ezek. 45:11–14).

The cor (Heb. *qōr*) was equal to the homer, but it could be used for liquid measure as well (1 Kings 4:22; 5:11, 25; 2 Chron. 2:10; 27:5; Ezek. 45:14), in which case it would have contained about 35 gallons, and possibly up to 60.

The lethech (Heb. *lētek*), mentioned only in Hos. 3:2, is interpreted by the Mishnah as half a homer or cor, or about 2 to 3.25 bushels.

The ephah (Heb. *'ēpâh*) was equal to one-tenth of a homer or cor, thus about 1.5 to 2.5 pecks, or three-eighths to two-thirds of a bushel. The ephah is mentioned numerous times in the OT, especially with grains and cereals, and must have been the most common dry measure.

The bath (Heb. *bat*) was a liquid measure equal to the ephah (Ezek. 45:14). Storejars from the eighth century B.C. have been found at Tell Beit Mirsim inscribed "bath" and at Lachish inscribed "royal bath." These jars, when reconstructed, would yield ca. 5.5 gallons, corresponding approximately to the ephah. Quantities of liquid from small to very large were measured with the bath (1 Kings 7:26, 38; 2 Chron. 2:10; 4:5; Isa. 5:10).

The seah (Heb. *se'ah*) was a dry measure of uncertain size. References in Gen. 18:6; 1 Kings 18:32; 2 Kings 7:1, 16, 18; and Isa. 27:8 are rendered by the KJV and RSV as simply "measure," but the Septuagint (LXX) would suggest 1.5 *modii* or about one-third of a bushel.

The hin (Heb. *hin*) is an Egyptian liquid measure that can be shown by actual examples to be

0.46 liter, or about half a quart. But according to calculations based on the writings of the historian Josephus, the Israelite hin was one-sixth of a bath, or a little less than a gallon. Ezek. 4:11 gives a daily ration of water as one-sixth of a hin, or ca. two-thirds of a quart.

The omer (Heb. *'omer*) was one-tenth of an ephah (Exod. 10:36), or a little more than 2 dry quarts. According to Exod. 16:16–18, the omer was a day's ration of grain.

The issaron (Heb. *'issaron*), mentioned only rarely (Exod. 29:40; Lev. 40:10), is evidently one-tenth of some measure, presumably an ephah.

The kab (Heb. *qab*) is referred to only in 2 Kings 6:25. In rabbinical sources it was one-eighteenth an ephah, or about 1.6 of a dry quart.

The smallest unit of capacity, the log (Heb. *log;* only Lev. 14:10, 12, 15, 24), was used for oil. It was apparently one-fourth of a kab, or about two-thirds of a pint. Exactly as just balances were demanded by biblical law, so just measures were called for (Lev. 19:36; Ezek. 45:10).

In the NT, capacity is determined by Greek or Roman measures. The *sextarius* is about a pint, the *metrētēs* (John 2:6) is possibly 20 to 30 gallons. *Modios* (Matt. 5:15; Mark 4:21; Luke 1:3) is the Greek term for "bushel," about one-fourth of an American bushel. The ointment Mary poured on Jesus' feet (John 12:3) was a *litra,* the Roman pound of 12 ounces. A *choinix* (Rev. 6:6) was about 1 quart.

It must be observed that our reconstruction of ancient weights and measures, while more extensive and accurate than it was just fifteen or twenty years ago, is still provisional and may change with further archaeological discoveries.

well (Heb. *be'er*), a hole or depression dug for the purpose of collecting water. A well was constructed by digging into the ground or by curbing surface springs. Wells, together with cisterns, were the major source of water in ancient Palestine. Digging a well in this semi-arid land was an occasion for rejoicing (Num. 21:17), but also for strife (Gen. 21:25–26; 26:15, 18; Exod. 2:16–17). Wells were located in the wilderness (Gen. 16:7, 14), in fields (Gen. 29:2), and in towns (2 Sam. 23:15) and supplied both human and animal needs. The city well, which was usually located outside the gate (Neh. 2:13; John 4:6–8), served as a meeting place, especially for the women, who had the daily task of drawing water for the household (Gen. 24:11). The well is used figuratively to describe the beloved as a source of pleasure (Prov. 5:15; Song of Sol. 4:15) and to characterize a wicked city that keeps its wickedness "fresh" as a well keeps its water (Jer. 6:7). ***See also*** Beer-sheba; Cisterns.

whale, an aquatic mammal of the order Cetacea. It is identified in Matt. 12:40 as the carrier of Jonah after he was cast into the sea, although the book of Jonah identifies it simply as a "great fish" (Jon. 1:17–2:10). "Dragon" (Ezek. 32:2) and "sea monster" (Job 7:12) are rendered as "whale" in the KJV. There is no way at present to determine precisely which species the biblical writers intended.

wheat (genus *Triticum*), one of the principal cereal grasses, along with barley, of the Holy Land. Domesticated originally in the Near East, it has been cultivated since prehistoric times. Several types exist in the present and were known also in the past and are variously referred to as einkorn, emmer, spelt, and possibly rye (KJV, Isa. 28:25). It is often translated as corn or ears of corn (KJV) or grain (RSV; Gen. 41:5; Mark 2:23).

After the harvest in the late spring, the wheat was prepared for domestic use as flour by threshing, winnowing, parching, and grinding or milling. The finely ground flour was preferred for baking breads and cakes and was therefore a major dietary component (Exod. 29:2; Lev. 2:1).

Wheat is less hardy than barley and is more susceptible to drought, frost, and poor soil conditions. Dependence on wheat as the staff of life often led to famine in times of environmental stress (Gen. 43:1–2). In good years, however, production was so great that it was an item of export from the Holy Land. Solomon is said to have sent twenty thousand measures of wheat to Hiram of Tyre in payment for the cedars and cypress sent for the construction of the Temple

Wheat, as depicted on bas-reliefs at ancient Hermopolis, Egypt.

and palace of Jerusalem (1 Kings 5:10–11). ***See also*** Corn; Rye; Spelt. P.L.C.

wheels, round disks fitted with an axle at their center for supporting a load-carrying device. Early representations of wheels show them to be solid, anchored to the axle, the whole combination turning beneath the bed of the vehicle (Royal Standard of Ur, third millennium B.C.). Subsequent developments freed the wheel to turn on the axle, designed spoked wheels with rims for lighter weight and maneuverability, and adapted the device to other uses than transportation (potter's wheel for shaping the clay [Jer. 18:3] or pulley for use in raising water from a cistern [Eccles. 12:6]). In addition to carts, wagons, and chariots, biblical writers refer to wheels on the Temple court lavers (1 Kings 7:30–33), four on each. Ezekiel's vision of God's throne includes wheels with eyes (Ezek. 1:4–28) and in Dan. 4:9 and *1 Enoch* 14:18 they are part of the throne support. The crushing effect of a wheel is behind Prov. 20:26 and the rumble of wheels bespoke destruction (Nah. 3:2). R.S.B.

whirlwind, a violent, destructive windstorm, common in Israel during the rainy season. True whirlwinds, i.e., swirling winds or tornadoes, are unusual, but sometimes they appear near the coast during the early winter. Whirlwinds and storms usually accompanied a theophany such as God's appearance to Job (Job 38:1; 40:6) and Ezekiel's vision of God (Ezek. 1:4; cf. Nah. 1:3; Zech. 9:14). According to 2 Kings 2:1, 11, the prophet Elijah did not die, but a whirlwind, accompanied by a chariot and horses of fire, carried him up to heaven. ***See also*** Elijah; Job, The Book of.

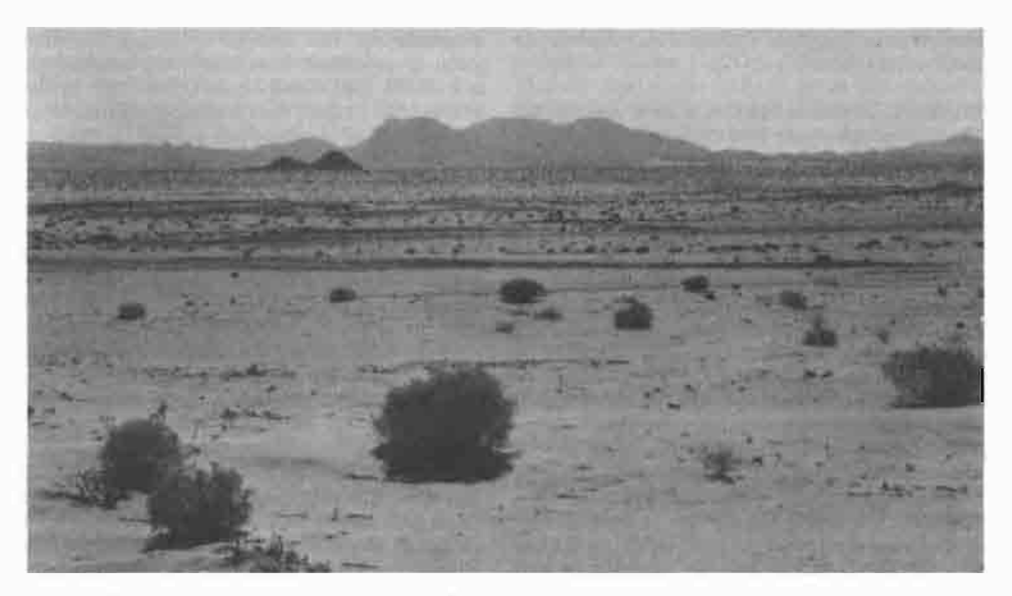
wickedness. ***See*** Redemption; Regeneration; Restitution; Sin.

widow, a woman whose husband has died. The status of the widow in ancient Israelite society was precarious. Having no inheritance rights and often in want of life's necessities, she was exposed to harsh treatment and exploitation. Widowhood was perceived by some to be a disgrace; death before old age was probably viewed as a judgment upon sin, and the reproach extended to the surviving spouse (Ruth 1:19–21; Isa. 54:4). Israel's legal corpus provided some measure of security for the widow. If a deceased Israelite had brothers, a levirate marriage could be arranged, but this was not always done (Deut. 25:5–10; Gen. 38). A priest's daughter could return to her father's house (Lev. 22:13). Often, however, widows had no respectable recourse but to rely on public charity.

God's concern for the plight of the widow is revealed in the Law, the Prophets, and certain of the Writings of the OT (Deut. 14:29; Jer. 49:11; Pss. 68:5; 146:9). It was taught that the neglect or oppression of widows provoked the divine wrath (Ps. 94:1–7; Job 22:9–11, 29–30; Isa. 1:16–17, 21–25). Noteworthy in Deuteronomy is the linkage of God's mercies (shown to his people who were sojourners in Egypt) with Israel's obligation to care for "the sojourners, the fatherless, and the widow" (Deut. 10:14–19; 24:17–22; 27:19).



Stories in the Gospels reveal Jesus' sensitivity to the widow's marginal existence: he restored to life "the only son" of the widow of Nain (Luke 7:11–17); he declared that a certain "poor widow's" copper coins exceeded in value the large gifts of the scribes to the Temple treasury, suggesting that some of their wealth was obtained by "eating up the property of widows" (Mark 12:38–44, NEB).

In the early church, widows were cared for and steps were taken to ensure equal distribution of food (Acts 6:1–6). The writer of the Pastoral Letter 1 Timothy urged a just and cost-efficient plan for the use of limited funds, so that "real widows" (those in abject poverty and truly alone) could be provided for (5:3–16). To this end, families were charged to care for their own (5:3–4, 16), and rules of eligibility for the enrollment of widows were prescribed (5:9–15). This enrollment probably implies the existence of an order of widows who devoted themselves to intercessory prayer and to rendering special services to the church. According to the second-century writers Ignatius (Smyrn. 13:1) and Polycarp (Phil. 4:3), such an order or ministry existed in their time. This order of widows later merged with that of church deaconesses. ***See also*** Family, The; Inheritance; Marriage; Women. J.L.P.

wife. ***See*** Concubine; Family, The; Marriage; Women; and individual entries by name.

wilderness, a desolate or deserted area devoid of civilization. One Hebrew word above all others is used for "wilderness," or "desert," in the OT: *midbar,* indicating both "that which is desolate and deserted" and "that which is beyond," i.e., beyond the limits of settlement and therefore of government control, perceived by both city dwellers and villagers as being essentially disorderly and dangerous, the home of wild beasts and savage wandering tribes. In time of war or repression refugees would flee to the *midbar* (Isa. 21:13–15; cf. Rev. 12:6, 14); "greatly distressed . . . enraged . . . [they] will curse their king and their God" (Isa. 8:21–22). But only too often they would find "no way to a city to dwell in; hungry and thirsty, their soul fainted within them" (Ps. 107:4–5).

Certainly, the primary Israelite experience was that of escaping from Egypt through the desolate wastes of Sinai and of entering there

Desert "wilderness" in the Sinai peninsula near Jebal Musa, a traditional site of Mount Sinai.

into covenant with Yahweh, but they remembered how they hated the wilderness wanderings and had no desire at all to return (Exod. 15:22–25; 16:3; Pss. 78:40; 95:8). It remained for them always "the great and terrible wilderness, with its fiery serpents and scorpions and thirsty ground where there was no water" (Deut. 8:15). *Midbar* was for them, as "wilderness" was originally in English, the *wild,* alarming wasteland, where men and women find themselves *bewildered* and disoriented.

Although often equated with the drought-stricken desert (Heb. *yeshimon;* Deut. 32:10; Ps. 106:14), the wilderness (*midbar*) included poor steppeland, e.g., the area surrounding the oasis of Damascus (1 Kings 19:15), and could include the marginal cultivated land on the Transjordan plateau (Num. 21:13; Deut. 4:43), as well as the pastureland east of Bethlehem, where in the Christmas story shepherds were "keeping watch over their flock" (Luke 2:8), as David had done centuries before them (1 Sam. 17:28). It could comprise also tangled thickets and scrub, such as the "thorns" and "briers" of the wilderness near Succoth in the Jordan Valley (Judg. 8:7, 16). Wilderness (*midbar*) in fact merged into wooded areas (Heb. *ya'ar*), which is normally translated "forest," and both were perceived by the settled Israelites as dangerous trackless country where one could rapidly become lost or be attacked by wild beasts. In fact, the two are equated in Ezek. 34:25 when God promises, "I will make with them a covenant of peace and banish wild beasts from the land, so that they may dwell securely in the wilderness [*midbar*] and sleep in the woods [*ya'ar*]." An even more impressive parallel may be found in Isa. 32:15, where wilderness replaces the thickly forested "Lebanon" of Isa. 29:17. They both belonged to the savage, ill-controlled regions beyond the cultivated farmlands. To the north and west lay the woods; to the south and east the wilderness.

NT writers held similar opinions (Heb. 11:37–38), viewing "waterless places" as the natural habitat of evil spirits (Luke 11:24; see Isa. 34:14). It was therefore appropriate that it was in the desert that Jesus was tempted by Satan to abandon his vocation of suffering Son of God (Matt. 4:1–11; Luke 4:1–13). When Jesus fed the multitudes in the wilderness (e.g., Mark 8:4), he showed he was able to overcome its dangers, both physical and supernatural. Jesus' forerunner, John the Baptist, had also appeared in the wilderness with his message of repentance (Mark 1:4), thus reminding Israel of its first days as chosen people in the desert of Sinai. The fact that John performed a baptism indicates that the wilderness was not a waterless stretch of sand, but rather a desolate area where water was nevertheless available, perhaps somewhere in the Jordan Valley. The remaining NT references to wilderness are principally in contexts where Israel's period of wilderness wandering is at issue (e.g., John 3:14; Acts 7:36; 1 Cor. 10:5). ***See also*** Bethlehem; Desert; Sinai, Succoth.

D.B./P.J.A.

willow, any water-loving tree of the genus *Salix* (Ezek. 17:5; Lev. 23:40; Job 40:22; Isa. 44:4). Even when it was a sorrowful symbol of

the exile in Babylon, the tree was associated with water (Ps. 137:1–2).

Willows, Brook of the, a stream crossed by Moabite refugees carrying their belongings (Isa. 15:7). The most likely identification is the Seil el-Qurahi, the lower portion of the Wadi el-Hesa southeast of the Dead Sea.

winds, perceptible movements of air masses. Winds were an important determinant of weather in ancient Palestine. In the rainless summer months moisture-laden winds from the Mediterranean (west or northwest) flowed over the land during the daytime, moderating the midday heat and leaving a heavy dew at night. These steady winds enabled threshers to winnow grain (Ps. 1:4). In the winter months the western winds brought thunderstorms (1 Kings 18:45), which were welcomed for their life-giving rain, despite their often violent effects: shaking the forest (Isa. 7:2) and agitating the sea (Ps. 107:25). Unstable weather between the two main seasons spawned the sirocco, the searing east or south wind that descended sporadically from the desert, blasting vegetation (Gen. 41:6; Ps. 103:16; Jon. 4:8), drying up water sources, and wrecking ships at sea (Ezek. 27:26). Striking in violent gusts (Job 1:19) or in a steady blast, it was often laden with suspended dust. God used an east wind to dry up the Flood (Gen. 8:1) and drive back the waters of the sea (Exod. 14:21).

Wind was a mysterious force, moving endlessly from unknown origin to unknown destination (Eccles. 1:6; John 3:8). It was a symbol of transience (Ps. 78:39), fruitless striving (Eccles. 1:14), and empty talk (Jer. 5:13), but also of untamed, irresistible power, whirling, scattering (Jer. 18:17), tossing to and fro (Eph. 4:14). God alone could command the winds (Mark 4:41), sending them forth from his storehouses (Jer. 10:13), riding upon them in the clouds (Ps. 18:10; 104:3; Ezek. 1:4), and commissioning them to do his will (Exod. 15:10; Ps. 104:4). The Holy Spirit at Pentecost was perceived as a mighty wind (Acts 2:2), and the four winds of heaven described the extremities of the universe (Dan. 7:2; Matt. 24:31; Rev. 7:1). ***See also*** Flesh and Spirit; Whirlwind. P.A.B.

wine-bibber, a drunkard; drunkards are denounced in Prov. 23:30. Jesus was accused of being a drunkard (Matt. 11:19) by those who rejected his ministry among the outcast.

wine press. *See* Vine.

wineskin. *See* Bag; Bottles; Vine.

winnowing, the process by which threshed grain is separated from chaff, the extraneous, nonedible stalks and husks (Ruth 3:2). In the ancient Holy Land, the threshed grain and chaff was mounded on a flat open surface, or piled on a cloth, a wide but shallow basket, or a sieve. It was then raked or thrown into the air where the brisk afternoon wind removed the lighter chaff (cf. Ps. 1:4). The heavier grain dropped back to the ground and was gathered. The threshed and winnowed grain was then ready for use or storage in granaries. The same procedures are still used in many places in the Near East today. John the Baptist used the process of winnowing as a metaphor for divine judgment (Luke 3:17). ***See also*** Threshing. P.L.C.

winnowing fork (KJV: "fan," in Matt. 3:12; Luke 3:17), the hand device used by the farmer to throw the mix from his shredded pile of grain and straw into the air to let the wind carry the straw and chaff away and the grain fall back for collection (Isa. 41:16). The winnowing fork needed sufficient tines closely enough spaced to hold nearly clean grain (Isa. 30:24). Such fine separation of straw and chaff from the kernels of wheat became a metaphor for the punishment of Jerusalem by God (Jer. 15:7; cf. Matt. 3:12; Luke 3:17). In the final stages the grain would be thrown up into the breeze by shovel, the breeze carrying off the last of the chaff and leaving the grain ready for sifting and the removing of pebbles by direct hand inspection. Prevalent north and west winds provided a natural fanning mill for Palestine's farmers, as they do to this day. Fanning was done on the threshing floors after the sledges had been driven over the harvested grain sufficiently to cut the straw fine. ***See also*** Sledge; Winnowing. R.S.B.

wisdom, a term in the Hebrew Bible (OT) standing for many things ranging from the technical skill of the artisan (Exod. 36:8) to the art of government (1 Kings 3:12, 28). It also designates simple cleverness (2 Sam. 14:2), especially the practical skill of coping with life (Prov. 1; 5; 11; 14), and the pursuit of a lifestyle of proper ethical conduct (Prov. 2:9–11 and throughout). Wisdom is also seen as belonging properly to God (Job 28), associated with creation (Prov. 8:22–31), and even identified with the Torah or Law (Ecclus. 24:23).

Wisdom Literature in the OT: In the Hebrew Bible, "wisdom literature" is generally understood to refer to Proverbs, Job, and Ecclesiastes; among the Apocrypha, it includes Ecclesiasticus (The Wisdom of Jesus the Son of Sirach) and The Wisdom of Solomon. The extent to which other parts of the Bible can be described as "wisdom" (e.g., the story of Joseph in Gen. 37–50) is disputed, but certain Psalms seem to betray wisdom influence (e.g., Ps. 37). The relationship between wisdom and apocalyptic and

the extent to which the latter was influenced by the former also remains a moot point.

This literature has characteristic traits: (1) There is an absence of reference to the typical salvation beliefs, such as the patriarchal promises, the Exodus, the Sinai covenant, etc. (2) The object of the Hebrew sage is to transmit the lessons of experience, so that one may learn to cope with life. The teaching inculcates certain goals, such as self-control (especially in speech), honesty, diligence, etc. If one follows the counsels of the sage, wisdom will bring life; its opposite, folly—a practical, not merely intellectual folly—brings destruction. (3) A characteristic problem is retribution, the way in which the wise/foolish (i.e., virtuous/wrongdoers) are treated. Proverbs upholds the optimistic view shared by such books as Deuteronomy but disputed by Job and Ecclesiastes. (4) Certain literary forms are cultivated: the discrete, separate saying, which is usually a pithy expression in two parallel lines; the admonition, whether positive or negative, which is often accompanied by a motivation; wisdom poems (typical of Prov. 1–9); and reflections (characteristic of Ecclesiastes). Job is dominated by disputation speeches between the protagonist and the three friends (chaps. 3–31).

Solomon was famous in biblical tradition for his wisdom (1 Kings 4:29–34); hence Proverbs and Ecclesiastes came to be attributed to him. The origins of Israelite wisdom are presumed to lie in the insights, oral and written, of the family and clan and also of the wise men who could have provided training for courtiers in Jerusalem. The existence of some kind of "school" may be inferred from similar institutions in Mesopotamia and Egypt. Wisdom, in fact, is an international possession, cultivated throughout the ancient Near East, and many parallels to Israelite wisdom, both remote and close, have been proposed (e.g., the teaching of the Egyptian sage Amenemopet and Prov. 22:17–24:22).

An outstanding trait of biblical wisdom is the personification of Lady Wisdom in Proverbs 1; 3; and 9 (cf. Job 28; Ecclus. 24). She is described as originating from God and is associated with creation (Prov. 3:19; 8:22–31). According to G. von Rad, she is "the self-revelation of creation" and, one might add, the revelation of God in and through creation (Ps. 19:1). Wisdom theology is a theology of creation, for it was within the area of creation and human experience that the Hebrew sages operated.

The Wisdom Tradition in the NT: The wisdom tradition continues through the intertestamental period (Ecclus., Wisd. of Sol.) and appears in Christianity (NT) and Judaism (Sayings of the Fathers). First of all, Jesus is presented in the synoptic Gospels as a wisdom teacher, a rabbi. The many logia (sayings) attributed to him are cast in the aphoristic style of the sages (e.g., Matt. 6:19–7:27), and comparisons and parables abound. The wisdom of Jesus is "greater than Solomon" (Luke 11:31; cf. Mark 6:2). In Matt. 11:2–19, and Luke 7:18–35 Jesus is implicitly designated as wisdom (cf. Matt. 11:27; Luke 10:22). What appears as a threat by wisdom in Luke 11:49–51 is a means for Matthew to identify Jesus with wisdom (Matt. 23:34–36). Like wisdom in Proverbs 8, Jesus issues an invitation to all to follow him and take up his yoke (Matt. 11:28–30).

"Wisdom" does not occur in the Johannine literature, but Jesus is proclaimed as the divine Logos or Word, who has become incarnate (John 1:1–18). This interpretation was served by the personification of wisdom (Prov. 8; Ecclus. 24; Bar. 3:9–4:4; Wisd. of Sol. 7–9). Some would claim that a *sophia* (Gk., "wisdom") myth, which comes to development in later Gnosticism, underlies this portrayal.

Wisdom is a serious concern in Paul's dealings with the Corinthians. Here he contrasts their worldly wisdom with the folly of the cross (1 Cor. 1:17–25; cf. 2:6–16) and affirms that Christ is the "wisdom of God" (1 Cor. 1:24). The OT personification of wisdom seems to lie behind the christological development in Eph. 3:8–10 and Col. 1:15–20. In Col. 4:5 and Eph. 5:15 the Christian is to walk in wisdom, and the "spirit of wisdom" (Eph. 1:17) is a gift from the Father.

The Letter of James as a whole bears striking resemblance to traditional wisdom literature because of its hortatory or parenetic nature. Wisdom is a gift to be asked from God, who will grant it (1:5). This is practical wisdom. While it is "from above," in contrast to the wisdom that is "earthly," it expresses itself in exemplary conduct; it is "peaceable, . . . full of mercy and good fruits" (3:13–18).

Many themes of biblical wisdom appear in the writings of the postapostolic age (e.g., *Didache; The Shepherd of Hermas*) and in Gnostic literature (e.g., *The Gospel of Thomas*). ***See also*** Ecclesiastes; Ecclesiasticus; Job, The Book of; Logos; Proverbs, The; Wisdom of Solomon, The.

Wisdom of Solomon, the, a poetic discourse composed in Greek by a Hellenistic Jew, probably in Alexandria, Egypt. The latest likely occasion for its composition is the persecution of Egyptian Jews under Gaius Caligula in A.D.

38–41, although dates as early as the last half of the first century B.C. have also been suggested. The writer assumes the identity of Solomon (cf. Wisd. of Sol. 7:1–14 and 8:17–9:18 with 1 Kings 3:6–9) to speak in praise of wisdom and righteousness and warn against the folly of oppression and idolatry. While the wicked may seem to prosper in this life, they are not aware, he claims, that they must face a future judgment (4:20) and even at birth in effect cease to be (5:13). Righteousness, on the other hand, is immortal (1:15). The book has survived as a part of the Septuagint, or Greek version of the OT. It is considered a part of the Apocrypha by Protestants and one of the deuterocanonical writings by Catholics.

OUTLINE OF CONTENTS

The Wisdom of Solomon

I. A discourse on the justice of God (chaps. 1–5)
II. In praise of wisdom as a guide for life (chaps. 6–9)
III. Wisdom as a key to history, from Adam to Moses (chaps. 10–12)
IV. The origins and forms of idolatry (13:1–15:17)
V. A case in point: the Egyptians and the Israelites in the Exodus (15:18–19:22).

The initial discourse (chaps. 1–5) proclaims that "Because the Spirit of the Lord has filled the world, . . . no one who utters unrighteous things will escape notice, and justice, when it punishes, will not pass him by" (1:7–8). The ungodly, it argues, have made a covenant with death, and, assuming this life to be the whole of existence, they live as they please and oppress the righteous. With allusions to the Enoch tradition (4:10–15) as well as to Second Isaiah's suffering servant (5:1–8; cf. Isa. 52:13–53:12), the discourse speaks of a righteous one who was persecuted but, to the consternation of his persecutors, comes to be numbered among the heavenly beings (5:5) at the final judgment. A parallel account of martyrdom among Egyptian Jewry—perhaps even related to the same occasion if the Wisdom of Solomon is from the time of Caligula—is the account of the death of the righteous Eleazar in 4 Maccabees. The latter goes beyond the Wisdom of Solomon by appropriating the theme of vicarious atonement found in Isa. 52:13–53:12 (see 4 Macc. 6:27–30).

The second section of the Wisdom of Solomon picks up the story of Solomon, the king who chose wisdom (cf. 1 Kings 3:5–9), and advocates that all rulers should seek Wisdom (personified as a woman as in Prov. 8:22–31 and Ecclus. 24) from beside the throne of God in order to rule wisely and justly. The woman Wisdom is defined as God's spirit, intelligent, holy, the fashioner of all things, an emanation of God's glory, a reflection of eternal light, and an image of divine goodness (7:22–26). The passage clearly understands Wisdom in terms of Hellenistic philosophy, in a manner similar to Philo's *logos* or rationality of God, a subordinate agent responsible for creation. While the Christian idea of the Word (*logos*) of God in John 1:1–5, 14 is similar, neither the Wisdom of Solomon's Wisdom nor Philo's *logos* is to be thought of as consubstantial or one with God, as in the Christian doctrine of the Trinity. Some scholars see the outlines of the Egyptian and Hellenistic goddess Isis behind the portrait of Wisdom as a woman; however, a glance at the larger context of the Wisdom of Solomon with its polemic against idols should make it clear that, if the identification is correct, the passage is not advocating some form of paganism but is using a common image from the surrounding culture to advance an authentically Jewish theme. In listing the various topics of natural and cosmological lore—both secret and manifest—taught to Solomon, Wisdom of Solomon 7:17–22 gives us a look into the scope of Jewish speculative wisdom of the age—a form of wisdom also appearing in apocalypses like *1 Enoch*, where an angel reveals cosmological secrets to the seer (see *1 Enoch* 41).

Chaps. 10–12 then use the theme of Wisdom personified as a key to unlock the secrets of history from Adam to Moses, revealing God's providence through history as well as through creation. Curiously enough, it pictures Wisdom as protecting Adam and delivering him from his transgression. Cain thus becomes the first to perish through folly (10:1–3). At the end of this section, the book shifts its attention from oppression to the idolatry of the Egyptians and Canaanites to demonstrate that people are punished by the same things by which they sin (11:16).

The writer then turns to an interesting discussion of the roots of idolatry that goes beyond the polemics found elsewhere to suggest several different theories of its origin (13:1–15:17). Led by the beauty of God's creation to worship the natural phenomena, humanity subsequently assumes that it can fabricate gods and begins to trust in the works of its hands. Another suggestion echoes that of Euhemeros (ca. 300 B.C.), who claimed that the gods were the result of the deification of heroes. The Wisdom of Solomon suggests that parents make statues to remember dead children and kings create images to impose their authority at a distance, so that out of the grief of parents and the vanity of kings spring the cults and secret mysteries of paganism.

The Wisdom of Solomon concludes (15:18–19:22) by turning to the Exodus to demonstrate the theory of poetic justice enunciated earlier (cf. 11:16). The ultimate irony is

that the Egyptians, who had imprisoned the people of God, are really themselves captives of the power of darkness. In developing this idea, the writer explores the Hellenistic idea of the psychological self-punishment of the guilty (chap. 17; cf. Philo *Flaccus* 162–80). The radical drama of liberation is symbolized through the image of the transformation of nature, so that fire burns in water and yet has no power over human flesh (19:18–21).

While the Wisdom of Solomon claims to address alien kings in order to teach them how to rule wisely, its real audience is more likely the Hellenistic Jewish community in Alexandria and its purpose to support it in facing persecution and in resisting the dangers of idolatry in a pagan culture. ***See also*** Apocrypha, Old Testament; Ecclesiasticus; Immortality; Judgment, Day of; Persecution; Wisdom. D.W.S.

wise men, sages who appear in the biblical traditions within the context of an international wisdom movement (on Egyptian, Persian, and Babylonian wise men, see Gen. 41:8; Esther 1:13; Dan. 2:12); the term applies also to the Magi in the infancy narrative of Matt. 2:1–18.

Wise men espoused wisdom in Israel in at least three settings: the tribe, the court, and the school. In each case, the wisdom shared was generally practical, concerned with knowledge about the principles governing the world and the life of the individual. The usual form of instruction was the proverb. Wisdom was based on reason rather than revelation, but reason enlightened by piety, for "the fear of the Lord is the beginning of wisdom" (Prov. 9:10). According to Deut. 1:13–15, wise men were selected for the tribes in the days of Moses to provide instruction in the law and from their own understanding and experience. A professional class of wise men developed (Jer. 18:18; Isa. 29:14) along with priests and prophets. Some served at the royal court to guide rulers and to preserve (as scribes) the sacred traditions (Jer. 8:8–9; 18:18). Finally, professional wise man provided instruction in schools they established (Ecclus. 51:23). Proverbs, Job, Ecclesiastes, Ecclesiasticus, and the Wisdom of Solomon are thought to have been composed by professional sages. The preeminent wise man in Israel's traditions was Solomon, whose "wisdom surpassed the wisdom of all the people of the east" (1 Kings 4:30). Occasionally, the traditions speak of the "wise woman" (2 Sam. 14:2; 20:16).

The Wise Men, or Magi (from the Greek root meaning "magic"), who appear in Matthew are said to be "from the East" (2:1), which could mean Arabia, Mesopotamia, or elsewhere. They are portrayed as astrologers, since they are guided by the star (2:2), and as Gentiles, since they do not know the scriptural prophecy concerning the location of the Messiah's birth (2:2–6). Popular traditions have portrayed them as three in number, although

The three Magi, or Wise Men, of the Matthean account of Jesus' birth (Matt. 2:1–18) as depicted in the mosaics at San Apollinaire in Classe, Ravenna, Italy, sixth century.

Matthew does not say so, because of the three gifts (2:11), and as kings in light of Isa. 60:3, although for Matthew they are astrologers. Later, postbiblical, traditions have also supplied names (Caspar, Melchior, and Balthasar). Epiphany ("manifestation," January 6) is the annual celebration, based on this account, of the manifestation of Jesus to the Gentiles, of whom the Wise Men are considered the first to pay him homage. ***See also*** Astrologers; Epiphany, Feast of; Proverb; Stars, Star of Bethlehem; Wisdom. A.J.H.

witch, a specialist in the manipulation of intangible powers of evil against people. Witches were commonly held to have existed in the ancient Near East and were doubtless known to the ancient Israelites. The OT contains lists of offenders of various kinds no longer precisely definable, but which probably included witches. The longest such list is found in Deut. 18:10–11, where the practitioners of various acts forbidden to the readers are said to flourish in the nations Israel is dispossessing. A slightly shorter list attributes such offenses to Manasseh (2 Kings 21:6; 2 Chron. 33:6), and several of the same terms are combined with the prophets and dreamers to whom Jeremiah tells the Judeans not to listen (Jer. 27:9). Pairs of such terms are found in Lev. 19:26; Isa. 47:9, 12 (of Babylon); and Mic. 5:11. A woman who practices one of these activities and who may be a witch is proscribed in Exod. 22:18, and Nah. 3:4 designates Nineveh such a woman. The so-called witch of Endor (1 Sam. 28) is a necromancer or medium. ***See also*** Magic and Divination. S.B.P.

withe. ***See*** Bowstring.

withered hand, hand viewed in 1 Kings 13:1–6 as divine punishment; its restoration is seen as divine mercy. Jesus' healing of an atrophied hand on the Sabbath (Mark 3:1–6; Matt. 12:9–14; Luke 6:6–11) is portrayed as manifesting divine mercy that contrasts with rule-oriented attitudes seen as heartless. ***See also*** Disease and Healing; Miracles; Sabbath.

witness (Heb. *ayd;* Gk. *mahr'tōōs*), in the legal sphere, one who speaks from personal experience about what happened to oneself or another. This may occur at a trial (Deut. 17:6; Prov. 19:28; Mark 14:63) or a legal transaction (Isa. 8:2; Jer. 32:10). It is in this legal sense that two or three witnesses are called upon to corroborate a member's apostasy (Matt. 26:60; 2 Cor. 13:1; Heb. 10:28). Witnesses initiate the death sentence (Deut. 17:7; Acts 7:58). Bearing false witness is roundly condemned (Exod. 20:16; Prov. 12:17; Acts 6:13) and can bring severe reprisal (Deut. 19:16–21; Prov. 21:28). Sometimes a pillar or altar of rocks is built as a visible witness to a convenantal agreement (Gen. 31:44; Josh. 22:27, 34; Isa. 19:19–20). God is frequently called upon as a witness to confirm a person's or nation's proper or improper conduct (1 Sam. 12:15; Rom. 1:9; Jer. 29:23; Micah 1:2).

The term takes on several specialized meanings in the NT, referring to a person present at the ministry, death, resurrection, and ascension of Jesus (Luke 24:48; Acts 1:22) or to one who attests to the truth about God (John 8:18; Rev. 1:5; 11:3). The "cloud of witnesses" in Heb. 12:1 compares the multitude who have suffered but retained their faith to the great crowd of spectators at a Greco-Roman athletic contest, whose presence spurs the contestants to give their best efforts. "Martyr" is derived from the same Greek word as "witness." ***See also*** Testimony. D.R.E.

wizard, one who practiced such things as magic, sorcery, divination, or necromancy. The word can refer to either a male or female. Israel was forbidden to consult them (Lev. 19:31; Isa. 8:19). They were banned as early as the reign of Saul in the late eleventh century B.C. (1 Sam. 28:3), although Saul did consult a female diviner to raise up the ghost of Samuel (1 Sam. 28:9). King Josiah (639–609 B.C.) banned them (2 Kings 23:24) after they had gained a foothold in the reign of Manasseh (697–642 B.C.; 2 Kings 21:6). ***See also*** Magic and Divination.

wolf, a member of the species *Canus lupus,* large members of the dog family. In biblical usage the literal reference to some such animal is found only in Isa. 11:6; 65:25; and John 10:12. All other usages are metaphorical references to the wolf's hunger (Gen. 49:7); destruction (Jer. 5:6); or vicious, fierce, or ravenous conduct regarding the innocent (Ezek. 22:27; Hab. 1:8; Zeph. 3:3; Matt. 7:15; Matt. 10:16; Luke 10:3; Acts 20:29).

woman with a flow of blood, woman whose healing when she touched Jesus' garment is reported in the Gospels (Mark 5:25–34; Matt. 8:20–22; Luke 8:43–48). Later tradition identifies her as "Veronica."

women, a topic in the Bible that can be approached in several ways. We can look at the legal status of women and the roles and functions of women in society, and we can look at portrayals of human and divine women.

The Legal Status of Women in the Patriarchal Period: The biblical world was undoubtedly androcentric and dominant actions were undertaken by men. Two separate social systems are portrayed in the Bible. The first, most probably older system is the extended family of the patriarchal period, which was patrilineal and patrifocal. The male head of the family had absolute rights of disposition over his children. A woman left her father's dominion to enter the dominion of the head of the family into which she was marrying. The most important social bond created by marriage was that between the father-in-law and the new daughter-in-law. In the event of the husband's death, the woman stayed in the new family, either as the mother of children, or being passed to another son in the institution of levirate marriage (Gen. 38:7–11; Deut. 25:5–10). In such a system, women had no direct access to power or decision making.

As the stories of the matriarchs of Israel show, the women of this period made their mark either by directly influencing their husbands (Sarah, Gen. 16:5; 21:10) or by trickery (Rebekah, Gen. 27; Rachel, Gen. 31). Although most women may have thrived, the system of patriarchal disposition lent itself to such abuses as the offer of Lot's daughters to the men of Sodom (Gen. 19:8) and of the women in Gibeah (Judg. 19:24), and the sacrifice of the daughter of Jephthah (Judg. 11).

Women in Classical Israel: Apart from the royal family, classical Israel consisted of nuclear rather than extended families. This change, heralded in Gen. 2:24, did not mean "emancipation" for women, who were still considered under the dominion of their husbands (Gen. 3:16). It should be noted, however, that in the family hierarchy, the sons of the family were not considered higher than the mother, and a son who rebelled against father or mother would be stoned (Deut. 21:18–21). Yet according to the formal laws of Israel women were clearly subordinate, although there does seem to have been a considerable diminution in the rights of the head of household to dispose of family members as compared with their rights during the patriarchal period.

Women owed sexual exclusivity to their present or future husbands. A woman was expected to be a virgin when she married. If she was seduced into premarital sex, the seducer had to pay the bride-price to her father, who could

then decide whether to grant her to him in marriage (Exod. 22:16–17); if she was raped, the attacker had to pay the bride-price, was given the girl in marriage, and could not divorce her (Deut. 22:28–29). A man could accuse his bride of not being a virgin: if the allegation was "proved" by the lack of blood upon the bedclothes, the girl could be stoned for behaving wantonly while in her father's house (Deut. 22:13–21). Adultery, defined as sex by a married woman with a man not her husband, was punishable by death (Lev. 20:10; cf. John 8:3–7). A man could accuse his wife of adultery and thus cause her to undergo a solemn oath procedure attesting her innocence (Num. 5:11–31).

Divorce was the prerogative of the husband. It was somewhat regulated by Deuteronomy, which provided for a bill of divorce so that women could remarry (24:1), and which did not allow men to divorce wives that they had had to marry after rape (Deut. 22:28–29), or wives that they had unsuccessfully accused of not having been virgins (22:13–21). Although one cannot imagine that it would be pleasant to be married in perpetuity to a man by whom one has been raped or falsely accused, the purpose of these laws was clearly to prevent men from freely divorcing unloved wives in a socioeconomic system in which single divorced women would be at a disadvantage.

Women did not normally hold property, and the male head of the household could annul the vows of his women if he did so on the day he heard of them (Num. 30:5–8). The inferior status of women is indicated in economic terms by the valuation for the purpose of vows of women at thirty shekels and of men at fifty (Lev. 27:3–4). Women were to be isolated during the ritual impurity of their menstrual period (Lev. 15:19–24) and after childbirth (Lev. 12:1–8), when the period of impurity was double if the child was female.

Biblical narratives indicate, however, that the position of women vis-à-vis their husbands was not as weak as the laws envision. The Shunnamite woman was able to entertain Elijah without the prior consent of her husband (2 Kings 4:8–17), and Abigail could commandeer large amounts of her husband's supplies and bring them to David (1 Sam. 25). The biblical laws probably indicate the ideal male-female relations envisioned by their male formulators rather than reflect the social situation as it actually existed.

Nondomestic Roles: Certain women are shown in nondomestic roles, acting on the stage of history. There were two prominent royal women, Jezebel (1 Kings 18–19; 2 Kings 9:30–37) and Athaliah (2 Kings 11). Although these were considered villainesses since they were on the wrong side, they were strong and determined women; and Jezebel, in particular, was a woman of dignity and devotion. The "wise woman" of Tekoa came and convinced David by a parable, much in the manner of Nathan (2 Sam. 14). The "wise woman" of Abel (2 Sam. 20:16–22) negotiated for her town in warfare; the fact that Joab approached the city walls to speak to her and that she could convince the town to deliver Sheba may indicate that "wise woman" was a title of some town official rather than a descriptive adjective. Deborah was a political leader who also coordinated a war and was recognized as a leader both before and after the war (Judg. 4–5). Miriam was acknowledged as the leader of the women, who led the women in the victory song (Exod. 15:20–21). Although her powers could not be compared to those of Moses (Num. 12), she was remembered as one of the triumvirate of Exodus leaders (Mic. 6:4).

Both Deborah and Miriam were remembered as prophetesses and this seems to have been an acceptable, if rare, occupation of women. There was no surprise expressed that the prophet whom Josiah consulted on the occasion of the finding of a scroll of the law was the woman Huldah (2 Kings 22:14–20); the fact that she was a woman is passed in silence, probably an indication that women could be accepted and expected in this role. During the restoration period there is a mention of Nehemiah's opponent Noadiah the prophetess; again, her sex is treated as irrelevant (Neh. 6:14). Women did not have to choose between marriage and prophecy, for Huldah was clearly married, and Deborah may have been. Women also played some role in worship, particularly as singers (2 Chron. 35:25; Neh. 7:67).

The Image of Women: The image of the ideal wife is conveyed in Proverbs 31: she is strong, competent, able to succeed economically, but family-centered, always acting for the provision of her household. She is not sensual, but the woman of Song of Songs (where there is no mention of marriage) is portrayed in a noncondemnatory way as frankly erotic. Jael is portrayed as fierce (Judg. 4:17–21), although normally the ferocity of women is discounted (Isa. 19:16; Jer. 51:30). Above all, women are depicted (and perhaps feared) for being articulate: Abigail convinces David of appropriate action (1 Sam. 25), as does the wise woman of Tekoa (2 Sam. 14:2–10); the wise woman of Abel convinces her city to follow her counsel (2 Sam. 20:16–20), Tamar attempts unsuccessfully to thwart a rape by logical arguments (2 Sam. 13), and both Samson's wife and Delilah talk him into revealing his secrets by nagging and verbal manipulation (Judg. 14:15–17; 16:4–17).

The Nonhuman Female: There is considerable dispute as to whether a goddess was worshiped in ancient Israel. In the Bible itself, however, there is no indication of a goddess. The most important nonhuman female image is the personification of the land and of the collectivity of the nation as "Lady Israel," which is found throughout the Prophets. The relationship of God to Israel can be depicted as a close marital

bond by this image, first expressed by Hosea, and the "holy family" of Israel becomes God, "Lady Israel," and the people (see, e.g., Jer. 31). Furthermore, Israel's lack of faithfulness toward God can be expressed as the waywardness and adultery of a faithless wife (e.g., in Hosea). Sexual imagery becomes a vehicle for the expression of the passionate relationship between God and Israel. At the same time, in the condemnation of the wayward Israel in Ezekiel 16 one might detect misogynistic attitudes that are not proper to express directly: the Bible contains no openly misogynistic statements about the nature of ordinary women.

Another important nonhuman female image is "wisdom" in the book of Proverbs (e.g., 8–9). Wisdom is often found associated with goddesses in pagan cultures. There are several reasons for this. The intellectual's passion for learning is comparable to sexual passion and may even partially supplant it, so that "Lady knowledge" becomes pursued like a human woman. In addition, the woman caretaker seems all-knowing to the very young child, and this may have influenced the portrayal of knowledge as female. In the Bible, wisdom is seen as a creature rather than as a goddess, but as a companion to God.

Whether or not there were goddesses in the popular imagination, there is no doubt that they had no place in the prophetic mentality. Instead, the image of God undergoes a "feminization" from the early "man of war" of Exodus 15, and emphasis is placed on the nurturing, more motherly aspects of God (e.g., Hos. 11:1–4; Jer. 31:20; Isa. 46:3–4).

Women in the NT: While there are indications that patriarchal rules were continued among Christians (e.g., 1 Tim. 2:11–12; but cf. Eph. 5:22–24, where submission of wives is under the rubric that all are to be subject to one another in Christ, v. 21, including husbands, v. 25, who are to imitate Christ's self-sacrificing love toward their wives), there are also indications that the role of women was influenced by the non-Jewish environment of early Christianity. Thus, in the discussion of divorce in Mark 10:2–12, it is assumed a wife can divorce her husband (v. 12) as was the case in Roman society. The frequent mention of women among the followers of Jesus (e.g., Luke 8:1–3; 23:55–56; 24:10), and the prominence of such women in the early church as Prisca (Rom. 16:3; 1 Cor. 16:19), the deaconess Phoebe (Rom. 16:1), and Mary (Rom. 16:6), among others, indicates they played an important role in the early church. Paul's refusal to let women speak in the Corinthian church (1 Cor. 14:34–36) was thus not universal, despite his claim to the contrary (1 Cor. 14:33b), and his statement that in Christ the religious distinction between the sexes had been eliminated (Gal. 3:28) was observed in other churches (e.g., Phil. 4:3).

New Approaches: Part of the feminist approach to the Bible has been to deal with the stories of women in two particular ways: "depatriarchalizing" and "remembering." "Depatriarchalizing" is the attempt to read the Hebrew text without the prism of intervening interpretations; when this is done it is clear that the biblical text is not so "patriarchal" or misogynistic as we would otherwise have believed. An example is the new reading of Eve. It is clear in the biblical text that at the creation, woman was not intended to be subordinate to man, for the Hebrew word *ezer,* normally translated "helper" (Gen. 2:18), is frequently used of God (e.g., Pss. 30:10; 54:4) and does not imply subordination. Eve is portrayed as the spokesperson for the couple, and during her talk with the serpent she presents theological arguments. She is never portrayed as wanton, or as tempting or tempted sexually, nor does the biblical author single her out for greater blame than her partner. This approach also concentrates on such passages as the Song of Songs, in which there is a clear lack of any patriarchal or condemnatory attitude toward women, thus indicating that the Hebrew Bible was not a monolithically patriarchal document.

"Remembering," the retelling the stories of patriarchal abuse of women as a hagiography and martyrology, provides not only documentation of patriarchy, but a sacred history to be remembered and thus overcome. Such female "victims" as Hagar, Jepthah's daughter, the concubine from Gibeah, and Tamar the daughter of David are remembered in this way. ***See also*** Marriage.

woods, as a collective term, a stand of trees. A highly valued resource of the Holy Land, wood was used for the manufacture of everything from small everyday household items to the palaces of kings and temples and altars of the Lord. It was especially important as fuel for domestic hearths and for industrial installations such as kilns, metal smelters, and forges. It was also used for sacrificial fires (Gen. 22:7; Num. 19:6). Wood was valuable as an export commodity to countries whose timber resources were limited. Luxury woods such as ebony were imported into the Holy Land (Ezek. 27:15). Cedar was preferred for the construction of items meant to last, such as buildings and furniture. Pine, oak, cypress, and sycamore were also popular as construction materials. Noah

used gopher wood (cypress) to build the ark (Gen. 6:14). Olivewood was used by Solomon for the cherubim carved on the oracle that housed the Ark of the Covenant (1 Kings 6:23), and the tabernacle was made of acacia wood (*shittah;* Exod. 26:15). Sturdy poplar and oak were favored implement hafts and roofing. The very light wood of the palm also had a broad range of uses. A great variety of woods existed in ancient times. However, these resources have become severely depleted over time as demand has continued to exceed supply. P.L.C.

wool, the fleece of a sheep, used in ancient Palestine for clothing (Lev. 13:47–48; Ezek. 34:3). White wool was one of the principal products traded by Damascus to Tyre (Ezek. 27:18). The wool of a hundred thousand rams had to be paid by Mesha, king of Moab, as tribute to Ahab, king of Israel (2 Kings 3:4). The color of undyed wool became a symbol of purity (Isa. 1:18) and whiteness (Dan. 7:9; Rev. 1:14).

word, that which is spoken, either by a human or by God. In the Bible, God's revelation is characteristically his speaking. Therefore, the expression "word of God" or "word of the Lord" holds an important place in the Bible and biblical religion, usually denoting God's revelation of his will and purpose. The Bible itself is not infrequently referred to as the Word of God by Christians. It is important to note, however, that the expression "word of God" in Scripture does not usually refer to the written word at all, but rather to God's or his emissaries' speaking and inspiration.

In the OT, God's word is central. God speaks and thus creates (Gen. 1:3, 6, 9, 11, 14, 20, 24, 26). He utters the words of the Decalogue (Exod. 20:1). Prophets hear and speak what the Lord has spoken to them (Isa. 1:2; 6:8–10), for they are primarily recipients and transmitters of the word of the Lord (Jer. 1:2). The NT usage of the term is subject to later and extrabiblical influences but can be seen as a development of the OT. Jesus preaches the word (Mark 2:2), and the gospel of Jesus Christ is called the word of God (Acts 4:31; 1 Pet. 1:23–25). Eventually, Jesus himself is said to be God's Word (John 1:1, 14; cf. Heb. 1:2). Thus, in both the OT and the NT, God's speaking and word are of fundamental importance. ***See also*** Creation; Logos; Prophet. D.M.S.

world, the, a term used with various meanings in different parts of the Bible. The Bible as a whole has no unitary conception of "world" as such. The concept is somewhat diffuse, if present at all, in the OT, but, under the influence of Greek thought and Christian views of salvation, becomes much more distinct in the NT.

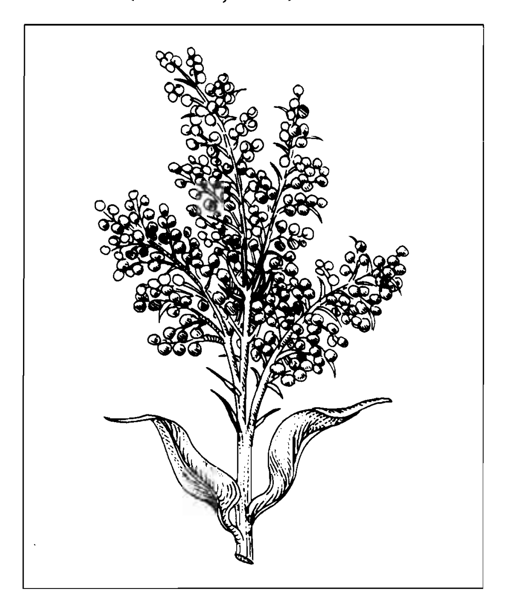
In the OT: In the OT, God is Creator of the heavens and the earth (Gen. 1:1–2:3). There is ample reflection on the Creator's role in establishing the earth and everything in, above, and under it (cf. Job 38), including humankind (cf. Gen. 1:26–28; 2:7, 15–24; Ps. 8:3–8). But an overall concept of the world in the sense of a universe is expressed in no particular term. A Hebrew word for earth or land (*eretz*) is sometimes used in the sense of world, or the world, but it is only rarely translated in this way in English versions (cf. RSV, Jer. 25:26). Another, rarer term (*'olam*) is more frequently translated "world," but its meaning cannot always be clearly distinguished (e.g., Ps. 24:1, where the two terms appear in apparently synonymous parallelism). The idea of creation and humanity as God's handiwork is very much a part of OT theology, and indeed quite important, even though there is no single term corresponding to "world." Probably belief in God's fundamental and continuing role as Creator precludes any understanding of the world as an independent entity standing over against God. At the same time, the creation is in no sense an emanation or extension of the Creator so that it could be considered divine.

In Ancient Greek Thought: In ancient Greek thought and language, precisely what is absent in the OT becomes very important. The world or cosmos as an ordered system, the universe, was a phenomenon to be understood and explained as a whole. Far from being the result of God's creation by word or deed, it was conceived as an extension, projection, or at least a reflection of the ultimate principle of reality which, in the Hebrew tradition but also in Greek thought, was called God. The concept of the world in modern Western thought owes more to Greek philosophy than to the OT, as our use of such terms as "cosmic" and "cosmology" attests. The modern negative connotations of "world" (i.e., "worldly," "worldliness") owe something not only to Greek but also to early Christian thought and the NT.

In the NT: The NT employs three terms for world: the one most frequently attested (*kosmos*), transliterated into English as "cosmos"; a second term meaning "inhabited world" (*oikoumenē* from which "ecumenical" comes); and a term transliterated as "aeon" that has temporal connotations (*aiōn;* "this world/the world to come"). The most frequently used and most important is the first. Sometimes it is used in a neutral or even positive sense of the universe, as in Acts 17:24 ("God who made the world and everything in it"). In such cases, one is not far from what the psalmist expresses when he speaks of God, "who made heaven and earth, the sea, and all that is in them" (Ps. 146:6). Sometimes, "world" simply refers to humanity or the inhabited world (Rom. 1:8).

Frequently, however, "world" has significant theological connotations, particularly in the Pauline and Johannine literature. When Paul speaks of God in Christ reconciling the world to himself (2 Cor. 5:19), there is no doubt that, in his view, the world is in need of reconciliation.

Apart from God's revelation in the gospel, the world did not, through its wisdom, know God (1 Cor. 1:21). The world is the arena in which sin, which alienates people from God, reigns. Therefore, "the world" is a shorthand way of referring to the totality of humanity in the bondage of sin. This bondage is not a permanent condition, for through God's action in Christ "the form of this world is passing away" (1 Cor. 7:31). Thus Paul can urge the Romans not to be conformed to this world (Rom. 12:2). In this latter case, "world" translates the word that comes into English as "aeon," which can also mean "age." This overlap of terms suggests that, in Paul's thought, this world belongs to an old and transitory age or epoch. Thus the seer of Revelation writes that "the kingdom of the world has become the kingdom of our Lord and of his Christ, and he shall reign for ever and ever" (11:15).



In the Gospel of John, the world is the object of God's salvation in Christ (3:16; 12:47). Moreover, it is his creation through Christ (1:3, 10). Yet the world apart from Christ stands under judgment (16:8–11), hating Jesus' followers, who have been separated from the world and are not of the world (17:16). The dualism between God, Christ, and the disciples, on the one hand, and the world, on the other, is described in terms of a sharp antinomy. Disciples are urged to have nothing to do with the world, especially not to love it (1 John 2:15–17). At the same time, Jesus has explicitly not prayed for disciples to be taken out of the world (John 17:15). Even in the Fourth Gospel, the world continues to be God's, in creation and salvation. It is the same world that Matthew has in view as he portrays the risen Jesus sending his disciples to make disciples of all nations (28:19) or Luke as Jesus informs the disciples that they shall be witnesses from Jerusalem to the end of the earth (Acts 1:8).

The concept of world in the NT maintains roots in the OT, while it is importantly informed by Greek thought, even by the pessimism of late antiquity that was to emerge in Gnosticism. At the same time, the Christian conception of the world of humanity as alienated from God by sin and death is correlated with a view of the world in which it appears as both the arena and the object of God's salvation. In the NT, then, cosmology (the conception of the world) is fundamentally shaped and influenced by anthropology (the conception of humanity) and soteriology (the conception of salvation). ***See also*** Creation; Gnosticism; Salvation; Sin. D.M.S.

worms, the members of the phylum Annelida as well as the larvae of numerous insects. Most biblical references are probably to larvae or maggots because of their association with death and decay (Job 7:5; 21:26; Isa. 14:11; Acts 12:23; Mark 9:48). Such a creature assaulted the vine of Jonah (4:7), and its appetite for wool is a metaphor for God's destruction visited on those who oppose his people (Isa. 51:8).

wormwood, a shrublike plant that belongs to the aster family and has a bitter taste. Numerous species of wormwood are found in Palestine, the most common being *Artemisia herba-alba*. The plant is often used as a metaphor for bitterness and sorrow (Prov. 5:4; Lam. 3:15, 19; Amos 5:7; 6:12). In Jer. 9:15 and 23:15, God's punishment of the people of Israel is described in terms of wormwood and poisoned water. Rev. 8:11 describes a star called "Wormwood" falling to earth, turning part of the waters into wormwood and killing many people.

Wormwood (*Artemisia judaica*).

worship, the attitude and acts of reverence to a deity. The term "worship" in the OT translates the Hebrew word meaning "to bow down, prostrate oneself," a posture indicating reverence and homage given to a lord, whether human or divine. The concept of worship is expressed by the term "serve." In general, the worship given to God was modeled after the service given to human sovereigns; this was especially prominent in pagan religions. In these the deity's image inhabited a palace (temple) and had servants (priests) who supplied food (offered sacrifices), washed and anointed and clothed it, scented the air with incenses, lit lamps at night, and guarded the doors to the house. Worshipers brought offerings and tithes to the deity, said prayers and bowed down, as one might bring tribute and present petitions to a king. Indeed the very purpose of human existence, in Mesopotamian thought, was to provide the gods with the necessities of life.

Although Israelite worship shared many of these external forms, even to calling sacrifices "the food of God" (e.g., Lev. 21:6), its essence was quite different. As the prophets pointed out, God could not be worshiped only externally. To truly honor God, it was necessary to obey his laws, the moral and ethical ones as well as ritual laws. To appear before God with sacrifices while flouting his demands for justice was to insult him (cf. Isa. 1:11–17; Amos 5:21–22). God certainly did not need the sacrifices for food (Ps. 50:12–13); rather sacrifice and other forms of worship were offered to honor God as king.

Sacrifice: Ideal Israelite worship is depicted in the Priestly instructions of Exodus, Leviticus, and Numbers. Its most prominent feature is sacrifice. Sacrifices were brought as gifts to God; the Hebrew term for cereal offering also means "present" (cf. Gen. 32:19, where Jacob offers a large present to Esau to win his favor) or "tribute" (e.g., 2 Sam. 8:2). In addition, the blood of the sin and guilt offerings was used to cleanse the sanctuary.

The most important part of any animal sacrifice was the disposal of the blood at the altar. Whether dashed against its sides, or smeared on its horns, this ritual act made the sacrifice valid; in fact, it distinguished sacrifice from mere slaughter. Leviticus 17 requires all animals eligible as offerings to be sacrificed, rather than simply slaughtered (see vv. 3–4). In addition, the animal's suet (the hard fat on the entrails) and kidneys belonged to God and therefore had to be burned on the altar (Lev. 3:16). Only a priest could perform these essential acts since only he could officiate at the altar (Lev. 3:5, 11). In exchange for his services, the priest received some portion of the sacrifice.

Cattle, sheep, goats, doves, and pigeons were the only kinds of animals that could be offered, and vegetable offerings used wheat, barley, olive oil, wine, and frankincense. All offerings were salted (Lev. 2:13; cf. Ezek. 43:24). Sacrificial animals had to be unblemished; that is, they could not be diseased or injured or castrated (see Lev. 22:17–25).

The burnt offering (Lev. 1) was the commonest and most general sacrifice. Appropriate for atonement or thanksgiving, its purpose, basically, was to win God's favor. It was probably the oldest kind of sacrifice (mentioned throughout the Bible) and played a major role in public worship (Num. 28–29) and rites of cleansing (Lev. 12:6, 8; 14:19, 22; 15:15, 30; 16:24). The animal offered had to be male (except birds). The animal was entirely burned on the altar, except for the hide, which went to the priest (Lev. 7:8).

The peace offering (Lev. 3) was brought when one wished to eat meat. It could be a bull or a cow, or a sheep or a goat (male or female). The officiating priest received the right thigh, while the animal's breast was shared by all the priests (Lev. 7:31–34). The person bringing the sacrifice received the rest of the animal, which had to be eaten within one or two days (Lev. 7:15; 19:6–8).

The peace offering was further subdivided, according to purpose, into the thank offering, free-will offering, and votive offering (Lev. 7:11–18). Psalm 107 mentions four occasions for which a thank offering would be appropriate: successful passage through the desert, release from prison, recovery from a serious illness, or surviving a storm at sea. The votive offering was given to repay a vow (cf. 2 Sam. 15:7–8), while the free-will offering needed no special occasion. These offerings were distinguished ritually, in that the thank offering required different kinds of breads to accompany it (Lev. 7:12) and had to be eaten in one day, whereas the votive offering and the free-will offering could be left over one night and finished on the following day. Under no circumstances could a sacrifice be eaten after the second day (Lev. 7:15–18).

The ordination offering was a special type of peace offering, whose blood was used as part of the ritual ordaining the high priest. Like the thank offering, it had a bread accompaniment and had to be eaten on the same day that it was offered (Exod. 29:19–28, 31–34; Lev. 8:22–29, 31–32).

The term "sin offering" is somewhat misleading. The purpose of this sacrifice (Lev. 4–5:13) was not to atone for any kind of sin, as the name seems to imply. Crimes against other people were dealt with by appropriate punishments that did not involve sacrifice, while deliberate crimes against God (done "with a high hand") could not be sacrificially atoned for at all (Num. 15:30–31). Rather, the sin offering was used to cleanse the sanctuary of impurity. For this reason it was regularly offered at festivals (Num. 28:15, 22, 30; 29:5, 11, 16, 19). As a private offering, the sin offering (or, more properly, the purification offering) was brought when a person had unwittingly violated a prohibition (Lev. 4:2) or for rites of cleansing (Lev. 12:6; 14:19, 22; 15:15, 30; 16:3, 5; Num. 6:14, 16), or when one had forgotten to cleanse oneself (Lev. 5:2–3), or failed to fulfill a vow (Lev. 5:4), or had not responded to a public adjuration (Lev. 5:1). When both the sin offering and the burnt offering were to be offered, the sin offering always came first; the altar had to be cleansed before other sacrifices could be offered on it (cf. Lev. 9:7–21; 14:19).

The animals used for the private sin offering varied with the status of the offender. The high priest or community as a whole offered a bull; a ruler offered a male goat, while a lay person brought a female goat or a ewe. The ritual also varied: when the community (or the high priest who represented it) had transgressed, the sanctuary itself was defiled; it was cleansed by sprinkling some of the bull's blood in front of the sanctuary veil and smearing it on the horns of the incense altar (Lev. 4:5–7, 16–18). The

bull's meat could not be eaten, so it was burned outside the camp (Lev. 4:12, 21). In the case of an individual, whether ruler or commoner, only the outer altar was defiled. It was cleansed by smearing the blood of the goat or ewe on the altar's horns, and the priest received the meat of the animal. In certain cases there was a provision for a less costly sin offering if the person were poor (Lev. 5:7–13; 12:8; 14:21–22).

The guilt offering (Lev. 5:14–6:7) was brought when one had desecrated some holy thing (Lev. 5:14) or perjured oneself (Lev. 6:2–5). Its purpose was the reparation of damages. The sacrifice consisted of a ram, offered in a manner similar to the peace offering (Lev. 7:2–7), but with the necessary addition of the offerer's confession of guilt, and the repayment of damages, plus a twenty percent fine. The priest who offered it received the meat (Lev. 7:7). Uniquely, this sacrifice could even be paid for in money (Lev. 5:18; cf. 2 Kings 12:16). It was always a private sacrifice.

In two special cases, that of the healed leper being cleansed and that of a Nazirite whose vow was desecrated by accidental contact with a corpse (which made one impure), the guilt offering was a male lamb (Lev. 14:12, 21; Num. 6:9, 12). Furthermore, in the leper's case, the blood of the guilt offering was also applied to the person's extremities as part of the cleansing ritual (Lev. 14:12–14, 25).

The cereal offering (Lev. 2) was a vegetable counterpart to the burnt offerings. It could be raw, in which case frankincense was added, or cooked in various ways (baked, boiled, fried), but it could not be leavened or sweetened (Lev. 2:11). Oil was present whether the offering was cooked or raw. The flour used was usually wheat (semolina), but barley flour or parched grain could also be offered (Lev. 2:14). When the cereral offering was a poor person's substitute for the animal sin offering, the flour was offered dry, without oil and incense (Lev. 5:11; cf. also Num. 5:15). Only a handful of the cereal offering (together with all the incense, if present) was burned on the altar; the remainder went to the priest (Lev. 2:2–3; 6:14–16). The sole exception was the priest's cereal offering; it was entirely burned since a priest could not profit from his own offering (Lev. 6:23).

According to Numbers 15 the burnt offering and the peace offering were normally accompanied by cereal offerings (mixed with oil) and wine libations ("drink offerings"). The amount of grain and wine depended on the type of animal being offered: the larger the species, the more grain and wine.

Temple Ritual: The daily ritual was as follows: every morning, the ashes on the sacrificial altar were cleared off and the fire was stoked (Lev. 6:10–13), and the daily burnt offering, a yearling male lamb, plus its accompanying cereal and drink offerings, was offered (Lev. 6:8–13; Exod. 29:38–42; Num. 28:3–8). The high priest, dressed in his priestly garments (Exod. 28:29, 30, 35, 38), entered the sanctuary, trimmed the oil lamps, and offered a specially formulated incense on the incense altar inside (Exod. 30:7–9, 34–36). Outside, he would offer a special cereal offering, composed of wheaten cakes cooked on a griddle (Lev. 6:19–23). In the evening, a second lamb was offered like the morning one, and the high priest again entered the sanctuary to trim the oil lamps (Lev. 24:1–4; cf. 1 Sam. 3:3) and burn incense. He would also offer the second half of the high-priestly cereal offering.

Such was the daily routine. Every Sabbath day two additional lambs were offered, like the daily ones (Num. 28:9–10). Also, the high priest would replace the twelve loaves of bread (the Bread of Presence), which were arranged in two rows on the table inside the sanctuary, with frankincense on top (Lev. 24:5–9; cf. 1 Sam. 21:1–6). At the beginning of each month (the new moon) and at all the festivals the priests blew trumpets (Num. 10:8, 10) and additional sacrifices were offered, both burnt offerings and a sin offering (which was always a male goat; see Num. 28–29). Festival days (or the beginning and end of week-long festivals) were days of rest, like the Sabbath (Lev. 23:7–8, 21, 24, 27, 35, 36).

On the Day of Atonement the people rested and fasted, and the high priest, wearing special garments for the occasion, performed the Day of Atonement ritual (Lev. 16), which cleansed the sanctuary of all impurity. It consisted of two sin offerings, one for the high priest and one for the people, whose blood was brought not only into the sanctuary but into the inner shrine itself, the Holy of Holies, where the Ark of God was kept. The high priest entered the Holy of Holies only after placing a pan of burning incense inside, to make a screen of smoke between him and the Ark (Lev. 16:13). After cleansing the sanctuary, the priest laid his hands on a living goat and confessed the people's sins, thereby transferring those sins to the goat, which was then sent away into the wilderness.

Donations: In addition to these public and private sacrifices, offered at regular seasons or at will, the people donated a tenth portion of their produce to the sanctuary. This tithe was given to the Levites, in exchange for their work in guarding and transporting the tabernacle (Num. 18:21–24). The Levites themselves gave a tithe of their tithe to the priests (Num. 18:26). Furthermore, the priests received the first fruits of all produce, including a sheaf of grain at the beginning of the harvest and two loaves of leavened bread at its end (Lev. 23:10–11, 17; cf. Num. 18:11), the firstborn of all livestock (Num. 18:12–13, 15–17), and the first part of the processed produce (flour, wine, oil; cf. Num. 15:17–21; 18:12).

People might also voluntarily donate items to the sanctuary, which would then belong to the priests. If persons or nonsacrificial animals

were donated, only the monetary value was paid (Lev. 27:1–8). Land, tithes of vegetable produce, and nonsacrificial animals could also be redeemed from the sanctuary by the donor, by paying the value plus a twenty percent penalty (Lev. 27:13, 19, 31). An extreme form of dedication was "devotion," which, when applied to cities, involved complete destruction (Num. 21:2–3; cf. Josh. 6:17–21). Anything so devoted could not be redeemed; persons who were devoted had to be killed (Lev. 27:28–29).

A different kind of dedication of a person was the Nazirite vow (Num. 6). People who made this vow could not drink any alcoholic beverage or consume any product of the grapevine; nor could they cut their hair or shave. In fact, the hair was actually consecrated to God (Num. 6:5, 9, 18). The Nazirites were holy and hence were not supposed to become unclean. The vow was of limited duration, and at the end of the term a special ceremony was performed to return the Nazirite to ordinary, common status (Num. 6:13–20).

Ritual Purity: Persons participating in worship had to be ritually clean. Contact with a corpse (Num. 19) or animal carcasses (Lev. 11:8, 24–25, 31, 39), sexual emissions (Lev. 15), giving birth to a child (Lev. 12), and leprosy (Lev. 13) all caused a person to become unclean in various degrees. An unclean person could not eat sacrificial meat (Lev. 7:20), enter the sanctuary, or even handle tithes or other items belonging to God (Lev. 12:4). Cleansing was effected by bathing and washing one's clothes. Certain more severe states of impurity required additional rites of cleansing and might take several days to complete. Although one was excluded from worship, being unclean was not a crime. Failure to cleanse oneself after the period of impurity had passed, however, was sinful and necessitated bringing a sin offering (Lev. 5:2–3), since (prolonged) impurity defiled the sanctuary (cf. Lev. 16:19; Num. 19:20).

To be eligible to officiate in the sanctuary, priests were required not only to be clean but unblemished (Lev. 21:17–23). Furthermore, they could not officiate while drunk (Lev. 10:9) or mourning (Lev. 10:6). They had to be properly dressed (Exod. 28:40–43); and before officiating at either the altar or inside the sanctuary they were to wash their hands and feet (Exod. 30:18–21; priests did not wear shoes: cf. Exod. 3:5; Josh. 5:15).

Other Versions of Ritual Procedures: The book of Deuteronomy presents a slightly modified (though much less detailed) version of the system described by the Priestly texts. The principal difference lies in Deuteronomy's insistence on a single sanctuary for the entire land of Israel to which all sacrifices were to be brought (cf. Deut. 12:5–14). As a result, Deuteronomy permitted profane slaughter of animals for meat (Deut. 12:15 vs. Lev. 17:2–4), since for many Israelites the distance to the sanctuary was too great (Deut. 12:20–21). There were also other, relatively minor differences in detail in Deuteronomy, regarding the Passover (Deut. 16:2 vs. Exod. 12:5; Deut. 16:7 vs. Exod. 12:9), tithes (Deut. 14:22–29 vs. Num. 18), and the priests' share of sacrifices (Deut. 18:2 vs. Lev. 7:31–32).

Worship in Ezekiel's visionary temple (Ezek. 40–48) also differs somewhat from the Priestly system. For instance, Ezekiel calls for a purification of the temple on the first and seventh days of the first month, presumably in preparation for the Passover (Ezek. 45:18–20; cf. v. 21). He also mentions only a single daily burnt offering sacrificed each morning (Ezek. 46:13–15). Ezekiel's system was never actually put into effect, but it may reflect the thinking of certain priests of his time, since Ezekiel himself was a priest (Ezek. 1:3).

Patriarchal Period: Actual practice also deviated somewhat from the Priestly system outlined above. The worship practiced by the patriarchs knows nothing of all this. Their worship was simple and informal; they had no priests or temples. Rather, the patriarchs themselves offered burnt offerings at temporary altars they built themselves in the open (cf. Gen. 8:20; 12:7–8; 13:18; 22:13; 26:25). Jacob also worshiped by pouring a drink offering on a pillar he set up and by anointing it with oil (Gen. 28:18; 35:14). In later periods this would probably have been considered idolatrous (Exod. 23:24; Deut. 7:5; 1 Kings 14:22–23).

The Period of the Judges: During the time of the judges this type of worship continued to be practiced, but priests and temples were also known. Levites were considered the proper people to act as priests (Judg. 17:13), but individual Israelites continued to offer their own sacrifices on simple outdoor altars (Judg. 6:24–27; 13:19). There was a temple at Shiloh during this period, where the Ark of the Lord was kept until it was captured by the Philistines. The account in 1 Samuel 1–3 provides a glimpse of temple worship at this time: families such as Samuel's might go there for a yearly feast, where they would offer sacrifice like a peace offering and perhaps pray, as Hannah did. The priests there took a portion of the meat, whatever "the fork brought up" (1 Sam. 2:13–14). As in Leviticus the animal's suet belonged to God. It was to be offered first, after which the priest could take his share. Eli's sons were condemned for disregarding this rule and thereby slighting God (1 Sam. 2:15–17).

First and Second Temple Times: Even after Solomon built the Temple in Jerusalem and installed the Ark there, the people continued to offer sacrifices at local outdoor altars ("high places"). After Solomon's death (924 B.C.), Jeroboam, king of Israel, built two shrines of his own at Bethel and Dan, for fear that the people, by worshiping in Jerusalem, would defect to the Davidic kings there (1 Kings 12:26–29). Jer-

oboam also appointed non-Levites as priests (1 Kings 12:31) and moved the Feast of Booths to the eighth month (1 Kings 12:32–33). The writers of Kings and Chronicles condemned both Jeroboam's shrines and the "high places" as idolatrous (1 Kings 14:23; 15:14; 2 Kings 12:3; 14:4; 15:4). The "high places" were too often associated with the pillars and other pagan practices (1 Kings 14:23–24; 2 Kings 15:3–4), while Jeroboam's shrines were condemned for the calf images he erected at them (1 Kings 12:31; 14:9). Under Josiah these "high places" were finally eradicated, and worship was centralized at the Jerusalem Temple (2 Kings 23:5–9), as prescribed in Deuteronomy. However, the people continued to offer cereal offerings and incense privately, since there was no blood involved (cf. Jer. 41:4–5, where these offerings are brought to a ruined temple). This practice persisted even in Second Temple times.

An important element of Israelite worship hardly mentioned at all in the Pentateuch is that of prayer and song. Presumably the precise form of prayers or songs was not crucial to orthodox worship; the only recorded prayers are the priestly benediction (Num. 6:24–26) and prayers accompanying the offering of first fruits (Deut. 26:3–11) and tithes (Deut. 26:13–15). The Chronicler records the establishment of levitical singers in the Temple (1 Chron. 16:4–6), and many of the Psalms were probably composed for use in Temple worship. Individuals would naturally resort to the Temple to pray (cf. 1 Sam. 1:9–18; 1 Kings 8:22; 27–30), but prayer was a private matter and could be done anywhere. Fasting, too, was a private matter (e.g., 2 Sam. 12:16, 21–23), except on the Day of Atonement or when a special day of fasting was proclaimed (Joel 1:14; Ezra 8:21; 2 Chron. 20:3).

It is difficult to ascertain to what extent the rituals performed in Solomon's Temple corresponded to the instructions of the Pentateuch. For instance, there may have been only one daily burnt offering (cf. Ezek. 46:13–15) offered every morning, rather than two, with only a cereal offering presented in the evening (2 Kings 16:15; cf. Ezra 9:5; Ps. 141:2; Dan. 9:21; where the "evening sacrifice" is literally the evening cereal offering). In Second Temple times, the Pentateuchal instructions were followed in detail in Temple worship. In addition, new festivals were added, two of which are mentioned in the Bible: Purim (Esther 9:20–22) and the Feast of Dedication (Hanukkah; cf. John 10:22–23).

A completely new institution of worship was added in the Second Temple period: the synagogue. Its origins are unknown, but it probably began among the exiles, who were otherwise unable to worship, since they were too far from the Temple. The people gathered at the synagogue on the Sabbath to pray and read the Bible, and the Scripture reading was interpreted and expounded in a short sermon (cf. Luke 4:16–29).

Early Christian Worship: In the NT "worship" still means primarily "bow down" but the word also translates Greek terms signifying service or piety. However, the external form of worship differs radically from that of the OT. Since the death of Christ constituted the perfect sacrifice, no more sacrifices were needed (Heb. 9:11–12, 24–26). Indeed, the entire institution of Temple, priesthood, sacrifice, and cleansing ritual became obsolete. Rather, the church itself, that is, all the believers, was at once temple and priesthood, inhabited by the Holy Spirit (1 Cor. 6:19; Eph. 2:21–22; 1 Pet. 2:9).

As a result, Christian worship was internal rather than external. Only three rituals are known from the NT: baptism, communion, and the laying on of hands. However, for none of these do we have any explicit instructions describing how they are to be performed. Baptism initiated a person into the church; it consisted simply of immersion in water and was probably accompanied by a reference to Jesus, in whose name the person was baptized. The laying on of hands was associated with receiving spiritual gifts (Acts 8:17) or a special commission (Acts 13:2–3). Only communion was celebrated on a regular basis, to commemorate Jesus' death and as a joyous anticipation of the future kingdom feast (cf. Mark 14:25; 1 Cor. 11:26). It consisted of a simple meal of bread and wine over which a blessing was spoken (1 Cor. 10:16).

The first day of the week was a favorite day for Christian assembly (Acts 20:7; cf. 1 Cor. 16:2), though early Christians might also have met daily (Acts 3:46). At these meetings, there would be teaching, exhortation, singing, praying, prophesying, reading letters, and the "breaking of bread" (probably communion; Acts 2:42, 46; 15:30; 1 Cor. 14:26; Col. 4:16). Above all, Christian worship was characterized by great joy and thanksgiving (cf. 1 Thess. 5:16–18). *See also* Feasts, Festivals, and Fasts; Patriarch; Priests; Tabernacle; Temple, The; Temples. S.R.

wrath, a word denoting the active feeling of God against sin, expressing in human categories an important attribute of God: that he is holy and righteous and rejects everything that is not. This rejection is real, manifesting itself in actual situations such as the destruction of Sodom and Gomorrah (Deut. 29:23), the chastisement of Moses for his reluctance to obey (Exod. 4:14), and even the death of Uzzah for touching with profane hand the Ark of God (2 Sam. 6:7). The wrath of God is thus a divine reaction to human provocation, not an arbitrary passion or animosity. Even in this reaction God is "slow to anger"; the OT emphasizes that he is "merciful and gracious . . . abounding in steadfast love" (Ps. 103:8; Joel 2:13). In the NT, the angry reaction of Jesus against those who desecrated the Temple (John 2:13–17) bears the characteristics of divine wrath. Wrath is also an essential part of Paul's theology: he often mentions that

human disobedience and transgression result in the coming of the wrath of God (Rom 1:18; 2:5; 2:8; 5:9; 9:22; Eph. 2:3; 5:6; Col. 3:6; 1 Thess. 1:10). The overpowering theme of the NT, however, is the love of God, not his anger. The NT can say that "God is love" (1 John 4:8); the mission of Jesus was to take the wrath of God upon himself. That is the meaning of salvation in the NT: since the time when Jesus was sent into the world, only those who do not believe and do not obey have to worry about the wrath of God. ***See also*** Judgment, Day of; Mercy. S.B.

wrestle, to vie with someone physically. Jacob wrestled with a messenger of God during the night and emerged triumphant but injured (Gen. 32:24, 25; cf. Hos. 12:5). The idea was not restricted to physical conflict; see, e.g., Rachel's struggle with Leah (Gen. 30:8) and the statement that Christians wrestle against celestial spiritual forces (Eph. 6:12). J.L.C.

writing, the transcribing of human language into visible form. Writing was invented in the ancient Near East sometime before the beginning of the third millennium B.C. It appeared first in southern Mesopotamia and soon afterwards in the Nile Valley. Various systems of writing developed, but all eventually gave way to the alphabet. Alphabetic writing was an important part of the culture of ancient Israel and the early church, and there are numerous references to writing and written documents in the Bible.

Writing Systems of the Ancient Near East: By the latter centuries of the fourth millennium B.C. a pictographic writing system was in use along the lower Euphrates. It evolved into the cuneiform script of the Sumerians, which the Semitic-speaking inhabitants of Mesopotamia inherited. Cuneiform, therefore, became the writing system of both the Babylonians and Assyrians, and from them it was borrowed and adapted to the languages of several other peoples, including the Hurrians, the Hittites, and the Urartians. Characteristically, cuneiform or "wedge writing" was impressed on wet clay tablets using a reed stylus with a wedge-shaped tip. The individual signs, composed of combinations of wedges, included both ideograms (signs representing entire words or ideas) and phonograms (signs representing sounds). The phonograms were syllabic, representing combinations of vowels and consonants. The system as a whole was extremely complex and cumbersome in comparison to the alphabetic system that eventually displaced it. A Mesopotamian scribe was obliged to undertake a long and difficult apprenticeship.

Cuneiform tablet from Ebla. ca. 2400 B.C.

Egyptian writing may have emerged under indirect influence from Mesopotamia. In Egypt, however, the pictorial character of the early script was retained. This was true, at least, of hieroglyphic, the pictographic writing used for monumental inscriptions. As in the case of the cuneiform signs, the individual hieroglyphs included both ideograms and phonograms. In this case, however, the phonograms were alphabetic, representing one or more consonantal sounds, rather than syllabic. There were two cursive derivatives of hieroglyphic, called hieratic and demotic. Hieratic seems to have been developed in very early times, but the oldest demotic documents come from the end of the eighth century B.C. Like his Mesopotamian counterpart, an Egyptian scribe had to study for many years to master the complexities of the writing system.

The alphabet was invented somewhere in Syro-Palestine in the first half of the second millennium B.C. It was based on a consonantal principle that suggests an initial Egyptian influence. In contrast to Egyptian hieroglyphic, however, the alphabet employed no ideograms, and each of its phonograms represented a single consonantal sound. The signs were pictographic at first, but they soon evolved into abstract, linear shapes. The earliest undisputed examples of alphabetic writing date to the end of the Middle Bronze Age, ca. 1550 B.C. These are the so-called Proto-Sinaitic inscriptions, graffiti scratched on stone by Asiatic laborers in an Egyptian turquoise-mining community at modern Serabit el-Khadem in the southwestern area of the Sinai Peninsula. The alphabet was in general use in the city-states of Syria and Palestine during the Late Bronze Age (ca. 1550–1200 B.C.), and in the first millennium specialized national or regional branches developed. Among these was the Hebrew alphabet, which was used in Israel and Judah until the Exile (586 B.C.). Another branch, which developed in the Aramean states of southern and central Syria, was adopted along with the Aramaic language for the official use of the Assyrian, Babylonian, and Persian empires.

The development of the alphabet, from its origin to modern scripts; from a chart by Frank M. Cross, Jr.

The Aramaic alphabet eventually replaced most local systems throughout the imperial region. After the sixth century B.C. most Jewish literature was written with the Aramaic script.

Sometime before the eighth century B.C. the Greeks learned the alphabet from the Phoenicians. By adding vowel signs to the purely consonantal signs of the Phoenicians, they improved the system and produced an alphabet that is the direct ancestor of the one we still use today.

Although the alphabet coexisted for centuries with the ancient systems of Mesopotamia and Egypt and several other forms of writing, it eventually triumphed over them all. This was at least in part a consequence of its economy and utility. It was much simpler and more flexible than its competitors, and it made widespread literacy possible for the first time. Given the tenacity with which traditional writing systems are maintained, however, it seems unlikely that the obvious advantages of alphabetic writing would have been enough to displace the older systems in the absence of other factors. Of these the most important was probably its selection as the primary medium of international communication for five empires. The Assyrians adopted the Aramaic alphabet for use in the imperial chancelleries, establishing a convention that the Babylonians and Persians inherited, and in the Hellenistic and Roman worlds the Greek and Latin alphabets held sway.

Writing Materials: Various materials served as writing surfaces. Inscriptions intended to be permanent were most often incised in stone. Thus we have stone stelae and monumental inscriptions in Mesopotamian cuneiform—with wedges engraved in stone to imitate those impressed in clay—and Egyptian hieroglyphic. Many alphabetic texts cut in stone have been found in Syria and Palestine, and there are references in the Bible to stone inscriptions (Josh. 8:32) and their imperishability (Job 19:24). Recent discoveries, however, suggest that during the period of the Israelite and Judean monarchies there was a practice of preparing stone surfaces with plaster to receive monumental texts written with ink (cf. Deut. 27:2–3). Such texts survived only in exceptional circumstances, and this may be a chief reason that relatively few public documents from this period have been discovered.

The "tables" Moses brought down from Mount Sinai were made of stone (Exod. 31:18), but the writing tablets mentioned in Isa. 30:8 and Hab. 2:2 were probably incised sheets of wood (covered with wax, cf. Luke 1:63) or metal. Exactly what the "large tablet" of Isa. 8:1

was is disputed. A silver prayer scroll from the First Temple period (tenth–sixth centuries B.C.) has recently come to light in Jerusalem, and the Copper Scroll from Qumran shows that the practice of preserving important documents on sheets of soft metal persisted. Although a chisel was required to execute a stone inscription, metal or waxed wood could be incised with a simple stylus made of iron or tipped with a hard substance like emery (the "point of diamond" of Jer. 17:1). The "iron pen and lead" of Job 19:24 may be a reference to writing on a sheet of lead with an iron stylus or possibly to filling letters engraved in stone with molten lead.

The general needs of correspondence and record keeping in ancient Israel were served by specially prepared leather and papyrus, and their use continued into NT times. The deed of sale executed by Jeremiah in prison, for example, was probably a sheet of papyrus, folded, sealed, and stored in a ceramic jar (Jer. 32:11–14). There is a reference to the use of "paper [i.e., papyrus] and ink" for letter writing in 2 John 12, but during the Roman period papyrus was replaced in many of its uses by parchment, a refined type of leather, because of its greater durability. Leather, moreover, seems to have been the preferred material for sacred documents. The Qumran scrolls suggest that this was the case in Hellenistic and Roman times, although portions of the Bible recorded on papyrus have survived from the same period. According to the Letter of Aristeas (176 B.C.) leather was mandatory for Torah scrolls used in public worship. For both leather and papyrus the writing medium was ink (cf. Jer. 36:18), which was usually black, derived from soot, although both red and yellow ink are also known. The ink was applied with a brush made from a frayed reed and shaped with a penknife, which could also be used to cut leather (cf. Jer. 36:23). In imitation of Egyptian practice these materials were kept in a "writing case," a scribal palette equipped with slots for pens and wells for ink and worn at the belt (Ezek. 9:2, 3, 11).

Notes and informal records were written with ink on broken pieces of pottery. Numerous ostraca, as these texts are called, have survived from biblical times, including such well-known collections as the Samaria ostraca of the ninth century B.C., the Lachish letters of the early sixth century, and a recently discovered group of ostraca from Arad.

The Uses of Writing: Writing was put to numerous uses in ancient Israel. One of these was record keeping. There is mention in the Bible of the collection and preservation of various kinds of information (e.g., Josh. 18:8–9). Surviving inscriptions, such as the Samaria ostraca, show that economic transactions were recorded in writing, and there are references in the Bible to the execution of several kinds of legal documents, such as deeds of purchase (Jer. 32:10), writs of divorce (Deut. 24:1, 3), and so on.

An ostracon from Arad written on in ink (ca. 600 B.C.) mentions "The House of YHWH."

Another common use of writing was correspondence. Letters from several periods of Israelite history have been recovered by archaeologists. The Bible makes frequent reference to the official correspondence of the Israelite and Judean courts, mentioning letters sent by David (2 Sam. 11:14), Jezebel (1 Kings 21:8), Jehu (2 Kings 10:1), and Hezekiah (2 Chron. 30:1), in addition to letters received from the king of Syria (2 Kings 5:5), the Assyrian Rabshakeh (2 Kings 19:14; Isa. 37:14), and Sennacherib himself (2 Chron. 32:17). The fortunes of the Jewish community after the return from Exile are described largely in terms of correspondence with the Persian court (Ezra 4–7). Many of the NT books are themselves letters, written by Paul and others to distant churches.

In addition to its common uses writing served certain ceremonial functions, both secular and religious. These included the erection of victory stelae (1 Sam. 15:12; 1 Chron. 18:3; cf. 2 Sam. 8:3), which in most cases would have borne inscriptions, and public and personal memorials of various kinds (Exod. 17:14; 2 Sam. 18:18). Here, too, belongs the commitment of collections of ritual regulations to writing (Exod. 24:4; Deut. 31:24; Josh. 8:32; etc.) and the recording of prophetic sayings for the instruction of later generations (Isa. 8:1, 16; 30:8; Jer. 30:2). Ritual and magical uses of writing are hinted at by passages like Num. 5:23–24 and Jer. 51:59–64 (cf. Ezek. 2:8–3:3).

Literacy: Although it is difficult to estimate how much of the ancient community could

read and write, it seems clear that Israel was a literate society from at least the time of the settlement in Palestine (late twelfth century B.C.). It is surprising to learn that the "young man from Succoth" of Judg. 8:14, apparently a common soldier, was able to write the names of seventy-seven men, but the existence of some degree of literacy in Palestine during the period of the judges is attested by inscriptional remains, including a scribal practice tablet with a crude abecedarium scratched on it. The so-called Gezer calendar, an inscribed limestone plaque from the tenth century B.C., was probably also used for scribal practice.

Isaiah's allusion to a child's ability to "write down" (the number of) a few trees (Isa. 10:19) might be taken to suggest that literacy had become widespread by the eighth century, but this impression is contradicted by the reference in Isa. 29:11 to "one who can read," which shows that such ability was not a general accomplishment. In Isa. 8:1 Isaiah is commanded to write on a tablet, but this does not necessarily mean that the prophet himself could write: Jeremiah, when commanded to write down his oracles, dictated them to Baruch (Jer. 36:2, 4). Note also that when the scroll produced by Baruch was taken to Jehoiakim, the king had it read to him by a member of his court (Jer. 36:20). All of these things suggest a pattern of limited literacy in ancient Israel. In a given generation there may have been many who could read and write, but the general population probably relied on a fairly small number of individuals trained in scribal schools or families (cf. 1 Chron. 2:55).

The situation reflected in the NT is much the same. Paul apparently dictated his letters to a companion (e.g., Rom. 16:22; cf. Gal. 6:11), although he may have concluded them with a benediction in his own hand (2 Thess. 3:17). Such letters were intended to be read aloud to the assembled Christians rather than read individually and were often exchanged among churches (e.g., Col. 4:16). Aside from Luke 1:3, which could also mean the author dictated the text, the Gospels give no indication whether they were written down or dictated by their authors.

Xerxes (zuhrk´sees), the name of several rulers of the Persian Empire. **1** Xerxes I, who ruled 486–465 B.C. and is known from Greek history for his attempts at conquering the Greek mainland. He is probably the ruler referred to in Ezra 4:6 (there called Ahasuerus, from the Persian form of his name), a passage out of chronological context, who received a complaint against the Jews who had returned to Palestine from the Exile. In Dan. 9:1, an Ahasuerus is mentioned as the father of Darius the Mede (but see 2). The Persian ruler of the book of Esther (1:1, etc., there also called Ahasuerus) is presumably based on Xerxes I, but as presented in Esther he is more a legendary than a historical figure. The Greek translators of the Septuagint (and cf. Josephus *Antiquities* II. 184) consistently render Ahasuerus as Artaxerxes, however. **2** Xerxes II, 425 B.C., who succeeded Artaxerxes I (the son of Xerxes I) but was assassinated almost immediately. He is probably not referred to in the Bible. P.R.A.

Crown Prince Xerxes (who became Xerxes I) standing behind the Persian ruler Darius I, whom he succeeded in 486 B.C.; Persepolis relief.

Yahweh (yah´weh). ***See*** Names of God in the Old Testament.

Yahwist, the name given the earliest literary source underlying the books of Genesis through Numbers. The siglum given the source is "J," which is derived from the German spelling of the name of God, *Jahveh* (in English usually spelled Yahweh), used throughout this source. The Yahwist source is usually dated around 950 B.C. Among its characteristics are bold anthropomorphisms; positive attitudes toward agricultural civilization, the state, and kingship; a mixture of nationalistic and universalistic concerns; and a style that exudes charm, simplicity, and clarity. The anonymous writer wove together the oral and written stories to assist a people in discovering not only the outer history of names and places but also the inner story of God's work among them. Examples of the Yahwist writing are found in Gen. 2:4b–4:26; 32:22–32; Exod. 1–22; and Num. 24:1–25. ***See also*** Sources of the Pentateuch. K.H.R.

Yam Suph (yahm *soof*´), term referring to body of water through which the Israelites escaped at the Exodus, either a marshy area or a body of water south(east) of the Promised Land, perhaps the Gulf of Aqabah. The usual Septuagint equivalent is "Red Sea," but 1 Kings 9:26 has "ultimate sea" (taking Hebrew *swp, suph,* as *soph,* "end"; *yam* means "sea"). The modern translation "reed sea" is possible (since *suph* means "reeds"), but disputed. Apart from the expression *ym swp,* Hebrew *suph* occurs as a place name (Deut. 1:1) and as a term for "reeds" or "weeds" (Exod. 2:3, 5; Isa. 19:6; Jon. 2:6); it may even imply "final danger" (*soph*) in Jon. 2:6.

The original meaning of the Hebrew *ym swp* is disputed. If it named or described a marshy area across which the Israelites escaped from Egypt, then "reed sea" could have been meant. If it identified a distant sea in the south (the present Red Sea and its extensions on either side of the Sinai peninsula) that came to be regarded as the location of the Exodus, "ultimate sea" may have been intended. The expression may echo Moses' escape from the reeds (*swp*) of the Nile canal in Exod. 2:1–6. First Moses and then the people are rescued from mortal danger, *swp,* by the Lord (cf. the *swp,* "weeds," wrapped around Jonah's head after he sank in the sea, Jon. 2:6). K.G.O.

Yarmuk, Wadi el- (yahr´mook, wah´dee el-), the major eastern tributary of the Jordan River,

which it enters just south of the Sea of Galilee. Before modern diversion of the water of the Yarmuk and its sources for irrigation it was a perennial stream with an outflow nearly equal to that of the Jordan. Its gorge cuts through basalt of volcanic origin which overlies strata of chalk and limestone. This valley is a natural barrier and was the boundary between Bashan and Gilead in the Iron Age (1200–600 B.C.). Today it forms part of the border between Syria and Jordan. The modern Syrian border town of Deraa just north of the Yarmuk is located on the site of and preserves the ancient name of Edrei, where according to Num. 21:33–35 the Israelites under Moses defeated the forces of Og, king of Bashan. Curiously, the Yarmuk is not mentioned in the Bible, although archaeological surveys have shown that settlements existed in and near it from prehistoric times. In the Neolithic period (10,000–4000 B.C.) the wadi gives its name to a distinctive "Yarmukian culture." In the Roman period several of the cities of the Decapolis were located near the Wadi Yarmuk, including Gadara, Abila, and perhaps Dion. ***See also*** Decapolis; Edrei. M.D.C.

year. ***See*** Time.

yodh (yohd), the tenth consonant of the Semitic alphabet (thus, also "ten" in postbiblical Hebrew) which, like "y" its equivalent, also functions as a semivowel when preceded by a vowel. Both the letter's name and its earliest Phoenician representation derive from *yad,* "hand." When the Aramaic cursive replaced the older Hebrew script, this letter became the smallest in the alphabet; as such, referred to by its Greek name, *iota,* it underlies the famous "jot" of Matt. 5:18 (KJV).

yoke, a wooden or iron frame for joining two oxen or other draft animals so they can pull a plow, cart, or other heavy load. A yoke generally consisted of a single crossbar with leather or rope nooses or wooden rods that were fastened around the animals' necks (cf. Jer. 27:2). The crossbar was attached to a shaft that pulled the load (cf. Deut. 21:3; 1 Sam. 6:7; 11:5; 1 Kings 19:19). A yoke of oxen might refer to a pair of oxen (1 Sam. 11:7; 1 Kings 19:21; Luke 14:19). A "yoke" of land, usually translated "acre," refers to the amount of land a yoke of oxen could plow in one day (1 Sam. 14:14; Isa. 5:10).

Yoke was used figuratively as a symbol of hardship, submission, or servitude. Jeremiah wore a yoke to symbolize his message that Judah should submit to Babylon (Jer. 27–28). When the people of Israel considered whether or not they would accept Rehoboam as king, they asked him to lighten the heavy yoke, i.e., the hard service, that his father, Solomon, imposed on them (1 Kings 12:1–11). Yoke may refer to other burdens or responsibilities, such as sin (Lam. 1:14), service to God (Lam. 3:27; Jer. 2:20; 5:5), slavery (Ecclus. 33:26), or obedience to Torah (Acts 15:10) or Christ (Matt. 11:29–30). M.A.S.

yokefellow (Gk. *syzygos*), either a personal name or an adjective. "Syzygos" is referred to in Phil. 4:3 ("true yokefellow") as one who is to help bring an end to a disagreement between two women in the church at Philippi. The identity of the "yokefellow" has provoked widespread speculation among commentators. Among the more exotic views is that the reference is to Paul's (hypothetical) wife or to an unknown amanuensis. Others regard it as a proper name for one of Paul's co-workers. Perhaps the yokefellow was some unnamed co-worker of Paul, possibly even someone elsewhere referred to by name (e.g., Timothy, Titus, possibly even Epaphroditus, see Phil. 2:25–30; 4:18). ***See also*** Epaphroditus; Paul; Philippi; Timothy; Titus. A.J.M.

Yom Kippur (yom´ kip´uhr). ***See*** Atonement, Day of.

Y-R-S-L-M, or more properly y-r-sh-l-m, letters that, in Hebrew, indicate Jerusalem. They are found on various artifacts from Palestine, including jar handles and seals. The spelling y-r-sh-l-y-m is found on coins of the first Jewish revolt (ca. A.D. 66–70) and y-r-w-sh-l-m on coins of the second revolt (ca. A.D. 132–135). ***See also*** Money; Seal.

Z

Zaanannim (zay′uh-na′nim), a point on the southern border of Naphtali with Issachar (Josh. 19:33) where Heber the Kenite pitched his tent (Judg. 4:11) in which the Canaanite king Sisera was subsequently slain (Judg. 4:17–21). It was most likely modern Khan et-Tujjar some five miles west of the Sea of Galilee.

Zabad (zay′bad; a shortened name, Heb., "He [God] has given," or "gift"; cf. the full names Zebadiah, Zabdiel, and related names Zabdi, Zabud, and Zebidah). **1** A descendant of Sheshan in the line of Judah (1 Chron. 2:36–37; cf. v. 31). **2** An Ephraimite of the Shuthelah lineage (1 Chron. 7:21). **3** One of David's "mighty men" (1 Chron. 11:41; cf. 2 Sam. 23:24–39). **4** One of the murderers of King Joash according to 2 Chron. 24:26 (called Jozacar [RSV; MT: "Jozabad"] in 2 Kings 12:21). **5** Three men among the returned exiles who had married foreign women (Ezra 10:27, 33, 43). P.A.B.

Zabbai (zab′*i*), a descendant of Bebai, who gave up his foreign wife under the reforms of Ezra (Ezra 10:28). He may be the same individual who is mentioned in Neh. 3:20 as the father of the Baruch who helped to rebuild the walls of Jerusalem. ***See also*** Ezra.

Zabdi (zab′d*i*). **1** The grandfather of Achan of Judah, who violated Joshua's order not to take the devoted spoil from Jericho (Josh. 7:1). **2** A member of the tribe of Benjamin (1 Chron. 8:19). **3** A Shiphmite who served as an official under David in charge of the "produce of the vineyards for the wine cellars" (1 Chron. 27:27). **4** A Levite in postexilic Jerusalem, the son of Asaph and father of Mica (Neh. 11:17).

Zabdiel (zab′dee-uhl). **1** The father of Jashobeam, one of David's officers (1 Chron. 27:2). **2** An overseer of priests in the time of Nehemiah and the son of Haggedolim (Neh. 11:14). **3** An Arabian who killed Alexander Balas, a contender for the Syrian throne ca. 150 B.C., and sent the head to the Egyptian king Ptolemy VI (1 Macc. 11:17). ***See also*** Alexander.

Zacchaeus (za-kee′uhs). **1** An officer in Judas Maccabeus's army (2 Macc. 10:19). **2** A wealthy tax collector in Jericho (Luke 19:1–10), whose actions belied the meaning of his name ("pure") and warranted the label "sinner" (19:7). Learning that Jesus was to pass by, he, being "small of stature," climbed a tree for a better view. Surprisingly, Jesus summoned him and ate with him. Zacchaeus's promise to contribute to the poor and restore fourfold those wrongfully treated stands in sharp contrast to the response of the rich ruler (Luke 18:18–25). ***See also*** Maccabees; Publicans. P.L.S.

Zacchaeus in the tree for a better view of Jesus (Luke 19:3–4); pulpit plaque, Ravenna, Italy.

Zaccur (zak′uhr; Heb., "remembered"). **1** A Reubenite, the father of Shammua, one of the twelve spies sent by Moses into Canaan (Num. 13:4). **2** A descendant of Simeon (1 Chron. 4:26). **3** A Levite of the clan of Merari (1 Chron. 24:27). **4** A Levite musician of the clan of Asaph and head of the third course of musicians in the time of King David (1 Chron. 25:1, 10). He is probably the same person who is listed as the ancestor of a postexilic musician (Neh. 12:35). **5** The son of Imri who helped repair the walls of Jerusalem under Nehemiah (Neh. 3:2). **6** A Levite who signed the postexilic covenant to keep the law (Neh. 10:12); he is possibly the same Levite who was the father of Hanan, a Temple official in the time of Nehemiah (Neh. 13:13). **7** A member of the clan of Bigvai who returned from the Babylonian captivity with Ezra (Ezra 8:14). The Hebrew text reads Zabbud but with a marginal correction (Qere) to Zaccur; however, some versions retain Zabbud. D.R.B.

Zachariah (zak′uh-r*i*′uh). ***See*** Zechariah.

Zacharias (zak′uh-r*i*′uhs), KJV for Zechariah the prophet (Matt. 23:35; Luke 11:51), and for

Zechariah the father of John the Baptist (Luke 1:5–67; 3:2). ***See also*** John the Baptist; Zechariah.

Zadok (zay´dok), a priest whose descendants served in the high-priesthood for most of the First and Second Temple periods (tenth century B.C. to first century A.D.). Zadok and Abiathar were priests under David (2 Sam. 20:25) and supported him during Absalom's revolt (2 Sam. 15:24–29, 35; 17:15; 19:12). In the succession struggle after David's death, Zadok supported Solomon (1 Kings 1:8, 32), while Abiathar supported Adonijah (1 Kings 1:7). Zadok therefore anointed Solomon (1 Kings 1:39–45) and became his sole priest.

The Bible identifies Zadok's father as Ahitub (2 Sam. 8:17). Confusion regarding the genealogy of Abiathar in this verse caused some scholars to discount its historicity and to claim that Zadok's origins were non-Israelite. This theory has recently been challenged by the OT scholar F. M. Cross, who accepts the Aaronite descent of Zadok. Some have suggested that Zadok originally hailed from Hebron where David had come in contact with him.

1 Chron. 6:8–15 (cf. 9:11; Ezra 7:1–5; Neh. 11:11) lists the descendants of Zadok, although there are probably gaps in the list. This family controlled the Jerusalem priesthood from the time of Solomon (ca. 965 B.C.) until the Exile (586 B.C.). Ezek. 40:46; 43:19; 44:15; and 48:11 specify that in the rebuilt Temple only Zadokite priests would minister. This line continued to serve in the high-priesthood until 171 B.C. when it passed first to the Hellenizers and then to the Hasmonean house. The sect of the Dead Sea Scrolls, probably founded in the aftermath of the Hasmonean takeover of the high-priesthood, repeatedly emphasizes the sole legitimacy of the Zadokite priests who were the early leaders and probably the founders of the sect. ***See also*** Priests. L.H.S.

Zair (zay´uhr), a location either in or near Edomite territory where Jehoram, the king of Judah (Southern Kingdom), fought the Edomites in an attempt to keep them under Israelite control (2 Kings 8:21). The location is unknown, although some scholars connect it with Zoar (Deut. 34:3) or Zior (Josh. 15:54); other scholars think Zair may be a scribal error for Seir, another name for the whole territory of Edom.

Zalmon (zal´muhn). **1** A member of David's elite group of fighting men (2 Sam. 23:28); he is also called Ilai (1 Chron. 11:29). **2** A mountain near Shechem from which Abimelech cut branches with which to burn the Temple of El-berith (Judg. 9:48); it is usually identified as a promontory or slope of Mount Gerizim or Mount Ebal, which lie on either side of Shechem. **3** An unknown location (Ps. 68:14); possibly the same as 2 above, but probably a much higher elevation east of the Jordan toward Mount Hermon.

Zalmonah (zal-moh´nuh), one of the encampments of the Israelites during the exodus from Egypt (Num. 33:41–42). Although the exact site is not known, it is probably located in the Arabah twenty to thirty miles south of the Dead Sea.

Zalmunna (zal-muhn´uh), a Midianite king who, along with Zebah, was pursued and killed by Gideon (Judg. 8:4–21; Ps. 83:11). ***See also*** Gideon; Zebah.

Zamzummim (zam-zuh´mim), the name given by the Ammonites to an ancient race of giants who were the original inhabitants of the area east of the Jordan later occupied by the Ammonites and Moabites; the Israelites called them Rephaim (Deut. 2:20–21). Some scholars identify them with the descendants of Ham who are elsewhere called Zuzim (Gen. 14:5). ***See also*** Rephaim.

Zanoah (zuh-noh´uh). **1** A town of Judah in the northern Shephelah (Josh. 15:34; Neh. 11:30), identified with Khirbet Zanu'. **2** A town in the hill country of Judah (Josh. 15:56), possibly to be identified with Khirbet Beit Amra. **3** The grandchild of Mered by his Jewish wife (1 Chron. 4:18).

Zaphenath-paneah (zaf´uh-nath-puh-nee´uh; KJV: "Zaphnath-paaneah"), the name Pharaoh gave to Joseph when he appointed him as vizier (Gen. 41:45). It was a common practice in Egypt for Semites to take Egyptian names. However, the Egyptian original behind this particular term is uncertain. Although it has been suggested that it comes from *Djed-pa-netjer-iw.f-ankh* ("The god speaks and he lives"), this name is not attested in Egypt until considerably later than the patriarchal era. It may therefore have been a later addition to the story in Genesis, or it may represent a garbled version of some other Egyptian personal name. According to the Targums, based on a wordplay, the name means "revealer of secrets." ***See also*** Joseph. J.M.W.

Zaphon (zay´fon), a city east of the Jordan River which was included in the land given to the tribe of Gad (Josh. 13:27). Formerly it belonged to the kingdom of Sihon. The site is mentioned in the Amarna letters and the story of Jephthah (Judg. 12:1–7). The site has been identified with Tell es Sa'idiyeh or Tell el Qos in modern Jordan. ***See also*** Amarna, Tell el-; Sihon.

Zarah (zair´uh). ***See*** Zerah.

Zared (zay´rid), the term in the KJV for the RSV's "Zered" in Num. 21:12. ***See also*** Zered, The Brook.

Zarephath (zair´uh-fath; KJV "Sarepta"), a port city on the Phoenician coast at modern Sarafand, eight miles south of Sidon and fourteen miles north of Tyre. Phoenician and Hellenistic remains were found at Ras el-Qantara, a promontory overlooking what was a northern harbor and possibly a southern one. Hellenistic, Roman, and later remains cover a wider area along the coast, including a small Roman harbor used from the first to sixth centuries A.D. The modern village of Sarafand is centered some distance inland as are Phoenician rock-cut tombs discovered by villagers.

Occupied from 1600 B.C. onward, Zarephath was most important during the Phoenician period. In the ninth century B.C. the prophet Elijah received the hospitality of a poor widow of Zarephath and miraculously replenished her depleted grain and revived her dying son (1 Kings 17:8–24). Centuries later Jesus referred to Elijah's visit (Luke 4:25–27) and by the fourth century A.D. Christian pilgrims stopped there on their way to the Holy Land. A prosperous town and a church to St. Elijah were mentioned in the sixth century, but by the thirteenth century A.D. only eight houses remained standing.

In an Egyptian text of the thirteenth century B.C. Zarephath is mentioned along with Byblos, Beirut, Sidon, and Tyre. In his campaign of 701 B.C. the Assyrian king Sennacherib included Zarephath in a list of pacified coastal cities, while King Esarhaddon transferred Zarephath to the control of Tyre some twenty years later.

Excavation during 1969–74 by J. Pritchard at Zarephath has provided an archaeological record of Phoenician material culture in its homeland, including a stratigraphic sequence of Phoenician pottery. Continuous occupation at Zarephath from the Late Bronze Age (ca. 1500 B.C.) into the Phoenician Iron Age (ca. 1100 B.C.) demonstrates that Phoenician culture evolved locally. In an industrial quarter dating to several centuries of the Iron Age, twenty-two bilobate-shaped kilns for pottery were found along with settling basins and heaps of misfired pottery, including red-slip ware, mushroom-lip juglets, and other Phoenician ceramic types.

A small one-room shrine with benches along its walls was discovered in the potters' quarter. Near the front of it a cache of objects was found that included terra-cotta figurines and an ivory plaque with a short dedicatory inscription to Astarte-Tanit. This is the first known syncretism of Astarte, the female deity of the Canaanite Levant, and the other female deity, Tanit, whose center of worship was the western Mediterranean where child sacrifices were made to her. This demonstrates that the worship of Tanit was not entirely restricted to the western Mediterranean. T.L.M.

Zarethan (zair´uh-than), a city in the Jordan Valley whose location has not been firmly established. It was beside the clay ground where Solomon's Phoenician smith cast bronze utensils for the Temple (1 Kings 7:46; 2 Chron. 4:17). When Joshua led the Israelites across the Jordan River, water backed up near Zarethan (Josh. 3:16). In the period of the judges, Gideon pursued the Midianites toward Zarethan (Judg. 7:22). Again during Solomon's reign it is mentioned as belonging to one of his administrative districts (1 Kings 4:12). Several modern sites have been proposed as the location of Zarethan, among them Tell Umm Hamad, Sleihat, Tell el-Merkbere, and Tell es-Sa'idiyeh.

The latter site, one of the most prominent tells in the region, was excavated by J. Pritchard in 1964–67. Tell es-Sa'idiyeh consists of twin (upper and lower) mounds and is on the south bank of the Wadi Kufrinjeh, 1.1 miles west of the Jordan River. Iron Age settlement was concentrated on the upper mound. Its water supply was provided in time of siege by a unique semi-subterranean stairway cut into the side of the mound; it linked the walled city with springs at the foot of the tell. A wall of mudbrick running down the center of the staircase supported a roof that hid the system from attackers.

The earliest Iron Age settlement excavated on the upper mound was Level IV, possibly dating to the ninth century B.C. Residential houses in it and the succeeding two strata, Levels III and II, were all made of mudbrick. In Level III one house contained a white-plastered mud platform with associated ashes and incense burners. The settlement in Level II, of the eighth century B.C., exhibits systematic town planning in which standardized houses were constructed in a residential block that, with its flanking streets, was oriented perpendicularly to the defensive wall protecting the perimeter of the settlement. Houses, built back to back, were of a three-room pillar type often found in Palestine. The front room was divided in two by a row of mudbrick pillars. A back room stood on the side opposite the street entrance. Level II was destroyed by a heavy fire, and reoccupation of the area, probably in the seventh century B.C., included scores of circular pits that served as storage facilities for grain. Persian and Hellenistic public buildings were located on the highest point of the upper mound. The large Persian structure was square in shape with a paved central courtyard and a tower built at one of the building's corners.

Early Bronze Age (3000–2000 B.C.) potsherds covered the lower mound, but excavation there also revealed a cemetery dating from the Late Bronze Age to the early Iron Age (ca. 1500–900 B.C.). A number of bronze utensils were found in the graves, including a tripod stand, several bowls, and a strainer in the grave of a female. Also found with her were silver jewelry, beads of gold and carnelian, and ivory cosmetic objects. Another grave contained bronze weapons and skeletal remains wrapped in cloth and covered with bitumen. T.L.M.

Excavations at Tell es-Sa'idiyeh, an important Iron Age settlement and one of the sites proposed as the biblical city of Zarethan.

Zattu (zat´*oo*), the chief of a family of exiles that returned from the Babylonian captivity (Ezra 2:8; Neh. 7:13; 10:14). Some members of this family married foreign women (Ezra 10:27).

zayin (zah´yin), the seventh letter of the Hebrew alphabet. It stands at the beginning of the seventh section of Psalm 119 and, in the Hebrew, is the first letter in each verse (Ps. 119:49–56).

Zealot (zel´uht), a person who opposed the Roman occupation of Palestine which began in 63 B.C. Luke uses the term as an epithet for one of Jesus' disciples, Simon (Luke 6:15; Acts 1:13). Prior to the revolt against Rome (A.D. 66–70) a nationalistic party emerged in Palestine called the Zealots. Some scholars hold that Josephus's reference to a "fourth philosophy," or party, among the Jews established by Judas the Galilean, who led resistance to the Roman incorporation of Judea as a province (A.D. 6), can be used to show that the Zealot party had its origins in a nationalistic movement at the beginning of the first century (Josephus *Antiquities* 18.23).

Most scholars think that it is incorrect to locate organized resistance to Roman rule centered around a particular party leadership and ideology earlier than the decade prior to the outbreak of the revolt. Josephus also admits that a number of parties and groups were associated with the final stages of the revolt (*War* 7.262–70). Disturbances in Galilee occurred throughout Herod's reign, but they do not appear to have been part of an organized resistance movement.

Use of the epithet "Zealot" for one of Jesus' disciples, Jesus' crucifixion by Roman authorities, and the parallel drawn between Jesus and Judas the Galilean in Acts 5:37 have led some to ask whether Jesus was a Zealot. Although unrest was evident in isolated incidents such as Pilate's slaughter of Galileans (Luke 13:1–4) and the border skirmish between Galileans and Samaritans, which was, however, connected more with Jerusalem than Galilee (Josephus *Antiquities* 20.120), such an identification does not seem probable. Unlike John the Baptist's, Jesus' ministry in Galilee does not appear to have caused the Herodian officials in Galilee any concern. Nor is Jesus' call for devotion to the rule of God cast in terms characteristic of Zealot ideology. Mark 12:17 suggests that he was unwilling to align himself with that form of resistance. This view is also embedded in sayings against the disciples' aspirations toward power (Mark 8:33; 10:38–39; Luke 24:21; Acts 1:6).

It would seem then that the epithet "Zealot" used of Simon perhaps refers to the older sense of the word, namely, a person who is devoted to the law, who is "zealous" for God (e.g., Num. 25:13; 2 Kings 10:16; Acts 22:3). ***See also*** Cross; Trial of Jesus, The. P.P.

Zebadiah (zeb´uh-d*i*´uh; Heb., "Yahweh has given a gift"; also Zeraiah; KJV: "Zaraias"). **1** Benjaminite son of Beriah (1 Chron. 8:15). **2** Benjaminite son of Elpaal (1 Chron. 8:17). **3** Benjaminite son of Jeroham of Gedor who fought for David (1 Chron. 12:7). **4** Third son of Meshelemiah (1 Chron. 26:2) who served as a gatekeeper. **5** Son of

Asahel who succeeded his father as leader of the labor division for David (1 Chron. 27:7). **6** Levite teacher who worked at Jehoshaphat's time (2 Chron. 17:8). **7** Son of Ishmael and governor of the house of Judah under Jehoshaphat (2 Chron. 19:11). **8** Son of Michael and descendant of Shephatiah who returned from Exile (Ezra 8:8). **9** Descendant of Immer who was found to have married a foreign woman (Ezra 10:20). R.S.B.

Zebah (zee´buh; Heb., "sacrifice" or "offering"), a king of Midian who, along with Zalmunna and fifteen thousand survivors of the allied Midianite and Amalekite army, fled from the Israelites led by Gideon. Gideon pursued the kings and the remnant of the army to Karkor east of the Jordan where, in a surprise attack, he routed the army and captured Zebah and Zalmunna. After carrying out reprisals against Succoth and Penuel for failing to lend assistance, Gideon killed Zebah and Zalmunna because he held them responsible for the deaths of his kinsmen at Tabor (Judg. 8:4–21; Ps. 83:11). ***See also*** Gideon.

Zebedee (zeb´uh-dee), a fisherman and the father of Jesus' disciples James and John (Matt. 4:21–22; Mark 1:19–20; Luke 5:10). His wife, who may perhaps have been named Salome (cf. Mark 15:40), was one of the women ministering to Jesus (Matt. 27:56). The reference to "hired servants" (Mark 1:20) suggests that he was a man of some affluence. ***See also*** James; John the Apostle; Salome.

Zeboiim (zuh-boi´im), a site in the valley near the Dead Sea, noted as marking the eastern border of Canaan together with Sodom, Gomorrah, Admah, and Lasha (Gen. 10:19). Ruled by Shemeber, it joined a coalition with neighboring cities (Gen. 14:2) opposing invaders from the north (Gen. 14:8). Hosea used both Admah and Zeboiim as symbols of utter destruction (Hos. 11:8), referring presumably to the legendary destruction of the whole region when Sodom and Gomorrah were destroyed together with "those cities and all the Plain" (Gen. 19:24–25). While recent archaeological work has recovered remains of five Early Bronze Age cities southeast of the Dead Sea on the plain below the hill line to the east, no specific identification has been established for Zeboiim to date, although it is thought to be one of the five "cities of the plain." R.S.B.

Zeboim (zuh-boh´im). ***See*** Zeboiim.

Zeboim, Valley of, a valley in the tribal territory of Benjamin southeast of Michmash to which the Philistines came for battle with Saul and Jonathan (1 Sam. 13:18), probably modern Wadi Abu Daba', a branch of the Wadi Qelt. Both ancient and modern names mean "Valley of the Hyenas."

Zebul (zee´buhl), a city official at Shechem who was loyal to Abimelech, the king, at the time of Gaal's challenge to Abimelech's leadership. Zebul participated in Abimelech's plan for Gaal's defeat (Judg. 9:28–41).

Zebulun (zeb´yuh-luhn; Heb., "exalt"), the sixth son of Jacob, his sixth by Leah (Gen. 30:19–20). Zebulun and his three sons went down to Egypt with the family of Jacob (Gen. 46:14). Jacob's blessing of Zebulun implies that his descendants would live along or near the Mediterranean coast and would maintain close relations with the Phoenicians (Gen. 49:13). The tribe was allotted the territory of south-central Galilee (Josh. 19:10–16). Their southern boundary corresponded roughly with the southern edge of the hills of Lower Galilee and their northern border reached the Beth Netophah Valley. Their allotment extended from just north of Mt. Carmel on the west, to Mt. Tabor on the east. Zebulun was something of a hinterland, almost entirely mountainous, with the exception of the broad valleys on its western and northern edges. Its only towns of note were Hannathon (modern Tell el-Bedeiwiyeh), known from the Tell el-Amarna Letters; Shim'on ("Shimron" in the Masoretic Text and in most English versions), a Canaanite city conquered by Thutmose III and also mentioned in the Tell el-Amarna Letters; and Gath-hepher, hometown of Jonah (2 Kings 14:25). Zebulun, while a hinterland, was not isolated; some of Canaan's most important highways passed along its northern, southern, western, and eastern boundaries, by which the tribe had easy access to the sea (cf. Gen. 49:13; Deut. 33:19). Jesus' hometown, Nazareth, was located in the heart of Zebulun (cf. Isa. 9:1; Matt. 4:15). D.A.D.

Zechariah (zek´uh-r*i*´uh; KJV: "Zachariah" or "Zacharias"; Heb., "Yahweh remembers"), the name of more than thirty people in the Bible, including a Levite gatekeeper (1 Chron. 26:2, 14), a Levite harpist (1 Chron. 15:18, 20; 16:5), and a trumpet-blowing priest who led David's procession accompanying the Ark of the Covenant into Jerusalem (1 Chron. 15:24). The more important bearers of the name are: **1** A prophet during the reign of Joash (Jehoash) of Judah (ca. 837–800 B.C.). The son of Jehoiada, a priest, he was stoned by the people because of his unpopular preaching (2 Chron. 24:20–23). He is probably the Zechariah mentioned by Jesus in Matt. 23:35 and Luke 11:51 (the addition in Matthew of "the son of Barachiah," a reference to Zechariah the postexilic prophet, is probably a scribal error). **2** The son of Jeroboam II, who succeeded his father to the throne of Israel ca. 746 B.C. He was the last of the family of Jehu. After reigning only six months, he was assassinated by Shallum, evidence of a period of considerable political unrest (2 Kings 14:29; 15:8–12). **3** One of the "Minor Prophets" after

the Exile, associated with the canonical book of Zechariah. **4** The father of John the Baptist. According to Luke 1:5, he was a priest from the line of priests associated with Abijah (cf. 1 Chron. 24:7–19) and was married to Elizabeth, "of the daughters of Aaron." Described as righteous before the law, the couple was childless and "advanced in years" (reminiscent of the OT stories of Abraham and Sarah, Gen. 16:1; 17:1–21; 18:9–15; 21:1–8, and of Elkanah and Hannah, 1 Sam. 1:1–20). An angel appeared to Zechariah, announcing that his long desire for a son would be fulfilled and the son's name was to be John. Asking for a sign, Zechariah was struck dumb. It was not until after John's birth that Zechariah, filled with the Holy Spirit, was again able to speak, blessing God and prophesying the fulfillment of Israel's hope for the Messiah (Luke 1:1–25, 57–80). *See also* Abijah; Abraham; Ark; Berechiah; Elizabeth; Elkanah; Hannah; Jehoiada; Jehu; Jeroboam II; Joash; John the Baptist; Levites; Sarah; Shallum; Zechariah, The Book of. P.L.S.

Zechariah, the Book of, the eleventh of the so-called twelve Minor Prophets in the OT. The first eight chapters, nearly in their entirety, can be attributed to Zechariah, son (or grandson) of Iddo. Chaps. 9–11 and 12–14 comprise two separate collections from a later period and will be discussed separately below.

Historical Setting: The words of Haggai, a contemporary of Zechariah, describe the adverse conditions under which the Jewish community lived during the period after the return of some of the exiles to Judah following the edict of Cyrus in 538 B.C. The economy had suffered as a result of crop failure, there was insufficient food, and the value of personal wealth had been eroded by inflation. Haggai responded to this situation in 520 B.C. with an urgent message: the people are themselves at fault for leaving the Temple—destroyed by the Babylonians in 586—in ruins. Yet an eschatological turning point was at hand. No sooner would the people take up the task of rebuilding than God would act to restore the kingdom, which would rise to the glory of a messianic age under its Davidic prince Zerubbabel.

Zechariah took up the admonition where Haggai had left off, both chronologically (520–518 B.C.) and thematically (his message is more encompassing). No doubt due in part to his encouragement, the rebuilding of the Temple was carried forward, coming to completion in 516 B.C.

Structure and Message of Zechariah 1–8: The heart of Zechariah's message is formed by a cycle of eight visions in chaps. 1–6, visions received by the prophet in a two-month period in 519. Though likely also written by the prophet Zechariah, the fourth of these visions (chap. 3) is distinct from the others in form and theme; it depicts a trial in heaven in which Satan accuses Joshua and in which God declares the latter free of reproach and then commands that he be consecrated by the high-priestly office. The twin themes of defilement and purification were of critical importance for a people recently having experienced loss of the Temple and exile in a foreign land. To be fit for office, even the high priest had to be stripped of his unclean clothes and reclothed in pure raiment. It is possible that this passage arose in response to charges from a rival group that the Zadokite Joshua was unsuited for the high-priestly office. Nothing less than a direct word of God is invoked to repudiate such opposition.

The remaining seven visions form an intricate unit giving a symbolic representation of the Jewish community revolving around the rebuilt Temple in a land secured and sanctified by God. Significantly the central vision depicts an elaborate lampstand consisting of seven lamps, on the side of which rise two olive trees. This rich symbolism is interpreted in chap. 4 as representing the all-seeing presence of God (the lamps) and the two anointed emissaries of God on earth, Joshua and Zerubbabel (the olive trees). From this spiritual center of the universe (as indeed the Temple was regarded in the ancient world) the other visions reach out, depicting God's securing the land against foreign oppressors and establishing prosperity (visions 2 and 3), God's purging the community of all who violate the Torah (visions 5 and 6), and finally God's securing the very outer reaches of the universe (visions 1 and 7).

The political setting addressed by this powerful symbolism can be inferred from the plaintive questioning of the angel in 1:12: "O Lord of hosts, how long will you withhold mercy from Jerusalem and the cities of Judah, with which you have been angry these seventy years?" The Persian king Darius I (522–486 B.C.) had just crushed the widespread insurrections that had raised nationalistic hopes within many of the Persian vassal states, including Judah. Disappointment threatened the morale of the Jewish community, threatening among other things the Temple rebuilding effort. The visions of Zechariah offered assurance that God remained "very jealous for Jerusalem and for Zion" (1:14).

Zech. 1:1–7 and chaps. 7–8 draw various sayings of Zechariah into a framework around the visions. They offer clear evidence of the ethical sensitivity of this prophet, who has sometimes unfairly been described strictly as a cult prophet. The reference to "the former prophets" in 1:4 hints at a growing sense within the sixth-century prophetic circles that a classical period has yielded to an age of lesser figures, who, as the anonymous additions appended to books like Isaiah and Zechariah suggest, no longer felt empowered to identify themselves by name.

We have noted that the prophetic activity of Zechariah (and Haggai) bore fruit in the completion of the Temple. Are other effects dis-

cernible? The enigmatic passage in 6:9–14 offers a tantalizing piece of evidence. It describes the casting of crowns, apparently for the twin members of the Zadokite/Davidic diarchy, Joshua and Zerubbabel. Yet awkward adjustments to the text have led to the portrayal of a crown being placed solely on the head of Joshua. Zerubbabel has been dropped from the text. Many scholars have taken this as indirect evidence that the messianic fervor engendered by the two prophets had gone so far as to cause the Persians to fear further unrest in Judah, leading to the removal of the Davidic prince. At any rate, this text points to an important development. For the remainder of the Persian period (to 333 B.C.) and on into the Hellenistic (333–63 B.C.), Judah was to be a theocracy under the leadership of a succession of Zadokite high priests.

Zechariah's message grows out of a tradition reaching back to the Temple theology developed by the Zadokite priests in the pre-exilic period and reaching literary culmination in the book of Ezekiel and the so-called Priestly writing. It is a tradition expressing the concerns and theological insights of a guild of priests devoted to maintaining a state of holiness through the proper maintenance of Temple and sacrifice that would be hospitable to the presence of the divine Glory upon which the well-being of the land depended. Along with Ezekiel it gives indication of significant developments in the history of the religion of Israel, including the increasing sense of the transcendence of God, which encouraged speculation concerning divine intermediaries, the cultivation of the genre of the vision as a medium of revelation, and the movement toward an elaborate symbolism and a high eschatology anticipating later apocalyptic writings, upon which Zechariah and Ezekiel exercised considerable influence.

The precise chronological notes running through Haggai and Zechariah 1–8 were probably provided by an editor who gave these prophetic collections their final shape, a person with the type of historical concerns discernible behind the Chronicler's history.

Zechariah 9–14: Zechariah 9–11, Zechariah 12–14, and the book of Malachi are three collections of prophetic materials each bearing the heading "An Oracle." It seems likely that at a late stage in the formation of the twelve Minor Prophets, these three collections were added in such a way as to yield the number twelve by attaching two to Zechariah and placing the third as a separate book under the name Malachi (resulting from reading Heb. *mala'ki*, "my messenger," in Mal. 3:1 as a personal name [cf. 1:1]). Though containing no explicit evidence for dating, it seems that all three collections consist of materials from the fifth and fourth centuries B.C., written by groups increasingly disillusioned with prevailing conditions, critical of their leaders, and given to apocalyptic visions as a means of preserving their hopes for final vindication.

Zechariah 9 portrays the Lord as Divine Warrior reestablishing an empire resembling that of David's with the Temple as its center (9:8). The theme of divine conquest is revisited in chap. 10, though a new element is added in the invective against unfaithful leaders (vv. 2–3). The designation of those leaders as shepherds leads to further development in chap. 11, where Ezekiel's promise in chap. 34 of a faithful shepherd (David), who would replace abusive ones, is reversed. The abusive shepherds will be replaced by a shepherd who will outdo all others in wanton violence. Added to this, Ezekiel's sign-act in 37:15–28 of reattaching two stakes symbolizing the reunification of Judah and Israel is also reversed: in Zechariah 11, the staff named Unity is broken, "annulling the family ties between Judah and Israel" (v. 14).

Zechariah 12 and 14 depict devastating battles engulfing Jerusalem and Judah, from which only a remnant is miraculously delivered by the direct activity of the Warrior God Yahweh. Considering also the derision heaped in 13:2–6 upon those who prophesy, it becomes clear that chaps. 12–14 move powerfully in the direction of full-blown apocalyptic. A viewpoint comes to expression that is so pessimistic about the possibility of human participation in reform as to turn exclusively to visions of forceful divine intervention. Only after the day of divine wrath can God's promise of holiness and peace for Jerusalem be fulfilled (14:20–21). ***See also*** Cyrus II; Darius; Exile; Malachi, The Book of. P.D.H.

OUTLINE OF CONTENTS

The Book of Zechariah

I. God's words to Zechariah (1:1–7)
II. Eight visions (1:8–6:15)
  A. First vision: a rider (1:8–17)
  B. Second vision: four horns (1:18–21)
  C. Third vision: a measuring line (2:1–13)
  D. Fourth vision: Joshua (3:1–10)
  E. Fifth vision: lamp and trees (4:1–14)
  F. Sixth vision: a flying scroll (5:1–8)
  G. Seventh vision: winged women (5:9–11)
  H. Eighth vision: chariots (6:1–15)
III. Words of Zechariah (7:1–8:23)
IV. Collections of prophetic oracles (9:1–14:21)
  A. "First oracle" (9:1–11:17)
  B. "Second oracle" (12:1–14:21)

Zedek (zed´ek) **Valley,** a name that does not occur in the Bible. It identifies an artificial valley discovered during excavations in ancient

Jerusalem during the early 1920's. It has been determined that the early city of Jerusalem was located on the southeastern ridge extending below the present Temple Mount area. The least defensible aspect of that ridge was its northern border and apparently this valley, which was cut into the hill from the west, was designed for defense purposes. As the city expanded northward under David(?) and Solomon, this valley or moat outlived its usefulness, and was subsequently filled in. The name Zedek is derived from Melchizedek and Adonizedek and was assigned to the valley by the scholar R. A. S. Macalister. J.A.D.

Zedekiah (zed´uh-kī´uh; Heb., "Yahweh is righteousness"). **1** The last king of Judah, who was placed on the throne as a puppet ruler by Nebuchadnezzar after his first conquest of Jerusalem in 597 B.C. (2 Kings 24:17). In spite of the repeated warnings and criticisms of the prophet Jeremiah, reported in the narratives of Jeremiah 37–39 and 52, Zedekiah rebelled against his Babylonian overlords (2 Kings 24:20). As the result, Jerusalem was recaptured and destroyed (586 B.C.) and a bereaved and maimed Zedekiah was taken in fetters to Babylon (2 Kings 25:6–7). **2** A priest of Nehemiah's time (Neh. 10:2). **3** Two nobles of Nehemiah's time (Jer. 36:12; 1 Chron. 3:16). **4** A false prophet opposed by Micaiah, son of Imlah (1 Kings 22:11, 24; 2 Chron. 18:10, 23). **5** A false prophet opposed by Jeremiah (Jer. 29:21–23). W.S.T.

Zeeb (zee´uhb), a Midianite prince whom Gideon captured and killed (Judg. 7:25). ***See also*** Oreb and Zeeb.

Zelophehad (zuh-loh´fuh-had), a man of Manasseh who died in the wilderness leaving no male heir (Num. 26:33; 27:3; 1 Chron. 7:2). His five daughters, Mahlah, Noah, Hoglah, Milcah, and Tirzah, petitioned Moses and Eleazar, the priest, to recognize the right of female inheritance (Num. 27:1–11; cf. Josh. 17:3–6). The petition was granted with the stipulation that female heirs marry within their own tribe to protect the tribal inheritance (Num. 36:1–12).

Zenas (zee´nuhs), person identified as a lawyer (to distinguish him from another Zenas?) whom Titus is asked to speed on his way with Apollos (Titus 3:13). According to post–New Testament tradition, the first bishop of Diospolis (Lydda) was Zenas, author of a life of Titus. ***See also*** Apollos.

Zephaniah (zef´uh-nī´uh; Heb., "God has concealed" or "preserved"). **1** A priest who served as an intermediary between King Zedekiah of Judah and the prophet Jeremiah (Jer. 21:1; 37:3; early sixth century B.C.). He was taken before the king of Babylon at Riblah and was there put to death (Jer. 52:24–27). **2** An ancestor of the prophet Samuel (1 Chron. 6:36). **3** The father of Josia; he was living in Jerusalem in the mid-sixth century B.C. when Darius decreed the rebuilding of the Jerusalem Temple (Zech. 6:10–14). **4** A prophet during the reign of King Josiah of Judah (640–609 B.C.). ***See also*** Zephaniah, The Book of. P.J.A.

Zephaniah, the Book of, one of the books of the twelve "Minor Prophets" in the OT. The prophecies of Zephaniah span the reign of King Josiah of Judah (640–609 B.C.). His is the first prophetic voice to be preserved for us in the Bible since the time of Isaiah and Micah (701 B.C.), and his prophecy forms God's radical reaction to the idolatrous results of the reigns of Manasseh (697–642 B.C.) and Amon (642–640 B.C.) in Judah, with their mixing the worship of foreign gods with that of the true God of Israel. It is probable that Zephaniah was a member of that reform group of prophets and Levites who were responsible for Deuteronomy. Chapters 1 and 2 of his book probably date shortly after 640 B.C., while 3:1–17 may come from the period of 612–609 B.C., when it was clear that the reform measures of Deuteronomy had failed. 3:18–20 are probably an exilic, deuteronomic addition to the work.

OUTLINE OF CONTENTS

The Book of Zephaniah

- I. Superscription
- II. Announcement of Universal judgment in the Day of the Lord (1:2–2:4)
  - A. Judgment of the earth and of Judah and Jerusalem (1:2–6)
  - B. The coming Day proclaimed (1:7–13)
  - C. Description of the Day (1:14-2:4)
- III. Picture of the judgment (2:5–3:8)
  - A. On foreign nations (2:5–15)
    - 1. Philistines (west) (2:5–7)
    - 2. Moab and Ammon (east) (2:8–11)
    - 3. Egypt (south) (2:12)
    - 4. Assyria (north) (2:13–14)
  - B. On Jerusalem (3:1–8)
- IV. Promise of salvation (3:9–20)
  - A. For the remnant of Judah and Jerusalem (3:9–13)
  - B. The new people of Zion (3:14–17)
  - C. For the exiles in Babylonia (deuteronomic addition; 3:18–20)

Zephaniah is the only prophet for whom four generations of ancestors are named, but it is doubtful that "Hezekiah" in 1:1 refers to the Judean king of that name. We know nothing further about the prophet.

Central Message: The central message of Zephaniah is that the fire of God's wrath is

about to burn up a creation gone wrong (1:1–2; 3:9), but the announcement is directed principally to Judah and Jerusalem in the effort to call forth their repentance. The sins of the covenant people are four: their idolatry, represented by their worship of such foreign deities as the Canaanite baals (1:4), the Assyrian astral deities (1:5, 9), and the god Milcom of Ammon (1:5); their accommodation to foreign ways (1:8); their unethical action within their own society (1:9); and, above all, their indifference toward and unbelief in the God of Israel (1:12). This last is characterized as a "thickening upon their lees," a figure drawn from the process of winemaking, in which wine left too long on its sediment becomes thick and syrupy. The Judeans have become thus ruined, proclaims the prophet, because they no longer believe that God does anything in their world (1:12).

The Judeans and foreign peoples, who share their unbelief, will therefore be laid waste on the coming Day of the Lord, a concept rooted in the theology of Israel's Holy Wars and dating from the time of the tribal federation (1220–1020 B.C.). In such theology, God was pictured as a Divine Warrior who fought on his people's behalf to defeat their enemies. Popular theology in Israel therefore believed that the Day of the Lord would be a time when God would finally defeat all of Israel's enemies, inaugurate his kingdom on earth, and exalt his covenant people. The prophets, beginning with Amos, however, announced that God would instead war against his covenant people for their sins against him. Zephaniah portrays this final war against Israel and all unbelievers more fully than does any other prophet.

The coming of the awful Day is described in Zeph. 1:14–16, a passage whose initial words were translated into Latin as *Dies irae,* developed into poetry, and then used in various Latin masses and numerous literary and musical works. The Day will open with a sacrifice, when God will consecrate his mysterious warriors (1:7), followed by the war cry of God as he wades into the fray (1:14). The battle will begin in Jerusalem's commercial center (1:10–11) and from there spread throughout the earth. God will search out his enemies (1:12), leveling his covenant curses against his own people (1:13), and wasting the lands of foreigners to the west (2:4, 5–7), the east (2:8–11), the south (2:12), and the north (2:13–14), in short, over all the earth. No defense will be adequate against God's war (1:16–18), and he will make a full and sudden end of all unbelievers (1:18).

Only repentance and casting oneself on the mercy of God can save Judah on that Day. Zephaniah therefore calls his compatriots to hold an assembly of fasting and repentance (2:1–3) that will evidence Judah's humility, obedience, and righteousness or trust in the Lord (2:3). If Judah so repents, it may be saved (2:3). However, Judah and Jerusalem, symbolized by their corrupt leaders (3:3–4), refuse Zephaniah's call, as they have always refused God's correction through prophets and the Deuteronomic law (3:2), through military defeat (3:6), and through the evidence of God's work in the natural world (3:5). The judgment upon God's people is therefore inevitable. But a remnant of faithful will be preserved in Judah (2:7, 9) and will spread out over foreign lands. Within Jerusalem there will be left a humble, trusting, and righteous folk (3:9–13) who do no wrong. God will establish his kingdom over all the earth (3:14–17). Jerusalem will rejoice (3:14), and God will exult in the midst of it (3:17).

E.R.A.

Zerah (zihr´uh). **1** An Edomite descendant of Esau by Basemath, daughter of Ishmael (Gen. 36:13, 17; 1 Chron. 1:37; cf. Gen. 36:1–4); also the father of an early Edomite king (same person?; Gen. 36:33; 1 Chron. 1:44). **2** A twin son of Judah by Tamar (Gen. 38:30; cf. 46:12; 1 Chron. 2:4, 6), founder of the Zerahites (Num. 26:20) or "sons [descendants] of Zerah" (1 Chron. 9:6; Neh. 11:24). Achan, a warrior who took for personal use some items from Jericho that had been dedicated (lit. "devoted") to God, is identified as a descendant of Zerah (Josh. 7:1, 18, 24; cf. 1 Chron. 2:6–7). **3** The founder of a Simeonite division, the Zerahites (Num. 26:13; 1 Chron. 4:24; called Zohar in Gen. 46:10; Exod. 6:15). **4** Two Levites (1 Chron. 6:21, 41). **5** An Ethiopian (Cushite) leader of a large attacking force whom King Asa of Judah defeated at Mareshah (2 Chron. 14:9–15).

P.A.B.

Zerahiah (zair´uh-h*i*´uh; Heb., "Yah [God] has dawned" or "Yah has shone forth"). **1** A Levite in the priestly line of Aaron and an ancestor of Ezra (1 Chron. 6:6, 51; Ezra 7:4). **2** A member of the clan of Pahath-moab whose son Eliehoenai returned from the Babylonian captivity with Ezra (Ezra 8:4).

Zerahites (zihr´uh-h*i*ts), the name of two clan groups during the period of the wilderness wanderings, one belonging to the tribe of Simeon (Num. 26:13) and the other to the tribe of Judah (Num. 26:20). The association of the Zerahites with both Judah and Simeon probably

reflects the fact that after the settlement in the land the tribe of Simeon was absorbed very quickly into the tribe of Judah and lost its identity (see Gen. 49:7; Josh. 19:1). The same practice of dual identification is seen in the city lists in which cities are named as belonging to both Simeon and Judah (cf. Josh. 15:21–63 with 19:1–9). It is therefore likely that only one group is referred to. It was to the Zerahites that Achan belonged (Josh. 7:17), as did Sibbecai and Maharai, two of David's military commanders (1 Chron. 27:11, 13). ***See also*** Simeon; Zerah; Zohar. D.R.B.

Zeraiah (zuh-r*i*'uh). ***See*** Zebadiah.

Zered (zihr'id), **the Brook,** a brook that empties into the Dead Sea at its extreme southeast corner. The crossing of this stream concluded the Israelites' desert wanderings (Num. 21:12; Deut. 2:13–14). Probably the modern Wadi el-Hesa, it cleaves the high eastern plateau to join the southern end of the Dead Sea. It constitutes the frontier between Moab and Edom and is perhaps the "Brook of the Willows" (Isa. 15:7). ***See also*** Edom; Moab.

Zeresh (zihr'ish), the wife of Haman (Esther 5:10, 14; 6:13). Various etymologies have been proposed for the name from the Persian, Indian, and Avestan languages, but none of these has won broad consensus. ***See also*** Esther; Haman.

Zerqa (zuhr'kuh), the modern name for the river that begins at a spring in modern Amman, Jordan, flows north through the village of Zerqa, then turns west to empty into the Jordan River fifteen miles north of the Dead Sea. Joshua probably crossed the Jordan in the area where the Zerqa joins it (Josh. 3:14–17).

Zeruah (zuh-r*oo*'uh), a widow and the mother of King Jeroboam I of Israel (924–903 B.C.; 1 Kings 11:26).

Zerubbabel (zuh-ruhb'uh-buhl; Heb., "shoot of Babylon"), a descendant of the Davidic family. The genealogies differ: 1 Chron. 3:19 gives Pedaiah, a younger son of Jehoiachin, as his father; Hag. 1:1 and Ezra 3:2 (cf. Matt. 1:12; Luke 3:37) give Shealtiel, the eldest son. Zerubbabel appears with Joshua (Jeshua) the high priest as the recipient of Haggai's message (Hag. 1:1; 2:2) to rebuild the Temple. In Hag. 2:20–23 he is to receive royal status as "servant" and "signet ring," executive officer of God. In Zechariah, he is named only in 4:6b–10a, inserted in the vision of the golden lampstand; he alone is the initiator and completer of the restored Temple, not by human power but by divine "spirit." The origin of this passage is uncertain; text and interpretation are difficult. Zech. 2:10 and 6:12 ("the Branch," cf. Jer. 23:5) are generally believed to indicate Zerubbabel. Later reinterpretation may have resulted in his name being removed, perhaps when priestly rulers had superseded governors. These passages also remain problematic.

Zerubbabel appears in Ezra 3:2, 8 and 4:2, 3, usually with Jeshua, as responsible for rebuilding the Temple; in 4:1–3 he refuses the help of "adversaries" who claimed to be true worshipers ever since the Assyrian ruler Esarhaddon brought them to the land—a reference nowhere else attested. They are also mentioned in Ezra 5:2 in the Aramaic account; their names here may be due to the harmonizing of this narrative with that of Ezra 3. In Ezra 2:2; Neh. 7:7; and Neh. 12:1, 47 Zerubbabel appears as leader of one group of returning exiles. These passages reflect various stages of postexilic life in Judah.

Only in Hag. 1:1 and 2:2 is Zerubbabel entitled "governor": the same term appears in seal impressions (bullae) of the official administering the district of Yehud (Judah). He was probably, but not certainly, appointed by Darius I. 1 Esd. 3:1–5:3 has a fictional tale of a contest of wits at the court of Darius; unexpectedly, Zerubbabel is identified as the winner and is granted leave to rebuild Jerusalem and the Temple. ***See also*** Haggai; Zechariah. P.R.A.

Zeruiah (zuh-r*oo*'yuh), the mother of Joab, Abishai, and Asahel, three of David's warriors. According to 1 Chron. 2:16 she was David's sister, and perhaps for this reason his three nephews are identified not by their father's name, but by their mother's. If the text of 2 Sam. 17:25 is sound, Zeruiah's own father was a certain Nahash, perhaps an earlier husband of Jesse's wife. The sons of Zeruiah are depicted as impetuous and ruthless men, frequently appearing as foils to the mild-tempered king (cf. 2 Sam. 3:39).

Zeus (z*oo*s), the chief deity of the Greek pantheon, often described as "the father of gods and men." Zeus as the "sky god," who wielded the thunder bolt and was responsible for weather and rain while enthroned on Mount Olympus, was of Indo-European origin. By Homeric times (ca. 800 B.C.) Zeus was the highest civic god, protector of justice and morals. The circle of twelve gods and goddesses established as a family on Olympus is evident in Homer. Other elements in the Zeus mythology appear to have had a different origin. Zeus's father, Kronos, was said to have swallowed his children until he was given a stone instead of Zeus, which also freed other gods of Zeus's generation, Hera, Poseidon, and Hades. Other features of the Zeus legend include the overthrow of the earlier generation, the Titans, "sons of Earth," and the unions with various goddesses and mortal women.

In Hellenistic times (ca. 300 B.C.–A.D. 300) Zeus was identified with the chief deity of any non-Greek religion. The Stoics spoke of

the highest principle, fire or reason, which animates the universe, as "Zeus." Barnabas is taken to be "Zeus" by the people of Lystra (Acts 14:12). P.P.

Ziba (zi´buh), in the OT, a retainer in Saul's household who informed David of a survivor among Saul's people, namely, a grandson in the person of Jonathan's lame son Mephibosheth. David restored Saul's estate to Saul's grandson Mephibosheth, appointing Ziba as overseer (2 Sam. 9:1–12). When David was forced to flee Jerusalem during Absalom's revolt, Ziba met him with provisions and a story of Mephibosheth's designs on the crown. For this information Ziba received in reward the grant of Mephibosheth's estate (2 Sam. 16:1–4). On David's return, Ziba rushed to the Jordan to assist him, while Mephibosheth met him with expressions of loyalty and a story of Ziba's deceit. David thereupon divided the estate between them (2 Sam. 19:17–29). P.A.B.

Zibeon (zib´ee-uhn; Heb., meaning uncertain, perhaps "hyena"), the son of Seir the Horite and a chieftain of the Horites (Gen. 36:20, 29). He is identified as the ancestor of Esau's wife (Gen. 36:2), which reveals a relationship between the Horites and the Edomites. The reference to Zibeon as a Hivite (Gen. 36:2) is a textual error for Horite, since he is always elsewhere connected with the Horites. ***See also*** Edomites; Horites.

Zichri (zik´ri). **1** The head of a levitical family in the time of Moses (Exod. 6:21). **2** The name of three Benjaminites (1 Chron. 8:19, 23, 27). **3** A Levite appointed by David to supervise the dedicated booty (1 Chron. 26:25). **4** The father of the leader of the Reubenites during David's reign (1 Chron. 27:16). **5** The father of a Judahite general in Jehoshaphat's army (2 Chron. 17:16). **6** The father of one of Jehoiada's generals (2 Chron. 23:1). **7** An Ephraimite warrior in the army of Pekah who slew three of Ahaz's officers (2 Chron. 28:7). **8** The grandfather of a Levite who made the return from exile (1 Chron. 9:15; cf. Neh. 11:17). **9** The father of a Benjaminite who lived in Jerusalem after the return from exile (Neh. 11:9). **10** The head of a priestly family in the second generation after the return from exile (Neh. 12:17). P.K.M.

Zidon (zi´duhn). ***See*** Sidon.

ziggurat (zig´uh-rat; from the Akkadian *ziqqurratu,* "temple tower," a noun derived from *zaqāru,* "to build high"), a stepped temple with rectangular or, later, square base built mostly in Mesopotamia. Ziggurats usually had a sanctuary on the ground level, which perhaps was matched by a sanctuary on the ziggurat's summit, where the god was thought to appear. Ziggurats were built from the protoliterate period on. They existed at one time or another in most major Mesopotamian cities, including Babylon, Ashur, Nineveh, Ur, and Eridu, and honored important gods such as Marduk, Ashur, Shamash, Enlil, Anu, and Ishtar. The magnificent ziggurat at Ur, dating from the late third millennium, is well preserved and suggests the great impact that these structures must have had on the ancient Mesopotamians. The first-millennium ziggurat of Marduk in Babylon was called the *Etemenanki,* "the house that is the foundation of heaven and earth," indicating the important place that ziggurats had in antiquity. This is the ziggurat that greatly impressed Herodotus, the fifth-century Greek historian.

Mesotamian ziggurats influenced the architecture of their neighbors; it is thus not surprising that ziggurats also influenced some of the literary narratives of the Israelites. The construction of the Tower of Babel (Gen. 11:1–9) was probably patterned after the building of a

The Ziggurat at Ur: a view of the southwest face.

great ziggurat. Indeed, the narrative is set in Mesopotamia (vv. 2, 9) and even reflects Mesopotamian building techniques and phraseology (v. 3). In Gen. 28:12–15, Jacob, on his way to Haran, dreams of angels ascending and descending a staircase (RSV: "ladder"). Possibly, the staircase in this dream is patterned after a ziggurat, whose stairs led to a summit where the god was manifest (cf. v. 17). ***See also*** Babel. M.Z.B.

Ziha (zi´huh). **1** A family group of Temple servants (Nethinim) who returned from the Babylonian captivity with Zerubbabel (Ezra 2:43; Neh. 7:46). **2** One of the overseers of the Temple servants who lived in Ophel after the return from exile (Neh. 11:21).

Ziklag (zik´lag), a city in the Negev, the wilderness area west and south of the Dead Sea, whose location cannot be determined with certainty. The city was given to David by the Philistine tyrant of Gath, Achish. It was David's base for military operations for a year and four months (1 Sam. 27:5–12), and it was destroyed by the Amalekites at the time of Saul's last stand against the Philistines (1 Sam. 30:1–19). It is listed in the ancestral holdings of both Judah (Josh. 15:31; cf. 1 Sam. 27:6) and Simeon (Josh. 19:5; cf. 1 Chron. 4:30).

Zillah (zil´uh), one of the wives of Lamech and the mother of Tubal-cain (Gen. 4:19–23). The name seems to be derived from the common Hebrew word for "shade," but other, more speculative etymologies have been proposed.

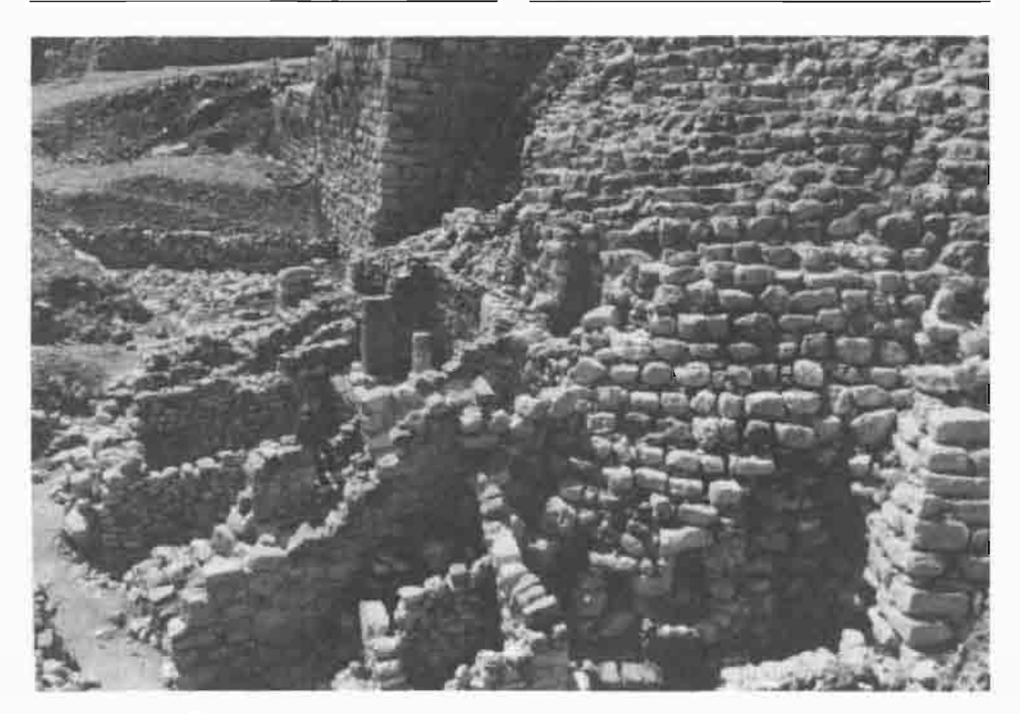
Zillethai (zil´uh-thi; Heb., "shadow, protection"). **1** A Benjaminite, one of the sons of Shimei (1 Chron. 8:20). **2** A member of the tribe of Manasseh who came to help David while he was taking refuge at Ziklag (1 Chron. 12:20).

Zilpah (zil´puh), the handmaiden of Leah, who was given to Jacob as a "surrogate mother" and bore Gad and Asher (Gen. 30:9–13). Even though surrogates were normally given to their husbands by childless wives, Zilpah was given to Jacob after Leah had already borne four sons, apparently in retaliation for the action of the childless Rachel, whose handmaiden Bilhah had borne Dan and Naphtali as a surrogate mother for Rachel. Despite the fact that they bore sons to Jacob, Zilpah and Bilhah are not considered matriarchs of Israel. T.S.F.

Zilthai (zil´thi). ***See*** Zillethai.

Zimran (zim´ran), a son of Abraham and Keturah (Gen. 25:2; 1 Chron. 1:32). The name almost certainly refers to a clan living in Arabia, possibly at a place along the east shore of the Red Sea west of Mecca called Zabram by the Hellenistic geographer Ptolemy in the second century A.D.

Zimri (zim´ri; Heb., "[God] is my protection" or "strength"). **1** A Simeonite who lived prior to Israel's entry into Canaan and was killed by the priest Phinehas for bringing a Midianite woman into his home (Num. 25). **2** Commander of half the chariotry in early ninth-century B.C. Israel who led a successful coup against King Elah, as a result of which Zimri became an epithet for one who kills his own master (2 Kings 9:31). He ruled in Tirzah for only one week before another officer (Omri) besieged the city and Zimri committed suicide by entering the royal palace he had set afire (1 Kings 16:8–31). **3** A descendant of Judah (1 Chron. 2:6, perhaps the same as Zabdi in Jos. 7:1). **4** A descendant of Saul's son Jonathan (1 Chron. 8:36; 9:42). **5** A nation, apparently near southern Mesopotamia (Jer. 25:25), although the accuracy and exact reference of the text are uncertain. F.E.G.



Zin (zin), **Wilderness of,** an area on the southern border of Palestine, including also a place called Zin (Num. 34:3–4; Josh. 15:1–3), within the area of Paran. It included Kadesh-barnea as well as Massah and Meribah (Num. 27:14; Deut. 32:51) and must therefore have been south of the present Israeli border, more or less in the center on an east-west axis. Moses sent spies from here to explore the future homeland (Num. 13:25). It is not the same as the "Wilderness of Sin." ***See also*** Kadesh; Massah; Paran; Sin, Wilderness of.

Zion (zi´uhn), a Hebrew word whose precise meaning is not known. It may mean "citadel" or "fortress," but it has come to refer to at least three different aspects of the city of Jerusalem, as well as "the mountain of Samaria."

According to 2 Sam. 5:6–10, David and his men took Jerusalem from the Jebusites, apparently climbing through a water tunnel or shaft and opening the city gate from the inside. Verse 7 states that "David took the stronghold of Zion, that is the city of David," thus essentially equating the names Jerusalem, Zion, and the city of David. The synonymous use of these terms can be seen elsewhere in the OT.

It is clear both from a close reading of the Bible and from archaeological research that the pre-Israelite fortress of Jerusalem occupied the southeastern ridge, which extends south from the current Temple Mount complex located immediately to its north. This ridge has narrow precipitous valleys on both its eastern and western sides which eventually meet at the southern tip of the ridge.

While this city or fortress can legitimately be called Zion, the Temple Mount area immediately to the north, which was first constructed under Solomon's reign, may also bear the name. This seems implied from a number of Psalms extolling the virtues of Zion and from related themes elsewhere in the OT. Zion is "my [God's] holy hill" (Ps. 2:6), "the holy habitation of the

A monumental stepped structure, taller than a five-story building, excavated in the city of David—or Zion—from the tenth century B.C. It continues 22 feet beneath the Israelite houses whose remains are located toward the center of the photo.

Most High" (Ps. 46:4); it is "Mount Zion, which he loves," where God "built his sanctuary like the high heavens" (Ps. 78:68–69).

In Byzantine times the name Zion was erroneously assigned to the hill immediately south of the southwestern corner of the present "old city," and from that time until the present century this site has been proposed as the original Zion. Though it has been shown conclusively that such is not the case, nevertheless two sites of traditional veneration are located there: David's tomb and the upper room of the Last Supper.

There is yet another possibility for the term as suggested by Amos 6:1, where Zion occurs in a phrase that parallels it to "the mountain of Samaria." Perhaps Zion here is equated with Samaria in the sense of a "citadel," although it may be nothing more than a sarcastic comment on the false pride of Samaria's inhabitants.

The descriptive language of Zion is replete with rich imagery. Streams of water come forth from her (Ps. 46:4), although in actuality the city is supplied by two springs, both of which are located off the hill proper. Zion is called "His holy mountain, beautiful in elevation" (Ps. 48:1–2), adopting language more appropriate to a sacred mountain in north Syria. On numerous occasions Zion is employed as a metaphor for security and protection (e.g., Ps. 125). The NT continues this imagery using the term "heavenly Jerusalem" or Zion metaphorically in reference to the church (Heb. 12:22), the gospel message (1 Pet. 2:6), and the place of God's dwelling (Rev. 14:1). ***See also*** David; Jerusalem. J.A.D.

Ziph (zif). **1** A descendant of Caleb (1 Chron. 2:42); however, since this passage reflects more historical and geographical relationships than actual family genealogies, Ziph likely refers to the area settled by the Calebites (see 3 and 4 below). **2** A Judahite member of the Calebite clan (1 Chron. 4:16). **3** A city in the hill country of southern Judah (Josh. 15:55) which gives its name to the portion of the Judean wilderness between the city and the Dead Sea at En-gedi ("the Wilderness of Ziph"; 1 Sam. 23:14–15; 24; 26:2). While David was hiding in this area during his flight from Saul, the Ziphites betrayed his location to Saul (1 Sam. 23:19; 26:1). The city was later fortified and provisioned by King Rehoboam as a defensive garrison (2 Chron. 11:8). The site is identified as modern Tell ez-Zif, about three miles southwest of Hebron. **4** A city in the far southern territory of the tribe of Judah (Josh. 15:24). Some scholars identify it as modern Khirbet ez-Zeifeh, which lies west of the south end of the Dead Sea in the eastern Negev. D.R.B.

Zippor (zip´or; Heb., "bird"), the father of Balak, the king of Moab who hired Balaam to curse Israel (Num. 22:2, 4; Josh. 24:9).

Zipporah (zi-por´uh), the wife of Moses and the mother of Gershom and Eliezer. She was

one of the seven daughters of Reuel, priest of Midian (also known as Jethro). Zipporah appears in three narratives. In the first (Exod. 2:16–22), the daughters were drawing water for their sheep, the (male) shepherds chased them away, and Moses (who had just fled Egypt) "saved" them; upon hearing this, Reuel invited him to his home and gave him Zipporah as his wife. In the second narrative (Exod. 4:24–26) God inexplicably attacked Moses, and Zipporah saved him by circumcising her son and touching Moses' feet with the foreskin. Zipporah and her sons stayed with Jethro in Midian when Moses went back to Egypt to lead the Exodus; Jethro brought them to Moses when he came to meet Israel in the desert (Exod. 18:2–5). T.S.F.

Zoan (zoh´uhn; Heb.; Egyptian *Djanet;* Gk. *Tanis*), the residence of the kings of Egypt during the twenty-first and twenty-second dynasties (ca. 1070–715 B.C.) and a major commercial and political center down into the Ptolemaic period (ca. 332–30 B.C.), which is located at modern San el-Hagar on the Tanitic branch of the Nile in the northeast delta, about seventy-three miles northeast of Cairo. The "fields of Zoan"—evidently a region around Tanis—are described in Ps. 78:12, 43 as the scene of the wonders associated with the Exodus. According to Num. 13:22, Hebron was built seven years before Zoan. Zoan was still an important city in the days of Isaiah and Ezekiel (Isa. 19:11, 13; 30:4; Ezek. 30:14).

Tanis is one of the largest sites in the Egyptian delta. It has been excavated several times, by W. M. Flinders Petrie (1883–1886), Pierre Montet (intermittently between 1929 and 1956), and most recently by Jean Yoyotte (starting in 1966). The principal feature of Tanis is an enormous mudbrick enclosure wall, inside of which a second wall surrounds a great temple dedicated to the god Amun. This complex was evidently started by the twenty-first-dynasty king Psusennes I (1039–991 B.C.). Elsewhere within the inner enclosure wall are the subterranean tombs of six kings of the twenty-first and twenty-second dynasties.

Because so many monuments inscribed with the names of Ramesses II and his nineteenth- and twentieth-dynasty (ca. 1293–1070 B.C.) successors were found at Tanis, it was thought for a long time that Tanis was the site of ancient Raamses, the store-city (KJV: "treasure-city") where the Hebrews labored for Pharaoh (Exod. 1:11). However, it has now been recognized that these earlier monuments were transferred to Tanis from elsewhere, probably the area of Qantir-Khatana, about fifteen miles south of Tanis, which appears to be the real location of the biblical store-city of Raamses. Therefore, the references to Zoan as the site of the Exodus wonders are anachronistic. ***See also*** Raamses, Rameses. J.M.W.

Zoar (zoh´ahr), one of the five cities of the plain (along with Sodom, Gomorrah, Admah, and Zeboiim). The four eastern kings led by Chedorlaomer, king of Elam, defeated these five cities in the valley of Siddim (Gen. 14:1–12). God allowed Lot to flee from Sodom to Zoar before he destroyed Sodom and the other three cities with fire and brimstone (Gen. 19:18–23). Zoar is mentioned later in connection with the destruction of Moab (Isa. 15:5; Jer. 48:34). The exact location of Zoar is uncertain; it may be at the site of es-Safi, located about five miles south of the Dead Sea. ***See also*** Cities. J.M.W.

Zobah (zoh´buh), or Aram-zobah, one of the independent city-states the Arameans (Syrians) formed at the beginning of the first millennium B.C. Zobah was situated in the Valley of Lebanon, with Hamath to the north and Damascus to the south. The kingdom of Zobah was extensive, controlling eastern Syria from the Hauran to the Euphrates Valley. So powerful was it that it posed a threat not only to Israel but even to imperial Assyria. 1 Sam. 14:47 mentions Saul's victory over Zobah. Some scholars, however, maintain that the Arameans did not appear on the Israelite stage until the time of David. Aram-zobah was David's arch rival for control of Syria and Transjordan. When David was warring with the Ammonites, Hadadezer ben Rehob, the powerful Aramean king of Zobah, intervened in support of the Ammonites (2 Sam. 8:5; 1 Chron. 18:3–9). As a result, David twice defeated Hadadezer and reduced Zobah to the status of subject. P.J.K.

Zohar (zoh´hahr). **1** The father of Ephron, the Hittite who sold Abraham the cave of Machpelah in which to bury Sarah (Gen. 23:8; 25:9). **2** A son of Simeon who accompanied Jacob and his family to Egypt (Gen. 46:10) and became the head of a family group there (Exod. 6:15). This is probably the same person who is elsewhere called Zerah (1 Chron. 4:24), the ancestor of the family group called the Zerahites who left Egypt with Moses (Num. 26:13). **3** A descendant of Judah (1 Chron. 4:7); the name occurs as a traditional marginal correction (Qere) for the name Izhar, the form that appears in the Hebrew text. In some versions the name appears as Jezoar. Since this is the only occurrence of this person in the Bible and the text is not clear, the proper form of the name is uncertain. ***See also*** Izhar; Zerah; Zerahites. D.R.B.

Zoheleth (zoh´huh-lith). ***See*** Serpent's Stone.

Zophar (zoh´fahr), one of the three friends of Job who offered him comfort and advice (Job 2:11; 11:1; 20:1); their counsel to Job prompts a rebuke from God for its lack of understanding and insight (Job 42:7–9). ***See also*** Job, The Book of.

Zorah (zor´uh), a town (modern Sar'ah) located in the Valley of Sorek, three miles northeast of Beth-shemesh and fifteen miles west of Jerusalem. The Danite Manoah, father of Samson, came from Zorah, and Samson was raised there (Judg. 13:2, 25). Both he and his father were buried in the region between Zorah and Eshtaol (Judg. 16:31). The Danites were the first tribe to settle in the Zorah area (Josh. 15:33; 19:31). When the neighboring Philistines encroached upon their territory, the Danites migrated north; they settled at Laish and renamed it Dan (Judg. 18). With the departure of the Danites from Zorah the town became Judahite. To protect Judah from the Egyptians, King Rehoboam fortified Zorah and the surrounding towns in the Shephelah region. Upon return from Babylonian exile Jews settled again in Zorah. P.J.K.

Zoroaster (zoh´roh-as´tuhr), an east Iranian prophet whose followers worshiped the deity Ahura-Mazda. Belief in divine beings, *Ahuras,* was probably part of the older Aryan religion. Zoroaster appears in a new personal relationship to Ahura-Mazda, whom Zoroaster may have seen as the personification of all of the other divine qualities. A large number of inscriptions from the time of Darius (late sixth century B.C.) show that Ahura-Mazda was considered to be the god of the Iranians, though Zoroastrianism does not appear to have had the formal organization at that time that it would acquire later.

According to Zoroaster, the history of the world was divided into three ages of three thousand years each. The first was the golden age of Ahura-Mazda. The second was a period of warfare with evil that ended with the coming of Zoroaster. The prophet brought a new force enabling humans to participate in separating truth from falsehood. The final period would extend until the renovation of the world.

Some elements of this belief appear to have influenced the development of angelology, dualism, belief in an evil power, Satan, and a periodized story of the world that we find in the Judaism of the Greco-Roman period, especially in apocryphal writings such as Daniel. ***See also*** Apocalyptic Literature; Apocrypha, Old Testament; Pseudepigrapha; Satan. P.P.

Zuar (z*oo*´uhr), father of Nethanel, the leader of the tribe of Issachar during the wandering of the Israelites through Sinai (Num. 1:8; 2:5; 7:18, 23; 10:15).

Zur (zuhr). **1** A Midianite prince whose daughter, Cozbi, was killed by Phinehas along with her new husband Zimri of Israel (Num. 25:15; see Num. 25:6–8). Zur was slain by the Israelites in the battle in which Moses defeated Sihon, king of the Amorites (Num. 31:8; Josh. 13:21). **2** A Gibeonite, the son of Jeiel (1 Chron. 8:30, 9:36). ***See also*** Sihon.

Zurishaddai (zoor´i-shad´*i*; Heb., "Shaddai [divine title translated 'the Almighty'] is my Rock"), the father of Shelumiel, the leader of the tribe of Simeon during the wilderness wandering (Num. 1:6; 10:19).

INDEX TO COLOR MAPS

This index lists geographical names found on the color maps at the back of this book. The number(s) of the map(s) on which the name appears is listed first, followed by the key, or grid reference (a letter-figure combination that refers to the letters and figures at the margins of the map). Places whose names have changed over time are identified by a "see also" reference. For example, the entry for Azotus indicates it can be found on Map 11 in location B-5, and on Map 13 in location A-5, and readers are referred to Ashdod, its alternate name.

Physical Map of the Land of Israel and Surrounding Area in Biblical Times

Elevations are given in feet
The terrain model map here and those on subsequent pages depict the natural vegetation of the Bible world as far as it can be determined. Primary ground cover has undergone changes by time and humans. For example, vast areas of Mediterranean vegetation, originally a maquis-forest type, are now dwarf-shrub with only rare patches of forest. The following sequence of colors applies to maps in the series.
Mediterranean vegetation
Grassland — steppe
Mixed grassland & forest
Sparse grassland & shrub
Riverine vegetation & oases
Snow & ice
Barren salt flats
Sandy or salt desert
Stony desert — hamada
Barren lava beds
